

# Sky Blue Compact Porterweed

*Stachytarpheta sp.*

Sky blue Porterweed is a new variety we have added to our Porterweed collection – and so far, we're impressed. The foliage is stunning – large and textured, it grows tight and stays clean and green looking all season. The sky blue flower spikes are non stop – as are the visits from butterflies and hummingbirds. The plant has a bushy, compact growth habit – about 2.5 x 2.5 – and responds well to pruning. Perennial.
