Quiz Title: 00.01 SU Intake: Suicide Risk Assessment

Quiz Total: 15

0. Clients with multiple risk factors, especially when presenting with psychiatric illness, substance abuse, and co-morbid conditions, should be assessed for suicide risk and necessary precautions. Consider the total number and severity of risk factors.** These risk factors indicate cause for immediate assessment of risk and intervention. NOTE: this tool is designed to screen for demographic factors that may help identify patients who fall into a statistically higher risk group for self harm. This is not intended to be a definitive or comprehensive assessment. Patients with higher scores will be assessed further for necessary level of care to minimize the risk of self-harm.

User Answer
I consent to complete the assessment
Total Score: 0

1. Current Intent

User Answer (1=None, 1=Intent without plan**, 1=Clear intent with plan**)
Intent without plan**(1),
Total Score: 1
