ABSTRACT

An apparatus for shooting. The apparatus includes a gun. The apparatus includes a controller connected to the gun which controls whether the gun can fire. The apparatus includes a mechanism for determining a present biometric signature of a shooter who desires to fire the gun. The determining mechanism is in communication with the controller. The controller only allows the gun to fire if the present biometric signature of the shooter is recognized by the controller. A method for firing a gun. The method includes the steps of gripping a handle of a gun by a shooter. Then there is the step of recognizing a present biometric signature of the shooter. Next there is the step of releasing a trigger of the gun so the gun can fire as long as the biometric signature of the shooter is recognized.
