Nuclear Silver Mystery

Over 14 thousand tons of silver were taken from the U.S. treasury to use in the Y-12 uranium separation facility as part of the WWII Manhattan Project. Some of it was purportedly lost and never returned, about .0036 of .01 of 14000 x 2000 lbs x 12 (to get ounces).

So: .0036 x .01 then that times 14000x2000x12 = ounces never returned

Result: .000036 x 336,000,000 ounces

Final: 12,096 times today’s price of $14 an ounce is: $169,344    So, where is almost a quarter of a million in silver that is missing?
