

## UNIVERSAL HEIGHT ADJUSTABLE CHANGING TABLES REQUEST FORM

Accessibility should be the norm,  
not the exception.

My name is \_\_\_\_\_

as a parent, guardian, or caregiver for a senior or an individual with special needs, I want to bring your attention to a product that could greatly enhance our ability to support your business.

Although accessibility regulations aim to create a more inclusive environment, significant barriers still remain. For example, many places now offer what is considered an 'accessible restroom,' which often includes only a baby changing table unsuitable for individuals weighing 60 lbs or more, as well as a handicap stall designed for individuals with full mobility who can independently maneuver into the stall and use the support bars.

Inaccessibility affects everyone. Issues like cracked sidewalks, inadequate or improperly constructed ramps, insufficient truncated domes for the visually impaired, revolving doors, inaccessible shuttle services, limited parking spaces, and the lack of adult-height adjustable changing tables with safe spaces create challenges for many.

These obstacles don't just impact children and adults born with medical complexities; they also affect individuals who acquire challenges later in life—such as veterans who sustained service-related injuries, seniors, our own family members, and ultimately our future selves.

**Universal Changing Tables** accommodates people of all ages and abilities. Holding up to 400lbs, with surface measuring at least 70in. by 30in.

**Benefits** Having these resources in your business ensures the safety of your clients, students, and customers, which leads to fewer injuries and reduced insurance claims. This not only fosters a secure environment but also boosts profitability. Additionally, Hospitals gain substantial advantages when working with individuals who have confirmed state-backed payments, compared to those who are unable to provide any form of payment.

**To learn more** Please consider purchasing one or two Universal changing tables today! This table will give seniors and children with special needs an equal opportunity experience and help them be a part of everyday life in their community! You can contact me at \_\_\_\_\_ about this opportunity.

The fixed- height tables are too high to climb or lower onto, and it is very hard for the caregivers to lift the person. This is not conducive for safe transfer.
