

HOISTING AND STOWING CHAIRTOPPER

HOISTING AND STOWING CHAIRTOPPER

Load, transport and retrieve your folding frame wheelchair using a roof top box

The **Chairtopper** is a valet service for your wheelchair. When you get seated into the vehicle, the Chairtopper will take care of your wheelchair with one easy operation. When you are ready to leave at your destination, simply press the push button handset and the Chairtopper will bring your wheelchair back to your door opening position so that you can remain **independent while travelling** to the places you need to be.

The **roof top box design** means that your wheelchair will be safely stored and protected from the elements. Keeping the wheelchair outside of your vehicle means you will always have an **interior free from dirt** or similar from the wheels as well as keeping the full capacity of the interior. The vehicles inside can now be used for what it was designed for, people and luggage.

The Chairtopper is a specifically designed unit for vehicle transport and can be painted to match the vehicles colouring. This product will provide you with the **independence you deserve**.
