

Engineered Prefabricated
Roof Trusses

Engineered for Durability & Strength

Built for precision

**Made to be a cost effective
solution**

Who We Are

Specialists in engineered timber roof trusses with compliance with all regulatory parties.

We specialize in Residential, commercial and industrial applications.

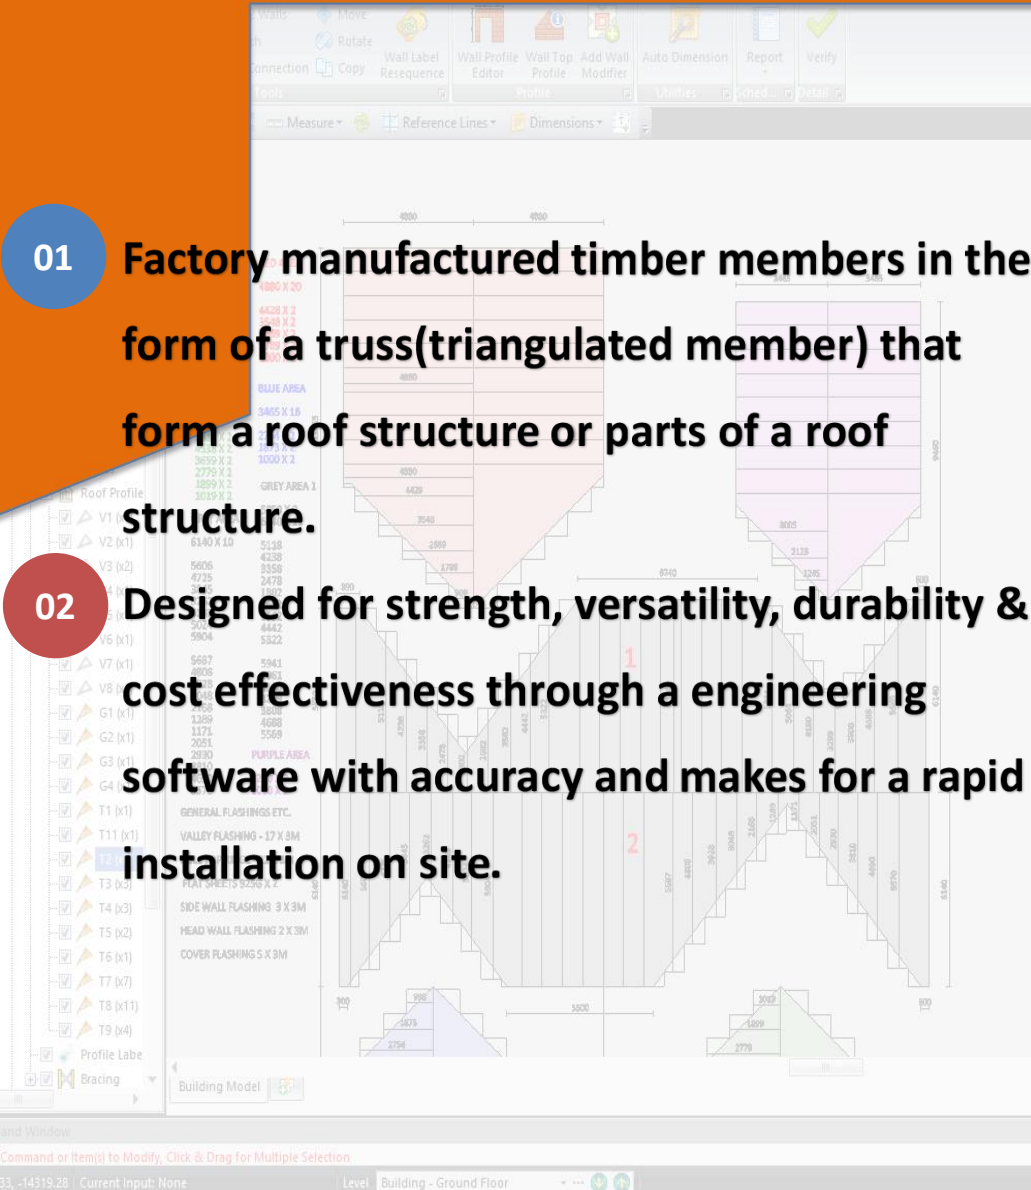

Professionally designed and manufactured according to customers specifications.

What Are Prefabricated Roof Trusses?

01 Factory manufactured timber members in the form of a truss (triangulated member) that form a roof structure or parts of a roof structure.

02 Designed for strength, versatility, durability & cost effectiveness through a engineering software with accuracy and makes for a rapid installation on site.

Advantages of going Prefab

Prefabricated Truss design

Faster quotation times with accurate estimates compared to on site guesstimation.

Prefab Truss Labour

In a formal and professional standard more cost effective in labour and time spent installing.

PrefabTruss Manufacturing

Superior quality, time spent manufacturing and adherence with all SABS, NHBRC & ITC-SA regulations.

Prefab Truss Costs

Prefabricated trusses are more cost effective due to lower wastage and accurate timber calculations for manufacturing.

Project Showcase

A short showcase of the projects we've done.
