

Our mission is to provide consumers with natural, eco-friendly products that are actually natural and eco-friendly. That is why we use biodegradable tubes and glass jars rather than plastic containers, and why almost all our labels are printed on paper with eco-safe ink. And as if that wasn't enough, we only use high quality, pure ingredients that are all beneficial for your skin. We don't use any cheap "filler" ingredients, or any alcohols, dyes, or glycerin - all of which dry out your skin and lips, and provide no real benefit.

Lip Balm

This usually comes in a standard size .2 oz tube, packaged as a 12 pack. But, occasionally we have to use a slightly larger .25 oz tube packaged in a 10 pack. Customers don't seem to mind, and since both sizes cost the same, they're actually getting a better deal with the larger tube. We apologize for any inconvenience and plan to have the issue resolved soon.

Hand Balm

Choose either 1.25oz or .5oz - sold individually. We've found that where you plan to sell the hand balm will determine which size sells better. For example, the smaller size sells better at the checkout counter, whereas it might get overlooked on a shelf. In any case, both sizes contain the same UPC barcode on their label, so we encourage you to choose the size best suited for your location.

Shower Balm

This is a whole body balm meant to be used immediately following a shower while you're still wet. It absorbs quickly without leaving a greasy residue, but leaves your skin noticeably less dry for at least a day.

Foot Stick

Foot Stick heals dry cracked feet and helps prevent blisters. It also contains lemongrass essential oil to help prevent athlete's foot and make your feet smell good. Think of it as a giant lip balm for your feet.

Bug Stick

Bug Stick was designed for the outdoors crowd. It's small, easy to carry, easy to use, and 100% biodegradable - even the ink on the label is eco-safe. It is a rub on balm that naturally repels ticks, mosquitoes, and other bugs using citronella, eucalyptus, and lavender essential oils. It can be applied directly to your skin or applied to clothing (boots, sleeves, hat, etc.).

Food-Safe Kitchen Balm

Kitchen Balm is a multi purpose, food-safe balm made with beeswax and USDA approved food-grade white mineral oil. It is designed to be a food-safe cutting board wax, stainless steel knife protectant, and food processor sealant. But it has a few popular uses that reach outside the kitchen, as a leather polish and wood furniture polish, especially for antiques and delicate furniture.
