I am responding to your letter asking for clarification of the requirements of title III of the Americans with Disabilities Act (ADA) , 42 U. S. C. 12101 et seq. , and this Department 's regulation implementing title III, 28 C.F.R. pt. 36. You have asked whether the ADA requires the North Memorial Medical Center to make its mobile health care screening vans accessible to people with disabilities, and, if it does not, what alternative arrangements to provide equivalent services for people with disabilities would be acceptable.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA, and it is not binding on the Department.

A medical center is a place of public accommodation subject to title III of the ADA. As such, it is required to make its services accessible to people with disabilities in accordance with the full range of title III requirements, such as nondiscriminatory eligibility criteria; reasonable modifications in policies, practices, and procedures; provision of auxiliary aids; and removal of barriers in existing facilities. In addition, it is required to comply with the new construction and alteration requirements for buildings and facilities established by this Department's regulation implementing title III.

cc: Records, Chrono, Wodatch, Bowen, Blizard, FOIA, Library
n:\udd\mercado\plcrtltr\berg.jlb

Although mobile health care screening vans are "facilities" subject to title III, the Department's current regulation does not establish standards for the design and construction of such facilities. Therefore, the medical center is not currently required to purchase health care screening vans that meet specific design criteria. The medical center, however, is required to remove architectural, communication, and transportation barriers in its vans to the extent that it is readily achievable to do so.

If it is not readily achievable to make the health screening vans accessible, then you must consider any alternative method of providing access to the health screening van's services that is readily achievable. Such services should be made available to individuals with disabilities at the same cost as the services provided at the van site.

While we cannot tell you which alternative methods of providing access would be readily achievable for you, options that you may wish to consider include:

providing comparable services at an accessible site at your

medical facility, "bundled" in a way that would enable an individual with a disability to obtain the same range of services with a comparable degree of convenience as the services that are provided by the van;

using the mobile health screening van to deliver the services to persons with disabilities in their own homes; or

transporting people with disabilities from their homes or the van site to an accessible facility where they can receive the services that are being provided by the van.

For your information, I am enclosing a copy of the regulation implementing title III of the ADA and the Department's Title III Technical Assistance Manual, which was developed to assist individuals and entities subject to the ADA to understand the requirements of title III. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

TO WHOM IT MAY CONCERN:

I am writing to request specific information regarding any recommendations you may have to assure our compliance with the ADA. I am writing as a representative of North Memorial Medical Center, a community hospital in Minneapolis, Minnesota. We are currently reviewing the possibility of purchasing a mobile van. The purpose of this van would be two-fold. One, to provide low cost or free public health or screening types of services to the community. Services which may be included would be health

history questionnaires, cholesterol screening, diabetes screening, pulmonary function testing, hearing screening and maternal child care information. We are currently questions whether or not this van would need to be accessible to those in wheelchairs or with significant ambulatory disabilities. Obviously the majority of the commercial vans available do not meet this need.

You should understand that we would have available similar services at the Medical Center. Obviously the exact character of the service might differ somewhat and would not be a neatly "bundled" as it would be on the health care screening van.

I would appreciate you response to the following specific questions.

1. Does ADA require that we make the health care screening van accessible to wheelchairs, walkers, or patients with significant disabilities?

2. Is it acceptable to offer similar services at an off site location, i.e. at the Medical Center? How similar do these services need to be and their availability, convenience, and cost?

Central Offices located at North Memorial Medical Center
(612) 520-5551 3300 North Oakdale Robbinsdale, MN 55422
---

3. Would the Medical Center be responsible for transferring the potential consumer to the Medical Center? We currently would not envision making transportation available to some off site location where the van would be located. However, the van might be more conveniently located relative to the patient's primary residence.

I have included a rough blueprint of the types of vans we are currently considering. As you may realize, the majority of these vans as currently configured are not easily reconfigured to something that is handicapped accessible.

I would appreciate your telephone or written response at your earliest possible convenience. We are well into the development process and would appreciate this input to assure our compliance with the ADA.

Thank you for your help in this matter. Feel free to contact me at any time on a digital pager XXXXXXXX or in my office during business hours at 1-612-520-5551.

Sincerely,

Mark Berg, M.D.
Medical Director
NorthWorks Program

T. 5-13-93

DJ 202-82-1

MAY 20 1993

Mr. Gene J. Colin
Chair
State Building Code Council
State of Washington
Ninth and Columbia Building, MS/GH-51
Olympia, Washington 98504-4151

Dear Mr. Colin:

This letter is an initial response to your request that the Department of Justice certify that the State Regulations for Barrier Free Design adopted by the Washington State Building Code Council ("Council") on November 8, 1991, meet or exceed the new construction and alterations requirements of title III of the Americans with Disabilities Act of 1990 (ADA), 42 U.S.C. 12101 et seq., and this Department's regulation implementing title III, 28 C.F.R. Part 36 (1992).

I would like to thank the Council and its staff for the cooperation and patience shown over the past several months. The review process has been a lengthy one with considerable telephone conversations, meetings, and exchanges of information. The Council and its staff, especially Willy O'Neill, have responded to our questions quickly and professionally. This lengthy review process is attributable to your request's status as our first certification review and the likelihood that it will establish a precedent for all future reviews. Further, in an effort to carry out our responsibilities under the ADA and to provide helpful and responsive feedback to the Council, we have undertaken a comprehensive and detailed review of materials submitted.

After reviewing the material submitted to the Department of Justice, we have determined that the information the Council has provided to us is incomplete. We, therefore, request additional information as well as clarification of some provisions before we make a preliminary determination as to whether the materials submitted meet or exceed the requirements of the ADA.

To assist you in this process, we have prepared a side-by-side comparison of the Washington State Regulations (WSR)

cc: Records, Chrono, Wodatch, Blizard, Lusher, FOIA, Library
n:\udd\mercado\plcrtltr\colin.rhl

01-02087

submitted and the applicable sections of the 1991 Uniform Building Code (UBC) to the ADA title III regulations (including the ADA Accessibility Guidelines for Buildings and Facilities ("ADAAG")). A copy of the side-by-side analysis, which is enclosed, identifies those elements that do not appear to satisfy the requirements of the ADA. The side-by-side comparison identifies sections of the ADAAG for which we could find no

equivalent provision in the WSR. They are identified by the characters "NE." Other sections are designated "possibly not equivalent" (PNE). Some elements of the WSR that have been identified as "possibly not equivalent" appear to be typographical errors, e.g., references to the wrong section of the regulation. Other elements designated "possibly not equivalent" simply require further clarification by the Council regarding their intent and meaning.

While the side-by-side comparison should give the Council a comprehensive picture of the areas of concern, I would like to highlight some of the major differences between the submitted code and the ADA. These differences are as follows:

1) There are no technical requirements for accessible elevators or platform lifts. The WSR incorporates by reference the requirements of Chapter 296-81 of the Washington Administrative Code, which was not submitted for certification. (See 51-20-3105(c) 2 and 51-20-3105(c) 3.)

2) The WSR provides that where "full compliance is impractical due to unique characteristics of the terrain, the building official may grant modifications . . . provided that any portion of the building or structure that can be made accessible shall be made accessible to the greatest extent practical." This provision appears to apply a lower standard than the ADA, which requires new construction to comply with the requirements of ADAAG unless it is structurally impracticable to comply. (See 51-20-3101(e)

3) The WSR allows an exemption for "floors or portions of floors that are not customarily occupied (emphasis added) including but not limited to . . . machinery, mechanical and electrical equipment rooms." The use of the phrase "not customarily occupied" and the use of machinery, mechanical and electrical equipment rooms as examples applies this exemption to areas not generally exempt under ADA. Under ADA, unless machinery, mechanical, and electrical equipment rooms are non-occupiable spaces accessed only by ladders, catwalks, crawl spaces, very narrow passageways, or freight (non-passenger) elevators, they must comply Pith the requirements of 4.1.1(3) Areas Used Only by Employees as Work Areas. (See 51-20-3103(a) 1. EXCEPTIONS:1.)

4) The WSR includes a provision that permits construction of inaccessible elements and spaces on floors of less than 3000 square feet, which are located above or below the accessible

ground floor and where no elevator access is required by the WSR or the ADA, if the facility provides accessible services on an accessible floor. (See 51-20-3103(a) 2.) The title III regulations require elements and spaces on such floors to meet the same accessibility requirements as those applicable to the accessible ground floor or those floors connected by elevators.

5) The WSR provides that "the path of travel need not be made accessible if the cost of compliance with this part would exceed 20% of the total project cost, inclusive of the cost of eliminating barriers, within a 36 month period" (emphasis added). (See 51-20-3114(a) 2. EXCEPTION.) This provision appears to include all costs of removing barriers within a 36 month period in the 20% formula for disproportionality. (See 36.403(h)(2).) The ADA requires a covered entity to spend up to 20% of the cost of each alteration to an area containing a primary function on accessibility modifications to the path of travel. These funds must be spent at the time that the primary function alteration is done. The only situation in which the costs of alterations over a three-year period are considered is when a covered entity undertakes a series of small alterations to primary function areas served by the same path of travel without making the path of travel accessible. The cost of readily achievable barrier removal required by section 302 of the ADA may not be counted toward meeting the obligation to make the path of travel accessible.

6) It is difficult to determine what accessibility provisions would apply to hotels, motels, inns, resorts, or to homeless shelters due to the use in differing terminology. These differences are highlighted in the side-by-side comparison.

7) The WSR uses the ADAAG table to establish the number of accessible rooms required in hotels and the number or percentage of rooms that are required to have roll-in showers. However, the WSR do not clearly state that the number of accessible rooms with roll-in showers are in addition to the other required rooms as required by section 9.1.2 of ADAAG. We have been told by Council staff that the State code officials interpret the provision to require rooms with roll-in showers as included in the required 4% accessible rooms rather than being in addition to the 4%. (.See 51-20-3103(a) 8.C.)

8) Some of the definitions used in the submitted materials differ in some respects from the ADAAG definitions. These definitional differences are highlighted in the side-by-side analysis. The most problematic are the definitions of mezzanine, assembly building, and story.

01-02089

9) The WSR's technical specifications for visible alarms differ from ADAAG. Certain ADAAG specifications for visible alarms (including color, intensity, and flash rate) are contained in the appendix to the WSR. (See 51-20-3106(o).)

10) The WSR does not contain ATM requirements.

11) The WSR's procedures for determining when accessibility modifications would threaten or destroy the historic significance of a building or a facility do not conform to the ADA requirements. Specifically, under the WSR, the authority to make that determination is given to the building official, not the State Historic Preservation Officer (or certified local historic preservation program) as provided under the ADA Regulations (See 51-20-3113(a).)

We understand that after the Council submitted its request for certification, the Washington Department of Labor and Industries continued to work on requirements for elevators and platform lifts. We have also been informed that the Council entered into additional rulemaking in July 1992, to correct technical errors and to make editorial corrections in the 1992 State Regulations for Barrier Free Facilities. If those changes and any others that are directly related to the request for certification are now final, we invite you to supplement the submission with those regulations before we make a final determination on whether to certify the state's barrier-free regulations.

Please include the notice of public hearing, copies of transcripts from the hearings, and copies of any standards referenced by the revised sections if not previously submitted. Please note, pursuant to 36.603(b)(1)-(3) of this Department's regulation, the entire package submitted for certification, including copies of the proposed request and supporting materials, must have been made available for public examination and subject to comment at hearings. The elevator code and interpretations made by the Council should be included. We also request that you review the side-by-side comparison to identify any areas where we may have overlooked relevant comparable provisions.

We believe it would greatly facilitate completion of our review of this matter, if Council representatives would be willing to meet with our staff. Such a meeting would serve to address all of the areas of concern identified in the side-by-side comparison, to provide additional information about any provisions of the Washington State Regulations that we may have overlooked in our analysis, to clarify interpretations of the

regulations, and to otherwise discuss and resolve any questions that we or the Council may have regarding this matter. If you believe that such a conference would be a worthwhile endeavor, we

would be willing to schedule such a meeting at the Council's offices at the earliest, mutually acceptable time.

If you have any questions concerning this letter or if we can assist you in preparing the requested information, please call Janet Blizard or Ruth Lusher of our staff at (202) 307-0663. Please include a reference to DJ number 202-82-1, the number assigned to this matter, in any further correspondence with us.

Sincerely,

John L. Wodatch

Ms. Barbara S. Drake, Deputy,
U.S. Assistant Attorney General
Office on the Americans With Disabilities Act,
Civil Rights Division
U.S. Department of Justice
P.O. Box 75087
Washington D.C. 20013

Re: Request for Certification

Dear Ms. Drake:

Enclosed is the State of Washington's Request for Certification of the State Regulations for Barrier-Free Facilities as adopted by the Washington State Building Code Council on November 8, 1991. The Council has revised the State Regulations for Barrier-Free Facilities in order to make them equivalent to the final Americans with Disabilities Act Accessibility Guidelines (ADAAG) as published by the Department of Justice on July 26, 1991.

Included in the request, in duplicate, are copies of the following documents:

1. A brief overview of the State Regulations for Barrier-Free Facilities; and,

2. Chapter 51-20 of the Washington State Administrative Code which includes the State Regulations for Barrier-Free Facilities; and,

3. Chapters 19.27, 19.27A, and 70.92 of the Revised Code of Washington which created the State Building Code Council and mandate adoption of the State Building Code and the State regulations for Barrier-Free Facilities as part of the code; and,

4. The State Administrative Procedures Act (APA) (RCW 34.05) and all relevant documentation required by the APA for adopting formal state agency rules including proposed rule adoption and public hearing notices; and,

Administered by the Department of Community Development
01-02091

5. The public hearings record and written testimony on adoption of the revised State Regulations for Barrier-Free Facilities; and,

6. State Building Code Council Public Hearings Notice Mailing List for the State Regulations for Barrier-Free Facilities; and,

7. 1991 Uniform Fire Code Standard No 14-1; and

8. State Building Code Council membership list and miscellaneous information.

It should be noted that the State Regulations for Barrier-Free Facilities are comprised in Chapter 51-20-3100 of the Washington Administrative Code as an amendatory section to Chapter 31 of the 1991 Uniform Building Code (UBC). In addition to Chapter 31, Sections 51-20-005; 51-20-3304 (b) and (h) and 51-20-3306 (g) and (i) of the Washington Administrative Code contain additional amendatory language to the corresponding sections in the UBC in order to ensure equivalency with ADAAG.

The UBC is developed and published by the International Conference of Building Officials (ICBC). A copy of the 1991 Uniform Building Code has already been provided to Department of Justice staff.

Finally, the State of Washington has submitted the revised Chapter 31 of the 1991 UBC to the ICBO as a formal code change

proposal.

If you have any questions or comments on our request for certification, please contact Barrier-Free Committee staff Willy O'Neil at (206) 586-0486. Thank you for your consideration.

Sincerely,

Gene J. Colin, Chair

ENCLOSURE

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This code comparison was prepared by the staff of the Public Access Section to provide informal guidance to assist the Washington State Building Code Council to compare its code requirements to the requirements of the ADA. However, this technical assistance does not constitute a determination by the Department of the Council's rights or responsibilities under the ADA, and it is not binding on the Department.

(This document was originally in CHART format - however - due to ASCII formatting, it now appears as follows:)

ADA Requirements

1. Purpose. This document sets guidelines for accessibility to places of public accommodation and commercial facilities by individuals with disabilities. These guidelines are to be applied during the design, construction, and alteration of such buildings and facilities to the extent required by regulations issued by Federal agencies, including the Department of Justice, under the Americans with Disabilities Act of 1990.

The technical specifications 4.2 through 4.35 of these guidelines are the same as those of the American National Standard Institute's document A117.1-1980, except as noted in this text by italics. However, sections 4.1.1 through 4.1.7 and sections 5 through 10 are different from ANSI Al17.1 in their entirety and are printed in standard type.

The illustrations and text of ANSI Al17.1 are reproduced with permission from the American National Standards Institute. Copies of the standard may be purchased from the American National Standards Institute at 1430 Broadway, New York, New York 10018.

Washington State Regulations

51-20-002 Purpose. The purpose of these rules is to implement the provisions of chapter 19.27 RCW, which provides that the state building code council shall maintain the State Building Code in a status which is consistent with the purpose as set forth in RCW 19.27.020. In maintaining the codes the council shall regularly review updated versions of the codes adopted under the act, and other pertinent information, and shall amend the codes as deemed appropriate by the Council.

RCW 19-27-020 (5). To provide for standards and specifications for making buildings and facilities accessible to and usable by physically disabled persons.

51-20-003 Uniform Building Code. The 1991 edition of the Uniform Building Code as published by the International Conference of Building Officials and available from the International Conference of Building Officials, 5360 South Workman Mill Road, Whittier, California 90601 is hereby adopted by reference with the following additions, deletions, and exceptions.

41-20-005 Uniform Building Code Requirements for Barrier-Free Accessibility. Chapter 31 and other Uniform Build Code requirements for barrier-free access are adopted pursuant to chapters 70.92 and 19.27 RCW.

Commentary

NE ADA coverage is not limited to people with physical disabilities.

NE - Not equivalent to ADA provisions
PNE - Possibly/potentially not equivalent to ADA provisions

ADA Requirements

1. Purpose, continued.

2.1 Provisions for Adults. The specifications in these guidelines are based upon adult dimensions and anthropometrics.

2.2 Equivalent Facilitation Departures from particular technical

and scoping requirements of this guideline by the use of other designs and technologies are permitted where the alternative designs and technologies used will provide substantially equivalent or greater access to and usability of the facility.

Miscellaneous Instructions and Definitions.

3.1 Graphic Conventions. Graphic conventions are shown in Table 1. Dimensions that are not marked minimum or maximum are absolute, unless otherwise indicated in the text or captions.

Washington State Regulations

Pursuant to RCW 19.27.040, Chapter 31 and requirements affecting barrier-free access in Sections 3304 (b), 3304 (h), 3306 (g), and 3306 (i) shall not be amended by local governments.

In case of conflict with other provisions of this code, chapter 31 and requirements affecting barrier-free access in Sections 3304 (b), 3304 (h), 3306 (g), and 3305 (i) shall govern.

51-20-3101 Scope. (a) General. Buildings or portions of buildings shall be accessible to persons with disabilities as required by this chapter. Chapter 31 has been amended to comply with the Federal Fair Housing Act (FFHA) Guidelines as published by the U.S. Department of Housing and Urban Development (March 1991) and the Americans with Disabilities Act (ADA) Guidelines as published by the Architectural and Transportation Barriers Compliance Board and the Department of Justice (July 1991).

Reference is made to appendix Chapter 31 for FFHA and ADA requirements not regulated by this chapter.

(b) Design. The design and construction of accessible building elements shall be in accordance with this chapter. For a building, structure, or building element to be considered to be accessible, it shall be designed and constructed to the minimum provisions of this chapter.

51-20-3106 (d) Alternate Methods. The application of Section 105 to this chapter shall be limited to the extent that alternate methods of construction, designs, or technologies shall provide substantially equivalent or greater accessibility.

Commentary

ADA Requirements

3.2 Dimensional Tolerances. All dimensions are subject to conventional building industry tolerances for field conditions.

3.3 Notes. The text of these guidelines does not contain notes or footnotes. Additional information, explanations, and advisory materials are located in the Appendix. Paragraphs marked with an asterisk have related non-mandatory material in the Appendix. In the Appendix, the corresponding paragraph numbers are preceded by an A.

3.4 General Terminology.

comply with Meet one or more specifications of these guidelines.

if, if... then Denotes a specification that applies only when the conditions described are present.

may, Denotes an option or alternative.

shall, Denotes a mandatory specification or requirement.

should, Denotes an advisory specification or recommendation.

3.5 Definitions.

Access Aisle. An accessible pedestrian space between elements, such as parking spaces, seating, and desks, that provides clearances appropriate for use of elements.

Accessible. Describes a site, building, facility, or portion thereof
that complies with these guidelines.

Washington State Regulations

51-20-3101 (a) General. Reference is made to appendix Chapter 31 for FFHA and ADA requirements not regulated by this chapter. UBC Section 103 . . . Wherever in this code reference is made to the appendix, the provisions in the appendix shall not apply unless specifically adopted.

Chapter 4 Definitions and Abbreviations Section 401 (a) General. For the purpose of this code, certain terms,

phrases, words and their derivatives shall be construed as specified in this chapter. Words used in the singular include the plural and the plural the singular. Words used in the masculine gender include the feminine and the feminine the masculine.

Where terms are not defined, they shall have their ordinary accepted meanings within the context with which they are used. Webster's Third New International Dictionary of the English Language, Unabridged, copyright 1986, shall be considered as providing ordinarily accepted meanings.

Shall, as used in this code is mandatory.

WAC 51-20-3102 Definitions. Section 3102. For the purpose of the chapter certain terms are defined as follows (additional relevant definitions from UBC and WSR are included):

Access Aisle is an accessible pedestrian space between elements such as parking spaces, seating, and desks, that provides clearances appropriate for use of elements.

Accessible is approachable and usable by persons with disabilities.
51-3101 (b) Design. The design and construction of accessible building elements shall be in accordance with this chapter. For a building, structure or building element to be considered to be accessible, it shall be designed and constructed to the minimum provisions of this chapter.

Commentary

3 ADA/Washington State May 14, 1993

Technical Assistance Document

ADA Requirements

Accessible Element. An element specified by these guidelines (for
example, telephone, controls, and the like).

Accessible Route. A continuous unobstructed path connecting all accessible elements and spaces of a building or facility. Interior
accessible routes may include corridors, floors, ramps, elevators, lifts, and clear floor space at fixtures. Exterior accessible

routes may include parking access aisles, curb ramps, crosswalks at vehicular ways, walks, ramps and lifts.

Accessible Space. Space that complies with these guidelines.

Adaptability. The ability of certain building spaces and elements, such as kitchen counters, sinks, and grab bars, to be added or altered so as to accommodate the needs of individuals with or without disabilities or to accommodate the needs of persons with different types or degree of disability.

Addition. An expansion, extension, or increase in the gross floor area of a building or facility.

Administrative Authority. A governmental agency that adopts or enforces regulations and guidelines for the design construction, or alteration of buildings and facilities.

Washington State Regulations

See above.

Accessible Route of Travel is a continuous unobstructed path connecting all accessible elements and spaces in an accessible building or facility that can be negotiated by a person using a wheelchair and that is usable by persons with other disabilities.

See "accessible" above.

Chapter 4. Definitions and Abbreviations Sec. 402 Addition is an extension or increase in floor area or height of a building or structure.

700.92.130 (1) "Administrative authority" means the building department of each county, city, or town of this state.

70.92.130 (3) "Council" means the "state building code advisory council."

Chapter 4. Definitions and Abbreviations Sec. 403 Building Official is the officer or other designated authority charged with the administration and enforcement of this code, or the building official's duly authorized representative.

Commentary

ADA Requirements

Alteration. An alteration is a change to a building or facility made by, on behalf of, or for the use of a public accommodation or commercial facility, that affects or could affect the usability of the building or facility or part thereof. Alterations include, but are not limited to, remodeling, renovation, rehabilitation, reconstruction, historic restoration, changes or rearrangement of the structural parts or elements, and changes or rearrangement in the plan configuration of walls and full-height partitions. Normal maintenance, reroofing, painting or wallpapering, or changes to mechanical and electrical systems are not alterations unless they affect the usability of the building or facility.

Area of Rescue Assistance. An area, which has direct access to an exit, where people who are unable to use stairs may remain temporarily in safety to await further instructions or assistance during emergency evacuation.

Assembly Area. A room or space accommodating a group of individuals for recreational, educational, political, social, or amusement purposes, or for the consumption of food and drink.

Automatic Door. A door equipped with a power-operated mechanism and controls that open and close the door automatically ,upon receipt of a momentary actuating signal. The switch that begins the automatic cycle may be a photoelectric device, floor mat, or manual switch (see power-assisted door).

Washington State Regulations

51-20-3110 Alteration is any change, addition or modification in construction or occupancy.

Alteration, Substantial is any alteration where the total cost of all alterations (including but not limited to electrical, mechanical, plumbing and structural changes) for a building or facility within any 120 month period amounts to 60 percent or more of the assessed value.

70.92.120 (2) "Substantially remodeled or substantially rehabilitated" means any alteration or restoration of a building or structure within any twelve-month period, the cost of which exceeds sixty percent of the currently appraised value of the particular building or structure.

Area for Evacuation Assistance is an accessible space which is protected from fire and smoke and which facilitates egress.

Chapter 4 Definitions and Abbreviations Section 402. Assembly Building is a building or portion of a building used for the gathering together of 50 or more persons for such purposes as deliberation, education, instruction, worship, entertainment, amusement, drinking or dining or awaiting transportation.

Automatic Door is a door equipped with a power-operated mechanism and controls that open and close the door automatically, upon receipt of a momentary actuating signal. The switch that begins the automatic cycle may be a photoelectric device, floor mat or manual switch (see also, Power-assisted Door).

Commentary

NE ADAAG has no requirement regarding number of people.

5 ADA Washington State May 14, 1993 Technical Assistance Document

ADA Requirements

Building. Any structure used and intended for supporting or sheltering any use or occupancy

Circulation Path. An exterior or interior way of passage from one place to another for pedestrians, including, but not limited to, walks, hallways, courtyards, stairways, and stair landings.

Clear. Unobstructed.

Clear Floor Space. The minimum unobstructed floor or ground space required to accommodate a single, stationary wheelchair and occupant.

Closed Circuit Telephone. A telephone with dedicated line(s) such as a house phone, courtesy phone or phone that must be used to gain entrance to a facility.

Common Use. Refers to those interior and exterior rooms, spaces or elements that are made available for the use of a restricted, group of people (for example, occupants of a homeless shelter,

the occupants of an office building, or the guests of such occupants).

Cross Slope. The slope that is perpendicular to the direction of travel (see running slope).

Curb Ramp. A short ramp cutting through a curb or built up to it.

Detectable Warning. A standardized surface feature built in or applied to walking surfaces or other elements to warn visually impaired people of hazards on a circulation path.

Dwelling Unit. A single unit which provides a kitchen or food preparation area, in addition to rooms and spaces for living, bathing, sleeping, and the like. Dwelling units include a single family home or a townhouse used as a transient group home; an apartment building used as a shelter; guestrooms in a hotel that provide sleeping accommodations and food preparation areas; and other similar facilities used on a transient basis. For purposes of these guidelines, use of the term "Dwelling Unit" does not imply the unit is used as a residence.

Washington State Regulation

Chapter 4 Definitions and Abbreviations Section 403
Building is any structure used or intended for supporting or sheltering any use or occupancy.

Clear is unobstructed.

Clear Floor Space is unobstructed floor or ground space (See Section 3106(b)).

Common Use Areas are rooms, spaces or elements inside or outside a building that are made available for use by occupants of and visitors to the building.

Cross Slope is the slope that is perpendicular to the direction of travel.

Curb Ramp is a short ramp cutting through or built up to a curb.

Detectable Warning is a standardized surface feature built in or applied to walking surfaces or other elements to warn visually impaired persons of hazards on a circulation path.

Sec. 405 D. Dwelling Unit is any building or portion thereof

which contains living facilities, including provisions for sleeping, eating, cooking and sanitation, as required by this code, for not more than one family, or a congregate residence for 10 or less persons.

Commentary

PNE WSR seems to be defining residential dwelling units and sets an occupancy size of 10 or less persons. ADAAG defines a dwelling unit used on a transient basis and sets no occupancy limitations.

ADA Requirements

Egress, Means of. A continuous and unobstructed way of exit travel from any point in a building or facility to a public way. A means of egress comprises vertical and horizontal travel and may include intervening room spaces, doorways, hallways, corridors, passageways, balconies, ramps, stairs, enclosures, lobbies, horizontal exits, courts and yards. An accessible means of egress is one that complies with these guidelines and does not include stairs, steps, or escalators. Areas of rescue assistance or evacuation elevators may be included as part of accessible means of egress.

Element. An architectural or mechanical component of a building, facility, space, or site, e.g., telephone, curb ramp, door, drinking fountain, seating, or water closet.

Entrance. Any access point to a building or portion of a building or facility used for the purpose of entering. An entrance includes the approach walk, the vertical access leading to the entrance platform, the entrance platform itself, vestibules if provided, the entry door(s) or gate(s), and the hardware of the entry door(s) or gate(s).

Washington State Regulations

Dwelling Unit. Type A is an accessible dwelling unit that is designed and constructed to provide greater accessibility than a Type B dwelling unit. (Type A dwelling units constructed in accordance with this chapter also meet the design standards for Type B dwelling units.)

Dwelling Unit. Type B is an accessible dwelling unit that is designed and constructed to the U.S. Department of Housing and Urban Development Federal Fair Housing Act Accessibility Guidelines.

Single-Story Dwelling Unit is a dwelling unit with all finished living spaces located on one floor.

Multistory Dwelling Unit is a dwelling unit with finished living space located on one floor, and the floor or floors immediately above or below it.

Accessible Exit is an exit, as defined in Section 3301 (b), which complies with this chapter and does not contain stairs, steps, or escalators.

Chapter 33, Section 3310 (b) Exit is a continuous and unobstructed means of egress to a public way and shall include intervening aisles, doors, doorways, gates, corridors, exterior exit balconies, ramps, stairways, smoke-proof enclosures, horizontal exits, exit passageways, exit courts and yards.

Element is an architectural or mechanical component of a building, facility, space, or site, such as telephones, curb ramps, doors, drinking fountains, seating, or water closets.

Commentary

PNE No definition.

7 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

Facility. All or any portion of buildings, structures, site improvements, complexes, equipment, roads, walks, passageways, parking lots, or other real or personal property located on a site.

Ground Floor. Any occupiable floor less than one story above or below grade with direct access to grade. A building or facility always has at least one ground floor and may have more than one ground floor as where a split level entrance has been provided or where a building is built into a hillside.

Mezzanine or Mezzanine Floor. That portion of a story which is an intermediate (floor level placed within the story and having occupiable space above and below its floor.

Marked Crossing. A crosswalk or other identified path intended for pedestrian use in crossing a vehicular way.

Washington State Regulations

Primary Entry is a principal entrance through which most people enter the building. A building may have more than one primary entry.

Primary Entry Level is the floor or level of the building on which the primary entry is located.

51-20-0420 Section 420. Structure is that which is built or constructed, an edifice or building of any kind, or any piece of work artificially built up or composed of parts joined together in some definite manner.

Chapter 4, Section 408 Grade (Adjacent Ground Elevation) is the lowest point of elevation of the finished surface of the ground, paving or sidewalk within the area between the building and the property line or, when the property line is more than 5 feet from the building, between the building and a line 5 feet from the building.

51-20-0407 Section 407 Floor Area is the area included within the surrounding exterior walls of a building or portion thereof, exclusive of vent shafts and courts. The floor area of a building, or portion thereof, not provided with surrounding exterior walls shall be the usable area under the horizontal projection of the roof or floor above

Ground Floor is any occupiable floor less than one story above or below grade with direct access to grade. A building may have more than one ground floor.

Landing is a level area (except as otherwise provided), within or at the terminus of a stair or ramp.

Chapter 4 Definitions and Abbreviations Section 414 Mezzanine or Mezzanine Floor is an intermediate floor placed within a room.

Marked Crossing is a crosswalk or other identified path intended for pedestrian use in crossing a vehicular way.

Commentary

PNE WSR's definition does not appear to differentiate between a mezzanine and a raised or lowered floor level. Clarification is needed here.

ADA Requirements

Multifamily Dwelling. Any building containing more than two dwelling units.

Occupiable. A room or enclosed space designed for human occupancy in which individuals congregate for amusement, educational or similar purposes, or in which occupants are engaged at labor, and which is equipped with means of egress, light, and ventilation.

Operable Part. A part of a piece of equipment or appliance used to insert or withdraw objects, or to activate, deactivate, or adjust the equipment or appliance (for example, coin slot, pushbutton, handle).

Path of Travel. DOJ 36.403(e). (1) A "path of travel" includes a continuous, continuous, unobstructed way of pedestrian passage by means of which the altered area may be approached, entered, and exited, and which connects the altered area with an exterior approach (including sidewalks, streets, and parking areas), an entrance to the facility, and other parts of the facility.

(2) An accessible path of travel may consist of walks and sidewalks, curb ramps and other interior or exterior pedestrian ramps; clear floor paths through lobbies, corridors, rooms, and other improved areas; parking access aisles; elevators and lifts; or a combination of these elements.

(3) For the purposes of this part, the term "path of travel" also includes the restrooms, telephones, and drinking fountains serving the altered area.

Person with a Disability. DOJ Rule 36.104. Disability means, with respect to an individual, a physical or mental impairment that substantially limits one or more of the major life activities of such individual; a record of such an impairment; or being regarded as having such an impairment.

Washington State Regulations

Chapter 4 Definitions and Abbreviations Section 416
Occupancy is the Purpose for which a building, or part thereof, is used or intended to be used.

Section 409 H Habitable Space (Room) is space in a structure for living, sleeping, eating or cooking. Bathrooms, toilet compartments, closets, halls, storage or utility space, and similar areas, are not considered habitable space.

51-20-3110 Path of Travel means a continuous, unobstructed way of pedestrian passage by means of which an altered area may be approached, entered, and exited, and which connects the altered area with an exterior approach (including sidewalks. streets, and parking areas), an entry to the facility, and other parts of the facility. For the purposes of this part, the term path of travel also includes restrooms, telephones, and water fountains serving the altered area.

Person With Disability is an individual who has an impairment, including a mobility, sensory or cognitive impairment, which results in a functional limitation in access to and using a building or facility.

Commentary

9 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

Power-Assisted Door is a door used for human passage with a mechanism that helps to open the door, or relieves the opening resistance of the door, upon the activation of a switch or a continued force applied to the door itself.

Public Use. Describes Interior or exterior roams or spaces that are made available to the general public. Public use may be provided at a building or facility that is privately at publicly owned.

Primary Function. DOJ Rule 36.403(b). A "primary function" is a major activity for which the facility is intended.

Ramp. A walking surface which has a running slope greater that 1:20.

Running Slope. The slope that is parallel to the direction of travel (see cross slope).

Service Entrance. An entrance intended primarily for delivery of goods or services.

Signage. Displayed verbal, symbolic, tactile, and pictorial information.

Site. A parcel of land bounded by a property line or a designated portion of a public right-of-way.

Site Improvement. Landscaping, paving for pedestrian and vehicular ways, outdoor lighting, recreational facilities, and the like, added to a site.

Sleeping Accommodations. Rooms in which people sleep; for example, dormitory and hotel or motel guest rooms or suites.

Space. A definable area, e.g., room, toilet room, hall, assembly area, entrance, storage room, alcove, courtyard, or lobby.

Washington State Regulation

Power-assisted Door. A door used for human passage with a mechanism that helps to open the door, or relieve the opening resistance of a door, upon the activation of a switch or a continued force applied to the door itself.

Public use Areas are interior or exterior rooms or spaces that are made available to the general public. Public use may be provided at a privately or publicly owned building or facility.

Primary Function is a major function for which the facility is intended.

Ramp is any walking surface having a running slope exceeding 1 inch vertical in 48 inches horizontal.

Service Entry is an entrance intended primarily for delivery of goods or services.

Site is a parcel of land bounded by a property line or a designated portion of a public right-of-way.

51-20-0420 Section 420 Structure

ADA Requirements

Story. That portion of a building included between the upper surface of a floor and upper surface of the floor or roof next above. If such portion of a building does not include occupiable space, it is not considered a story for purposes of these guidelines. There may be more than one floor level within a story as in the case of mezzanine or mezzanines.

Structural Frame. The structural frame shall be considered to be the columns and the girders beams, trusses and spandrels having direct connections to the columns and all other members which are essential to the stability of the building as a whole.

Tactile. Describes an object that can be perceived using the sense of touch.

Text Telephone. Machinery or equipment that employs interactive graphic (i.e., typed) communications through the transmission of coded signals across the standard telephone network. Text telephones can include, for example, devices known as TDDs (telecommunication display devices or telecommunication devices for deaf persons) or computers.

Washington State Regulations

51-20-0420 Section 420 Story is that portion of a building included between the upper surface of any floor and the upper surface of the floor next above, except that the topmost story shall be that portion of a building included between the upper surface of the topmost floor and the ceiling or roof above. If the finished floor level directly above a usable or unused under-floor space is more than 6 feet above grade as defined herein for more than 50 percent of the total perimeter or is more than 12 feet above grade as defined herein at any point, such usable or unused under-floor space shall be considered as a story.

51-20-0320 Section 420 Story, First is the lowest story in a building which qualifies as a story, as defined herein, except that a floor level in a building having only one floor level shall be classified as a first story, provided such floor level is not more than 4 feet below grade as defined herein, for more

than 50 percent of the total perimeter, or not more than 8 feet below grade, as defined herein, at any point.

51-20-1702 Structural Frame. The structural frame shall be considered to be the columns and the girders beams, trusses and spandrels having direct connections to the columns and all other members which are essential to the stability of the building as a whole. The members of floor or roof panels which have no connection to the columns shall be considered secondary members and not a part of the structural frame.

Tactile is an object that can be perceived using the sense of touch.

Text Telephone is machinery or equipment that employs interactive graphic (i.e., typed) communications through the transmission of coded signals across the standard telephone network. Text telephones include telecommunications display devices or telecommunication devices for the deaf (TDDs) or computers.

Commentary

NE When used with the definition of "ground floor", this definition could result in a ground floor, or first story, that is not occupiable or no ground floor or an occupied basement that is not considered a story. Clarification needed as to application of the definition.

ADA Requirements

Transient Lodging. A building, facility, or portion thereof, excluding inpatient medical care facilities, that contains one or more dwelling units or sleeping accommodations. Transient lodging may include, but is not limited to, resorts, group homes, hotels, motels, and dormitories.

DOJ 36.104(1). An inn, hotel, motel, or other place of lodging, except for an establishment located within a building that contains not more that five rooms for rent or hire and that is actually occupied by the proprietor of the establishment as the residence of the proprietor.

Vehicular Way. A route intended for vehicular traffic, such as a street, driveway, or parking lot.

Walk. An exterior pathway with a prepared surface intended for pedestrian use, including general pedestrian areas such as plazas and courts.

Washington State Regulations

51-20-0404 Section 404 Congregate Residence is any building or portion thereof which contains facilities for living, sleeping and sanitation, as required by this code, and may include facilities for eating and cooking, for occupancy by other than a family. A congregate residence may be a shelter, convent, monastery, dormitory, fraternity or sorority house but does not include jails, hospitals, nursing homes, hotels or lodging houses.

Chapter 4, Section 413 Lodging House is any building or portion thereof containing not more than five guest rooms where rent is paid in money, goods, labor or otherwise.

51-20-0409 Section 409 Hotel is any building containing six or more guest rooms intended or designed to be used, or which are used, rented or hired out to be occupied, or which are occupied for sleeping purposes by guests.

51-20-0409 Section 409 Motel Is any building containing six or more guest rooms intended or designed to be used, or which are used, rented or hired out to be occupied, or which are occupied for sleeping purposes by guests.

(See definition of Hotel) 51-20-1201 Group R. Occupancies Defined. Group R Occupancies shall be:
Division 1. Hotels and apartment houses. Congregate residence (each accommodating more than 10 persons
Division 2. Not used.
Division 3. Dwellings, family child day care homes and lodging houses. Congregate residences (each accommodating 10 persons or less).

Vehicular Way is a route intended for vehicular traffic, such as a roadway, driveway, or parking lot located on a site.

51-20-0417 Section 417 Pedestrian Walkway is a walkway used exclusively as a pedestrian trafficway.

Commentary

NE Definitions vary in several ways. WSR's are generally

more specific and narrow in scope. Coverage is based on different numbers of units or people served. Further clarification is needed as to where shelters and social service establishments fit.

ADA Requirements

ACCESSIBLE ELEMENTS AND SPACES: SCOPE AND TECHNICAL REQUIREMENTS.

4.1 Minimum Requirements

4.1.1* Application.

(1) General. All areas of newly designed or newly constructed buildings and facilities required to be accessible by 4.1.2 and 4.1.3 and altered portions of existing buildings and facilities required to be accessible by 4.1.6 shall comply with these guidelines, 4.1 through 4.35, unless otherwise provided in this section or as modified in a special application section.

Washington Sate Regulations

51-20-3101 Scope (a) General. Buildings or portions of buildings shall be accessible to persons with disabilities as required by this chapter.

Chapter 31 has been amended to comply with the Federal Fair Housing Act (FFHA) Guidelines as published by the U.S. Department of Housing and Urban Development (March 1991)and the Americans with Disabilities Act (ADA) Guidelines as published by the U. S. Architectural and Transportation Barriers Compliance Board and the Department of Justice (July, 1991).

Reference is made to Appendix Chapter 31 for FFHA and ADA requirements not regulated by this chapter.

51-20-3101 (b) Design. The design and construction of accessible building elements shall be in accordance with this chapter. For a building, structure or building element to be considered to be accessible, it shall be designed and constructed to the minimum provisions of this chapter.

51-20-3103 Building Accessibility (a) Where required. 1.

General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.

51-20-0104 Application to Existing Buildings and Structures. (a) General. Buildings and structures to which additions, alterations or repairs are made shall comply with all the requirements of this code for new facilities except as specifically provided In this section. See Section 1210 for provisions requiring installation of smoke detectors in existing Group R, Division 3 Occupancies.

Commentary

13 ADA/Washington State May 14, 1993

Technical Assistance Document

ADA Requirements

4.1.1 (2) Application Based on Building Use. Special application sections 5 through 10 provide additional requirements for restaurants and cafeterias, medical care facilities, business and mercantile, libraries, accessible transient lodging, and transportation facilities. When a building or facility contains more than one use covered by a special application section, each portion shall comply with the requirements for that use.

Washington State Regulations

51-20-3106 Accessible Design and Construction Standards. (a) General. Where accessibility is required by this chapter, it shall be designed and constructed in accordance with this section, unless otherwise specified in this chapter.

51-20-3103 Building Accessibility (a) Where required 1. General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.

UBC Section 503. (a) ... When a building houses more than one occupancy, each portion of the building shall conform to the requirements of the occupancy housed therein.

Commentary

ADA Requirements

4.1.1 (2) Continued.

Washington Sate Regulations

51-20-3103 Building Accessibility. (a) Where required. 1. General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.
(a) 2. Group A. Occupancies. A. General. All Group A Occupancies shall be accessible as provided in this chapter.
(a) 3. Group B. Occupancies. All Group B Occupancies shall be accessible as provided in this chapter. Assembly spaces in Group B Occupancies shall comply with Section 3103 (a)2 B.
4. Group E. Occupancies. All Group E. Occupancies shall be accessible as provided in this chapter. Assembly spaces in Group E Occupancies shall comply with Section 3103 (a) 2. B.
5. Group H Occupancies. All Group H Occupancies shall be accessible as provided in this chapter.
6. Group I Occupancies. All Group I Occupancies shall be accessible in all public use, common use and employee use areas, and shall have accessible patient rooms, cells and treatment or examination rooms as follows:
6. A. In Group I, Division 1.1 hospitals which do not specialize in treating conditions that affect mobility, all patient rooms in each nursing unit, including associated toilet rooms and bathrooms.
6. B. In Group I, Division 1.1 hospitals which do not specialize in treating conditions that affect mobility, all patient rooms in each nursing unit, including associated toilet rooms and bathrooms.
6. C. In Group I, Division 1.1 and Division 2 nursing homes and long-term care facilities, at least 1 in every 2 patient rooms, including associated toilet rooms and bathrooms.
6. D. In Group I, Division 3, mental health Occupancies, at least 1 in every 10 patient rooms, including associated toilet rooms and bathrooms.

Commentary

ADA Requirements

4.1.1 (2) Continued.

Washington State Regulation

6. E. In Group I, Division 3 jail, prison and similar Occupancies, at least 1 in every 100 rooms or cells, including associated toilet rooms and bathrooms.
In Group I, Division 1.1 and 2 Occupancies, at least one accessible entrance that complies with Section 3103 (b) shall be under shelter. Every such entrance shall include a passenger loading zone which complies with Section 3108 (b) 3.

51-20-3103 (a) 7. Group M. Occupancies. Group M, Division 1 Occupancies shall be accessible.
EXCEPTIONS: 1. Private garages, carports and sheds are not required to be accessible if they are accessory to dwelling units which are not required to be accessible.
2. In Group M., Division 1 agricultural buildings, access need only be provided to paved work areas and areas open to the general public.

51-20-3103 (a) 8. Group R. Occupancies. A. General. All Group R Occupancies shall be accessible as provided in this chapter, Public- and common-use areas and facilities such as recreational facilities, laundry facilities, garbage and recycling collection areas, mailbox locations, lobbies, foyers and management offices, shall be accessible.

Number of Dwelling Units, In all Group R, Division 1 apartment buildings the total number of Type A dwelling units shall be as required by Table No. 31-B. All other dwelling units shall be designed and constructed to the requirements for Type B units as defined in this chapter.

EXCEPTIONS: 1. Group R Occupancies containing three or fewer dwelling units.

Commentary

ADA Requirements

4.1.1 (2) Continued.

4.1.1 (3)* Areas Used Only by Employees as Work Areas. Areas that are used only as work areas shall be designed and constructed so that individuals with disabilities can approach, enter, and exit the areas. These guidelines do not require that any
areas used only as work areas be constructed to permit maneuvering within the work area or be constructed or equipped (i.e., with racks or shelves) to be accessible.

Washington State Regulations

51-20-3152

TABLE NO. 31-B
REQUIRED TYPE A DWELLING UNITS

Total Number of Dwelling Units on Site	Required Number of Type A Dwelling Units
0-10	None
11-20	1
21-40	2
41-60	3
61-80	4
81-100	5
For every 20 units or fractional part thereof, over 100	1 additional

51-20-3101 (c) Maintenance of Facilities. Any building, facility, dwelling unit or site which is constructed to be accessible or adaptable under this chapter shall be maintained accessible and/or adaptable during its occupancy.

See Occupancy Groups above.

Commentary

PNE The language above implies all areas are to be accessible in most occupancies, but in some occupancies it is specific (i.e., "paved work areas" in agricultural buildings). We need clarification regarding employee areas.

ADA Requirements

4.1.1 (4) Temporary Structures. These guidelines cover temporary buildings or facilities as well as permanent facilities.
Temporary buildings and facilities are not of permanent construction but are of extensively used or are essential for public use for a period of time. Examples of temporary buildings or facilities covered by these guidelines include, but are not limited to: reviewing stands, temporary classrooms, bleacher areas, exhibit areas, temporary banking facilities, temporary health screening services, or temporary safe pedestrian passageways around construction sites. Structures, sites and equipment directly associated with the actual processes of construction, such as
scaffolding, bridging, material hoists, or construction trailers are not included.

Washington State Regulations

51-20-3103 Building Accessibility (a) Where required. 1. General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.
51-20-3103 (a) 1. EXCEPTION 3. Temporary structures, sites and equipment directly associated with the construction process such as construction site trailers, scaffolding, bridging or material hoists are not required to be accessible.

51-20-0104 (e) Moved Buildings and Temporary Buildings. Buildings or structures moved into or within the jurisdiction shall comply with the provisions of this code for new buildings or structures.

Temporary structures such as reviewing stands and other miscellaneous structures, sheds, canopies or fences used for the protection of the public around and in conjunction with construction work may be erected by special permit from the building official for a limited period of time. Such buildings or structures need not comply with the type of construction or fire-resistive time periods required by this code. Temporary buildings or structures shall be completely removed upon the expiration of the time limit stated in the permit.

Commentary

PNE Two concerns exist. WSR appears to exempt reviewing stands and temporary safe pedestrian walkways around a building site. We need an interpretation as to whether 51-20-0104(e) applies here. If so, WSR does not appear to be equivalent.

ADA Requirements

4.1.1 (5) General Exceptions.

(a) In new construction, a person or entity is not required to meet fully the requirements of these guidelines where that person or entity can demonstrate that it is structurally impracticable to do so. Full compliance will be considered structurally impracticable only in those rare circumstances when the unique characteristics of terrain prevent the incorporation of accessibility features. If full compliance with the requirements of these guidelines is structurally impracticable, a person or entity shall comply with the requirements to the extent it is not structurally impracticable. Any portion of the building or facility which can be made accessible shall comply to the extent that it is not structurally impracticable.

4.1.1 (5) (b) Accessibility is not required to (i) observation galleries used primarily for security purposes; or (ii) in non-occupiable spaces accessed only by ladders, catwalks, crawl spaces, very narrow passageways, or freight (non-passenger) elevators, and frequented only by service personnel for repair purposes; such spaces include, but are not limited to, elevator pits, elevator penthouses, piping or equipment catwalks.

Washington State Regulations

51-20-3101 (e) Modifications. Where full compliance with this chapter is impractical due to unique characteristics of the terrain, the building official may grant modifications in accordance with Section 106, provided that any portion of the building or structure that can be made accessible shall be made accessible to the greatest extent practical.

51-20-3103 (a) 1. EXCEPTIONS: 2. In other than Group B.

Occupancies; Group B, Division 2 retail Occupancies; terminals, depots and other stations used for transportation; buildings owned or operated by a government agency; and the professional offices of health care providers, floors above and below fully accessible levels that have areas less than 3000 square feet per floor, need not be accessible provided that the primary entry level provides facilities as required by Section 3105 equivalent to those located on the nonaccessible levels.
51-20-3103 (b) 2. EXCEPTION: For sites where natural terrain or other unusual property characteristics do not allow the provision of an accessible route of travel from the public way to the building, the point of vehicular debarkation may be substituted for the accessible entrance to the site.

51-20-3105 (a) General. . . Where specific floors of a building are required to be accessible, the requirements shall apply only to the facilities located on accessible floors.

51-20-3103 (a) 1. EXCEPTIONS: 1. Floors or portions of floors not customarily occupied, including, but not limited to, elevator pits, observation galleries used primarily for security purposes, elevator penthouses, nonoccupiable spaces accessed only by ladders, catwalks, crawl spaces, very narrow passageways, or freight elevators, piping and equipment catwalks and machinery, mechanical and electrical equipment rooms.

Commentary

NE Standards under ADAAG and WSR are not the same. A general exception to all accessibility provisions is allowed for floors with less than 3,000 square feet per floor above and below the accessible level in most occupancies. The elevator exception was expanded. This provision is restated in 51-20-3105(a) General.

NE WSR uses the term "impractical" rather than the more restrictive term, "impracticable," used in the ADA regulations.

NE The use of "not customarily occupied" and use of other exceptions as examples appears to expand this exception. Example: A basement used for storage, if "occupiable," would be a story under ADAAG. Further, the use of machinery, mechanical and electrical equipment rooms as example expands the exception to include spaces not exempt under ADA. Clarification of this provision is needed.

ADA Requirements

4.1.2 (3) All objects that protrude from surfaces or posts into circulation paths shall comply with 4.4.

4.1.2 (4) Ground surfaces along accessible routes and in accessible spaces shall comply with 4.5.

4.1.2 (5) (a) If parking spaces are provided for self-parking by employees or visitors, or both, then accessible spaces complying with 4.6 shall be provided in each such parking area in conformance with the table below. Spaces required by the table need not be provided in the particular lot. They may be provided in a different location if equivalent or greater accessibility in terms of distance from an accessible entrance, cost and convenience is ensured.

TOTAL PARKING IN LOT	REQUIRED MINIMUM NUMBER OF ACCESSIBLE SPACES
1 to 25	1
26 to 50	2
51 to 75	3
76 to 100	4
101 to 150	5
151 to 200	6
201 to 300	7
301 to 400	8
401 to 500	9
501 to 1000	2 percent of total
1001 and over	20, plus 1 for each 100 over 1000

Except as provided in (b), access aisles adjacent to accessible spaces shall be 60 inches (1525 mm) wide minimum.

Washington State Regulations

51-20-3106 (e) Protruding Objects. Protruding objects shall not reduce the clear width of an accessible route of travel or maneuvering space. Any wall- or post-mounted object with its leading edge between 27 inches and 79 inches above the floor may project not more than 4 inches into the required

width within a corridor. Any wall-or post-mounted projection greater than 4 inches shall extend to the floor. Protruding objects shall not reduce the clear width of an accessible route of travel or maneuvering space.

51-20-3106 (d) 5. A. General. All floor and ground surfaces in an accessible route of travel shall comply with 3106 (q).

51-20-3103(a)9. Other Parking Facilities. Principal use parking facilities which are not accessory to the use of any building or structure shall provide accessible spaces in accordance with Table No. 31-F.

51-20-3107 Parking Facilities. Section 3107 (a) Accessible Parking Required. For other than Group R, Division 1 apartment buildings, when parking lots or garage facilities are provided, accessible parking spaces shall be provided in accordance with Table No. 31-F.

Table 31-F

TOTAL PARKING IN LOT	REQUIRED MINIMUM NUMBER OF ACCESSIBLE SPACES
1 to 25	1
26 to 50	2
51 to 75	3
76 to 100	4
101 to 150	5
151 to 200	6
201 to 300	7
301 to 400	8
401 to 500	9
501 to 999	2 percent of total
Over 1000	20, plus 1 space for every 100 spaces or fraction thereof, over 1000.

Commentary

21 ADA/Washington State May 14, 1993 Technical Assistance Document

ADA Requirements

4.1.2 (5) (b) One in every eight accessible spaces, but not less than one, shall be served by an access aisle 96 in (2440 mm)

wide minimum and shall be designated "van accessible" as required by 4,6.4. The vertical clearance at such spaces shall comply with 4.6.5. All such spaces may be grouped on one level of a parking structure.

EXCEPTION: Provision of all required parking spaces in conformance with 'Universal Parking Design' (see appendix A4.6.3) is permitted.

4.1.2 (5) (c) If passenger loading zones are provided, then at least
one passenger loading zone shall comply with 4.6.6.

4.1.2 (5) (d) At facilities providing medical care and other services for persons with mobility impairments, parking spaces complying with 4.6 shall be provided in accordance with 4.1,2(5)la) except as follows:

(i) Outpatient units and facilities: 10 percent of the total number of parking spaces provided serving each such unit outpatient
unit or facility.

(ii) Units and facilities that specialize in treatment or services
for persons with mobility impairments: 20 percent of the total number of parking spaces provided serving each such unit or facility.

4.1.2 (5) (e)* Valet parking: Valet parking facilities shall provide a
passenger loading zone complying with 4.6.6 located on an accessible route to the entrance of the facility. Paragraphs 5(a), 5(b), and 5(d) of this section do not apply to valet parking.

Washington State Regulations

51-20-3107 (a) ... In addition, one in every eight accessible parking spaces, but in no case less than one, shall comply with the van parking space requirements in Section 3107 (b).

51-20-3107 (b) 2. Van accessible parking spaces shall have an adjacent access aisle not less than 96 inches in width.

51-20-3108 (a) Passenger Drop-Off and Loading Zones. (a) Location. Where provided, passenger drop-off and loading zones shall be located on an accessible route of travel (and

comply with accessible design requirements).

51-20-3107 (a) accessible Parking Required .... For Group 1, Division 1.1, 1.2 and 2 medical care Occupancies specializing in the treatment of persons with mobility impairments, 20 percent of parking spaces provided accessory to such occupancies shall be accessible.

51-20-3103 (a) 9. Other Parking Facilities. Principal use parking facilities which are not accessory to the use of any building or structure shall provide accessible spaces in accordance with Table No. 31-F.

Commentary

NE WSR does not address 10% accessible parking required at outpatient facilities.

ADA Requirements

4.1.2 (6) If toilet facilities are provided on a site, then each such public or common use toilet facility shall comply with 4,22. If bathing facilities are provided on a site, then each such public or common use bathing facility shall comply with 4.23.

For single user portable toilet or bathing units clustered at a single location, at least 5% but no less than one toilet unit or bathing unit complying with 4.22 or 4.23 shall be installed at each cluster whenever typical inaccessible units are provided. Accessible units shall be identified by the International Symbol of Accessibility. EXCEPTION: Portable toilet units at construction sites used exclusively by construction personnel are not required to comply with 4.1.2(6).

Washington State Regulations

51-20-3106 (k) 1. General. Bathrooms, toilet rooms, bathing facilities and shower rooms shall be designed in accordance with this section. (3106).

Commentary

PNE It is not clear whether portable toilets are covered under temporary buildings, If not, they are not covered. An

interpretation is needed.

ADA Requirements

4.1.2 (7) Building Signage. Signs which designate permanent rooms and spaces shall comply with 4.30.1, 4.30.4, 4.30.5 and 4.30.6. Other signs which provide direction to, or information about, functional spaces of the building shall comply with 4.30.1, 4.30.2, 4.30.3, and 4.30.5.

Elements and spaces of accessible facilities which shall be identified by the International Symbol of Accessibility and which shall comply with 4.30.7 are:

4.1.2 (7) (a) Parking spaces designated as reserved for individuals
with disabilities;

4.1.2 (7) (b) Accessible passenger loading zones;

4.1.2 (7) (c) Accessible entrances when not all are accessible (inaccessible entrances shall have directional signage to indicate the route to the nearest accessible entrance);

4.1.2 (7) (d) Accessible toilet and bathing facilities when not all are accessible.

Washington State Regulations

51-20-3103 (b) 4. Signs. A. International Symbol of Access. The following elements and spaces of accessible facilities shall be identified by the International Symbol of Access:
1. Accessible parking spaces
2. Accessible entrances when not all entrances are accessible (inaccessible entrances shall have directional signage to indicate the route to the nearest accessible entrance)
EXCEPTION: Individual entries into dwelling units.
3. Accessible passenger loading zone(s)
4. Accessible toilet and bathing facilities when not all are accessible.
EXCEPTION: Toilet and bathing facilities within dwelling units, patient rooms and guest rooms.

At every major junction along or leading to an exterior accessible route of travel, there shall be a sign displaying the International Symbol of Accessibility. Signage shall indicate the direction to accessible entries and facilities.

B. Other Signs. Where provided, permanent signs which identify rooms and spaces shall comply with Sections 3106 (p) 2, 3, and 5. Where provided, other signs which provide direction to or information about the building or portion of a building shall comply with Section 3106 (p) 3 and 4. EXCEPTION: Building directories and all temporary signs.

In hotels and lodging houses, a list of accessible guest rooms shall be posted permanently in a location not visible to the general public, for staff use at each reception or check-in desk.

In assembly areas, a sign notifying the general public of the availability of accessible seating and assistive listening systems shall be provided at ticket offices or similar locations.

Commentary

ADA Requirements

4.1.3 Accessible Buildings New Construction. Accessible buildings and facilities shall meet the following minimum requirements:

(1) At least one accessible route complying with 4.3 shall connect accessible building or facility entrances with all accessible spaces and elements within the building facility.

4.1.3 (2) All objects that overhang or protrude into circulation paths shall comply with 4.4.

4.1.4 (3) Ground and floor surfaces along accessible routes and in accessible rooms and spaces shall comply with 4.5.

4.1.3 (4) Interior and exterior stairs connecting levels that are not connected by an elevator, ramp, or other accessible means of vertical access shall comply with 4.9.

51-20-3106 Accessible Design and Construction Standards. (a) General. Where accessibility is required by this chapter, it shall be designed and constructed in accordance with this section, unless otherwise specified in this chapter.

51-20-3103 (b) 2. Accessible Route of travel. When a building or portion of a building is required to be accessible, an accessible route of travel shall be provided to all portions of the building, to accessible building entrances an connecting the building and the public way. Except within and accessible dwelling unit, the accessible route of travel to areas of primary function may serve but shall not pass through kitchens, storage rooms, toilet rooms, bathrooms, closets or other similar spaces. Accessible routes of travel serving any accessible space element shall also serve as a means of egress for emergencies or connect to an area of evacuation assistance....

51-20-3106 (e) Protruding Objects. Protruding objects shall not reduce the clear width of an accessible route of travel or maneuvering space. Any wall- or post-mounted object with its leading edge between 27 inches and 79 inches above the floor may project not more than 4 inches into the required width within a corridor. Any wall-or post-mounted projection greater than 4 inches shall extend to the floor. Protruding objects shall not reduce the clear width of an accessible route of travel or maneuvering space.

51-20-3106 (d) 5. A. General. All floor and ground surfaces in an accessible route of travel shall comply with Section 3106 (q).

51-20-3306 Stairways. (a) General. Every stairway having two or more risers serving any building of portion thereof shall conform to the requirements of this section. When aisles in assembly rooms have steps, they shall conform with the provisions in Section 3315.

51-20-3106 (i) Stairways. 1. General. Stairways required to be accessible shall comply with section 3306 and provisions of this section.

Commentary

PNE Although WSR appears to apply some provisions to all steps allowed in building code (single risers are not allowed),

there is no specific scoping to trigger the requirements contained in 3106 (i).

ADA Requirements

4.1.3 (5)* One passenger elevator complying with 4.10 shall serve each level, including mezzanines, in all multi-story buildings and facilities unless exempted below. If more than one elevator is provided, each full passenger elevator shall comply with 4.10.

EXCEPTION 1. Elevators are not required in facilities that are less than three stories or that have less than 3000 square feet per story unless the building is a shopping center, a shopping mall, or the professional office of a health care provider, or another type of facility as determined by the Attorney General. The elevator exemption set forth in this paragraph does not obviate or limit in any way the obligation to comply with the other accessibility requirements established in section 4.1.3. For example, floors above or below the accessible ground floor must meet the requirements of this section except for elevator service. If toilet or bathing facilities are provided on a level not served by an elevator, then toilet or bathing facilities must be provided on the accessible ground floor. In new construction if a building or facility is eligible for this exemption but a full passenger elevator is nonetheless planned, that elevator shall meet the requirements of 4.10 and shall serve each level in the building. A full passenger elevator that provides service from a garage to only one level of a building or facility is not required to serve other levels.

EXCEPTION 2: Elevator pits, elevator penthouses, mechanical rooms, piping or equipment catwalks are exempted from this requirement.

EXCEPTION 3: Accessible ramps complying with 4.8 may be used in lieu of an elevator.

Washington State Regulations

51-20-3105 (c) Elevators. 1. Where Required. In multi-story buildings or portions thereof required to be accessible by Section 3103, at least one elevator shall serve each level, including mezzanines. Other than within an individual dwelling unit, when an elevator is provided but not required, it shall be accessible.

EXCEPTIONS: 1. In Group R. Division 1 apartment occupancies, an elevator is not required where accessible dwelling units and guest rooms are accessible by ramp or by grade level route of travel.
2. In a building of fewer than three stories an elevator is not required where ramps, grade-level entrances or accessible horizontal exits from an adjacent building, are provided to each floor.
3. In multistory parking garages, an elevator is not required where an accessible route of travel is provided from accessible parking spaces on levels with accessible horizontal connections to the primary building served.
4. In Group R, Division 1 hotels and lodging houses less than 3 stories in height, an elevator is not required provided that accessible guest rooms are provided on the ground floor.

51-20-3103 (a) 1. EXCEPTION 2. In other than Group R Occupancies; Group B, Division 2 retail Occupancies; terminals, depots and other stations used for transportation; buildings owned or operated by a government agency; and the professional offices of health care providers, floors above and below fully accessible levels that have areas of less than 3000 square feet per floor, need not be accessible provided that the primary entry level provides facilities as required by Section 3105 equivalent to those located on the nonaccessible levels.

Commentary

NE Problem #1 Scoping - Elevator exception is expanded to become a general exception to access provisions on floors with less than 3,000 square feet. However, except for this one problem, WSR's elevator exception is more restrictive because it does not apply to two story buildings with unlimited floor space as does ADAAG.

Problem #2 Design - Design requirements are not available for review.

ADA Requirements

4.1.3 (5)* Continued.

EXCEPTION 4: Platform lifts (wheelchair lifts) complying with 4.11 of this guideline and applicable state or local codes may be used in lieu of an elevator under the following conditions:

(a) To provide an accessible route to a performing area in an assembly occupancy.

(b) To comply with the wheelchair viewing position line-of-sight and dispersion requirements of 4.33.3.

(c) To provide access to incidental occupiable spaces and Rooms which are not open to the general public and which house No more than five person, including but not limited to equipment Control rooms and projection booths.

(d) To provide access where existing site constraints or other constraints make use of a ramp or an elevator infeasible.

4.1.3 (6) Windows (Reserved).

Washington State Regulations

51-20-3105 (c) 2. Design. All elevators shall be accessible.

EXCEPTIONS: 1. Private elevators serving only one dwelling unit.
2. Where more than one elevator is provided in the building, elevators used exclusively for movement of freight.

51-20-3105 (c) 2....Elevators required to be accessible shall be designed and constructed to comply with Chapter 296-81 of the Washington Administrative Code.

51-20-3105 (c) 3. Platform Lifts. Platform lifts may be used in lieu of an elevator under one of the following conditions subject to approval by the building official:
1. (sic) To provide an accessible route of travel to a performing area in a Group A. Occupancy; or,
2. (sic) To provide unobstructed sight lines and distribution for wheelchair viewing positions in Group A Occupancies; or,
3. (sic) To provide access to spaces with an occupant load of less than 5; or
4. (sic) To provide access where existing site constraints or other constraints make use of a ramp or elevator infeasible.

All platform lifts used in lieu of an elevator shall be capable of
independent operation and shall comply with Chapter 296-81

of the Washington Administrative Code.

Commentary

NE Design requirements are not available for review.

NE WSR does not restrict use of a lift to areas with an occupant load of less than 5 that are not open to the public.

NE Design requirements are not available for review.

ADA Requirements

4.1.3 (7) Doors:

(a) At each accessible entrance to a building or facility, at least one door shall comply with 4.13.

4.1.3 (7) (b) Within a building or facility, at least one door at each accessible space shall comply with 4.13.

4.1.3.(7) (c) Each door that is an element of an accessible route shall comply with 4.13.

4.1.3 (7) (d) Each door required by 4.3.10, Egress, shall comply with 4.13.

4.1.3 (8) In new construction, at a minimum, the requirements in (a) and (b) below shall be satisfied independently:

(a) (i) At least 50% of all public entrances (excluding those in (b) below) must be accessible. At least one must be a ground floor entrance. Public entrances are any entrances that are not loading or service entrances.

(ii) Accessible entrances must be provided in a number at least equivalent to the number of exits required by the applicable building/fire codes. (This paragraph does not require an increase in the total number of entrances planned for a facility.)

(iii) An accessible entrance must be provided to each tenancy in a facility (for example, individual

stores in a strip shopping center).

One entrance may be considered as meeting more than one of the requirements in (a). Where feasible, accessible entrances shall be the entrances used by the majority of people visiting or working in the building.

Washington State Regulations

51-20-3304 Doors. (a) General. This section shall apply to every exit door serving an area having an occupant load of 10 or more, or serving hazardous rooms or areas, except that Subsection (c), (i), (j) and (k) shall apply to all exit doors regardless of occupant load. Buildings or structures used for human occupancy shall have at least one exterior exit door that meets the requirements of Subsection (f). Doors and landings at doors which are located within an accessible route of travel shall also comply with Chapter 31.

51-20-3103 (b) 3. Primary Entry Access. At least 50% of all public entries, or a number equal to the number of exits, required by Section 3303 (a), whichever is greater, shall be accessible. One of the accessible public entries shall be the primary entry to the building. At least one accessible entry must be ground floor entrance. Public entries do not include loading or service entries.

EXCEPTION: In Group R. Division 1 apartment buildings only the primary entry need to accessible, provided that the primary entry provides an accessible route of travel to all dwelling units required to be accessible.

51-20-3103 (b) 3. Where a building is designed not to have common or primary entries, the primary entry to each individual dwelling unit required to be accessible, and each individual tenant space, shall be accessible.

51-20-3103 (b) 3... One of the accessible public entries shall be the primary entry to a building. At least one accessible entry must be a ground floor entrance. Public entries do not include loading or service entries.

Commentary

PNE ADAAG does not allow the exception for apartment buildings, some of which may be used as transient lodging (i.e., short term condominium rentals and certain timeshare units). It is recognized that the majority of condominiums and

timeshare units will not be used as transient lodging.

ADA Requirements

4,1.3 (8)(b) (i) In addition, if direct access is provided for pedestrians from an enclosed parking garage to the building, at least one direct entrance from the garage to the building must be accessible.

(ii) If access is provided for pedestrians from a pedestrian tunnel or elevated walkway, one entrance to the building from each tunnel or walkway must be accessible.

One entrance may be considered as meeting more than one of the requirements in (b).

Because entrances also serve as emergency exits whose proximity to all parts of buildings and facilities is essential, it is preferable that all entrances be accessible.

4.1.3 (8) (c) If the only entrance to a building, or, tenancy in a facility, is a service entrance, that entrance shall be accessible.

4.1.3 (8) (d) Entrances which are not accessible shall have directional signage complying with 4.30.1. 4.30.2, 4.30.3 and 4.30.5, which indicates the location of the nearest accessible entrance.

Washington State Regulations

51-30-3103 (b) 2. . . . The accessible route of travel shall be the most practical direct route connecting accessible building entrances, accessible site facilities and the accessible site entrances.

51-20-3103 (b) 3. Primary Entry Access. . . . One of the accessible public entries shall be the primary entry to a building. At least one accessible entry must be a ground floor entrance. Public entries do not include loading or service entries.

51-20-3103 (b) 4. A. ...At every junction along or leading to an exterior accessible route of travel, there shall be a sign

displaying the International Symbol of Accessibility. Signage shall indicate the direction to accessible entries and facilities.

Commentary

NE No specific provisions requiring accessible entrances from tunnels, elevated walkways, or direct access to parking garages.

ADA Requirements

4.1.3 (9)* In buildings or facilities, or portions of buildings or facilities, required to be accessible, accessible means of egress shall be provided in the same number as required for exits by local building/life safety regulations. Where a required exit from an occupiable level above or below a level of accessible exit discharge is not accessible, an area of rescue assistance shall be provided on each such level (in a number equal to that of inaccessible required exits). Areas of rescue assistance shall comply with 4.3.11. A horizontal exit, meeting the requirements of local building/life safety regulations, shall satisfy the requirement for an area of rescue assistance.

EXCEPTION: Areas of rescue assistance are not required in buildings or facilities having a supervised automatic sprinkler system.

(10)* Drinking Fountains:

(a)Where only one drinking fountain is provided on a floor there shall be a drinking fountain which is accessible to individuals who use wheelchairs in accordance with 4.15 and one accessible to those who have difficulty bending or stooping. (This can be accommodated by the use of a "hi-lo" fountain; by providing one fountain accessible to those who use wheelchairs and one fountain at a standard height convenient for those who have difficulty bending; by providing a fountain accessible under 4.15 and a water cooler; or by such other means as would achieve the require accessibility for each group on each floor.)
4.1.3 (10) (b) Where more than one drinking fountain or water cooler is provided on a floor, 50% of those provided shall comply with 4.15 and shall be on an accessible route.

Washington State Regulations

51-20-3104 Egress and Areas for Evacuation Assistance. (a) General, In buildings or portions of buildings required to be accessible, means of egress shall be provided In the same number as required for exits by Chapter 33. When an exit required by Chapter 33 is not accessible, an area for evacuation assistance shall be provided.

EXCEPTION: Areas of evacuation assistance are not required in buildings where an approved, automatic fire-extinguishing system is installed in accordance with U.B.C. Standard No. 38-1, provided that quick-response sprinkler heads are used where allowed by the standard; and that a written fire- and life-safety emergency plan which specifically addresses the evacuation of persons with disabilities is approved by the building official and the fire chief.

Every area for evacuation assistance shall comply with the requirements of this code and shall adjoin an accessible route of travel which shall comply with Section 3106.

51-20-3105 (d) Other Building Components. 1. Water Fountains. On any floor where water fountains are provided, at least 50 percent, but in no case less than one fountain shall be accessible complying with Section 3106 (m) and at least one fountain shall be mounted at a standard height.

Commentary

30 ADA/Washington State May 14, 1993

Technical Assistance Document

ADA Requirements

4.1.3 (11) Toilet Facilities: If toilet rooms are provided, then each public and common use toilet room shall comply with 4.22. Other toilet rooms provided for the use of occupants of specific spaces (i.e., a private toilet room for the occupant of a private office) shall be adaptable. If bathing rooms are provided, then each public and common use bathroom shall comply with 4.23. Accessible toilet rooms and bathing facilities shall be on an accessible route.

4.1.3 (12) Storage, Shelving and Display Units:

(a) if fixed or built-in storage facilities such as cabinets,

shelves,
closets, and drawers are provided in accessible spaces, at least one of each type provided shall contain storage space complying with 4.25. Additional storage may be provided outside of the dimensions required by 4.25.
(b) Shelves or display units allowing self-service by customers in
mercantile occupancies shall be located on an accessible route complying with 4.3. Requirements for accessible reach range do not apply.

Washington State Regulations

51-20-3105 (b) Bathing and Toilet Facilities. 1. Bathing Facilities. When bathing facilities are provided, at least 2 percent but not less than 1, bathtub or shower shall be accessible. In dwelling units where both a bathtub and shower are provided in the same room, only one need be accessible.
51-20-3105 (b) 2. Toilet Facilities. Toilet facilities located within accessible dwelling units, guest rooms and congregate residences shall comply with Sections 3106 (k) and 3106 (aa).
In each toilet facility in other occupancies, at least one wheelchair accessible toilet stall with an accessible water closet shall be provided. In addition, when there are 6 or more water closets within a toilet facility, at least one other accessible toilet stall complying with Section 3106 (k) 4, also shall be installed.
51-20-3105 (b) 3. Lavatories, Mirrors and Towel Fixtures. At least one accessible lavatory shall be provided within any toilet facility. Where mirrors, towel fixtures and other toilet and bathroom accessories are provided, at least one of each shall be accessible.

51-20-3106 (k) 1. General. Bathrooms, toilet rooms, bathing facilities and shower rooms shall be designed in accordance with this section. For dwelling units see also Section 3106 (aa).

51-20-3105 (d) 6. Storage, Shelving and Display Units. In other than Group R, Division 1 apartment buildings, where fixed or built-in storage facilities such as cabinets, shelves closets and drawers are provided in accessible spaces, at least one of each type provided shall contain storage space complying with Section 3106 (r).
Self-service shelves or display units in retail occupancies shall be located on an accessible route in accordance with Section

3103 (b) 2.

Commentary

PNE Several questions arise based on scoping language:
1. Do all "bathrooms" have to be accessible with 2% accessible tubs or showers?
2. What about toilets not in stalls and single user toilet rooms?

PNE The exception limits access in apartment buildings, some of which may be used as public accommodations/ transient lodging.

ADA Requirements

4.1.3 (13) Controls and operating mechanisms in accessible spaces, along accessible routes, or as parts of accessible elements (for example, light switches and dispenser controls) shall comply with 4.27.

4.1.3 (14) If emergency warning systems are provided, then they shall include both audible alarms and visual alarms complying with 4.28. Sleeping accommodations required to comply with 9.3 shall have an alarm system complying with 4.28. Emergency warning systems in medical care facilities may be modified to suit standard health care alarm design practice.

4.1.3 (15) Detectable warnings shall be provided at locations as specified in 4.29.

Washington State Regulations

51-20-3105 (d) 8. Controls, Operating Mechanisms and Hardware. Controls, operating mechanisms and hardware, including switches that control lighting and ventilation and electrical convenience outlets, in accessible spaces, along accessible routes, or as parts of accessible elements shall comply with Section 3106 (c).

51-20-3105 (d) 9. Alarms. Alarm systems where provided, shall include both audible and visible alarms. The alarm devices shall be located in all sleeping accommodations and common-use areas including toilet rooms and bathing facilities, hallways, and lobbies.

EXCEPTIONS: 1. Alarm systems in Group 1, Division 1.1 and 1.2 Occupancies may be modified to suit standard health care design practice.
2. Visible alarms are not required in Group R, Division 1 apartment buildings.

51-20-3106 (d) 5.B Detectable Warnings. Curb ramps shall have detectable warnings complying with Section 3106 (g) Detectable warnings halls extend the full width and depth of the curb ramp.

51-20-3106 (d) 9. Vehicular Areas. Where an accessible route of travel crosses of adjoins a vehicular way, and where there are no curbs, railings or other elements, detectable by a person who has a severe vision impairment, separating the pedestrian and vehicular areas, the boundary between the areas shall be defined by a continuous detectable warning not less than 36 inches wide, complying with Section 3106 (g).

Commentary

PNE The exception for apartment buildings would apply to some facilities that are used as transient lodging.

PNE Both of these sections appear to reference 3106 (g) which is floor coverings and surface treatments. Detectable warnings as "truncated domes" is 3106 (q).

ADA Requirements

4.1.3. (13) Building Signage:

(a) Signs which designate permanent rooms and spaces shall comply with 4.30.1, 4.30.4, 4.30.5 and 4.30.6.
(b) Other signs which provide direction to or information about functional spaces of the building shall comply with 4.30.1, 4.30.2, 4.30.3, and 4.30.5.

EXCEPTION: Building directories, menus, and all other signs which are temporary are not required to comply.

Washington State Regulations

51-20-3103 (b) 4. B. Other Signs. Where provided,

permanent signs which identify rooms and spaces shall comply with Section 3106 (p) 2, 3, and 5. Where provided, other signs which provide direction to or information about the building or portion of a building shall comply with Section 3106 (p) 3 and 4.

EXCEPTION: Building directories and all temporary signs. . . .

Commentary

ADA/Washington Sate May 14, 1993

33 Technical Assistance Document

ADA Requirements

4.1.3 (17) Public Telephones:

(a) If public pay telephones, public closed circuit telephones, or other public telephones are provided, then they shall comply with 4.31.2 through 3.31.8 to the extent required by the following table:

Number of each type of telephone provided on each floor	Number of telephones required to comply with 4.31.2 through 4.31.8 1
1 or more single unit	1 per floor
1 bank2	1 per floor
2 or more banks2	1 per bank. Accessible unit may be installed as a single unit in proximity (either visible or with signage) to the bank. At least one public telephone per floor shall meet the requirements for a forward reach telephone3.

1 Additional public telephones may be installed at any height. Unless otherwise specified, accessible telephones may be either forward or side reach telephones.

2 A bank consists of two or more adjacent public telephones, often installed as a unit.

3 EXCEPTION: For exterior installations only, if dial tone first service is available, then a side reach telephone may be installed I instead of the required forward reach telephone (i.e., one

telephone in proximity to each bank shall comply with 4.31).

4.1.3 (17) (b)* All telephones required to be accessible and complying with 4.31.2. through 4.31.8 shall be equipped with a volume control. In addition, 25 percent, but never less than one, of all other public telephones provided shall be equipped with a volume control and shall be dispersed among all types of public telephones, including closed circuit telephones, through out the building or facility. Signage complying with applicable provisions of 4.30.7 shall be provided.

Washington State Regulations

51-20-3105 (d) 2. Telephones. On any floor where public telephones are provided at least one telephone shall be accessible. On any floor where 2 or more banks of multiple telephones are provided, at least one telephone in each bank shall be accessible and at lease one telephone per floor shall be designed to allow forward reach complying with Section 3106 . . .

51-20-3105 (d) 2. . . . All accessible telephones and at least 25 percent of all other public telephones, but in no case less than one, shall be provided with volume controls in accordance with Section 3106 (n) and shall be dispersed among the public telephones provided in the building.

Commentary

PNE There is a question as to use of the term "public" by WSR. Does it include closed circuit phones?

ADA Requirements

4.1.3 (17)(C) The following shall be provided in accordance with 4.31.9:

(i) if a total number of four or more public pay telephones (including both interior and exterior phones) is provided at a site, and at least one is in an interior location, then at least one interior public text telephone shall be provided.

(ii) if an interior public pay telephone is provided in a stadium or

arena, in a convention center, in a hotel with a convention center, or in a covered mall, at least one interior public text telephone shall be provided in the facility.

(iii) if a public pay telephone is located in or adjacent to a hospital emergency room, hospital recovery room, or hospital waiting room, one public text telephone shall be provided at each such location.

4.1.3 (17)(d) Where a bank of telephones in the interior of a building consists of three or more public pay telephones, at least one public pay telephone in each such bank shall be equipped with a shelf and outlet in compliance with 4.31.9 (2).

4.1.3 (18) If fixed or built-in seating or tables (including, but not limited to, study carrels and student laboratory stations), are provided in accessible public or common use areas, at least five percent (5%) but not less than one, of the fixed or built-in seating areas or tables shall comply with 4.32. An accessible route shall lead to and through such fixed or built-in seating areas, or tables.

Washington State Regulations

51-20-3105 (d) 2. . . . Where four or more public pay telephones are provided at a building site, and at least one is in an interior location, at least one interior telephone shall be a text telephone in accordance with Section 3106 (n).

51-20-31-5 (d) 32. . . . Where interior public pay phones are provided in transportation facilities; assembly and similar areas including stadiums and arenas, convention centers, hotels with convention facilities or covered malls; or adjacent to hospital emergency, recovery, or waiting rooms; at least one interior text telephone shall be provided.

51-20-3105 (d) 2. . . . Where any bank of public telephones consists of 1 or more telephones, at lease one telephone in each bank shall be equipped with a shelf and an electrical outlet complying with 3106 (n) 7.

51-20-3105 (d) 5. Fixed or Built-in Seating or Tables. Where fixed or built-in seating or tables are provided at least 5 percent, but no fewer than two, shall be accessible. Accessible fixed or built-in seating or tables shall comply with Section 3106 (s). In eating and drinking establishments, such seating or tables shall be distributed throughout the facility.

Commentary

ADA/Washington State May 14, 1993

35 Technical Assistance Document

ADA Requirements

4.1.3 (19)* Assembly areas:

(a) In places of assembly with fixed seating accessible wheelchair
locations shall comply with 4.33.2, 4.33.3, and 4.33.4 and shall be provided consistent with the following table:

Capacity of Seating in Assembly Areas	Number of Required Wheel chair Locations
4 to 25	1
26 to 50	2
51 to 300	4
301 to 500	6
over 500	6, plus 1 additional space for each total seating capacity increase of 100

In addition, one percent, but not less than one, of all fixed seats shall be aisle seats with no armrests on the aisle side, or removable or folding armrests on the aisle side. Each such seat shall be identified by a sign or marker. Signage notifying patrons of the availability of such seats shall be posted at the ticket office. Aisle seats are not required to comply with 4.33.4.

Washington State Regulations

51-20-3103 (a) 2. A. . . . Stadiums, theaters, auditoriums and similar occupancies shall provide wheelchair spaces in accordance with Table No. 31-A. Removable seats shall be permitted in the wheelchair spaces.

In addition, one percent, but not less than one, of all fixed seats shall be aisle seats with no armrests, or removable or folding armrests on the aisle side. Each such seat shall be identified by a sign complying with Section 3106 (p) 1.A.

Table 31-A

Capacity of Seating In Assembly Areas	Number of Required Wheelchair Spaces

4 to 25	1
26 to 50	2
51 to 300	4
301 to 500	6
over 500	6, plus 1 for each 100 over 500

51-20-3103 (b) 4. B. . . . In assembly areas, a sign notifying the general public of the availability of accessible seating and assistive listening systems shall be provided at ticket offices or similar locations.

Commentary

ADA/Washington State May 14, 1993
36 Technical Assistance Document
ADA Requirements

4.1.3 (19) (b) This paragraph applies to assembly areas where audible communications are integral to the use of the space (e.g., concert and lecture halls, playhouses and movie theaters, meeting rooms, etc.). Such assembly areas, if (1) they accommodate at least 50 persons, or if they have audio-amplification systems, and (2) they have fixed seating, shall have a permanently installed assistive listening system complying with 4.33. For other assembly areas, a permanently installed assistive listening system, or an adequate number of electrical outlets or other supplementary wiring necessary to support a portable assistive listening system shall be provided. The minimum number of receivers to be provided shall be equal to 4 percent of the total number of seats, but in no case less than two. Signage complying with applicable provisions of 4.30 shall be installed to notify patrons of the availability of a listening system.

4.1.3 (20) Where automated teller machines (ATMs) are provided, each ATM shall comply with the requirements of 4.34 except where two or more are provided at a location, then only one must comply.

EXCEPTION: Drive-up-only automated teller machines are not required to comply with 4.27.2, 4.27.3 and 4.34.3.

4.1.3 (21) Where dressing and fitting rooms are provided for use by the general public, patients customers or employees, 5 percent, but never less than one, of dressing rooms for each type of use in each cluster of dressing rooms shall be accessible and shall comply with 4.35.

Examples of types of dressing rooms are those serving different genders or distinct and different functions as in different treatment or examination facilities.

4.1.4 (Reserved).

Washington State Regulations

51-20-3103 (a) 2.B. Assistive Listening Devices. Assistive listening systems complying with Section 3106 (u) 3 shall be installed in assembly areas where audible communications are integral to the use of the space including stadiums, theaters, auditoriums, lecture halls, and similar areas; where fixed seats are provided; as follows;

1. Areas with an occupant load of 50 or more.
2. Areas where an audio-amplification system is installed.
Receivers for assistive-listening devices shall be provided at a rate of 4 percent of the total number of seats, but in no case fewer than two devices. In other assembly areas, where permanently installed assistive-listening systems are not provided, electrical outlets shall be provided at a rate of not less than 4 percent of the total occupant load.
Signage complying with Section 3106 (p) shall be installed to notify patrons of the availability of the listening system.

51-20-3105 (d) 7. A. Customer Service Facilities. A. Dressing and Fitting Rooms. Where dressing or fitting rooms are provided for use by the general public, patients, customers or employees, 5 percent, but not less than one in each group of rooms serving distinct and different functions shall be accessible in accordance with Section 3106 (x).

Commentary

PNE The definition of assembly area applies to spaces of 50 or more capacity. Also, electrical outlets are needed for the transmitting device not he receiver.

NE

ADA Requirements

4.1.5 Accessible Buildings: Additions. Each addition to an existing

building or facility shall be regarded as an alteration. Each space or element added to the existing building or facility shall comply with the applicable provisions of 4.1.1 to 4.1.3, Minimum Requirements (for New Construction) and the applicable technical specifications of 4.2 through 4.35 and Section 5 through 10. Each addition that affects or could affect the usability of an area containing a primary function shall comply with 4.1.6(2).

Washington State Regulations

51-23105 (d) 4. Swimming Pools. Where common or public sue swimming pools, hot tubs, spas and similar facilities are provided, they shall be accessible. Swimming pools shall be accessible by transfer tier, hydraulic chair, ramp or other means. Hot tubs and spas shall be accessible only to the edge of the facility.

51-20-3111 Additions. New additions may be made to existing buildings without making the entire building comply, provided the new additions conform to the provisions of Part II of this chapter except as follows:
1. Entries. Where a new addition to a building or facility does not have an accessible entry, at least one entry in the existing building or facility shall be accessible.
2. Accessible Route. Where the only accessible entry to the addition is located in the existing building or facility, at least
one accessible route of travel shall be provided through the existing building or facility to all rooms, elements and spaces in the new addition which are required to be accessible.
3. Toilet and Bathing Facilities. Where there are no toilet rooms and bathing facilities in an addition and these facilities are provided in the existing building, then at least one toilet and bathing facility in the existing facility shall comply with Section 3106 or with Section 3112 (c) 5.
4. Group I Occupancies. Where patient rooms are added to an existing Group I Occupancy, a percentage of the additional rooms equal to the requirement of Section 3103 (a) 6., but in no case more than the total number of rooms required by Section 3103 (a) 6. Shall comply with Section 3106 (w). where toilet or bath facilities are part of the accessible rooms, they shall comply with Section 3106 (k).
5. Group R, Division 1 Apartment Buildings. Additions of 3 or fewer dwelling units in Group R, Division 1 apartment buildings need not comply with Part I of this chapter.
where an addition affects the access to or use of an area of primary function, to the maximum extent feasible, the path of travel to the area of primary function shall be made

accessible.

Commentary

PNE A problem exists with the exemption for apartment buildings.

ADA Requirements

4.1.6 Accessible Building: Alterations.
(1)General. Alterations to existing buildings and facilities shall comply with the following;

(1) (a) No alteration shall be undertaken which decreases or has the effect of decreasing accessibility or usability of a building or facility below the requirements for new construction at the time of alteration.

(1) (b) If existing elements, spaces, or common areas are altered, then each such altered element, space, feature, or area shall comply with the applicable provisions of 4.1.1 to 4.1.3 Minimum Requirements (for New Construction). If the applicable provision for new construction requires that an element, space, or common area be on an accessible route, the altered element, space, or common area is not required to be on an accessible route except as provided in 4.1.6(2) (Alterations to an Area Containing a Primary Function).

Washington State Regulations

51-20-3110 Alteration is any change, addition or modification in construction or occupancy.

51-20-3112 Alterations. (a) General. 1. Compliance alterations to existing buildings or facilities shall comply with this Section. NO alteration shall reduce or have the effect of reducing accessibility or usability of a building, portion of a building or facility. If compliance with this section is technically infeasible, the alteration shall provide accessibility
to the maximum extent feasible. 51-20-3112 (a) 1. EXCEPTION: Except when substantial as defined by Section 3110, alterations to Group R, Division 1 apartment buildings need not comply with this section.

51-20-0104 Application to Existing Buildings and Structures.
(a) General. Buildings and structures to which additions, alterations or repairs are made shall comply with all the requirements of this code for new facilities except as specifically provided in this section. See Section 1210 for provisions requiring installation of smoke detectors in existing Group R, Division 3 Occupancies.

(b) Additions, Alterations or Repairs. Additions, alterations or repairs may be made to any building or structure without requiring the existing building or structure to comply with all the requirements to this code, provided the addition, alteration or repair conforms to that required for a new building or structure. Additions or alterations shall not be made to an existing building or structure which will cause the existing building or structure to be in violation of any of the provisions of this code nor shall such additions or alterations cause the existing building or structure to become unsafe . . .

(c) Any change in the use or occupancy of any existing building or structure shall comply with the provisions of Section 308 and 502 of this code.
For existing buildings, see Appendix Chapter 1.

Commentary

PNE The exemption to alteration requirements for apartments may be used by entities which operate certain types of transient lodging (i.e., short term rental condominiums and certain timeshare units).

ADA Requirements

4.1.6, Continued.

(1) (c) If alterations of single elements, when considered together, amount to an alteration of a room or space in a building or facility, the entire space shall be made accessible.

(d) No alteration of an existing element, space, or area of a building or facility shall impose a requirement for greater accessibility than that which would be required for new construction. For example, if the elevators and stairs in a building are being altered and the elevators are in turn, being made accessible, then no accessibility modifications are required to

the stairs connecting levels connected by the elevator. If stair modifications to correct unsafe conditions are required by other codes, the modification shall be done in compliance with these guidelines unless technically infeasible.

Washington State Regulations

51-20-3112 (a) 2. Existing Elements. If existing elements, spaces, essential features or common areas are altered, each such altered element, space feature or area shall comply with the applicable provisions of Part II of this Chapter. Where an extent feasible, the path of travel to the altered area shall be made accessible. See also Appendix Chapter 31 Division II. EXCEPTION 1. Accessible route of travel need not be Provided to altered elements, spaces or common areas which Are not areas of primary functions.

51-20-3112 (a) 4. Other Requirements. A. Where alterations of single elements, when considered together, amount to an alteration of a room or space in a building or facility, the entire area or space shall be accessible.

51-20-3112 (b) Substantial Alterations. Where substantial alteration as defined in 3110 occurs to a building or facility, the entire building or facility shall comply with Part II of this code.

51-20-3112 (a) 4.B. No alteration of an existing element, space or area of a building shall impose a requirement for greater accessibility than that which would be required for new construction.

51-20-3112 (c) 3. . . . When an accessible elevator is provided, existing stairs need not be made accessible.

Commentary

ADA Requirements

4.1.6 (1) (e) At least one interior public text telephone complying
with 4.31.9 shall be provided if:

(i) alterations to existing buildings or facilities with less than four exterior or interior public pay telephones would increase the total

number to four or more telephones with at least one in an interior location; or

(ii) alterations to one or more exterior or interior public pay telephones occur in an existing building or facility with four or more public telephones with at least one in an interior location.

4.1.6 (1) (f) If an escalator or stair is planned or installed where none existed previously and major structural modifications are necessary for such installation, then a means of accessible vertical access hall be provided that complies with the applicable provisions of 4.7, 4.8, 4.10, or 4.11.

4.1.6 (1) (g) In alterations, the requirements of 4.1.3(9), 4.3.10 and 4.3.11 do not apply.

4.1.6 (1) (h)* Entrances: If a planned alteration entails alterations to an entrance, and the building ahs an accessible entrance, the entrance being altered is not required to comply with 4.1.3(8), except to the extent required by 4.1.6(2). If a particular entrance is not made accessible, appropriate accessible signage indicating the location of the nearest accessible entrance (s) shall be installed at or near the inaccessible entrance, such that a person with disabilities will not be required to retrace the approach route from the inaccessible entrance.

4.1.6 (1) (I) If the alteration work is limited solely to the electrical, mechanical, or plumbing system, or to hazardous material abatement, or automatic sprinkler retrofitting, and does not involve the alteration of any elements or spaces required to be accessible under these guidelines, then 4.1.6 (2) does not apply.

Washington State Regulations

51-20-3112 (a) 4. D. Where alterations would increase the number of public pay phones to four, with at least one on the interior; or where the existing facility ahs four or more public pay phones and one or more is altered; at least one interior text telephone shall be provided in accordance with Section 3106 (n).

51-20-3112 (a) 3. Installation of Stairs or Escalators. Where an escalator or new stairway is planned or installed requiring major structural changes, then a means of vertical transportation (e.g., elevator, platform lift) shall be provided in accordance with this chapter.

51-20-3112 (a) 4.E. Where a building ahs an accessible

entry, altered entries need not be made accessible unless they provide access to areas of primary function.

51-20-3112 (a) 4.C. Where the alteration work is limited solely to the electrical, mechanical or plumbing system or hazardous materials removal, and does not involve the alteration, structural or otherwise, of any elements and spaces required to be accessible under these standards, Chapter 31 does not apply.

Commentary

ADA Requirement

4.1.6 (1) (j) EXCEPTION: In alteration work, if compliance with 4.1.6 is technically infeasible, the alteration shall provide accessibility to the maximum extent feasible. Any elements or features of the building or facility that are being altered and can be made accessible shall be made accessible within the scope of the alteration.

Technically Infeasible. Means, with respect to an alteration of a building or a facility, that it ahs little likelihood of being accomplished because existing structural conditions would require removing or altering a load-bearing member which is an essential part of the structural frame; or because other existing physical or site constraints prohibit modification or addition of elements, spaces, or features which are in full and strict compliance with the minimum requirements for new construction and which are necessary to provide accessibility.

4.1.6 (1) (k) EXCEPTION"

(i) These guidelines do not require the installation of an elevator in an altered facility that is less than three stories or has less than 3,000 square feet per story unless the building is a shopping center, a shopping mall, the professional office of a health care provider, or another type of facility as determined by the Attorney General.

(ii) The exemption provided in paragraph (I) does not obviate or limit in any way the obligation to comply with the other accessibility requirements established in these guidelines. For example, alterations to floors above or below the ground floor must be accessible regardless of whether the altered facility has

an elevator. If a facility subject to the elevator exemption set forth in paragraph (I) nonetheless has a full passenger elevator, that elevator shall meet, to the maximum extent feasible, the accessibility requirements of these guidelines.

Washington State Regulations

51-20-3112 Alterations. (a) General. 1. Compliance. Alterations to existing buildings or facilities shall comply with this section. No alteration shall reduce or have the effect of reducing accessibility or usability of a building, portion of a building or facility. If compliance with this section is technically infeasible, the alteration shall provide accessibility to the maximum extent feasible.

51-20-3110 Technically Infeasible means that an alteration has little likelihood of being accomplished because existing structural conditions would require removing or altering a load-bearing member or because site constraints prohibit modification or addition of elements, spaces or features necessary to provide accessibility.

51-20-3112 (a) 4.B. No alteration of an existing element, space or area of a building shall impose a requirement for greater accessibility than that which would be required for new construction.

Commentary

NE No equivalent provision. Section 51-30-3103 (a) 1 allows floors of more than 3000 square feet above and below accessible floors to be constructed without access features.

ADA Requirements

4.1.6 (2) Alterations to an Area Containing a Primary Function: In addition to the requirements of 4.1.6(1), an alteration that affects or could affect the usability of or access to an area containing a primary function shall be made so as to ensure that, to the maximum extent feasible, the path of travel to the altered area and the restrooms, telephones, and drinking fountains serving the altered area, are readily accessible to and usable by individuals with

disabilities, unless such alterations are disproportionate to the overall alterations in terms of cost and scope (as determined under criteria established by the Attorney General). (See Section 36.403)

4.1.6 (3) Special Technical Provisions for Alterations to Existing Buildings and Facilities:

(a) Ramps: Curb ramps and interior or exterior ramps to be constructed on sites or in existing buildings or facilities where space limitations prohibit the use of a 1:12 slope or less may have slopes and rises as follows:

(i) A slope between 1:10 and 1:12 is allowed for a maximum rise of 6 inches.

(ii) A slope between 1:8 and 1:10 is allowed for a maximum rise of 3 inches. A slope steeper than 1:8 is not allowed.

4.1.6 (3) (b) Stairs: Full extension of handrails at stairs shall not be required in alterations where such extensions would be hazardous or impossible due to plan configuration.

Washington State Regulations

51-20-3112 (a) 2. Existing Elements. If existing elements, spaces, essential features or common areas are altered, each such altered element, space feature or area shall comply with the applicable provisions of Part II of this chapter. Where an alteration is to an area of primary function, to the maximum extent feasible, the path of travel to the altered area shall be made accessible. See Also Appendix Chapter 31, Division II.
EXCEPTIONS: 1. Accessible route of travel need not be provided to altered elements, spaces or common areas which are not areas of primary function.
2. Areas of evacuation assistance need not be added to an altered building.

51-20-3114 (a) 2.
EXCEPTION: The path of travel need not be made accessible if the cost of compliance with this part would exceed 20% of the total project cost, inclusive of the cost of eliminating barriers, within a 36 month period.

51-20-3112 (c) Modifications. 1. General. The following modifications set forth in this section may be used for compliance where the required standard is technically infeasible or when providing access to historic buildings.

51-20-3112 (c) 2. Ramps. Curb ramps and ramps constructed on existing sites, or in existing buildings or facilities, may have slopes and rises as specified for existing facilities in Chapter 31, where space limitations prohibit the use of 1 vertical in 12 horizontal slope or less provided that:
A. A slope of not greater than 1 vertical in 10 horizontal is allowed for a maximum rise of 6 inches.
B. A slope of not greater than 1 vertical in 8 horizontal is Allowed for a maximum rise of 3 inches.
C. Slopes greater than 1 vertical in 8 horizontal are prohibited.

51-20-3112 (c) 3. Stairs. Full extension for stair handrails is not required when such extension would be hazardous or impossible due to plan configuration. When an accessible elevator is provided, existing stairs need not be made accessible.

Commentary

NE Path of travel definition includes restrooms, telephones, and water fountains serving altered area (see ADAAG 3.5 Definitions). However, the disproportionality formula is not equivalent because it includes barrier removal costs for a 36 month period. Reference to appendix is to readily achievable barrier removal provisions which do not count as part of the path of travel expenditure under the ADA.

ADA Requirements

4.1.6 (3) (c) Elevators:

(i) If safety door edges are provided in existing automatic elevators, automatic door reopening devices may be omitted (see 4.10.6).
(ii) Where existing shaft configuration or technical infeasibility prohibits strict compliance with 4.10.9, the minimum car plan prohibits strict compliance with 4.10.9, the minimum car plan dimensions may be reduced by the minimum amount necessary, but in no case shall the inside care area be smaller than 48 in by 48 in.
(iii) Equivalent facilitation may be provided with an elevator car of different dimensions when usability can be demonstrated and when all other elements required to be accessible comply with the applicable provisions of 4.10. For example, an elevator of 47 in by 69 in (1195 mm by 1755 mm) with a door opening on the narrow dimension, could accommodate the standard

wheelchair clearances shown in Figure 4.

Fig. 4 Minimum clear Floor Space for Wheelchairs.

Fig. 4(d) Clear Floor Space in Alcoves. For a front approach, where the depth of the alcove is equal to or less than 24 inches (610 mm), the required clear floor space is 30 inches by 48 inches (760 mm by 1220 mm).

For a side approach where the depth of the alcove is equal to or less than 15 inches (380 mm), the required clear floor space is 30 inches by 48 inches (760 mm by 1220 mm).

Fig. 4(e) Additional Maneuvering Clearances for Alcoves.
For a front approach, if the depth of the alcove is greater than 24 inches (610 mm), then in addition to the 30 inch (760 mm) width, a maneuvering clearance of 6 inches (150 mm) in width is required.

For a side approach, where the depth of the alcove is greater than 15 inches (380 mm), then in addition to the 48 inch (1220 mm) length, an additional maneuvering clearance of 12 inches in length (305 mm) is required.

Washington Sate Regulations

51-20-3112 (c) 4. Elevators shall comply with
Chapter 296-81, Washington Administrative Code.

Commentary

NE Design requirements not available for review.
ADA/Washington State May 14, 1993
44 Technical Assistance Document

ADA Requirements

4.1.6 (3) (d) Doors:

(i) Where it is technically infeasible to comply with clear opening width requirements of 4.13.5, a projection of 5/8 in maximum will be permitted for the latch side stop.

4.1.6 (3) (d) (ii) If existing thresholds are _ in high or less, and have (or are modified to have) a beveled edge on each side, they may remain.

4.1.6 (3) (e) Toilet Rooms:

(i) Where it is technically infeasible to comply with 4.22 or 4.23, the installation of at least one unisex toilet/bathroom per floor, located in the same area as existing toile t facilities, will be permitted in lieu of

modifying existing toilet facilities to be accessible. Each unisex toilet room shall contain one water closet complying with 4.16 and one lavatory complying with 4.19, and the door shall have a privacy latch.

(ii) Where it is technically infeasible to install a required standard stall (Fig. 30(a))< or where other codes prohibit reduction of the fixture count (i.e., removal of a water closet in order to create a double-wide stall), either alternate stall (Fig.30(b)) may be provided in lieu of the standard stall.

Fig. 30(a) Standard Stall. The location of the door is illustrated to be in front of the clear space (next to the water closet), with 3 maximum stile width of 4 inches (100 mm). An alternate door location is illustrated to be on the side of the toilet stall with a maximum stile width of 4 inches (100 mm). The minimum width of the standard stall shall be 60 inches (1525 mm). The centerline of the water closet shall be 18 inches (455 mm) from the side wall.

Washington State Regulations

50-20-3112 (c) 6. Doors. A. Clearance. When existing elements prohibit strict compliance with the clearance requirements, a projection of 5/8 inch maximum is permitted for the latch side door stop.

51-20-3112 (c) 6. B. Thresholds. Existing thresholds measuring _ inch high or less which are modified to provide a beveled edge on each side, may be retained.

51-20-3112 (c) 7. Toilet Rooms. A. Shared Facilities. The addition of one unisex toilet facility accessible to all occupants on the floor may be provided in lieu of making existing toilet facilities accessible when it is technically infeasible to comply with either part of Chapter 31.
B. Number. The number of toilet facilities and water closets Required by the Uniform Plumbing Code may be reduced by One, in order to provide accessible features.

Commentary

ADA/Washington State May 14, 1993
45 Technical Assistance Document

ADA Requirements

Fig. 30(a-1). If a standard stall is provided at the end of a row of stalls, the door (if located on the side of the stall) may swing into to the stall, if the length of the stall is extended at least a minimum of 36 inches (915 mm)

beyond the required minimum length.

Fig. 30(b) Alternate Stalls. Two alternate stalls are illustrated; one alternate stall is required to be 36 inches (915 mm) in width. The other alternate stall is required to be a minimum of 48 inches (1220 mm) in width. If a wall mounted water closet is used, the depth of the stall is required to be a minimum of 66 inches (1675 mm). If a floor mounted water closet is used, the depth of the stall is required to be a minimum of 69 inches (1745 mm). The 36 inch wide stall shall have parallel grab bars on the side walls. The 48 inch minimum stall shall have a grab bar behind the water closet and one on the side wall next to the water closet. In each alternate, the centerline of the water closet is 18 inches (455 mm) from a side wall.

(iii) When existing toilet or bathing facilities are being altered and are not made accessible, signage complying with 4.30.1,4.30.2, 4.30.3,4.30.5, and 4.30.7 shall be provided indicating the location of the nearest accessible toilet or bathing facility within the facility.

4.16.6 (3) (f) Assembly Areas:

(i) Where it is technically infeasible to disperse accessible seating throughout an altered assembly area, accessible seating areas may be clustered. Each accessible seating area shall have provisions for companion seating and shall be located on an accessible route
that also serves as a means of emergency egress.

(ii) Where it is technically infeasible to alter all performing areas to
be on an accessible route, at least one of each type of performing
area shall be made accessible.

Washington State Regulations

See above.

51-20-3112 (c) 8. Assembly Areas. Seating shall adjoin an accessible route of travel that also serves as a means of emergency egress or route to an area for evacuation assistance.

Commentary

ADA Requirements
4.1.6 (3) (g) Platform Lifts (Wheelchair Lifts): In alterations, platform lifts

(wheelchair lifts) complying with 4.11 and applicable state or local codes may be used as part of an accessible route. The use of lifts is not limited to the four conditions in exception 4 of 4.1.3(5).

(h) Dressing Rooms: In alterations where technical infeasibility can be demonstrated, one dressing room for each sex on each level shall be made accessible. Where only unisex dressing rooms are provided, accessible unisex dressing rooms may be used to fulfil this requirement.

4.1.7 Accessible Buildings: Historic Preservation.

(1) Applicability:

(a) General Rule. Alterations to a qualified historic building or facility shall comply with 4.1.6 Accessible Buildings: Alterations, the applicable technical specifications of 4.2 through 4.35 and the applicable special application section 5 through 10 unless it is determined in accordance with the procedures in 4.1.7(2) that compliance with the requirements for accessible routes (exterior and interior), ramps, entrances, or toilets would threaten or destroy the historic significance of the building or facility in which case the alternative requirements in 4.1.7 (3) may be used for the feature.

4.1.8 (1) EXCEPTION: (Reserved).

Washington State Regulations

51-20-3112 (c) 5. Platform Lifts. Upon the approval of the building official, platform lifts may be used in lieu of elevators in alterations, in locations in addition to those permitted in Part II of this chapter, if installation of an elevator is technically infeasible. Platform lifts shall comply with chapter 296-81 WAC.

51-20-3112 (c) 9. Dressing Rooms. Where it is technically infeasible to meet the requirements of Part I of this chapter, one dressing room for each sex, or a unisex dressing room, on each level shall be accessible.

51-20-3113 Historic Preservation (a) General. Generally, the accessibility provisions of this part shall be applied to historic buildings and facilities as defined in Section 104 (f) of
this code. The building official, after consultation with the appropriate historic preservation officer, shall determine whether provisions required by this part for accessible routes of travel (interior or exterior), ramps, entrances, toilets, parking or signage would threaten or destroy the historic significance of the building or facility.

If it is determined that any of the accessibility requirements listed above would threaten or destroy the historic significance of a building or facility, the modifications of Section 3112 (c) for that feature may be utilized.

Commentary

PNE WSR's process differs from ADAAG. WSR does not address facilities subject to the National Historic Preservation act.

ADA Requirements

4.1.7 (1) (b) Definition. A qualified historic building or facility is a
building or facility that is:

(i) Listed in or eligible for listing in the National Register of Historic Places; or

(ii) Designated as historic under an appropriate State or local law.

4.1.7 (2) Procedures: (a) Alterations to Qualified Historic buildings and Facilities Subject to Section 106 of the National Historic Preservation Act:

4.1.7 (2) (a) (i) Section 106 Process. Section 106 of the National Historic Preservation Act (16 U.S.C. 470 f) requires that a Federal agency with jurisdiction over a Federal, federally assisted, or federally licensed undertaking consider the effects of the agency's undertaking on buildings an facilities listed in or eligible for listing in the National Register of Historic Places and give the Advisory Council on Historic Preservation a reasonable opportunity to comment on the undertaking prior to approval of the undertaking.

4.1.7 (2) (a) (ii) ADA Application. Where alterations are undertaken to a qualified historic building or facility that is subject to section 106 of the National Historic Preservation Act, the Federal agency with jurisdiction over the undertaking shall follow the section 106 process. If the State Historic Preservation Officer or Advisory Council on Historic Preservation agrees that compliance with the requirements for accessible routes (exterior and interior), ramps, entrances, or toilets would threaten or destroy the historic significance of the building or facility,

the alternative requirements in 4.1.7(3) may be used for the feature.

Washington State Regulations

51-20-0104 (f) Historic Buildings. Repairs, alterations and additions necessary for the preservation, restoration, rehabilitation or continued use of a building or structure may be made without conformance to all the requirements of this code when authorized by the building official, provided:
1. The building or structure ahs been designated by official Action of the legally constituted authority of this jurisdiction As having special historical or architectural significance.
2. Any unsafe conditions as described in this code are corrected.
3. The restored building or structure will be no more hazardous based on life safety, fire safety and sanitation than the existing building.

Commentary

ADA Requirements

4.1.7 (2) (b) Alterations to Qualified Historic Buildings and Facilities Not Subject to Section 106 of the National Historic Preservation Act. Where alterations are undertaken to a qualified historic building or facility that is not subject to section 106 of the National Historic Preservation Act, if the entity undertaking the alterations believes that compliance with the requirements for accessible routes (exterior and interior), ramps, entrances, or toilets would threaten or destroy the historic significance of the building or facility and that the alternative requirements in 4.1.7(3) should be used for the feature, the entity should consult with the Sate Historic Preservation Officer. If the State Historic Preservation Office agrees that compliance with the accessibility requirements for accessible routes (exterior and interior), ramps, entrances or toilets would threaten or destroy the historical significance of the building or facility, the alternative requirements in 4.1.7(3) may be used.

4.1.7 (2) (c) Consultation With Interested Persons. Interested persons should be invited to participate in the consultation process, including State or local accessibility officials, individuals with disabilities, and organizations representing individuals with disabilities.

4.1.7 (2) (d) Certified Local Government Historic Preservation Programs. Where the State Historic Preservation Officer has delegated the consultation responsibility for purposes of this section to a local government historic preservation program that

has been certified in accordance with section 101(c) of the National Historic Preservation Act of 1966 (16 U.S.C. 470A (c)) and implementing regulations (36 CFR 61.5), the responsibility may be carried out by the appropriate local government body or official.

Washington Sate Regulations

51-20-3113 (a) . . . The building official, after consultation with the appropriate historic preservation officer, shall determine whether provisions required by this part for accessible routes of travel (interior or exterior), ramps, entrances, toilets, parking or signage would threaten or destroy the historic significance of the building or facility.

If it is determined that any of the accessibility requirements listed above would threaten or destroy the historic significance of a building or facility, the modifications of Section 3112 (c) for that feature may be utilized.

Commentary

PNE Without the use of the process provided in ADAAG, the building official would have greater authority and discretion. ADAAG 4.1.7(2)(a)(ii) allows one of two designated entities (State historic Preservation Officer or Advisory Council), not the code official to make the determination. However, on the other had, the building official could be less sensitive to historical issues or historic fabric and require more access.

ADA Requirements

4.1.11 (3) Historic Preservation: Minimum Requirements:

(a) At least one accessible route complying with 4.3 from a site access point to an accessible entrance shall be provided.

EXCEPTION: A ramp with a slope no greater than 1:6 for a run not to exceed 2 ft (610 mm) may be used as part of an accessible route to an entrance.

4.1.7 (3) (b) At least one accessible entrance complying with 4.14
which is used by the public shall be provided.

EXCEPTION: If it is determined that no entrance used by the public
can comply with 4.14, then access at any entrance not used by the general public but open (unlocked) with directional signage at
the primary entrance may be used. The accessible entrance shall also have a notification system. Where security is a problem, remote monitoring may be used.

4.1.7 (3) (c) If toilets are provided, then at least one toilet facility
complying with 4.22 and 4.1.6 shall be provided along an accessible route that
complies with 4.3. Such toilet facility may
be unisex in design.

Washington Sate Regulations

51-20-3113 (b) Special Provisions. Where removing architectural barriers or providing accessibility would threaten or destroy the historic significance of a building or facility, the following special provisions may be used; 51-20-3113 (b) 1. At least one accessible route from a site access point to an accessible route shall be provided.

51-20-3112 (c) Modifications. 1. General. The following modifications set forth in this section may be used for compliance where the required standard is technically infeasible or when providing access to historic buildings

51-20-3112 (c) 2. Ramps. Curb ramps and ramps constructed on existing sites, or in existing buildings or facilities, may have slopes and rises as specified for existing facilities in Chapter 31, where space limitation prohibit the use of 1 vertical in 12 horizontal slope or less provided that:
A. A slope of not greater than 1 vertical in 10 horizontal is allowed for a maximum rise of 3 inches.
B. slope not greater than 1 vertical in 8 horizontal is Allowed for a maximum rise of 3 inches.
C. Slopes greater than 1 vertical in 8 horizontal are Prohibited.

51-20-3113 (b) 2. At least one accessible entry which is used by the public shall be provided.

51-20-3113 (b) 2. EXCEPTION: Where it is determined by the building official that no entrance used by the public can

comply, access at any accessible entry which is unlocked during business hours may be used provided directional signs are located at the main entry and the accessible entry ahs a notification system. The route of travel for the accessible entry shall not pass through hazardous areas, storage rooms, closets, kitchens or spaces used for similar purposes.

51-20-3113 (b) 3. Where toilet facilities are provided, at least one toilet facility complying with Section 3111 and 3112 shall be provided along an accessible route. Such toilet facility shall be a shared facility available to both sexes.
Commentary

ADA Requirements

4.1.7 (3) (d) Accessible routes from an accessible entrance to all
publicly used spaces on at least the level of the accessible entrance shall be provided. Access shall be provided to all levels
of a building or facility in compliance with 4.1 whenever practical.

4.1.7 (3) (e) Displays and written information, documents, etc., should be located where they can be seen by a seated person. Exhibits and signage displayed horizontally (e.g., open books), Should be no higher than 44 in (1120 mm) above the floor Surface.

Washington Sate Regulations

51-20-3113 (b) 4. Accessible routes from an accessible entry to all publicly used spaces, on at least the level of the accessible entry, shall be provided. Access should be provided to all levels of a building or facility when practical.

51-20-3113 (b) 4. . . . Displays and written information and documents shall be located where they can be seen by a seated person.

51-20-3114 Appeal (a) Request for Appeal. An appeal from the standards for accessibility for existing buildings may be filed with the building official in accordance with Section 204, when:
1. Existing structural elements or physical constraints of the

Site prevent full compliance or would threaten or destroy the Historical significance of a historic building, or
2. For the path of travel, the cost of compliance with this part would exceed 20% or the total project cost, inclusive of the cost of eliminating barriers, within a 36-month period.
51-20-3114 (b) Review. 1. Consideration of Alternative Methods. Review of appeal requests shall include Consideration of alternative methods which may provide Partial access.
51-20-3114 (b) 2. Waiver or Modification of Requirements. The appeals board may waive or modify the requirements of This section when it is determined that compliance with Accessibility requirements would threaten or destroy the Historic significance of a building or facility.

Commentary

ADA/Washington State May 14, 1993
51 Technical Assistance Document

ADA Requirements

4.2 Space Allowance and Reach Ranges.
4.2.1* Wheelchair Passage Width. The minimum clear width for single wheelchair passage shall be 32 in (815 mm) at a point and 36 in (915 mm) continuously (see Fig. 1 and 24 (e)).

Fig. 1 Minimum Clear Width for Single Wheelchair.

The minimum clear passage width for a single wheelchair passage shall be 32 inches (815 mm) at a point for a maximum depth of 24 inches (610 mm).

4.2.2 Width for Wheelchair Passing. The minimum width for two wheelchairs to pass is 60 in (1525 mm) (see Fig. 2).

4.2.3* Wheelchair Turning Space. The space required for a wheelchair to make a 180-degree turn is a clear space of 60 in (1525 mm) diameter (see Fig. 3(a) or T-shaped space (see Fig. 3(b)).
Fig. 3 \Wheelchair Turning Space.

Fig. 3(b) T-Shaped Space for 180 degree Turns. The T-shape space is 36 inches (915 mm) wide at the top and stem within a 60 inch by 60 inch (1525 mm by 1525 mm) square.

Washington State Regulations

51-20-3106 (b) Space Allowance and Reach Ranges. 1. Wheelchair Passage Width. The minimum clear width for single wheelchair passage shall be 36 inches. The minimum width for two wheelchairs to pass is 60 inches.
EXCEPTION: The minimum width for single wheelchair passage may be 32 inches for a maximum distance of 24 inches.

See Above.

51-20-3106 (b) 2. Wheelchair Turning Spaces. Wheelchair turning spaces shall be designed and constructed to satisfy one of the following requirements;

A. A turning space no less than 60 inches in diameter; or,

B. A turning space at T-shaped intersections or within a room, where the minimum width is not less than 36 inches. Each segment of the T shall be clear of obstruction snot less than 24 inches in each direction.

ADA/Washington Sate May 14, 1993
52 Technical Assistance Document
ADA Requirement

4.2.4* Clear Floor or Ground Space for Wheelchairs.

4.2.4.1 Size and Approach. The minimum clear floor or ground space required to accommodate a single, stationary wheelchair and occupant is 30 in by 48 in (760 mm by 1220 mm) (see Fig. 4(a)). The minimum clear floor or ground space of wheelchairs may be positioned for forward or parallel approach to an object (see Fig.
4(b) and (c). Clear floor or ground space for wheelchairs may be part of the knee space required under some objects.

Washington State Regulations

51-20-3106 (b) 3. Unobstructed Floor Space. A floor space, including the vertical space above such floor space, which is free
of any physical obstruction including door swings, to a height of 29
inches. Where a pair of doors occurs, the swing of the inactive leaf may be considered to be unobstructed floor space. Unobstructed floor space may include toe spaces that are a minimum of 9 inches in height and not more than 6 inches in

depth.

51-20-3106 (b) 4.>. Knee and Toe Clearances. Spaces under obstructions, work surfaces or fixtures may be included in the clear floor or ground space provided that they are at least 30 inches in width, a minimum of 2 inches in height and not greater than 25 inches in depth. Toe spaces under obstructions, work surfaces or fixtures which comply with the requirements for unobstructed floor space may be included in the clear floor or ground space.

51-20-3106 (b) 4. Clear Floor or Ground spaces and Maneuvering Clearance Space for Wheelchairs.

A. Size. The minimum clear floor or ground space required to accommodate a single, stationary wheelchair occupant shall be not less than 30 inches by 48 inches.

B. Approach. Wheelchair spaces shall be designed to allow for forward or parallel approach to an accessible feature.

Commentary

ADA Requirements

4.2.4.2 Relationship of Maneuvering Clearance to Wheelchair Spaces. One full unobstructed side of the clear floor or ground space for a wheelchair shall adjoin or overlap an accessible route or adjoin another wheelchair clear floor space. If a clear floor space is located in an alcove or other wise confined on all or part of three sides, additional maneuvering clearances shall be provided as shown in Fig. 4(d) and (e).

Fig. 4 Minimum Clear Floor Space for Wheelchairs.

Fig. 4(d) Clear Floor Space in Alcoves. For a front approach, where the depth of the alcove is equal to or less than 24 inches (610 mm), the required clear floor space is 30 inches by 48

inches (760 mm by 1220 mm).

For a side approach, where the depth of the alcove is equal to or less than 15 inches (380 mm), the required clear floor space
Is 30 inches by 48 inches (760 mm by 1220 mm).

Fig. 4(e) Additional Maneuvering ?Clearances, f for Alcoves. For a front approach, if the depth of the alcove is greater than 24
inches (610mm)), then in addition to the 30 inch (760 mm) width, a maneuvering clearance of 6 inches (150 mm) in width is required.

For a side approach, where the depth of the alcove is greater than 15 inches (380 mm), then in addition to the 48 inch (1220 mm) length, an additional maneuvering clearance of 12 inches in length (305 mm) is required.

4.2.4.3 Surfaces for Wheelchair Spaces. Clear floor or ground spaces for wheelchairs shall comply with 4.5.

Washington Sate Regulations

451-20-3106 (b) 4 D. Approach to Wheelchair Spaces. One full unobstructed side of the clear floor or ground space for a wheelchair shall adjoin or overlap an accessible route of travel, or
shall adjoin another wheelchair clear space. Clear space located in
an alcove or otherwise confined on all or part of three sides shall
be not less than 36 inches in width where forward approach is provided, or 60 inches in width where parallel approach is provide.

See ADAAG 4.5.

Commentary

ADA Requirements

4.2.5* Forward Reach. If the clear floor space only allows forward
approach to an object, the maximum high forward reach allowed

shall be 48 in (1220 mm) (see Fig. 5(a).). the minimum low forward reach is 15 in (380 mm). If the high forward reach is over
an obstruction, reach and clearances shall be as shown in Fig. 5(b).

Fig. 5 Forward Reach.

Fig. 5(b) Maximum Forward Reach over an Obstruction. The maximum level forward reach over an obstruction with knee space below is 25 inches (635 mm). When the obstruction is less than 20 inches (1220 mm). When the obstruction projects 20 to 25 inches (510 mm to 635 mm), the maximum high forward reach is 44 inches (1120 mm). (4.2.5, 4.25.3)

4.2.6* Side Reach. If the clear floor space allows parallel approach
by a person in a wheelchair, the maximum high side reach allowed shall be 54 in (1370 mm) and the low side reach shall be no less than 9 in (230 mm) above the floor (Fig. 6(a) and (b)). If the side
reach is over an obstruction, the reach and clearances shall be as
shown in Fig 6(c).

Fig 6 Side Reach. (4.2.6, 4.25.3)

Fig. 6(a) Clear Floor Space Parallel Approach and Fig. 6(b) High and Low Side Reach Limits. The clear floor space is locate d a
maximum 10inches (255 mm) from the wall.

Fig. 6(c) Maximum Side Reach over Obstruction. If the depth of the obstruction is 24 inches (6510 mm) and the maximum height of the obstruction is 34 inches (865 mm), the maximum high side reach over the obstruction is 46 inches (1170).

4.3 Accessible Route.

4.3.1* General. All walks, halls, corridors, aisles, skywalks, tunnels, and other spaces that are part of an accessible route shall
comply with 4.3.

Washington Sate Regulations

51-20-3106 (b) 4. E. Forward Reach. Where the clear floor space only allows forward approach to an object, the maximum high

forward reach allowed shall be not higher than 48 inches. Reach obstructions 20 inches or less in depth may project into the clear
space provided that knee clearance is maintained in accordance with Section 3106 (b) 2. B. Reach obstructions greater than 20 inches in depth may project into the clear space provided that the
reach obstruction shall not exceed 25 inches in depth and the maximum high forward reach shall not exceed 44 inches in height. The minimum low forward reach shall be not lower than 15.

51-20-3106 (b) 4. F. Side Reach. Where the clear floor space allows parallel approach by a person in a wheelchair, the maximum high side reach allowed shall be not higher than 54 inches. Obstructions no greater than 34 inches in height and no more than 24 inches in depth may be located in the side reach area provided that when such obstructions are present the side reach shall be not
more than 46 inches. The minimum low side reach shall be no lower than 9 inches.

51-20-3103 (b) 2. Accessible Route of Travel

Commentary

ADA Requirements

4.3.2 Location.

(1) At least one accessible route within the boundary of the site shall be provided from public transportation stops, accessible parking, and accessible passenger loading zones, and public streets
or sidewalks to the accessible building entrance they serve. The accessible route shall, to the maximum extent feasible, coincide with the route for the general public.

(2) At least one accessible route shall connect accessible buildings, facilities, elements, and spaces that are on the same site.

(3) At least one accessible route shall connect accessible building
or facility entrances with all accessible spaces and elements and with all accessible dwelling units within the building or

facility.

(4) An accessible route shall connect at least one accessible entrance of each accessible dwelling unit with those exterior and interior spaces and facilities that serve the accessible dwelling unit.

4.3.3 Width. The minimum clear width of an accessible route shall be 36 in (915mm) except at doors (see 4.13.5 an d4.13.6). If a person in a wheelchair must make a turn around an obstruction, the minimum clear width of the accessible route shall be as shown in Fig. 7(a) and (b).

Fig. 7 Accessible Route.

Fig. 7(a) 90 degree turn. A 90 degree turn can be made From a 36 inch (915 mm) wide passage into another 36 inch (915 mm) passage if the depth of each leg is a minimum of 48 inches (1220 mm) on the inside dimensions of the turn.

Fig. 7(b) turns around an Obstruction. A U-turn around an obstruction less than 48 inches (1220 mm) wide may be made if the passage width is a minimum of 42 inches (1065 mm) and the base of the U-turn space is a minimum of 48 inches (1220 mm) wide.

Washington State Regulations

51-20-3103 (b) 2. Accessible Route of Travel. When a building, or portion of a building, is required to be accessible, an accessible route of travel shall be provided to all portions of the building, to accessible building entrances and connecting the building and the public way. Except within an accessible dwelling unit, the accessible route of travel to areas of primary function may serve but shall not pass through kitchens, storage rooms, toilet rooms, bathrooms, closets or other similar spaces.

When more than one building or facility is located on a site, accessible routes of travel shall be provided connecting accessible buildings and accessible site facilities. The accessible route of travel shall be the most practical direct route connecting

accessible
building entrances, accessible site facilities and the accessible site
entrances.

EXCEPTION: For sites where natural terrain or other unusual property characteristics do not allow the provision of an accessible
route of travel from the public way to the building, the point of vehicular debarkation may be substituted for the accessible entrance to the site.

51-20-3106 (d) Accessible Route of Travel. 1. Width. The minimum clear width of an accessible route of travel shall be 36 inches except at doors (see Section 3106 (j) 2.). Where an accessible route includes a 180 degree turn around an obstruction which is less than 48 inches in width, the clear width of the accessible route of travel around the obstruction shall be 42 inches
minimum. For exterior accessible routes of travel, the minimum clear width shall be 44 inches.

EXCEPTION: The minimum width for single wheelchair passage may be 32 inches for a maximum distance of 24 inches.

51-20-3115 (b) 1. In areas serving employees only, the minimum aisle width may be 24 inches but not less than the width required by the number of employees served.

Commentary

ADA/Washington State May 14, 1993
56 Technical Assistance Document

ADA Requirements

4.3.4 Passing Space. If an accessible route has less than 60 in (1525 mm) clear width, then passing spaces at least 60 in by 60 in
(1525 mm by 1525 mm) shall be located at reasonable intervals not to exceed 200 ft (61 m)./ A T-intersection of two corridors or
walks is an acceptable passing place.

4.3.5 Head Room. Accessible routes shall comply with 4.4.2.

4.3.6 Surface Textures. The surface of an accessible route shall comply with 4.5.

4.3.7 Slope. An accessible route with a running slope greater than
1:20 is a ramp and shall comply with 4.8. Nowhere shall the cross
slope of an accessible route exceed 1:50.

Washington State Regulations

51-20-3106 1. (d) Where an accessible route is less than 60 inches
in width, passing spaces at least 60 inches by 60 inches shall be located at intervals not to exceed 200 feet. A T-shaped intersection of two corridors or walks may be used as a passing space.

51-20-3106 (d) 2. Height. Accessible routes shall have a clear height of not less than 79 inches. Where the vertical clearance of
an area adjoining an accessible route of travel is less than 79 inches but more than 27 inches, a continuous permanent barrier shall be installed to prevent traffic onto such area of reduced clearance.

51-20-3106 (d) 5. Surfaces. A. General. All floor and ground surfaces in an accessible route of travel shall comply with Section
3106 (g).

51-20-3106 (g) Floor Coverings and Surface Treatments. 1. General. All surfaces shall be firm and stable.

51-20-3106 (g) 3. Slip-Resistant Surfaces. Showers, locker rooms, swimming pool, spa, and hot tub decks, toilet rooms and other areas subject to wet conditions shall have slip-resistant floors.

Exterior accessible routes of travel shall have slip-resistant surfaces.

51-20-3107 (d) 5. Surface. Parking spaces and access aisles shall
be firm, stable, smooth and slip-resistant.

51-20-3106 (d) 3. Slope. An accessible route of travel shall have
a running slope not greater than 1 vertical in 12 horizontal. An accessible route of travel with a running slope greater than 1

vertical in 20 horizontal shall comply with Section 3106 (h). Cross
slopes of an accessible route of travel shall not exceed 1 vertical in
48 horizontal.

Commentary

ADA Requirements

4.3.8 Changes in Levels. Changes in levels along an accessible route shall comply with 4.5.2. If an accessible route ahs changes
in level greater than1/2in (13 mm), then a curb ramp, ramp, elevator, or platform lift (as permitted in 4.1.3 and 4.1.6) shall be
provided that complies with 4.7, 4.8 4.10, or 4.11, respectively. An accessible route does not include stairs, steps, or escalators.
See definition of "egress, means of" in 3.5.

4.3.9 Doors. Doors along an accessible route shall comply with 4.13.

4.3.10* Egress. Accessible routes serving any accessible space or
element shall also serve as a means of egress for emergencies or connect to an accessible area of rescue assistance.

Washington State Regulations

51-20-3106 (d) 4. Changes in Level. Changes in level along an accessible route of travel shall comply with Section 3106 (f). Stairs shall not be part of an accessible route of travel. Any raised
area within an accessible route of travel shall be cut through to maintain a level route or shall have curb ramps at both sides and a
level area not less than 48 inches long connecting the ramps.

51-20-3106 (f) Changes in Level. Accessible routes of travel and accessible spaces within buildings shall have continuous common floor or ramp surfaces. Abrupt change in height greater than inch shall be beveled to 1 vertical in 2 horizontal. Changes in level

greater than1/2inch shall be accomplished by means of a ramp meeting the requirements of Section 3106 (h). For type B dwelling
units, see also Section 3106 (aa).

3106 (j) Doors. 1. General. Doors required to be accessible shall
comply with Section 3304 and provisions of this section. For the purposes of this section, gates shall be considered to be doors.

51-20-3103 (b) 2. . . . Accessible routes of travel serving any accessible space or element shall also serve as a means of egress for emergencies or connect to an area of evacuation assistance.

51-20-3104 Egress and Areas for Evacuation Assistance. (a) General. In buildings required to be
accessible, accessible means of egress shall be provided in the same number as required for exits in Chapter 33. When an exit required by Chapter 33 is not accessible, an area for evacuation assistance shall be provided.

Commentary

ADA Requirements

4.3.11 Areas of Rescue Assistance.

4.3.11.1 Location and Construction. An area of rescue assistance shall be one of the following:

(1) A portion of a stairway landing within a smokeproof enclosure (complying with local requirements).

(2) A portion of an exterior exit balcony located immediately adjacent to an exit stairway when the balcony complies with local requirements for exterior exit balconies. Openings to the interior of
the building located within 20 feet (6 m) of the area of rescue assistance shall be protected with fire assemblies having a three-
fourths hour fire protection rating.

(3) A portion of a one-hour fire-resistive corridor (complying with
local requirements for fire-resistive construction and for

openings)
located immediately adjacent to an exit enclosure.

(4) A vestibule located immediately adjacent to an exit enclosure and constructed to the same fire-resistive standards as required for
corridors and openings.

(5)A portion of a stairway landing within an exit enclosure which is vented to the exterior and is separated from the interior of the
building with not less than one-hour fire-resistive doors.

(6)When approved by the appropriate local authority, an area or a room which is separated from other portions of the building by a
smoke barrier. Smoke barriers shall have a fire-resistive rating of
not less than one hour and shall completely enclose the area or room. Doors in the smoke barrier shall be tight-fitting smoke- and
draft-control assemblies having a fire-protection rating of not less
than 20 minutes and shall be self-closing or automatic closing. The
area or room shall be provided with an exit directly to an exit enclosure where the room or area exits into an exit enclosure which is required to be of more than one-hour fire-resistive construction, the room or area shall have the same fire-resistive construction, including the same opening protection, as required for
the adjacent exit enclosure.

Washington Sate Regulations

51-20-3104 Egress and Areas for Evacuation Assistance.

(c) Areas for Evacuation Assistance. 1. Location and Construction. An area for evacuation assistance shall be one of the following:

(b) 1.A. A portion of a landing within a smokeproof enclosure, complying with Section 3310.

(b)1.B. A portion of an exterior exit balcony, located immediately
adjacent to an exit stairway, when the exterior exit balcony complies with Section 3305. Openings to the interior of the

building located within 20 feet of the area for evacuation assistance shall be protected with fire assemblies having a three-
fourths-hourfire-protection-rating.

(b)1.C. A portion of a one-hour fire-resistive corridor complying with Sections 3305 (g) and (h) located immediately adjacent to an exit enclosure.

(b)1.D. A vestibule located immediately adjacent to an exit enclosure and constructed to the same fire-resistive standards as required by Section 3305 (g) and (h).

(b)1.E. A portion of a stairway landing within an exit enclosure which is vented to the exterior and is separated from the interior of
the building by not less than one-hour fire-resistive door assemblies.

(b)1.F. When approved by the building official, an area or room which is separated from other portions of the building by a smoke barrier. Smoke barriers shall have a fire-resistive rating of not less
than one hour and shall completely enclose the area or room. Doors in the smoke barrier shall be tight-fitting smoke- and draft-
control assemblies having a fire-protection rating of not less than
20 minutes and shall be self-closing or automatic closing. The area
or room shall be provided with an exit directly to an exit enclosure.
When the room or area exits into an exit enclosure which is required to be of more than one-hour fire-resistive construction, the
room or area shall have the same -fire-resistive construction,

Commentary

ADA Requirements

(7) An elevator lobby when elevator shafts and adjacent lobbies are pressurized as required for smokeproof enclosures by local regulations and when complying with requirements herein for size, communication, and signage. Such pressurization system shall be

activated by smoke detectors on each floor located in a manner approved by the appropriate local authority. Pressurization equipment and its duct work within the building shall be separated
from other portions of the building by a minimum two-hour fire-resistive construction.

4.3.11.2 Size. Each area of rescue assistance shall provide at least
two accessible areas each being not less than 30 inches by 48 inches (760 mm by 12220 mm). The area of rescue assistance shall not encroach on any required exit width. The total number of such
30-inch by 48-inch (760 mm by 1220 mm) areas per story shall be not less than one for every 200 persons of calculated occupant load served by the area of rescue assistance.

EXCEPTION: The appropriate local authority may reduce the minimum number of 30-inch by 48-inch (760 mm by 1220 mm) areas to one for each area of rescue assistance on floors where the
occupant load is less than 200.

Washington State Regulations

51-20-3104 (b) 1.G. An elevator lobby complying with Section 3104(d).

51-20-3104 (d) Area for Evacuation Assistance, High-Rise Alternative. Within a building of any height or occupancy, constructed in accordance with the requirements of Section 1807 or 1907, an area for evacuation assistance may be located in the elevator lobby, or adjacent to the elevator where no lobby is required, when:

1. the area for evacuation assistance complies with the requirements for size, two-way communication and identification as
specified in Section 3104 (b); and,

2. Elevator shafts are pressurized as required for smokeproof enclosures in Section 3310. Such pressurization system shall be activated by smoke detectors on each floor located in a manner approved by the building official. Pressurization equipment and its
ductwork with the building shall be separated from other portions of the building by a minimum of two-hour fire-resistive construction.

3. The manager of the building shall establish and maintain a written fire- and life-safety emergency plan which, in addition to other provisions, shall specifically address the evacuation of persons with disabilities, and which ahs been approved by the building official and fire chief.

51-20-3104 (b) 2. Size. Each area for evacuation assistance shall provide at least two wheelchair spaces not smaller than 30 inches by 48 inches for each space. The area for evacuation assistance shall not encroach on any required exit width. The total number of such 30-inch by 48-inch wheelchair spaces per story shall not be less than 1 for every 200 persons of calculated occupant load served by the area for evacuation assistance.

EXCEPTION: The building official may reduce the minimum number of 30-inch by 48-inch areas to one for each area for evacuation assistance on floors where the occupant load is less than 200.

Commentary

ADA Requirements

4.3.11.3* Stairway Width. Each stairway adjacent to an area of rescue assistance shall have a minimum clear width of 48 inches between handrails.

4.3.11.4* Two-way Communication. A method of two-way communication, with both visible and audible signals, shall be provided between each area of rescue assistance and the primary entry. The fire department or appropriate local authority may approve a location other than the primary entry.

4.3.11.5 Identification. Each area of rescue assistance shall be identified by a sign which state "AREA OF RESCUE ASSISTANCE" and displays the international symbol of accessibility. The sign shall be illuminated when exit sign illumination is required. Signage shall also be installed at all inaccessible exits and where otherwise necessary to clearly indicate the direction to areas of rescue assistance. In each area of rescue assistance, instructions on

the
use of the area under emergency conditions shall be posted adjoining the two-way communication system.

Washington State Regulations
51-20-3104 (b) 3. Stairway Width. Each stairway adjacent to an area for evacuation assistance shall have a minimum clear width of
48 inches.

51-20-3104 (b) 4. Two-way Communication. A telephone with controlled access to a public telephone system or another method of two-way communication shall be provided between each area for evacuation assistance and the primary entry. The fire department may approve location other than the primary entrance.

51-20-3104 (b) 5. Identification. Each area for evacuation assistance shall be identified by a sign which states: AREA FOR EVACUATION ASSISTANCE and the International Symbol of access. The sign shall be illuminated when exit sign illumination is
required. The sign shall comply with sections 3314 (c) and (j). In
each area for evacuation assistance, instructions on the use of the
area under emergency condition shall be posted adjoining the two-way communication system.

51-20-3104 (c) Accessible Exits. All exterior exits which are located adjacent to accessible areas and within 6 inches of grade shall be accessible.

Commentary

PNE WSR does not require that the 48 inches be measured between the handrails. We need a clarification of where 48 inches is measured.

NE WSR does not require the two-way communication to be both audible and visible.

ADA Requirements

4.4 Protruding Objects.
4.4.1* General. Objects projecting from walls (for example, telephones) with their leading edges between 27 in and 80 in (685

mm and 2030 mm) above the finished floor shall protrude no more than 4 in (100 mm) into walks, halls, corridors, passageways, or aisles (see Fig. 8(a). Objects mounted with their leading edges at
or below 27 in (685 mm) above the finished floor may protrude any amount (see Fig. 8(a) and (b). Free-standing objects mounted on posts or pylons may overhang 12 in (305 mm) maximum from 27 in to 80 in (685 mm to 2030 mm) above the ground or finished floor (see Fig. 8(c) and (d)). Protruding objects shall not reduce the clear
width of an accessible route or maneuvering space (see Fig. 8(e)).

Fig. 8 Protruding Objects.

Fig. 8(c-1) Overhead Hazards. As an example, the diagram illustrates a stair whose underside descends across a pathway. Where the headroom is less than 80 inches, protection is offered by
a railing (2030 mm) which can be no higher than 27 inches (685 mm) to ensure detectability.

Fig. 8(d) Objects Mounted on Posts or Pylons. The diagram illustrates an area where an overhang can be greater than 12 inches (305 mm) because the object cannot be approached in the direction of the overhang.

Fig. 8(e) Example of Protection around Wall-Mounted Objects and Measurements of Clear Widths. The minimum clear width for continuous passage is 36 inches. Thirty two (32) inches
is the minimum clear width for a maximum distance of 24 inches (610 mm). The maximum distance an object can protrude beyond a wing wall is 4 inches (100 mm).

Washington State Regulations

51-20-3106 (e) Protruding Objects. Protruding objects shall not reduce the clear width of an accessible route of travel or maneuvering space. Any wall- or post-mounted object with its leading edge between 27 inches and 79 inches above the floor may project not more than 4 inches into the required width within a corridor. Any wall-or post-mounted projection greater than 4 inches shall extend to the floor. Protruding objects shall not reduce
the clear width of an accessible route of travel or maneuvering space.

Commentary

ADA/Washington State May 14, 1993
62 Technical Assistance Document

ADA Requirements

4.4.2 Head Room. Walks, halls, corridors, passage ways, aisles, or other circulation spaces shall have 80 in (2030 mm) minimum clear head room (see Fig. 8(a)). If vertical clearance of an area adjoining an accessible route is reduced to less than 80 in (nominal dimension), a barrier to warn blind or visually-impaired persons shall be provided (see Fig. 8(c-1))

Fig. 8(c-1) Overhead Hazards. As an example, the diagram Illustrates a stair whose underside descends across a pathway. Where the headroom is less than 80 inches, protection is offered by A railing (2030 mm) which can be no higher than 27 inches (685 mm) to ensure detectability.

4.5 Ground and Floor Surfaces.

4.5.1* General. Ground and floor surfaces along accessible routes and in accessible rooms and spaces including floors, walks, ramps, stairs, and curb ramps, shall be stable, firm, slip-resistant, and shall comply with 4.5.

4.5.2 Changes in Level. Changes in level up to in (6 mm) may be vertical and without edge treatment (see Fig. 7(c)). Changes in level between and1/2in (6 mm and 13 mm) shall be beveled with a slope no greater than 1:2 (see Fig. 7(d)). Changes in level greater than1/2in (13 mm) shall be accomplished by means of a ramp that complies with 4.7 or 4.8.

4.5.3* Carpet. If carpet or carpet tile is used on a ground or floor surface, then it shall be securely attached; have a firm cushion, pad, or backing, or no cushion or pad; and have a level loop, textured loop, level cut pile, or level cut/uncut pile texture. The

maximum pile thickness shall be1/2in (13 mm) (see Fig. 8(f)). Exposed edges of carpet shall be fastened to floor surfaces and Have trim along the entire length of the exposed edge. Carpet edge
Trim shall comply with 4.5.2.

Washington State Regulations

51-20-3106 (d) 2. Height. Accessible routes shall have a clear height of not less than 79 inches. Where the vertical clearance of
an area adjoining an accessible route of travel is less than 79 inches but more than 27 inches, a continuous permanent barrier shall be installed to prevent traffic into such areas of reduced clearance.

51-20-3106 (g) Floor Coverings and Surface Treatments. 1. General. All surfaces shall be firm and stable.

51-20-3106 (g) 3. Slip-Resistant Surfaces. Showers, locker rooms, swimming pool, spa and hot tub decks, toilet rooms and other areas subject to wet conditions shall have slip-resistant floors.
Exterior accessible routes of travel shall have slip-resistant surfaces.

51-20-3107 (b) 5. Surface. Parking spaces and access aisles shall
be firm, stable, smooth and slip-resistant.

51-20-3106 (f) Changes, in Level. Accessible routes of travel and
accessible spaces within buildings shall have continuous common floor or ramp surfaces. Abrupt change in height greater than inch shall be beveled to 1 vertical in 2 horizontal. Changes in level
greater than1/2inch shall be accomplished by means of a ramp meeting the requirements of Section 3106 (h). For Type B dwelling
units, see also Section 3106 (aa).

51-20-3106 (g) 2. Carpeting. Carpeting and floor mats in accessible areas shall be securely fastened to the underlying surface, and shall provide a firm, stable, continuous and relatively
smooth surface.

Commentary

PNE WSR's provision does not include the1/2inch maximum pile thickness.

ADA Requirements

4.5.4 Gratings. If gratings are located in walking surfaces, then they shall have spaces no greater than1/2in (13 mm) wide in one direction (see Fig. 8(g)). If gratings have elongated openings, then they shall be placed so that the long dimension is perpendicular to the dominant direction of travel (see Fig. 8(h)).

4.6 Parking and Passenger Loading Zones.

4.6.1 Minimum Number. Parking spaces required to be accessible by 4.1 shall comply with 4.6.2 through 4.6.5. Passenger loading zones required to be accessible by 4.1 shall comply with 4.6.5 and 4.6.6.

4.6.2 Location. Accessible parking spaces serving a particular building shall be located on the shortest accessible route of travel from adjacent parking to an accessible entrance. In parking facilities that do no serve a particular building, accessible parking shall be located on the shortest accessible route of travel to an accessible pedestrian entrance of the parking facility. In buildings with multiple accessible entrances with adjacent parking, accessible parking spaces shall be dispersed and located closest to the accessible entrances.

Washington State Regulations

51-20-3106 (g) 4. Grates. Within an accessible route of travel grates shall have openings no more than1/2inch in one direction. Where grates have elongated openings, they shall be placed so that The long dimension is perpendicular to the dominant direction of

Travel. The maximum vertical surface change shall be 1/8 inch.

51-20-3106 (g) 5. Expansion and Construction Joints. Expansion and construction joints in exterior routes of travel shall have a width of not more than1/2inch, shall be filed with a firm, compressible, elastic material, and shall be substantially level with
the surface of the accessible route of travel.

51-20-3107 Parking Facilities. (a) Accessible Parking Required.

51-20-3107 (b) Design and Construction. 1. General. When accessible parking spaces are required by this section they shall be
designed and constructed in accordance with this section.

51-20-3108 (b) Design and Construction. 1. General. Passenger drop-off and loading zones shall be designed and constructed in accordance with this section.

51-20-3107 (a) . . . Accessible parking spaces shall be located on
the shortest possible accessible route of travel to an accessible building entrance. In facilities with multiple accessible building
entrances with adjacent parking, accessible parking spaces shall be
dispersed and located near the accessible entrances. Wherever practical, the accessible route of travel shall not cross lanes of
vehicular traffic. Where crossing traffic lanes is necessary, the
route of travel shall be designated and marked as a crosswalk.

Commentary

ADA/Washington State May 14, 1993
64 Technical Assistance Document

ADA Requirements

4.6.3* Parking Spaces. Accessible parking spaces shall be at least
96 in (2440 mm) wide. Parking access aisles shall be part of an accessible route to the building or facility entrance and shall comply
with 4.3. Two accessible parking spaces may share a common access aisle (see Fig. 9). Parked vehicle overhangs shall not

reduce
the clear width of an accessible route. Parking spaces and
access
aisles shall be level with surface slopes not exceeding 1:50 (2%)
in
all directions.

Fig. 9 Dimensions of Parking Spaces.

The access aisle shall be a minimum of 60 inches (1525 mm) wide for cars or a minimum of 96 inches (2440 mm) wide for vans. The accessible route connected to the access aisle at the front of the parking spaces shall be a minimum of 36 inches (915 mm).

4.6.4* Signage. Accessible parking spaces shall be designated as reserved by a sign showing the symbol of accessibility (see 4.30.7). Spaces complying with 4.1.2(5)(b) shall have an additional sign "Van-Accessible" mounted below the symbol of accessibility. Such signs shall be located so they cannot be obscured by a vehicle parked in the space.

4.6.5* Vertical Clearance. Provide minimum vertical clearance of 114 in (2895 mm) at accessible passenger loading zones and along at least one vehicle access route to such areas from site entrance(s)
and exit(s). At parking spaces complying with 4.1.2(5)(b), provide
minimum vertical clearance of 98 in (2490 mm) at the parking space and along at least one vehicle access route to such spaces from site entrance(s) and exit(s).

Washington State Regulations

51-20-3107 (b) 2. Size. Parking spaces shall be not less than 96 inches in width and shall have an adjacent access aisle not less than 60 inches in width. Where two adjacent spaces are provided, the access aisle may be shared between the two spaces. Boundaries of access aisles shall be marked so that aisles will
not
be used as parking space.

Van accessible parking spaces shall have an adjacent access aisle not less than 96 inches in width.

51-20-3107 (b) 4. Slope. Accessible parking spaces and access aisles shall be located on a surface with a slope not to exceed 1 vertical in 48 horizontal.

51-20-3107 (b) 5. Surface. Parking spaces and access aisles shall
be firm, stable, smooth and slip-resistant.

51-20-3107 (c) Signs. Every parking space required by this section
shall be identified by a sign, centered between 3 and 5 feet above
the parking surface, at the head of the parking space. The sign shall include the International Symbol of Access and the phrase "State Disabled Parking Permit Required."

51-20-3107 (b) 3. Vertical Clearance. Where accessible parking spaces are provided for vans, the vertical clearance shall be not less than 114 inches.

Commentary

NE WSR requires no sign designating which spaces are "van-accessible."

PNE WSR's requirement for vertical clearance does not appear to apply to passenger loading zones or along vehicle access routes.

ADA Requirements

4.6.6 Passenger Loading Zones. Passenger loading zones shall provide an access aisle at least 60 in (1525 mm) wide and 20 ft (240 in)(6100 mm) long adjacent and parallel to the vehicle pull-up
space (see Fig. 10). If there are curbs between the access aisle and the vehicle pull-up space, then a curb ramp complying with 4.7
shall be provided. Vehicle standing spaces and access aisles shall
be level with surface slopes not exceeding 1:50 (2%) in all directions.

4.7 Curb Ramps.

4.7.1 Location. Curb ramps complying with 4.7 shall be provided wherever an accessible route crosses a curb.

4.7.2 Slope. Slopes of curb ramps shall comply with 4.8.2. The

slope shall be measured as shown in Fig. 11. Transitions from ramps to walks, gutters, or streets shall be flush and free of abrupt changes. Maximum slopes of adjoining gutters, road surface immediately adjacent to the curb ramp, or accessible route shall not exceed 1:20.

Fig. 11 Measurement of Curb Ramp Slopes.

The ramp slope is a ratio equal to the vertical rise divided by the horizontal run. The adjoining slope at walk or street shall not exceed 1:20.

Washington State Regulations

51-20-3108 Passenger Drop -off and Loading Zones. (a) Location. Where provided, passenger drop-off and loading zones shall be located on an accessible route of travel.

51-20-3108 (b) 2. Passenger Drop-off Zones. A. Size. Drop-off zones shall be not less than 12 feet in width by 25 feet in length with the long dimension abutting and parallel to an accessible route of travel.

51-20-3108 (b) 2 B. Slope. Such zones shall be located on a surface with a slope not exceeding 1 vertical in 48 horizontal.

51-20-3108 (b) 3. Passenger Loading Zones. A. Size. Passenger loading zones shall provide an access aisle not less than 5 feet in width by 20 feet in length with the long dimension abutting and parallel to: (1) the vehicle space on one side and (2) an accessible route of travel on the other.

51-20-3108 (b) 3. B. Slope. Such zones shall be located on a surface with a slope not exceeding 1 vertical in 48 horizontal.

51-20-3106 (d) 4. Changes in Level. Changes in level along an accessible route of travel shall comply with Section 3106 (f). Stairs shall not be part of an accessible route of travel. Any raised area within an accessible route of travel shall be cut through to

maintain a level route or shall have curb ramps at both sides and a
level area not less than 48 inches long connecting the ramps.

51-20-3106 (d) 8. Curb Ramps. A. Slope Slopes of curb ramps shall comply with Section 3106 (h). Transitions from ramps to walks, gutters or vehicular ways shall be flush and free of abrupt
changes in height. Maximum slopes of adjoining gutters and road surfaces immediately adjacent to the curb ramp or accessible route
of travel shall not exceed 1 vertical in 20 horizontal.

Commentary

ADA Requirements

4.7.3 Width. The minimum width of a curb ramp shall be 36 in (915 mm), exclusive of flared sides.

4.7.4 Surface. Surfaces of curb ramps shall comply with 4.5.

4.7.5 Sides of Curb Ramps. If a curb ramp is located where pedestrians must walk across the ramp, or where it is not protected
by handrails or guardrail, it shall have flared sides; the maximum
slope of the flare shall be 1:10 (see Fig. 12(a)). Curb ramps with
returned curbs may be sued where pedestrians would not normally walk across the ramp (see Fig. 12(b)).

Fig. 12 Sides of Curb Ramps.

Fig. 12(a) Flared Sides. If the landing depth at the top of a
curb ramp is less than 48 inches, then the slope of the flared side
shall not exceed 1:12.

4.7.6 Built-up Curb Ramps. Built-up curb ramps shall be located so
that they do not project into vehicular traffic lanes (see Fig. 13).

4.7.7 Detectable Warnings. A curb ramp shall have a detectable warning complying with 4.29.2. The detectable warning shall extend the full width and depth of the curb ramp.

4.7.8 Obstructions. Curb ramps shall be located or protected to prevent their obstruction by parked vehicles.

4.7.9 Location at marked Crossings. Curb ramps at marked crossings shall be wholly contained within the markings, excluding
any flared sides (see Fig. 15).

Washington State Regulations

51-20-3106 (d) 8. B. Width. Curb ramps shall be not less than 36 inches in width, exclusive of the required side slopes.

51-20-3106 (d) 5. Surfaces. A. General. All floor and ground surfaces in an accessible route of travel shall comply with Section
3106 (q).

51-20-3106 (d) 8. C. Side slopes of Curb Ramps. Curb ramps located where pedestrians must walk across the ramp, or where not protected by handrails or guardrails, shall have sloped sides.
The maximum side slope shall be 1 vertical in 10 horizontal. Curb
ramps with returned curbs may be used where pedestrians would not normally walk across the ramp.

51-20-3106 (d) 8. D. Location. Built-up curb ramps shall be located so as not to project into vehicular ways nor be located within accessible parking spaces.

51-20-3106 (d) 5.B. Detectable Warnings. Curb ramps shall have detectable warnings complying with Section 3106 (q). Detectable warnings shall extend the full width and depth of the curb ramp.

51-20-3106 (d) 9. Vehicular Areas. Where an accessible route of travel crosses or adjoins a vehicular way, and where there are no curbs, railings or other elements detectable by a person who has severe vision impairment separating the pedestrian and vehicular areas, the boundary between the areas shall be defined by a continuous detectable warning not less than 36 inches wide, complying with Section 3106 (g).

51-20-3106 (d) 8 E. Obstructions. Curb ramps shall be located or

protected to prevent their obstruction by parked vehicles.

51-20-3106 (d) 8. F. Location at Marked Cross Walks. Curb ramps at marked cross walks shall be wholly contained within the markings, excluding any sloped sides.

Commentary

NE WSR does not address requirement for 48 inch clear space at top of a curb ramp or use of 1:12 slope on side flare where 48 inches "not provided."

PNE This provision is generally equivalent if it refers to section 3106 (q). the print is not clear. Clarification is needed.

ADA/Washington State May 14, 1993
67 Technical Assistance Document

ADA Requirements

4.7.10 Diagonal Curb Ramps. If diagonal (or corner type) curb ramps have returned curbs or other well-defined edges, such edges shall be parallel to the direction of pedestrian flow. The bottom of diagonal curb ramps shall have 48 in (1220 mm) minimum clear space as shown in Fig. 15 (c) and (d). If diagonal curb ramps are provided at marked crossings, the 48 in (1220 mm) clear space shall be within the markings (see Fig. 15 (c) and (d)). If diagonal curb ramps have flared sides, they shall also have at least a 24 in (610 mm) long segment of straight curb located on each side of the curb ramp and within the marked crossing (see Fig. 15c).

4.7.10 Islands. Any raised islands in crossings shall be cut through level with the street or have curb ramps at both sides and a level area at least 48 in (1220 mm) long between the curb ramps in the part of the island intersected by the crossings (see Fig. 15(a) and (b)).

4.8 Ramps.

4.8.1* General. Any part of an accessible route with a slope greater than 1:20 shall be considered a ramp and shall comply with 4.8.

4.8.2* Slope and Rise. The lease possible slope shall be used for any ramp. The maximum slope of a ramp in new construction shall be 1:12. The maximum rise for any run shall be 30 in (760 mm) (see Fig. 16). Curb ramps and ramps to be constructed on existing sites or in existing buildings or facilities may have slopes and rises as shown as allowed in 4.1.6(3)(a) if space limitations prohibit the use of a 1:12 slope or less (see 4.1.6).

Fig. 16 Components of a Single Ramp Run and Sample Ramp Dimensions.

If the slope of a ramp is between 1:12 and 1:16, the maximum rise shall be 30 inches (760 mm) and the maximum horizontal run shall be 30 feet (9 m). If the slope of the ramp is between 1:16 and 1:20, the maximum rise shall be 30 inches (760 mm) and the maximum horizontal run shall be 40 feet (12 m).

Washington State Regulations

51-20-3106 (d) 4. Changes in Level. Changes in level along an accessible route of travel shall comply with Section 3106 (f). Stairs shall not be part of an accessible route of travel. Any raised area within an accessible route of travel shall be cut through to maintain a level route of shall have curb ramps at both sides and a level area not less than 48 inches long connecting the ramps.
51-20-3106 (h) Ramps. 1. General Ramps required to be accessible shall comply with Section 3307 and the provisions of this section. No ramp shall change direction between landings, except ramps with an inside radius of 30 feet or greater.

51-20-3106 (h) 2. Slope and Rise. The maximum slope of a ramp shall be 1 vertical in 12 horizontal. The maximum rise for any run shall be 30 inches.

51-20-3315 (e) Ramp Slope. The slope of ramped aisles shall not

be more than 1 vertical in 8 horizontal. Ramped aisles shall have
a slip-resistant surface.

EXCEPTION: When provided with fixed seating, theaters may have a slope not steeper than 1 vertical to 5 horizontal.

Commentary

NE No equivalent provisions.

PNE Clarification is needed to ascertain whether the "ramped aisles" of 51-20-3315 (e) are allowed as part of an accessible route. If allowed, this is not equivalent.

ADA Requirements

4.8.3 Clear Width. The minimum clear width of a ramp shall be 36 in (915 mm).

4.8.4* Landings. Ramps shall have level landings at bottom and top of each ramp and each ramp run. Landings shall have the following features:

(1) The landing shall be at least as wide as the ramp run leading to it.

(2) The landing length shall be a minimum of 60 in (1525 mm) Clear.

(3) If ramps change direction at landings, the minimum landing Size shall be 60 in by 60 in (1525 mm by 1525 mm).

(4) If a doorway is located at a landing, then the area in front of
The doorway shall comply with 4.13.6.

Washington State Regulations

51-20-3106 (h) 3. Width. The minimum width of a ramp shall be not less than 36 inches for interior ramps and 44 inches for exterior ramps.

51-20-3106 (h) 4. Landings. Ramps within the accessible route of

travel shall have landings at the top and bottom, and at least one intermediate landing shall be provided for each 30 inches of rise.
Landings shall have a minimum dimension measured in the direction of ramp run of not less than 60 inches. Where the ramp changes direction at a landing, the landing shall be not less than 60 inches by 60 inches. The width of any landing shall be not less the width of the ramp.

Commentary

ADA/Washington State May 14, 1993
69 Technical Assistance Document

ADA Requirements

4.8.5* Handrails. If a ramp run has a rise greater than 6 in (150 mm) or a horizontal projection greater than 72 in (1830 mm), then it shall have handrails on both sides. Handrails are not required on curb ramps or adjacent to seating in assembly areas. Handrails shall comply with 4.26 and shall have the following features:

(1) Handrails shall be provided along both sides of ramp segments. The inside handrail on switchback or dogleg ramps shall always be continuous.

Washington State Regulations

51-20-3106 (h) 5. Handrails. Ramps having slopes steeper than 1 vertical in 20 horizontal shall have handrails as required for stairways, except that intermediate handrails as required for stairways, except that intermediate handrails as required in Section 3306 (I) are not required. Handrails shall be continuous provided that they shall not be required at any point of access along the ramp, nor at any curb ramp. Handrails shall extend at least 12 inches beyond the top and bottom of any ramp segment.

EXCEPTION: Ramps having a rise less than or equal to 6 inches or a run less than or equal to 72 inches need not have handrails.

51-20-3306 (i) Handrails. Stairways shall have handrails on each side, and every stairway required to be more than 88 inches in width shall be provided with not less than one intermediate handrail
for each 88 inches of required width. Intermediate handrails shall
be spaced approximately equally across the entire width of the stairway.
EXCEPTION: 1. Stairways less than 44 inches in width or stairways serving one individual dwelling unit in Group R, Division 1
or 3 Occupancies, or a Group R, Division 3 Congregate residence may have one handrail.
2. Private stairways 20 inches or less in height may have handrails
on one side only.
3. Stairways having less than four risers and serving one individual
dwelling unit in Group, R, Division 1 or 3, or a Group R. Division 3
congregate residence or serving Group M. Occupancies need not have handrails.

Commentary

NE It appears that the reference to section 51-20-3306 (l) Would allow ramps to have only one handrail if they are less than 44 inches in width. Section 51-20-3106 sates "ramps . . . shall have handrails as required for stairways in section 3306 (I)* and 3306 (l) ahs an exception for stairways less than 44 inches or stairways serving certain occupancy types. Certain ramps may be less than 44 inches wide.

ADA Requirements

(2) If handrails are not continuous, they shall extend at least 12
in (305 mm) beyond the top and bottom of the ramp segment and shall be parallel with the floor or ground surface (see Fig. 17).

(3) The clear space between the handrail and the wall shall be 1 r in (38 mm).

(4) Gripping surfaces shall be continuous.

(5) Top of handrail gripping surfaces shall be mounted between 34 in and 38 in (865 mm and 965 mm) above ramp surfaces.

(6) Ends of handrails shall be either rounded or returned smoothly
to floor, wall, or post.

(7) Handrails shall not rotate within their fittings.

4.8.6 Cross Slope and Surfaces. The cross slope of ramp surfaces shall be no greater than 1:50. Ramp surfaces shall comply with 4.5.

Washington Sate Regulations

The top of handrails and handrail extensions shall be placed not less than 34 inches or more than 38 inches above the nosing of treads and landings. Handrails shall be continuous the full length
of the stairs and, except for private stairways, at least one handrail
shall extend in the direction of the stair run not less than 12 inches
beyond the top riser or less than 23 inches beyond the bottom riser. Ends shall be returned or shall terminate in newel posts or
safety terminals.

The handgrip portion of handrails shall be not less than 1 r inches or more than 2 inches in cross-sectional dimension or the shape shall provide an equivalent gripping surface. The handgrip portion of handrails shall have a smooth surface with no sharp corners.

Handrails projecting from a wall shall have a space of not less than
11/2inches between the all and the handrail. Any recess containing a handrail shall allow a clearance of not less than 18 inches above the top of the rail, and shall be not more than 3 inches in horizontal depth.

Handrails shall not rotate within their fittings.

51-20-3106 (d) 3. Slope. An accessible route of travel shall have
a running slope not greater than 1 vertical in 12 horizontal. An accessible route of travel with a running slope greater than 1

vertical in 20 horizontal shall comply with Section 3106 (h). Cross
slopes of an accessible route of travel shall not exceed 1 vertical in
48 horizontal.

Commentary

ADA Requirements

4.8.7 Edge Protection. Ramps and landings with drop-offs shall have curbs, walls, or projecting surfaces that prevent people from slipping off the ramp. Curbs shall be a minimum of 2 in (50 mm) high (see Fig. 17).

4.8.8 Outdoor Conditions. Outdoor ramps and their approaches shall be designed so that water will not accumulate on walking surfaces.

4.9 Stairs.

4.9.1* Minimum Number. Stairs required to be accessible by 4.1 shall comply with 4.9.

Washington State Regulations

51-20-3106 (d) 6. Edge Protection. Guardrails designed and constructed in accordance with Section 1712 shall be provided on any portion of an accessible route of travel which is more than 30
inches above the grade or floor below. Any portion of the edge of
an accessible route of travel which is more than1/2inch above adjacent grade of floor shall be provided with a protective railing
with the top of the rail at a height of 34 inches nominal and a mid-
rail at a height of 18 inches nominal.
EXCEPTION: 1. Where curbs, walls, or should slopes abut the accessible route of travel, a protective railing is not required. Where provided:
A. Curbs shall be not less than 2 inches in height above the surface of the accessible route of travel.
B. Shoulder slopes shall be at the same grade as the edge of the accessible route of travel; and shall have a slope, downward from

the edge, of not more than 1 vertical in 48 horizontal for a distance
of not less than 36 inches.
2. For routes of travel adjoining vehicular ways or parking areas,
protective railings are not required provided the difference in grade
is less than 3 inches.

51-20-3106 (h) 6. Exterior Ramps. Exposed ramps and their approaches shall be constructed to prevent the accumulation of water on walking surfaces.
51-20-3106 (I) Stairways.

1. General. Stairways required to be accessible shall comply with Section 3306 and provisions of this section.

Commentary

ADA/Washington State May 14, 1993
72 Technical Assistance Document

ADA Requirements

4.9.2 Treads and Risers. On any given flight of stairs, all steps
shall have uniform riser heights and uniform tread widths. Stair treads shall be no less than 11 in (280 mm) wide, measured from riser to riser (see Fig. 18(a)). Open risers are not permitted.

4.9.3 Nosing. The undersides of nosing shall not be abrupt. The radius of curvature at the leading edge of the tread shall be no greater than1/2in (13 mm). Risers shall be sloped or the underside of the nosing shall have an angle not less than 60 degrees from the horizontal. Nosing shall project no more than 1-1/2 in (38 mm) (see Fig. 18).

Washington State Regulations

51-20-3106 (i) 2. Open Risers. Open risers shall not be permitted

EXCEPTION: Stairways in Group H, Division 1 apartment buildings may have open risers.

51-20-3306 (c) Rise and Run. The rise of every step in a stairway
shall not be less than 4 inches or greater than 7 inches. Except

as
permitted in Subsections (d) and (f), the run shall not be less than
11 inches as measured horizontally between the vertical planes of
the furthermost projection of adjacent reads. Except as permitted
in Subsections (d), (e) and (f), the largest tread run within any flight of stairs shall not exceed the smallest by more than 3/8 inch.
The greatest riser height within any flight of stairs shall not exceed
the smallest by more than 3/8 inch.

EXCEPTIONS: 1. Private stairways serving an occupant load of less than 10 and stairways to unoccupied roofs may be constructed with an 8-inch maximum rise and a 9-inch minimum run.
2. Where the bottom or top riser adjoins a sloping public way, walk or driveway having an established grade and serving as a landing, the bottom or top riser may be reduced along the slope to
less than 4 inches in height with the variation in height of the bottom or top riser not to exceed 3 inches in every 3 feet of stairway width.

51-20-3106 (i) 3. Nosing. Stair nosing shall be flush, slip-resistant
and rounded to a radius of1/2inches maximum. Risers shall be sloped or the underside to the nosing shall have an angel of not less than 60 degrees from the horizontal. Nosing shall project no
more than 11/2inches.

Commentary

ADA Requirements

4.9.4 Handrails. Stairways shall have handrails at both sides of all
stairs. Handrails shall comply with 4.26 and shall have the following features:

(1) Handrails shall be continuous along both sides of stairs. The

inside handrail on switchback or dogleg stairs shall always be continuous (see Fig. 19(a) and (b)).

(2) If handrails are not continuous, they shall extend at least 12 in (305 mm) beyond the top riser and at least 12 in (305 mm) plus the width of one tread beyond the bottom riser. At the top, the extension shall be parallel with the floor or ground surface. At the bottom, the handrail shall continue to slope for a distance of the width of one tread from the bottom riser; the remainder of the extension shall be horizontal (see Fig. 19(c) and (d)). Handrail extensions shall comply with 4.4.

(3) The clear space between handrails and wall shall be 1-1/2 in (38 mm).

(4) Gripping surfaces shall be uninterrupted by newel posts, other construction elements, or obstructions.

(5) Top of handrail gripping surface shall be mounted between 34 in and 38 in (865 mm and 965 mm) above stair nosing.

(6) Ends of handrails shall be either rounded or returned smoothly to floor, wall or post.

(7) Handrails shall not rotate within their fittings.

Washington State Regulations

51-20-3306 (I) Handrails. Stairways shall have handrails on each side, and every stairway required to be more than 88 inches in width shall be provided with not less than one intermediate handrail for each 88 inches of required width. Intermediate handrails shall be spaced approximately equally across the entire width of the stairway.

EXCEPTION: 1. Stairways less than 44 inches in width or stairways serving one individual dwelling unit in Group R, Division 1 or 3 Occupancies, or a Group R, Division 3 congregate residence may have one handrail.
2. Private stairways 20 inches or less in height may have

handrails
on one side only.
3. Stairways having less than four risers and serving one individual
dwelling unit in Group R, Division 1 or 3, or a Group R. Division 3
congregate residence or serving Group M. Occupancies need not have handrails.

3306 (i) Handrails. . . . The top of handrails and handrail extension shall be placed not less than 34 inches or more than 38 inches above the nosing of treads and landings. Handrails shall be
continuous the full length of the stairs and, except for private stairways, at least one handrail shall extend in the direction of the
stair run not less than 12 inches beyond the top riser or less than
23 inches beyond the bottom riser. Ends shall be returned or shall
terminate in newel posts or safety terminals.

The handgrip portion of handrails shall be not less than 1 1/2 inches or more than 2 inches in cross-sectional dimension or the shape shall provide an equivalent gripping surface. The handgrip portion of handrails shall have a smooth surface with no sharp corners.

Handrails projecting from a wall shall have a space of not less than
1 1/2 inches between the wall and the handrail. Any recess containing a handrail shall allow a clearance of not less than 18 inches above the top of the rail, and shall be not more than 3 inches in horizontal depth.

Handrails shall not rotate within their fittings.

Commentary

NE The exception for stairways less than 44 inches to the requirement for two handrails would often apply to some of the facilities that are exempt from elevators under WSR. Small "Private" group homes used for transients could have four steps without handrails or stairways less than 44 inches wide with only one handrail. As a result, even people who walk with difficulty but could otherwise gain access by walking up stairs with handrails on both sides, would have no access.

ADA Requirements

4.9.5 Detectable Warnings at Stairs. (Reserved)

4.9.6 Outdoor Conditions. Outdoor stairs and their approaches shall be designed so that water will not accumulate on walking surfaces.

4.10 Elevators

4.10.1 General. Accessible elevators shall be on an accessible route and shall comply with 4.10 and with the ASME A17.1-1990, Safety Code for Elevators and Escalators. Freight elevators shall not be considered as meeting the requirements of this section unless the only elevators provided are used as combination passenger and freight elevators for the public and employees.

4.10.2 Automatic Operation, Elevator operation shall be automatic.

Each car shall be equipped with a self-leveling feature that will automatically bring the car to floor landings within a tolerance of
1/2 in (13 mm) under rated loading to zero loading conditions. This
self-leveling feature shall be automatic and independent of the operating device and shall correct the overtravel or undertravel.

4.10.3 Hall Call Buttons. Call buttons in elevator lobbies and halls
shall be centered at 42 in (1065 mm) above the floor. Such call buttons shall have visual signals to indicate when each call Is registered and when each call is answered. Call buttons shall be a
minimum of 3/4 In (19 mm) In the smallest dimension. The button designating the up direction shall be on top. (See Fig. 20.) Buttons
shall be raised or flush. Objects mounted beneath hall call buttons
shall not project Into the elevator lobby more than 4 in (100 mm).

Washington State Regulations

51-20-3106 (i) 4. Exterior Stairways. Exposed stairways and their
approaches shall be constructed to prevent the accumulation of water on walking surfaces.

51-20-3105(c) Elevators. 2. Design. All elevators shall be accessible

EXCEPTION: 1. Private elevators serving only one dwelling unit. 2. Where more than one elevator is provided in the building, elevators used exclusively for movement of freight.
Elevators required to be accessible shall be designed and Constructed to comply with Chapter 296-81 of the Washington Administrative Code.

Commentary

NE No technical provisions submitted for review.

NE

75 ADA/Washington State may 14, 1993
Technical Assistance Document

ADA Requirements

4.10.4 Hall Lanterns. A visible and audible signal shall be provided
at each hoistway entrance to indicate which car is answering a call.
Audible signals shall sound once for the up direction and twice for
the down direction or shall have verbal annunciators that say "up"
or "down." Visible signals shall have the following features:

(1) Hall lantern fixtures shall be mounted so that their centerline
Is at least 72 in (1830 mm) above the lobby floor, (See Fig. 20.)

(2) Visual elements shall be at least 2-1/2 in (64 mm) in the smallest dimension.

(3) Signals shall be visible from the vicinity of the hall call button

(see Fig. 20). In-car lanterns located in cars, visible from the vicinity of hall call buttons, and conforming to the above requirements, shall be acceptable.

4.10.5 Raised and Braille Characters an Hoistway Entrances. All elevator hoistway entrances shall have raised and Braille floor designations provided on both jambs. The centerline of the characters shall be 60 in (1525 mm) above finish floor. Such characters shall be 2 in (50 mm) high and shall comply with 4.30.4.
Permanently applied plates are acceptable If they are permanently fixed to the jambs. (See Fig. 20).

4.10.6* Door Protective and Reopening Device. Elevator doors shall
open and close automatically. They shall be provided with a reopening device that will stop and reopen a car door and hoistway
door automatically if the door becomes obstructed by an object or person. The device shall be capable of completing these operations
without requiring contact for an obstruction passing through the opening at heights of 5 in and 29 In (125 mm and 735 mm) above finish floor (see Fig. 20). Door reopening devices shall remain effective for at least 20 seconds. After such an interval, doors may
close in accordance with the requirements of ASME A17.1-1990.

Washington State Regulations

Commentary

NE

NE

NE

ADA Requirements

4.10.7* Door and Signal Timing for Hall Calls. The minimum acceptable time from notification that a car is answering a call until the doors of that car start to close shall be calculated from

the following equation:

T = D/(1.5 ft/s) or T = D/(445 mm/s)

where T total time in seconds and D distance (in feet or millimeters) from a point in the lobby or corridor 60 In (1525 mm)
directly in front of the farthest call button controlling that car
to the centerline of its hoistway door (sea Fig. 21). For cars with
in-car lanterns, T begins when the lantern is visible from the vicinity of hall call buttons and an audible signal Is sounded. The
minimum acceptable notification time shall be 5 seconds.

4.10.8 Door Delay for Car Calls. The minimum time for elevator doors to remain fully open in response to a car call shall be 3 seconds.

Washington State Regulations

ADA Requirements

4.10.9 Floor Plan of Elevator Cars, The floor area of elevator cars
shall provide space for Wheelchair users to enter the car, maneuver
within reach of controls, and exit from the car. Acceptable door opening and inside dimensions shall be as shown in Fig. 22. The clearance between the car platform sill and the edge of any hoistway landing shall be no greater than 1-1/4 In (32 mm).

Fig. 22 Minimum Dimensions of Elevator Cars.

Diagram (a) illustrates an elevator with a door providing a 36 inch (915 mm) minimum clear width, in the middle of the elevator. The width of the elevator car is a minimum of 80 inches (2030 mm). The depth of the elevator our measured from the back

wall to the elevator door is a minimum of 54 inches (1370 mm). The depth of the elevator car measured from the back wall to the control panel is a minimum of 51 inches (1291 mm).

Diagram (b] illustrates an elevator with door providing a minimum 36 inch (915 mm) clear width, located to one side of the elevator. The width of the elevator car is a minimum of 68 inches (1730 mm). The dept of the elevator car measured from the back wall to the elevator door is a minimum of 54 inches (1370 mm). The depth of the elevator car measured from the back well to the control panel is a minimum of 51 inches (1291).

4.10.10 Floor Surfaces. Floor surfaces shall comply with 4.5.

4.10.11 Illumination Levels. The level of illumination at the car controls, platform, 2nd car threshold and landing sill shall be at
least 5 footcandles (53.8 lux).

Washington State Regulations

Commentary

NE

ADA Requirements

4.10.12* Car Controls. Elevator control panels shall have the

following features:

(1) Buttons. All control buttons shall be at least 3/4 in (19 mm)
in their smallest dimension. They shall be raised or flush.
(2) Tactile, Braille, and Visual Control Indicators. All control buttons shall be designated by Braille and by raised standard alphabet characters for letters, arabic characters for numerals, or
standard symbols as shown In rig. 23(a), and as required In ASME A17.1-1 990. Raised and Braille characters and symbols shall comply with 4.30. The call button for the main entry floor shall be

designated by a raised star at the left of the floor designation (see Fig. 23(a)). All raised designations for control buttons shall be placed immediately to the left of the button to which they apply. Applied plates, permanently attached, are an acceptable means to provide raised control designations. Floor buttons shall be provided with visual indicators to show when each call is registered. The visual indicators shall be extinguished when each call is answered.

(3) Height. All floor buttons shall be no higher than 54 in (1370 mm) above the finish floor for side approach and 48 in (1220 mm) for front approach. Emergency controls, including the emergency alarm and emergency stop, shall be grouped at the bottom of the panel and shall have their centerlines no less than 35 in (890 mm) above the finish floor (see Fig. 23(a) and (b)).

Fig. 23 Car Controls.

Fig. 23(a) Panel Detail. The diagram Illustrates the symbols used for the following control buttons: main entry floor, door closed, door open, emergency alarm, and emergency stop. The diagram further states that the octagon symbol for the emergency stop shall be raised but the X (inside the octagon) Is not.

(4) Location. Controls shall be located on a front wall if cars have center opening doors, and at the side wall or at the front wall next to the door if cars have side opening doors (see Fig. 23(c) and (d)).

Washington State Regulations

Commentary
NE

NE

4.10.13* Car Position Indicators. In elevator cars, a visual car position indicator shall be provided above the car control panel or over the door to show the position of the elevator in the hoistway. As the car passes or stops at a floor served by the elevators, the corresponding numerals shall illuminate, and an audible signal shall sound. Numerals shall be a minimum of 1/2 In (13 mm) high. The audible signal shall be no less than 20 decibels with a frequency no higher than 1500 Hz. An automatic verbal announcement of the floor number at which a car stops or which a car passes may be substituted for the audible signal.

4.10.14* Emergency Communications. If provided, emergency two-way communication systems between the elevator and a point outside the hoistway shall comply with ASME A17.1-1990. The highest operable part of a two-way communication system shall be a maximum of 48 in (1220 mm) from the floor of the car. It shall be identified by a raised symbol and lettering complying with 4.30 and located adjacent to the device. If the system uses a handset then the length of the cord from the panel to the handset shall be at least 29 in (735 mm). If the system is located in a closed compartment the compartment door hardware shall conform to 4.27, Controls and Operating Mechanisms. The emergency intercommunication system shall not require voice communication.

4.1 1 Platform Lifts (Wheelchair Lifts).

4.11.1 Location. Platform lifts (wheelchair lifts) permitted by 4.1 shall comply with the requirements of 4.11.

4.11.2* Other Requirements. If platform lifts (wheelchair lifts) are used, they shall comply with 4.2.4, 4.5, 4.27, and ASME A17.1 Safety Code for Elevators and Escalators, Section XX, 1990.

4.11.3 Entrance If platform lift are used then they shall facilitate unassisted entry, operation. and exit from the lift in compliance with 4.11.2.

4.12 Windows.

4.12.1* General. (reserved).

4.12.2* Window Hardware. (Reserved),
Washington State Regulation

See below.

51-20-3105(c) 3.All platform lifts used in lieu of an elevator
shall
be capable of independent operation and shall comply with Chapter
296-81 of the Washington Administrative Code.

Commentary

NE

NE

NE See below.

NE No technical provisions submitted for review.

ADA Requirements

4.13 Doors.

4.13.1 General. Doors required to be accessible by 4.1 shall
comply with the requirements of 4.13,

4.13.2 Revolving Doors and Turnstiles. Revolving doors or
turnstiles shall not be the only means of passage at an
accessible
entrance or along an accessible route. An accessible gate or door
shall be provided adjacent to the turnstile or revolving door and
shall be so designed as to facilitate the same use pattern.

4.13.3 Gates. Gates, including ticket gates, shall meet all
applicable specifications of 4.13.

4.13.4 Double-Leaf Doorways. It doorways have two independently
operated door leaves, then at least one leaf shall meet the

specifications in 4.13.5 and 4.13.6. That leaf shall be an active leaf.

4.13.5 Clear Width. Doorways shall have a minimum clear opening of
32 in (815 mm) with the door open 90 degrees, measured between the
face of the door and the opposite stop (see Fig. 24(a),
(b). (c), and (d)). Openings more than 24 in (61 0 mm) in depth shall comply with 4.2.1 and 4.3.3 (see Fig. 24(e)l.

EXCEPTION: Doors not requiring full user passage, such as shallow closets, may have the clear opening reduced to 20 in (510 mm) minimum.

Washington State Regulations
51-20-3106 (j) Doors.

51-20-3106 (j) 1. General. Doors required to be accessible shall
comply with Section 3304 and provisions of this section. For the purpose of this section, gates shall be considered to be doors. An
accessible gate or door shall be provided adjacent to any turnstile
or revolving door. Where doorways have two independently operated door leaves, then at least one leaf shall comply with this
section.

51-20-3304 (l) Additional Doors. Additional Doors. When additional doors are provided for egress purposes, they shall conform to all provisions of this Chapter.

EXCEPTION: approved revolving doors having leaves which will collapse under opposing pressures may be used in exit situations, provided:
A. Such doors have a minimum width of 6 feet 6 inches.
B. At least one conforming exit door is located adjacent to each revolving door.
C. The revolving door shall not be considered to provide any exit width.

51-20-3304 (h) Special Doors. Revolving , sliding and overhead doors shall not be used as required exits. Where a turnstile is used, a gate or door to accommodate persons with disabilities shall
be installed.

51-20-3106 (j) 2. Clear Width. Doors shall be capable of opening
so that the clear width of the opening is not less than 32 inches.

EXCEPTION: Door not requiring full user passage, such as shallow closets, may have a clear opening not less than 20 inches.

51-20-3304 (f) Width and Height. Every required exit doorway shall be of a size as to permit the installation of a door not less
than 3 feet in width and not less than 6 feet 8 inches in height. When installed, exit doors shall be capable of opening so that the
Clear width of the exit is not less than 32 inches. In computing the Exit width required by Section 3303 (b), the net dimension of the exitway shall be used.

Commentary

81 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

4.13.6 Maneuvering Clearances at Door,. Minimum maneuvering clearances at doors that are not automatic or power-assisted shall
be as shown in Fig. 25. The floor or ground area within the required clearances shall be level and clear.

Fig. 25 Maneuvering Clearances at Doors. NOTE., All doors in alcoves shall comply with the clearances for front approaches

Diagram (a) Front Approaches -- Swinging Doors. Front approaches to pull side of swinging doors shall have maneuvering space that extends 18 in (455 mm) minimum beyond the latch side of the door and 60 in (1525 mm) minimum perpendicular to the doorway.

Front approaches to push side of swinging doors, equipped with
both closer and latch, shall have maneuvering space that extends 12
in (305 mm) minimum beyond the latch side of the door and 48 in

(1220 mm) minimum perpendicular to the doorway.

Front approaches to push side of swinging doors, not equipped with latch and closer, shall have maneuvering space that is the same width as door opening and extends 48 in (1220 mm) minimum perpendicular to the doorway.

Diagram (b) Hinge Side Approaches. Hinge-side approaches to pull side of swinging doors shall have maneuvering space that extends 36 in (915 mm) minimum beyond the latch side of the door if 60 in (1525 mm) minimum is provided perpendicular to the doorway or maneuvering space that extends 42 in (1065 mm) minimum beyond the latch side of the door shall be provided if 54 in (1370 mm) minimum is provided perpendicular to the doorway.

Hinge-side approaches to push side of swinging doors, not equipped with both latch and closer, shall have a maneuvering space of 54 in (1370 mm) minimum, parallel to the doorway and 42 in (1065 mm) minimum, perpendicular to the doorway.

Washington State Regulations

51-20-3106 (j) 3. Maneuvering Clearance at Doors. Except as provided in Section 3106 (aa) (3106 (aa) is dwelling unit), all doors shall have minimum maneuvering clearances as follows:

A. Where a door must be pulled to be opened, an unobstructed Floor space shall extend at least 18 inches beyond the strike jamb.

B. Where a door must be pushed to be opened and is equipped With a closer and a latch, an unobstructed floor space shall extend At least 12 inches beyond the strike jamb.

51-20-3304 (i) Floor Level at Doors. Regardless of the occupant load, there shall be a floor or landing on each side of a door. When access for persons with disabilities is required by Chapter 31, the floor or landing shall not be more than 1/2inch lower than the threshold of the doorway. When such access is not required, such dimension shall not exceed 1 inch. Landings shall be level except for exterior landings, which may have a slope not to exceed

inch per foot.

51-20-3304 (j) Landings at Door. Landings shall have a width not less than the width of the stairway or the width of the door, whichever is the greater. Doors in the fully open position shall not reduce a required dimension by more than 7 inches. When a landing serves an occupant load of 50 or more, doors in any position shall not reduce the landing dimension to less than one-half its required width. Landings shall have a length measured in
the direction of travel of not less than 44 inches.

Commentary

NE Provisions do not contain enough detail to ensure Access at doors. For example, ADAAG Fig. 25 requires Maneuvering clearances that range in size from 60 inches By 52 inches to 48 inches by 32 inches, depending on door Swing approach, etc. Although provisions in sections 51-20-33304 (i) and (j) compensate in some ways, the provisions are still inadequate.

ADA Requirements

Hinge side approaches to push side of swinging doors, equipped with both latch and closer, shall have maneuvering space of 54 in (1370 mm) minimum, parallel to the doorway, 48 in (1220 mm) minimum perpendicular to the doorway.

Diagram (c) Latch Side Approaches -- Swinging Doors.
latch-side approaches to pull side of swinging doors, with closers,
shall have maneuvering space that extends 24 in (610 mm) minimum beyond the latch side of the door and 54 In (1370 mm) minimum perpendicular to the doorway.

Latch-side approaches to pull side of swinging doors, not equipped with closers, shall have maneuvering space that extends 24 in (610 mm) minimum beyond the latch side of the door and 48 in (1220 mm) minimum perpendicular to

EXCEPTION: Entry doors to acute care hospital bedrooms for in-patients shall be exempted from the requirement for space at the

latch side of the door(see dimension "x" in Fig. 25) if the door is at
least 44 in (1120 mm) wide.

4.13.7 Two Doors in Series. The minimum space between two hinged or pivoted doors in series shall be 48 in (1220 mm) plus the
width of any door swinging into the space. Doors in series shall swing either in the same direction or away from the space between the doors (see Fig. 26),

4.13.8* Thresholds at Doorways. Thresholds at doorways shall not exceed 3/4 in 19 mm in height for exterior sliding doors or 1/2
in 13 mm) for other types of doors. Raised thresholds and floor level changes at accessible doorways shall be beveled with a slope
no greater than 1:2 (see 4.5.2).

Washington State Regulation

See above.

51-20-3106 (j) 3. C. Where two doors are in a series, the minimum distance between two hinged or pivoted doors shall be 48 inches in addition to any needed for door swing.

51-20-3106 (j) 4. Thresholds at Doors. Thresholds at doors shall
comply with Section 3106 (e). (sic)

51-20-3106 (f) Changes in Level. Accessible routes of travel and accessible spaces within buildings shall have continuous common floor or ramp surfaces. Abrupt change in height greater than inch shall be beveled to 1 vertical in 2 horizontal. Changes in level
greater than 1/2 inch shall be accomplished by means of a ramp meeting the requirements of 3106 (h). For Type b dwelling units, see also Section 3106 (aa).

Commentary

NE See above.

PNE Requirement for the direction of the door swing for Doors in series is not included.

PNE If the reference should be to 3106 (f) instead of

3106 (e), it is equivalent.

ADA Requirements

4.13.9* Door Hardware, Handles, pulls, latches, locks, and other operating devices on accessible doors shall have a shape that is easy to grasp with one hand and does not require tight grasping, tight pinching, or twisting of the wrist to operate. Lever-operated mechanisms, push-type mechanisms, and U-shaped handles are acceptable designs. When sliding doors are fully open, operating hardware shall be exposed and usable from both sides. Hardware required for accessible door passage shall be mounted no higher than 48 in(1220 mm) above finished floor.

4.13.10* Door Closers. If a door has a closer, then the sweep period of the closer shall be adjusted so that from an open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 in (75 mm) from the latch, measured to the leading edge of the door.

4.13.11* Door Opening Force. The maximum force; for pushing or pulling open a door shall be as follows:

(1) Fire doors shall have the minimum opening force allowable by the appropriate administrative authority.

(2) Other doors.
(a) exterior hinged doors: (Reserved).
(b) interior hinged doors: 5 lbf (22.2N)
(c) sliding or folding doors: 5 lbf (22.2N)

These forces do not apply to the force required to retract latch bolts or disengage other devices that may hold the door in a closed position.

Washington State Regulations

51-203106 (c) Controls and Hardware. 1. Operation. Handles, pulls, latches, locks and other operating devices on doors, windows, cabinets, plumbing fixtures and storage facilities,

shall
have a lever or other shape which will permit operation by wrist or
arm pressure and does not require tight grasping, pinching or twisting to operate.

2. Mounting Heights. The highest operable part of environmental And other controls, dispensers, receptacles and other operable Equipment shall be within a least one of the reach ranges specified
In Section 3106 (b), and not less than 36 inches above the floor. Electrical and communications system receptacles on walls shall be
Mounted a minimum of 15 inches in height above the floor. Door Hardware shall be mounted at not less than 36 inches and not more Than 48 inches above the floor.

51-20-3106 (j) 6. Door Closers. Where provided, door closers shall be adjusted to close from an open position of 70 degrees in not less than 3 seconds, to a point 3 inches from the latch, when measured to the leading edge of the door.

51-20-3304 (b) Swing and Opening force. Exit doors shall be of the
pivoted or side-hinged swinging type. Exit doors shall swing in the direction of exit travel when serving any hazardous area or when serving an occupant load of 50 or more. The door latch shall
release when subjected to a 15-pound force, and the door shall be set in motion when subjected to a 30-pound force. The door shall swing to full-open position when subjected to 15-pound force. Forces shall be applied to the latch side. Except that at exit doors
Within the accessible route of travel such force shall not exceed 8.5 pounds, and at sliding and folding doors, and interior swinging
doors such force shall not exceed 5 pounds. At exterior doors where environmental conditions require greater closing pressure, power-operated doors shall be used within the accessible route of travel.

Technical Assistance Document

ADA Requirements

4.13,12* Automatic Doors and Power-Assisted Doors. If an automatic door is used, then it shall comply with ANSI/BHMA A.156.10-1985. Slowly opening, low-powered, automatic doors Shall comply with ANSI A156.19-1984. Such doors shall not open to back check faster than 3 seconds and shall require no more than
15 lbf (66.6N) to stop door movement. If a power-assisted door is used, its door-opening force shall comply with 4.13.11 and its closing shall conform to the requirements in ANSI A156.19-1984.

Washington State Regulations

51-20-3106 (j) 5. Automatic and Power-Assisted Doors. Door-closers or power-operators shall be operable as required by Section
3304 (h).

EXCEPTION: Floor pad or electric-eye-actuated power operators.

All power-operated doors shall remain in the fully open position for
not less than 6 seconds before closing. Touch switches shall be mounted 36 inches above the floor and not less than 18 inches nor more than 36 inches horizontally from the nearest point of travel of
the moving door. Other power-operated doors must be actuated from a location not less than 36 inches from the nearest point of travel of the moving door. Power-operated doors shall automatically reopen when they encounter an obstruction other than the strike jamb.

51-20-3106 (j) 7. Vision Panels. Where vision panels are provided
in a door, the bottom of the glass shall be not more than 40 inches
above the door.

Technical Assistance Document

ADA Requirements

4.14 Entrances.

4.14.1 Minimum Number. Entrances required to be accessible by 4.1 shall be part of an accessible route complying with 4.3. Such entrances shall be connected by an accessible route to public transportation stops, to accessible parking and passenger loading zones, to public streets or sidewalks if available(see 4.3.2(1)). They shall also be connected by an accessible route to all accessible spaces or elements within the building or facility.

Washington State Regulations

51-20-3103 (b) Design and Construction. 2. Accessible Route of Travel. When a building or portion of a building, is required to be
accessible, an accessible route of travel shall be provided to all
portions of the building, to accessible building entrances and connecting the building and the public way. Except within an accessible dwelling unit, the accessible route of travel to areas of
primary function may serve but shall not pass through kitchens, storage rooms, toilet rooms, bathrooms, closets or other similar spaces.

Accessible routes of travel serving any accessible space or element
Shall serve as a means of egress for emergencies or connect to an Area of evacuation assistance.

EXCEPTION: For sites where natural terrain or other unusual property characteristics do not allow the provision of an accessible
route of travel from the public way to the building, the point of
vehicular debarkation may be substituted for the accessible entrance to the site.

ADA Requirements

4.14.2 Service Entrances. A service entrance shall not be the sole
accessible entrance unless it is the only entrance to a building or

facility (For example, in a factory or garage).

4.15 Drinking Fountains and Water Coolers.

4.15.1 Minimum Number. Drinking fountains or water coolers required to be accessible by 4.1 shall comply with 4.15

4.15.21 Spout Height. Spouts shall be no higher than 36 in (915 mm), measured from the floor or ground surfaces to the spout outlet (see Fig. 27(a)).

Fig. 27 Drinking Fountains and Water Coolers.

Fig. 27(a) Spout Height and Knee Clearance. In addition to clearances discussed in the text, the following knee clearance is required underneath the fountain: 8 inches (205 mm) minimum measured from the front edge underneath the fountain back towards the wall, and a 9 inch (230 mm) minimum high toe space, measured a maximum 6 inches (150 mm) from the wall. (4.15.2, 4.15.5)

Washington State Regulation

51-20-3103 (b) 3. Primary Entry Access. At least 50% of all public entries, or a number equal to the number or exits required by
Section 3303 (a), whichever is greater, shall be accessible. One of
the accessible public entries shall be the primary entry to a building. At least one accessible entry must be a ground floor entrance. Public entries do not include loading or services entries.

EXCEPTION: In Group R, Division 1 apartment buildings only the primary entry need be accessible, provided that the primary entry provides an accessible route of travel to all dwelling unit required
to be accessible.

Where a building is designed not to have common or primary entries, the primary entry to each individual dwelling unit required
to be accessible, and each individual tenant space, shall be accessible.

51-20-3105 (d) Other Building Components. 1. Water Fountains. on any floor where water fountains are provided, at least 50 percent, but in no case less than one fountain shall be

accessible
complying with Section 3106 (m) and at least one fountain shall be
mounted at a standard height.

51-20-3106 (m) 3. Spout Location. Spouts shall be located not more than 36 inches above the floor or ground surface.

Commentary

NE

87 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

4.15.3 Spout Location. The spouts of drinking fountains and water coolers shall be at the front of the unit and shall direct the water
flow in a trajectory that is parallel or nearly parallel to the front
of the unit, The spout shall provide a flow of water at least 4 in (100
mm) high so as to allow the insertion of a cup or glass under the flow of water. On an accessible drinking fountain with a round or oval bowl, the spout must be positioned so the flow of water is within 3 in (75 mm) of the front edge of the fountain.

4.15.4 Controls. Controls shall comply with 4.27.4. Unit controls shall be front mounted or side mounted near the front edge.

4.15.5 Clearances.

(1) Wall- and post-mounted cantilevered units shall have a clear
knee space between the bottom of the apron and the floor or ground
at least 27 in (685 mm) high, 30 in (760 mm) wide, and 17 in to 19 in
(430 mm to 485 mm) deep (see Fig. 27(a) and (b)), Such units shall also have a minimum clear floor space 30 in by 48 in (760 mm
by 1220 mm) to allow a person in a wheelchair to Approach the unit facing forward.

(2) Free-standing or built-in units not having a clear space

under
them shall have a clear floor space at least 30 in by 48 in (760 mm
by 1220 mm) that allows a person in a Wheelchair to make a
parallel approach to the unit (see Fig. 27(c) and (d)). This clear
floor space shall comply with 4.2.4.

4.16 Water Closets.

4.16.1 General. Accessible water closets shall comply with 4.16.

Washington State Regulations

51-20-3106 (m) 3. . . Spouts shall b e located in the front of the
unit and shall direct a water flow not less than 4 inches in height,
in a trajectory parallel to the front of the unit.

51-20-3106 (m) 4. Controls. Controls shall be located not more than 6 inches from the front of the unit and shall comply with Section 3106 (c). The force required to activate the control shall
not exceed 5 pounds.

51-20-3106 (m) Water Fountains. 1. Clear Floor Space. Wall- and post-mounted cantilevered units shall have a minimum clear floor space in front of the units 30 inches in width by 48 inches in
depth to allow a forward approach.

Free-standing or built-in units not having a clear space under them
shall have a clear floor-space at least 30 inches in depth by 48 inches in width in order to allow a person in a wheelchair to make
a parallel approach to the unit.

2. Knee space. Wall- and post-mounted cantilevered units shall have knee space in accordance with Section 3106 (b) 2. B. the knee space shall be not less than 19 inches in depth.

51-20-3106 (m) 5. Water Fountains in Alcoves. Where a unit is installed in an alcove greater than 3 inches in depth, the alcove shall be not less than 48 inches in width. A minimum 24 inches of

clear space shall be provided from the spout to the nearest side wall of the alcove. Recessed units shall be installed such that the
spout is not recessed beyond the plane of the wall.

51-20-3106 (k) Bathrooms, Toilet Rooms, Bathing facilities and Shower Rooms. 1. General. Bathrooms, toilet rooms, bathing facilities and shower rooms shall be designed in accordance with this section. For dwelling units, see also Section 3106 (aa).

Commentary

PNE WSR requires the spout to be located in the "front" of the unit. It is not clear how this would apply to fountains with round or oval bowls.

PNE Generally equivalent only if section 3106 (b) 12. C., Knee and Toe Clearance is referenced by 51-20-3106 (b) 2. Section 3106 (b) 2. B. is the T-turn. We need clarification.

ADA Requirements

4.16.2 Clear Floor Space. Clear floor Space for water closets not in
stalls shall comply with Fig. 28. Clear floor space may be arranged
to allow either a left-handed or right-handed approach.

Fig, 28 Clear Floor Space at Water Closets.

For a front transfer to the water closet, the minimum clear floor space at the water closet is a minimum 48 inches (1220 mm) in width by a minimum of 66 inches (1675 mm) in length. For a diagonal transfer to the water closet, the minimum clear floor space
is a minimum of 48 Inches (1220 mm) In width by a minimum of 56 inches (1420 mm) in length. For a side transfer to the water closer, the minimum clear floor space is a minimum of 60 inches (1525 mm) in width by a minimum of 56 inches (1420 mm) in length. (4. 16.2, A4.22.3)

4.16.3* Height. The height of water closets shall be 17 in to 19 in
(430 mm to 485 mm), measured to the top of the toilet seat (see

Fig. 29(b)) Seats shall not be sprung to return to lifted position.

Fig. 29(b) Side Wall. A 42 inch [1065 mm) minimum length grab bar is required to the side of the water closet spaced
12 inches (305 mm) maximum from the back wall and extending a minimum of 54 inches (1370 mm) from the back wall at a height between 33 and 36 inches (840-915 mm). The toilet paper dispenser shall be mounted of a minimum height of 19 inches (485 mm). (4.16.3, 4,16.4, 4.16.6)

Washington State Regulations

51-20-3106 (k) 5. A. Clear Floor Space. The lateral distance from
the center line of the water closet to the nearest obstruction including grab bars, shall be not less than 18 inches on one side and 41 inches on the other side. In other than stalls, a clear floor
space not less than 32 inches measured perpendicular to the wall on which the water closet is mounted, shall be provided in front of
the water closet.

EXCEPTION: A lavatory may be located within the clear floor space required for a water closet provided that knee and toe clearances for the lavatory comply with subsection 7 below and:
A. In Type B dwelling units the edge of the lavatory shall be located not less than 15 inches from the centerline of the water closet; or
B. In all other occupancies the edge of the lavatory shall be located not less than 18 inches from the centerline of the water closet.

51-20-3106 (k) 5. B. Height. The height of water closets shall be
a minimum of 17 inches and a maximum of 19 inches measured to the top of the seat. Seats shall not be sprung to return to a lifted
position.

Commentary

PNE A clarification is needed as to where the lavatory is Allowed to be in clear floor area. ADAAG does not allow a Lavatory in the clear floor area in stalls.

ADA Requirements
4.16.4* Grab Bars. Grab Bars for water closets not located in stalls shall comply with 4.26 and Fig. 29. The grab bar behind the water closet shall be 36 in (915 mm) minimum.

Fig. 29(a) Back Wall. A 36 inch (915 mm) minimum length grab bar is required behind the water closet mounted at a height between 33 and 36 inches (840-915 mm). The grab bar must extend a minimum of 12 inches (305) beyond the center of the water closer toward the side wall and a minimum of 24 inches (610 mm) toward the open side for either a left or right side approach.

Fig. 29(b) Side Wall. A 42 inch (1065 mm) minimum length grab bar is required to the side of the water closet spaced 12 inches (305 mm) maximum from the back wall and extending a minimum of 54 inches (1370 mm) from the back wall of a height between 33 and 36 inches (840-915 mm). The toilet paper dispenser shall be mounted of a minimum height of 19 inches (485 mm). (4.16.3, 4.16.4, 4.16.6)

4.16.5* Flush Controls. Flush controls shall be hand operated or automatic and shall comply with 4.27.4. Controls for flush valves shall be mounted on the wide side of toilet areas no more than 44 in (1120 mm) above the floor.

4.16.6 Dispensers. Toilet paper dispensers shall be installed within reach, as shown in Fig. (29b). Dispensers that control delivery, or that do not permit continuous paper flow, shall not be used.

Fig. 29 (b) ... The toilet paper dispenser shall be mounted at a minimum height of 19 inches (485 mm). (4.16.3, 4.16.4, 4.16.6)

4.17 Toilet Stalls.

4.17.1 Location. Accessible toilet stalls shall be on an accessible route and shall meet the requirements of 4.17.

4.17.2 Water Closets. Water closets in accessible stalls shall

comply with 4.16.

Washington State Regulations

51-20-3106 (k) 5. C. Grab Bars. Grab bars shall be installed at one side and the back of the toilet stall. The top of grab bars shall be not less than 33 inches and not more than 36 inches above and parallel to the floor. Grab bars located at the side shall be a minimum of 42 inches in length with the front end positioned not less than 18 inches in front of the water closet, and located not more than 18 inches from the center line of the water closet. Grab bars located at the back shall be a minimum of 36 inches in length.
Grab bars shall be mounted not more than 9 inches behind the water closet seat.

51-20-3106 (k) 5. D. Flush Controls. Flush controls shall be mounted for use from the wide side of the water closet area and not more than 44 inches above the floor.

51-20-3106 (k) 5. E. Dispensers and Receptacles. Toilet paper and other dispensers or receptacles shall be installed within easy reach of the water closet, and shall not interfere with grab bar utilization.

51-20-3105 (b) 2 Toilet Facilities. Toilet facilities located within accessible dwelling units, guest rooms and congregate residences shall comply with Sections 3106 (k) and 3106 (aa).
In each toilet facility in other occupancies at least one wheelchair accessible toilet stall with an accessible water closet shall be provided. In addition, when there are 6 or more water closets within a toilet facility, at least one other accessible toilet stall complying with Section 3106 (k) 1. also shall be installed.

Commentary

PNE No provision that dispensers cannot control the flow of paper.

4.17.3* Size and Arrangement. The size and arrangement of the standard toilet stall shall comply with Fig 30(a), Standard Stall.
Standard toilet stalls with a minimum depth of 56 in (1420 mm) (see Fig. 30 (a) shall have wall-mounted water closets. If the depth of a standard toilet stall is increased at least 3 in (75 mm) then a floor-mounted water closet may be used. Arrangements shown for standard toilet stalls may be reversed to allow either a left- or right-hand approach. Additional stalls shall be provided in conformance with 4.22.4.

EXCEPTION: In instances of alteration work where provision of a standard stall (Fig 30a) is technically infeasible or where plumbing code requirements prevent combining existing stalls to provide space, either alternate stall(Fig. 30(b)) may be provided in lieu of the standard stall.

Fig. 30 Toilet Stalls.

Fig. 30(a) Standard Stall. The location of the door is illustrated to be in front of the clear space (next to, the water closet), with a maximum stile width of 4 inches (100 mm). An alternate door location is illustrated to be on the side of the toilet stall with a maximum stile width of 4 inches (100 mm). The minimum width of the standard stall shall be 60 inches (1525 mm). The centerline of the water closet shall be 18 inches (455 mm) from the side wall.

Fig. 30 (a- 1). If a standard stall is provided at the end of a row of stalls, the door (if located on the side of the stall may swing into to the stall if the length of the stall is extended at least a minimum of 36 inches (915 mm) beyond the required minimum length.

Fig. 30(b) Alternate Stalls. Two alternate stalls are illustrated; one alternate stall is required to be 36 inches 1915 mm) in width. The other alternate stall is required to be a minimum of

48 inches (1220 mm) in width. If a wall mounted water closet is used, the depth of the stall required to be a minimum of 66 inches (1675 mm). If a floor mounted water closet is used, the depth of the stall is required to be a minimum of 69 inches (1745 mm). The 36 inch wide stall shall have parallel grab bars an the

Washington State Regulations

51-20-3106 (k) 3. Wheelchair Accessible Toilet Stalls. A. Dimensions. Wheelchair accessible toilet stalls shall be a least 60 inches in width. Where wall-hung water closets are installed, the depth of the stall shall be not less than 56 inches. Where floor-mounted water closets are installed, the depth of the stall shall be not less than 59 inches. Entry to the compartment shall have a clear width of 32 inch. Toilet stall doors shall not swing into the clear floor space required for any fixture. Except for door swing, a clear unobstructed access not less than 48 inches in width shall be provided to toilet stalls.

EXCEPTION: Toe clearance is not required in a stall with a depth greater than 60 inches.

Commentary
NE

ADA Requirements

4.17.4 Toe Clearances. In standard stalls, the front partition and at least one side partition shall provide a toe clearance of at least 9 in (230 mm) above the floor. If the depth of the stall is greater than 60 in (1526 mm), then the toe clearance is not required. (See description, figure 30, above.)

4.17.5* Doors. Toilet stall doors, including door hardware, shall comply with 4.13. if toilet stall approach is from the latch side of

the stall door, clearance between the door side of the stall and any
obstruction may be reduced to a minimum of 42 in (1065 mm) (Fig. 30). (See description, figure 30, above.)

4.17.6 Grab Bars. Grab bars complying with the length and positioning shown in Fig. 30(a) (b), (c), and (d) shall be provided.
Grab bars may be mounted with any desired method as long as they have a gripping surface at the locations shown and do not obstruct the required clear floor area. Grab bars shall comply with
4.26.

4.18 Urinals.

4.18.1 General. Accessible urinals shall comply with 4.18.

4.18.2 Height. Urinals shall be stall-type or wall-hung with an elongated rim at a maximum of 17 in (430 mm) above the finish floor.

4.18.3 Clear Floor Space. A clear floor space 30 in by 48 in (760 mm by 1220 mm) shall be provided in front of urinals to allow forward approach. This clear space shall adjoin or overlap an accessible route and shall comply with 4.2.4. Urinal shields that do
not extend beyond the front edge of the urinal rim may be provided
with 29 in (735 mm) clearance between them.

Washington State Regulations

51-20-3106 (k) 3. B. toe Clearances. In toilet stalls, the front
partition and at least one side partition shall provide a toe clearance
of a least 9 inches above the floor.

EXCEPTION: Toe clearance is not required in a stall with a depth Greater than 60 inches.

51-20-3106 (k) 3. C. Door Hardware. Doors of accessible toilet stall shall comply with Section 3106 (c).

51-20-3106 (k) 5. C. Grab Bars. Grab bars shall be installed at one side and the back of the toilet stall. The top of grab bars shall

be not less than 33 inches and not more than 36 inches above and parallel to the floor. Grab bars located at the side shall be a minimum of 42 inches in length with the front end positioned not less than 18 inches in front of the water closet, and located not more than 18 inches from the centerline of the water closet. Grab bars located at the back shall be a minimum of 36 inches in length. Grab bars shall be mounted not more than 9 inches behind the water closet seat.

51-20-3106 (k) Bathrooms, Toilet Rooms, Bathing Facilities and Shower Rooms. 1. General. Bathrooms, toilet rooms, bathing facilities and shower rooms shall be designed in accordance with this Section. For dwelling units see also Section 3106 (aa).

51-20-3106 (k) 6... Urinals shall be stall-type or wall-hung with an elongated rim at a maximum of 17 inches above the floor.

51-20-3106 (k) 6. Urinals. A clear floor space measuring 30 inches by 48 inches shall be provided in front of urinals. Urinal
shields shall have a clear space between them of not less than 29 inches and shall not extend farther than the front edge of the urinal
rim.

Technical Assistance Document

ADA Requirements

4.19.5 Faucets. Faucets shall comply with 4.27.4. Lever-operated, push-type, and electronically controlled mechanisms are examples of acceptable designs. If self-closing valves are used the faucet shall remain open for at least 10 seconds.

4.19.6* Mirrors. Mirrors shall be mounted with the bottom edge of the reflecting surface no higher than 40 in (1015 mm) above the finish floor (see Fig. 31).

4.20 Bathtubs.

4.20.1 General. Accessible bathtubs shall comply with 4.20.

Washington State Regulations

51-20-3106 (k) 7. E. Faucets. Faucet control handles shall be located not more than 17 inches from the front edge of the lavatory, sink or counter, and shall comply with Section 3105 (c).
Self-closing valves shall remain open for at least 10 seconds per Operation.

51-20-3106 (c) Controls and hardware 1. Operation. Handles, pulls, latches, locks and other operation devices on doors, windows, cabinets, plumbing fixtures and storage facilities shall have a lever or other shapes which will permit operation by wrist or

arm pressure and does not require tight grasping, pinching or twisting to operate.

51-20-3106 (k) 8. Mirrors, Dispensers and Other Fixtures. Mirrors
or shelve shall be installed so that the bottom of the mirror or the
top of the shelf is within 40 inches of the floor.

Drying equipment, towel or other dispensers, and disposal fixtures
Shall be mounted so as not to exceed 40 inches above the finish
Floor to any rack, operating controls, receptacle or dispenser.

51-20-3106 (k) 9. Bathtubs.

Commentary

PNE See below.

ADA Requirements

4.20.2 Floor Space. Clear floor space in front of bathtubs shall be
as shown in Fig. 33.

Fig. 33 Clear Floor Space at Bathtubs. (4.20 2, 4.20.3, 4.20.4)

Fig. 33(a) With Seat in Tub, If the approach is parallel to the
bathtub, a 30 inch (760 mm) minimum width by 60 inch (1525 mm) minimum length clear space is required alongside the bathtub. If the approach is perpendicular to the bathtub, a 48 inch (1220 mm) minimum width by 60 inch (1525 mm) minimum length clear space is required.

Fig. 33(b) With Seat at Head of Tub. If the approach is parallel to the bathtub, a 30 inch (760 mm) minimum width by 75 inch (1905 mm) minimum length clear space is required alongside the bathtub. The seat width must be 15 inches (380 mm) and must extend the full width of the bathtub.

4.20.3 Seat. An in-tub seat or a seat at the head end of the tub shall be provided as shown in Fig. 33 and 34. The structural strength of seats and their attachments shall comply with 4.26.3.

Seats shall be mounted securely and shall not slip during use.

Washington State Regulations

51-20-3106 (k) 9. A. Clear Floor Space. A clear floor space not less than 60 inches in length shall be provided along the tub. Where the required seat is located at the end of the tub, the clear floor space shall be not less than 75 inches in length. The clear floor space shall be not less than 30 inches in width where access to the space is parallel to the tub and not less than 48 inches in width where access to the space is a right angles to the tub. A lavatory which complies with subsection 5, above, may be located in the clear floor space of the tub.

51-20-3106 (k) 9.B Seats. An in-tub seat or a seat at the end of the tub shall be provided. In-tub seats shall be portable and removable, not less than 12 inches in width and extend the full width of the tub. Seats at the end of the tub shall be constructed flush with the top of the tub and shall extend not less than 15 inches from the end of the tub. Seats shall be mounted securely and shall not slip during use.

Commentary

PNE. This appears to be generally equivalent in intent but language must be more precise. As written, the lavatory could be located anywhere within the clear floor area, where as ADAAG only allows a complying lavatory at the end of the tub where the controls are located.

ADA Requirements

4.20,4 Grab Bars. Grab bars complying with 4.26 shall be provided as shown in Fig. 33 and 34.

Fig. 34 Grab Bars at Bathtubs. (4.20.3, 4.20.4, 4.20.5)

Fig. 34(a) With Seat in Tub. At the foot of the tub, the grab bar shall be 24 inches (610 mm) minimum in length measured

from the outer edge of the tub. On the back wall, two grab bars are required. The grab bars mounted on the back (long) wall shall be a minimum 24 inches (610 mm) in length located 12 inches (305 mm) maximum from the foot of the tub and 24 Inches (610 mm) maximum from the head of the tub. One grab bar shall be located 9 inches (230 mm) above the rim of the tub. The others shall be 33 to 36 inches (840 mm to 910 mm) above the bathroom floor. At the head of the tub, the grab bar shall be a minimum of 12 inches (305 mm) in length measured from the outer edge of the tub.

Fig. 34(b) With Seat at Head of Tub. At the foot of the tub, the grab bar shall be a minimum of 24 Inches (6l0 mm) in length measured from the outer edge 'of the tub. On the back wall,
two grab bars are required. The grab bars mounted on the back wall shall be a minimum of 48 inches (1220 mm) in length located a maximum of 12 inches (305 mm) from the foot of the tub and a maximum of 15 inches (380 mm) from the head of the tub. Heights of grab bars are as described above.

Washington State Regulations

51-20-3106 (k) 9. C. Grab Bars. All required grab bars shall be installed parallel to the floor. Lower grab bars shall be installed
centered 9 inches above the tub rim. Upper or single grab bars shall be installed centered not less than 33 inches and not more than 36 inches above the floor of the clear space.
Where a tub has a seat at the end, two grab bars not less than 48 inches in length shall be installed on the wall opposite the clear
floor space, one end of each shall terminate where the tub abuts the seat.

Where a tub has an in-tub seat, two grab bars not less than 24 inches in length shall be installed on the wall opposite the clear
floor space. The grab bars shall extend to not less than 24 inches
from one end of the tub and not less than 12 inches from the other
end. One grab bar shall be installed on the wall at the end of the
tub opposite the drain, extending at least 12 inches from the clear
floor space.

ADA Requirements

4.20.5 Controls. Faucets and other controls complying with 4.27.4 shall be located as shown in Fig. 34.

Fig. 34 Grab Bars at Bathtubs. (4.20.3, 4.20.4, 4.20.5)

Fig. 34(a) With Seat in Tub. At the foot of the tub, the grab bar shall be 24 inches (610 mm) minimum in length measured from the outer edge of the rub. On the back wall, two grab bars are required. The grab bars mounted on the back (long) wall shall be a minimum 24 inches (610 mm) in length located 12 inches (305 mm) maximum from the foot of the rub and 24 inches (610 mm) maximum from the head of the tub. One grab bar, shall be located 9 inches (230 mm) above the rim of the tub. The others shall be 33 to 36 inches (840 mm to 910 mm) above the bathroom floor. At the head of the tub, the grab bar shall be a minimum of 12 Inches (305 mm) in length measured from the outer edge
of the tub.

Fig. 34(b) With Seat at Head of Tub. At the foot of the tub, the grab bar shall be a minimum of 24 inches (610 mm) In length measured from the outer edge of the tub. On the back wall, two grab bars are required. The grab bars mounted on the back wall shall be a minimum of 48 inches (1220 mm) in length located a maximum of 12 inches (305 mm) from the foot of the tub and a maximum of 15 inches (380 mm) from the head of the tub. Heights of grab bars are as described above.

Figure 34 Grab Bars at Bathtubs. (a) and (b)require controls to be
"offset," located in an area between the open edge and the midpoint of the tub.

4.20.6 Shower Unit. A shower spray unit with a hose at least 60 in
(1525 mm) long that can be used both as a fixed shower head and as a hand-held shower shall be provided.

4.20.7 Bathtub Enclosures. If provided, enclosures for bathtubs shall not obstruct controls or transfer from Wheelchairs onto bathtub seats or into tubs. Enclosures on bathtubs shall not have

tracks mounted on their rims.

Washington State Regulations

51-20-3106 (c) Controls and Hardware 1. Operation. Handles, pulls, latches, locks and other operating devices on doors, windows, cabinets, plumbing fixtures and storage facilities shall have a lever or other shape which will permit operation by wrist or
twisting to operate..

51-20-3106 (k) 9. D. Controls and Fixtures. Faucets and other controls shall be located above the tub rim and below the grab bars, shall be not more than 24 inches laterally from the clear floor
space and shall comply with Section 3105 (c).

51-20-3106 (k) 9. D. . . . A shower spray unit with a hose at least
60 inches long that can be used as a fixed shower head or as a hand-held shower shall be provided.

51-20-3106 (k) 9. E. Bathtub Enclosures. Where provided, enclosures for bathtubs shall not obstruct controls or transfer from
wheelchairs onto bathtub seats or into tubs. Enclosures on bathtubs shall not have tracks mounted on their rims.

Commentary

NE ADAAG drawing requires controls to be offset
Between the open edge of the tub and the centerline.

97 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

4.21 Shower Stalls.

4.21.1* General. Accessible shower stalls shall comply with 4.21.

4.21.2 Size and Clearances. Except as specified in 9.1.2, shower stall size and clear floor space shall comply with Fig. 35(a) or (b)
The shower stall in Fig. 35(a) shall be 36 in by 36 in (915 mm by 915 mm). Shower stalls required by 9.1.2 shall comply with Fig.

57(a) or (b). The shower stall in Fig. 35(b) will fit into the space
required for a bathtub.

Fig. 35 Shower Size and Clearances.

Fig. 35(a) 36 inches by 36 inches (915 mm by 915 mm) Stall (Transfer Shower). The clear floor space shall be a minimum of
48 inches (1220 mm)in length by a minimum of 36 inches (9.15 mm in width and allow for a parallel approach. The clear floor space shall extend 1 foot beyond the shower wall on which the seat
is mounted.

Fig. 35(b) 30 inches by 60 inches (760 mm by 1525 mm) Stall(Roll-In Shower). The clear floor space alongside the shower shall be a minimum of 60 inches (1220 mm) In length by a minimum of 36 inches (915 mm) in width.

Washington State Regulations

51-20-3106 (k) 10. Showers Stalls.

51-20-3106 (k)10. A. Configurations. Shower stalls shall have one of the following configurations.

(i) Transfer shower stalls shall be 36 inches by 36 inches, nominal, and shall have a seat; or,

(ii) Roll-in shower stalls shall be not less than 30 inches in depth by 60 inches in length.

51-20-106 (k) 10 B. Clear Floor Space. A clear floor space not less than 48 inches in length shall be provided adjacent to shower stalls. For roll-in shower stalls, the clear floor space shall be not less than 36 inches in width. A lavatory which which complies with Subsection 5 above, may be located in the clear
floor space of a roll-in shower.

Commentary

NE. Clear floor space along roll-in shower must be 60 inches in length; otherwise, it will be obstructed by a lavatory. Further, location of the lavatory must be specified to preclude obstruction of the shower.

ADA Requirements

4.21.3 Seat. A seat shall be provided in shower stalls 36 in by 36 in (915 mm by 915 mm) and shall be as shown in Fig. 36. The seat shall be mounted 17 in to 19 in (430 mm to 485 mm) from the bathroom floor and shall extend the full depth of the stall. In a 36 in by 36 in (915 mm by 915 mm) shower stall, the seat shall be on the wall opposite the controls. Where a fixed seat is provided in a 30 in by 60 in minimum (760 mm by 1525 mm) shower stall, it shall be a folding type and shall be mounted on the wall adjacent to the controls as shown in Fig. 57. The structural strength of seats and their attachments shall comply with 4.26.3

Fig. 36 Shower Seat Design.

The diagram illustrates an L-shaped shower seat extending the full depth of the stall. The seat shall be located 1 1/2 inches (38 mm) maximum from the wall. The front of the seat (nearest to opening) shall extend a maximum 16 inches (330 mm) from the wall. The back of the seat (against the back wall) shall extend a maximum of 23 inches (582 mm) from the side wall and shall be a maximum of 15 inches (305 mm) deep.

Washington State Regulations

51-20-3106 (k) 10 C. Seats. In transfer shower stalls, a seat shall be mounted not less than 17 inches and not more than 19 inches above the floor, and shall extend the full depth of the stall. The seat shall be located on the wall opposite the controls and shall be mounted not more than 1 1/2 inches from the shower walls. The seat shall be not more than 16 inches in width.

EXCEPTION: A section of the seat not more than 15 inches in length and adjacent to the wall opposite the clear space, may be not more than 23 inches in width.

In roll-in shower stalls, a fold down seat complying with the

Dimensional requirements of this subsection, may be installed.

Commentary

NE Location of seat adjacent to controls is essential.

ADA Requirements

4.21.4 Grab Bars. Grab bars complying with 4.26 shall be provided as shown in Fig. 37.

Fig. 37 Grab Bars at Shower Stalls. (4.21.4, 4.21.5)

Fig. 37(a) 36 inches by 36 inches (915 mm by 915 mm) Stall. The diagram illustrates an L-shaped grab bar that is located along the full depth of the control wall (opposite the seat) and halfway along the back wall. The grab bar shall be mounted between 33 to 36 inches (840-915 mm) above the shower floor. The bottom of the control area shall be a maximum of 38 inches (965 mm) high and the top of the control area shall be a maximum of 48 inches (1220 mm) high. The controls and spray unit shall be within 18 inches (455 mm) of the front of the shower.

Fig. 37 (b) 30 inches by 60 inches (760 mm) by 1525 mm) Stall. The diagram illustrates a U-shaped grab bar that wraps around the stall. The grab bar shall be between 33 to 36 inches (840-915 mm) high. The controls are placed in an area between 38 inches and 48 inches (965 mm and 1220 mm) above the floor. If the controls are located on the back long wall they shall be located 27 inches (685 mm) from the side wall. The shower head and and control area may be located on either side wall.

4.21.5 Controls. Faucets and other controls complying with 4.27.4 shall be located as shown in Fig. 37. In shower stalls 36 in by 36 in (915 mm by 915 mm), all controls, faucets, and the shower unit shall be mounted on the side wall opposite the seat.

(See text above).

4.21.6 Shower Unit. A shower spray unit with a hose at least 60 in
(1525 mm) long that can be used both as a fixed shower head and as a hand-held shower shall be provided.

EXCEPTION: In unmonitored facilities where vandalism is a Consideration, a fixed shower head mounted at 48 in (1220 mm) Above the shower floor may be used in lieu of a hand-held shower Head.

Washington State Regulations

51-20-3106 (k) 10 D. Grab Bars. All required grab bars shall be installed parallel the floor. All grab bars shall be installed
not less than 33 inches and not more than 36 inches above the floor
of the clear space.

For transfer shower stalls, a grab bar not less than 18 inches in length shall be installed on the wall opposite the clear floor space, one end of which shall terminate at the wall opposite the seat. A grab bar not less than 27 inches in length shall also be installed on the wall opposite the seat.

For roll-in shower stalls, grab bars shall be provided on all Permanent stall walls. Grab bars located on either end of the Stall shall be not less than 27 inches in length. The grab bar Located opposite the clear spaces shall be not less than 48 Inches in length.

51-20-3106 (k) 10 E. Controls and Fixtures. Faucets and other controls shall be located on the same wall as the shower spray unit, and shall be installed not less than 38 inches or more than 48 inches above the shower floor and shall comply with Section 3106 (c). . .

51-20-3106 (k) 10 E. . . .A shower spray unit with a hose at least 60 inches long that can be used as a fixed shower head or as a hand-held shower shall be provided.

EXCEPTION: In unmonitored facilities where vandalism is a Consideration, a fixed shower head may be installed not more than 48 inches above the stall floor.

Commentary

NE Language should be more precise here to ensure that Controls are useable. ADAAG is very specific about location of Controls when placed on back wall and location of controls Adjacent to a fold down seat in a roll-in/transfer shower.

ADA Requirements

4.21.7 Curbs. If provided, curbs in shower stalls 36 in by 36 in (915 mm by 915 mm) shall be no higher than 1/2 in (13 mm). Shower stalls that are 30 in by 60 in (760 mm by 1525 mm) minimum shall not have curbs.

4.21.8 Shower Enclosures. If provided, enclosures for shower stalls
shall not obstruct controls or obstruct transfer from wheelchairs onto shower seats.

4.22 Toilet Rooms.

4.22.1 Minimum Number. Toilet facilities required to be accessible
4.1 shall comply with 4.22. Accessible toilet rooms shall be on an accessible route.

4.22.2 Doors. All doors to accessible toilet rooms shall comply with
4.13. Doors shall not swing into the clear floor space required for
any fixture.

Washington State Regulations

51-20-3106 (k) F. Thresholds. In transfer shower stalls, thresholds shall be flush or beveled with a maximum edge height of 1/2 inch, and a maximum slope not more than 1 vertical in 2 horizontal.

Thresholds in roll-in shower stalls shall be level with the Adjacent clear space.

51-20-3106 (k) 10 G. Shower Enclosures. Where provided, enclosures for shower stalls shall not obstruct controls or transfer from wheelchairs onto shower seats.

51-20-3106 (k) Bathrooms, Toilet Rooms and Reach ranges. 3.

Unobstructed floor Space. A floor space, including the vertical space above such floor space, which is free of any physical obstruction including door swings, to a height of 29 inches. Where a pair of doors occurs, the swing of the inactive leaf may be considered to be unobstructed floor space. Unobstructed floor space may include toe space that are a minimum of 9 inches in height and not more than 6 inches in depth.

51-20-3106 (j) 1. General. Doors required to be accessible shall comply with Section 3304 (Note: which applies to all exit doors) and provisions of this section.

Commentary

Technical Assistance Document

ADA Requirements

4.22.4 Water Closets. If toilet stalls are provided, then at least one shall be a standard toilet stall complying with 4.17; where 6 or more stalls are provided, in addition to the stall complying with 4.17.3, at least one stall 36 in (915 mm) wide with an outward swinging, self-closing door and parallel grab bars complying with Fig. 30(d) and 4.26 shall be provided. Water closets in such stalls shall comply with 4.16. If water closets are not in stalls, then at least one shall comply with 4.16.

4.22.5 Urinals. If urinals are provided, then at least one shall comply with 4.18.

Washington State Regulations

51-20-3106 (k) 3. Wheelchair Accessible Toilet Stalls. A. Dimensions. Wheelchair accessible toilet stall shall be at least 60 inches in width. Where wall-hung water closets are installed, the depth of the stall shall be not less than 67 inches. Where floor-mounted water closets are installed, the depth of the stall shall be not less than 59 inches. Entry to the compartment shall have a clear width of 32 inches. Toilet stall door shall not swing into the clear floor space required for any fixture. Except for door swing, a clear unobstructed access not less than 48 inches in width shall be provided to toilet stalls.

EXCEPTION: Toe clearance is not required in a stall with a depth greater than 60 inches.

51 -20-3106 (k) 4. Ambulatory Accessible Toilet Stalls. Ambulatory accessible toilet stalls shall be at least 36 inches

in
width, with an outward swinging, self-closing door. Grab bars shall be installed on each side of the toilet stall and shall comply with Sections 3106 (k) 4. C. and 3106 (k) 9.

51-20-3106 (k) 5. Water Closets. A. Clear Floor Space. The lateral distance from the center line of the water closet to the nearest obstruction, including grab bars, shall be not less than 18 inches on one side and 42 inches on the other side. In other than stalls, a clear floor space not less than 32 inches measured perpendicular to the wall on which the water closet is mounted, shall be provided in front of the water closest.

51-20-3106 (k) 6. Urinals. A clear floor space measuring 30 inches by 48 inches shall be provided in front of urinals. Urinal shields shall have a clear space between them of not less than 29 inches and shall not extend farther than the front edge of the urinal rim. Urinals shall be stall-type or wall-hung with an-elongated rim at a maximum of 17 inches above the floor.

51-20-3105 (b) 3. Lavatories, Mirrors and Towel Fixtures. At least one accessible lavatory shall be provided within any toilet facility. Where mirrors, towel fixtures and other toilet and bathroom accessories are provided, at least one of each shall be accessible.

51-20-3106 (k) 7. Lavatories and Sinks. A. Clear Floor Space. A clear floor space not less than 30 inches by 48 inches shall be provided in front of lavatories and sinks.

51-20-3106 (k) 8. Mirrors, Dispensers and Other Fixtures. Mirrors or shelves shall be installed so that the bottom of the mirror or the top of the shelf is within 40 inches of the floor.

51-20-3106 (k) 8. . . .Drying equipment, towel or other dispensers, and disposal fixtures shall be mounted so as not to exceed 40 inches above the finished floor to any rack operating controls, receptacle or dispenser.

51-20-3106 (c) Controls and Hardware. 1. Operation. Handles, pulls, latches, locks and other operating devices on Doors, windows, cabinets, plumbing fixtures and storage Facilities, shall have a level or other shape which will permit Operation by wrist or arm pressures and does not require tight

Grasping, pinching or twisting to operate.

51-20-3105 (b) Bathing and Toilet Facilities. 1. Bathing Facilities. When bathing facilities are provided, at least 2 percent, but not less than 1, bathtub or shower shall be accessible. In dwelling units where both a bathtub and shower are provided in the same room, only one need be accessible.

107 ADA/Washington State May 14, 1993

Technical Assistance Document

ADA Requirements

4.23.9* Medicine Cabinets. If medicine cabinets are provided, at least one shall be located with a usable shelf no higher than 44 in (1120 mm) above the floor space. The floor space shall comply with 4.2.4.

4.24 Sinks

4.24.1 General. Sinks required to be accessible by 4.1 shall comply with 4.24.

4.24.2 Height. Sinks shall be mounted with the counter or rim no higher than 34 in (865 mm) above the finish floor.

4.24.3 Knee Clearance. Knee clearance that is a least 27 in (685 mm) high, 30 in (760 mm) wide, and 19 in (485 mm) deep shall be provided underneath sinks.

4.24.4 Depth. Each sink shall be a maximum of 6 1/2in (165 mm) deep.

4.24.5 Clear Floor Space. A clear floor space at least 30 in by 48 in (760 mm by 1220 mm) complying with 4.2.4 shall be provided in front of a sink to allow forward approach. The clear floor space shall be on an accessible route and shall extend a maximum of 19 in (485 mm) underneath the sink (see Fig. 32)

4.24.6 Exposed Pipes and Surfaces. Hot water and drain pipes

exposed under sink shall be insulated or otherwise configured so as
to protect against contact. There shall be no sharp or abrasive surfaces under sinks.

Washington State Regulations

51-20-3105 (b) 3. Lavatories, Mirrors and Towel fixtures. At least one accessible lavatory shall be provided within any toilet facility. Where mirrors, towel fixtures and other toilet and bathroom accessories are provided, at least one of each shall be accessible.

51-20-3106 (k) 8. Mirrors, Dispensers, and Other Fixtures. Mirrors or shelves shall be installed so that the bottom of the mirror or the top of the shelf is within 40 inches of the floor. Drying equipment, towel or other dispensers, and disposal fixtures shall be mounted so as not to exceed 40 inches above the finished floor to any rack, operating controls, receptacle or dispenser.

51-20-3106 (k) 7. Lavatories and Sinks

51-20-3106 (k) 7. B. Height. Lavatories and sinks shall be mounted with the rim or counter surface not higher than 34 inches above the finish floor.

51-20-3106 (k) 7. C (ii) Sinks. Knee clearance not less than 27 inches in height, 30 inches in width and 19 inches in depth shall be provided underneath sinks.

51-20-3106 (k) 7. F. Sink Depth. Sinks shall be not less than 6 1/2 inches in depth.

51-20-3106 (k) 7. Lavatories and Sinks. A. Clear Floor Space. A clear floor space not less than 30 inches by 48 inches shall be provided in front of lavatories and sinks.

51-20-3106 (k) 7. D. Exposed Pipes and Surfaces. Hot water and drain pipes exposed under lavatories and sinks shall be insulated or otherwise covered. There shall be no sharp or abrasive surfaces under lavatories or sinks.

Commentary
NE

ADA Requirements

4.24.7. Faucets. Faucets shall comply with 4.27.4. Lever-operated, push-type, touch-type. Or electronically controlled mechanisms are acceptable designs.

4.25 Storage.

4.25.1 General. Fixed storage facilities such as cabinets, shelves, Closets, and drawers required to be accessible by 4.1 shall comply With 4.25.

4.25.2 Clear Floor Space. Clear floor space at least 30 in by 40 in (760 mm by 1220 mm) complying with 4.2.4 that allows either a forward or parallel approach by a person using a wheelchair shall be provided at accessible storage facilities.

Washington State Regulation

51-20-3106 (k) 7. E. Faucets. Faucet control handles shall be located not more than 17 inches from the front edge of the lavatory, sink or counter, and shall comply with Section 3106 (c). Self-closing valves shall remain open for at least 10 seconds per operation.

51-20-3106 (c) Controls and Hardware. 1. Operation. Handles, pulls, latches, locks and other operating devices on Doors, windows, cabinets, plumbing fixtures and storage Facilities, shall have a level or other shape which will permit Operation by wrist or arm pressure and does not require tight Grasping, pinching or twisting to operate.

51-20-3106 (r) Storage. Shelving and Display Units.

51-20-3106 (r) Storage. Shelving and Display Units. 1. Clear Floor Space. Storage, shelving and display units shall have a Clear floor space not less than 30 inches by 48 inches that allows either a forward or parallel approach.

Commentary

ADA Requirements

4.25.3 Height. Accessible storage spaces shall be within at least one of the reach ranges specified in 4.2.5 and 4.2.6 (see Fig, 5 and Fig 6). Clothes rods or Shelves shall be a maximum of 54 in (1370 mm) above the finish floor for a side approach. Where the distance from the Wheelchair to the clothes rod or shelf exceeds I0 in (255 mm) (as in closets without accessible doors) the height and depth to the rod or shelf shall comply with Fig. 38(a) and Fig. 38(b).

Fig. 38 Storage Shelves and Closets.

Fig. 38(a) Shelves. If the clear floor space allows a parallel approach by a person in a Wheelchair and the distance between the Wheelchair and the shelf exceeds 10 inches, the maximum high side reach shall be 48 inches (1220 mm) above the floor and the low side reach shall be a minimum of 9 inches (230 mm) above the floor. The shelves can be adjustable. The maximum distance from the user to the shelf shall be 21 inches (535 mm).

Fig. 38(b) Closets, If the clear floor space allows a parallel approach by a person in a Wheelchair and the distance between the Wheelchair and the clothes rod exceeds 10 inches the maximum high side reach shall be 48 inches (1220 mm). The maximum distance from the user to the clothes rod shall be 21 inches (535 mm).

4.26.4 Hardware. Hardware for accessible storage facilities shall comply with 4.27.4. Touch latches and U-shaped pulls are acceptable.4.26 Handrails, Grab Bars, and Tub and Shower Seats.

4.26.1* General. All handrails, grab bars, and tub and shower seats required to be accessible by 4.1, 4.8, 4.9, 4,16, 4.17, 4.20 or 4.21 shall comply with 4.26.

Washington State Regulation

51-20-3106 (r) 2. Height. Accessible storage, shelving and display units shall be within the reach ranges specified in Sections 3106 (b) 2. D. or 3106 (b) 2. E. Clothes rods shall Be not more than 54 inches above the floor.

51-20-3106 (c) Controls and hardware. 1. Operation. Handles, pulls, latches, locks and other operating devises on Doors, windows, cabinets, plumbing fixtures and storage Facilities, shall have a level or other shape which will permit operation by wrist or arm pressure and does not require tight Grasping, pinching or twisting to operate.

51-20-3106 (k) 11. Structural Requirements for Grab Bars and Tub and Shower Seats. A. General. All grab bars, and tub and shower seats required to be accessible shall comply with this section.

Commentary

ADA Requirements

4.26.2* Size and Spacing of Grab Bars and Handrails. The diameter
or width of the gripping surfaces of a handrail or grab bar shall be
1-1/4 in to 1-1/2 in (32 mm to 38 mm), or the shape shall provide an equivalent gripping surface. If handrails or grab bars are mounted adjacent to a wall, the space between the wall and the grab bar shall be 1-1/2 in (38 mm) (see Fig. 39(a), (b), (c), and (e)).
Handrails may be located in a recess if the recess is a maximum of 3
in (75 mm) deep and extends at least 18 in (455 mm) above the top of the rail (see Fig. 39(d)).

Washington State Regulation

51-20-3106 (k) 11. B. Size and Spacing for Grab Bars. Grab bars shall have an outside diameter of not less than 1-1/4 inch nor more than 1 1/2 inches and shall provide a clearance of 1-1/2 inches between the grab bar and the wall.

51-20-3306 (i) Handrails. Stairways shall have handrails on each side, and every stairway require to be more than 88 inches in width shall be provided with not less than one intermediate handrail for each 88 inches of required width.

Intermediate handrails shall be spaced approximately equally across the entire width of the stairway.
EXCEPTION: 1. Stairways less than 44 inches in width or stairways serving one individual dwelling unit in Group R, Division 1 or 3 occupancies, or a Group R, Division 3. congregate residence may have one handrail.
2. Private stairways 20 inches or less in height may have handrails on one side only.
3. Stairways having less than four risers and serving one individual dwelling unit in Group R, Division 1 or 3, or a Group R. Division 3 congregate residence or serving Group M. Occupancies need not have handrails.

The top of handrails and handrail extensions shall be placed not less than 34 inches or more than 38 inches above the nosing of treads and landings. Handrails shall be continuous the full length of the stairs and, except for private stairways, at least one handrail shall extend in the direction of the stair run not less than 12 inches beyond the top riser or less than 23 inches beyond the bottom riser. Ends shall be returned or shall terminate in newel posts or safety terminals.

Commentary

111 ADA/Washington State May 14, 1993

Technical Assistance Document

ADA Requirements

4.26.3 Structural Strength. The structural strength of grab bars,
tub and shower seats, fasteners, and mounting devices shall meet the following specification:

(1) Bending stress in a grab bar or seat induced by the maximum Bending moment from the application of 250 lbf (1112N) shall be Less than the allowable stress for the material of the grab bar or
Seat.

(2) Shear stress induced in a grab bar or seat by the application of
250 lbf (1112N) shall be less than the allowable shear stress for the
material of the grab bar or seat. If the connection between the grab
bar or seat and its mounting bracket or other support is considered

to be fully restrained, then direct and torsional shear stresses shall
be totaled for the combined shear stress, which shall not exceed the
allowable shear stress.

(3) Shear force induced in a fastener or mounting device from the
Application of 250 lbf (1112N) shall be less than the allowable
Lateral load of either the fastener or mounting device or the
Supporting structure, whichever is the smaller allowable load.

(4) Tensile force induced in a fastener by a direct tension force of
250 lbf (1112N) plus the maximum moment from the application of
250 lbf (1112N) shall be less than the allowable withdrawal load
between the fastener and the supporting structure.

The handgrip portion of handrails shall be not less than 1 1/2 inches or more than 2 inches in cross-sectional dimension or the shape shall provide an equivalent gripping surface. The handgrip portion of handrails shall have a smooth surface with no sharp corners.

Handrails projecting from a wall shall have a space of not less than 1 1/2 inches between the wall and the handrail. Any recess containing a handrail shall allow a clearance of not less than 18 inches above the top of the rail, and be not more than 3 inches in horizontal depth.

Handrails shall not rotate within their fittings.

Washington State Regulation

51-20-3106 (k) 11. C. Structural Strength. The structural strength of grab bars, tub and shower seats, fasteners and mounting devices shall meet the following specifications:

(1) Bending stress in a grab bar or seat induced by the Maximum bending moment from the application of 300 lbs.
Shall be less than the; the allowable stress for the material of the
Grab bar or seat.

(2) Shear stress in a grab bar or seat by the application of 300 lbs. Shall be less than the allowable shear stress for the material of the grab bar or seat. If the connection between the grab bar or seat and its mounting brackets or other support is

considered to be fully restrained, then direct and torsional shear stresses shall be totaled for the combined shear stress, which shall not exceed the allowable shear stress.

(3) Shear force induced in a fastener or mounting device from The application of 300 lbs. shall be less than the allowable lateral load of either the fastener or mounting device or the supporting structure, whichever is the smaller allowable load.

(4) Tensile force induced in a fastener by a direct tension force of 300 lbs. plus the maximum moment from the application of 300 lbs. shall be less than the allowable withdrawal load between the fastener and the supporting structure.

Commentary

ADA Requirements

(5) Grab bars shall not rotate within their fittings.

4.26.4 Eliminating Hazards. A handrail or grab bar and any wall or other surface adjacent to its shall be free of any sharp or abrasive elements. Edges shall have a minimum radius of 1/8 in (3.2 mm).

4.27 Controls and Operating Mechanisms.

4.27.1 General. Controls and operating mechanisms required to be accessible by 4.1 shall comply with 4.27

4.27.2 Clear Floor Space. Clear floor spaces complying with 4.2.4 that allows a forward or a parallel approach by a person using a wheelchair shall be provided at controls, dispensers, receptacles, and other operable equipment.

4.27.3* Height. The highest operable part of controls, dispenser, receptacles, and other operable equipment shall be placed within at at least one of the reach range specified in 4.2.5 and 4.2.6. Electrical

and communications system receptacles on walls shall be mounted no less than 15 in (380 mm) above the floor.

EXCEPTION: these requirements do not apply where the use of special equipment dictates otherwise or where electrical and communications systems receptacles are not normally intended for use by building occupants.

4.27.4 Operation. Controls and operating mechanisms shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. The force required to activate
controls shall be no greater than 5 lbf (22.2N).

4.28 Alarms

4.28.1 General. Alarm systems required to be accessible by 4.1 shall comply with 4.28. At a minimum, visual signal appliances shall be provided in building and facilities in each of the following
areas: restrooms and any other general usage areas (e.g., meeting
rooms), hallways, lobbies, and any other area for common use.

Washington State Regulation

51-20-3106 (k) 11 D. Special Hazards. A grab bar and any wall or other surface adjacent to it shall be free of any sharp or
abrasive elements. Edges shall have a minimum radius of 1/8 inch.

51-20-3106 (c) Controls and Hardware

51-20-3106 (c) 3. Clear Floor Space. Clear floor space that allows a forward or a side approach shall be provided at all controls or hardware.

51-20-3106 (c) 2. Mounting Heights. The highest operable part of environmental and other controls, dispensers, receptacles and other operable equipment shall be within at least one of the reach ranges specified in Section 3106 (b), and not less than 36 inches above the floor. Electrical and communications system receptacles on walls shall be mounted a minimum of 15 inches in height above the floor. Door hardware shall be mounted at not less than 36 inches and not more than 48 inches above the floor.

51-20-3106 (c) 1. Operation. Handles, pulls, latches, locks and other operating devices on doors, windows, cabinets, plumbing fixtures and storage facilities, shall have a lever or other shape which will permit operation by wrist or arm pressure and does not require tight grasping, pinching or twisting to operate.

51-20-3105 (d) 9. Alarms. Alarms systems where provided, shall include both audible and visible alarms. The alarm devices shall be located in all sleeping accommodations and common-use areas including toilet rooms and bathing facilities, hallways, and lobbies.

Commentary

NE Equivalent provision found for handrails but not grab bars.

113 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

4.28.2* Audible Alarms. If provided, audible emergency alarms shall produce a sound that exceeds the prevailing equivalent sound
level in the room or space by at least 15 dbA or exceeds any, maximum sound level with a duration of 60 seconds by 5 dbA, whichever is louder. Sound levels for alarm signals shall not exceed
120 dbA.

4.28.3* Visual Alarms. Visual alarm signal appliances shall be integrated into the building or facility alarm system. If single station
audible alarms are provided then single station visual alarm signals
shall be provided. Visual alarm signals shall have the following minimum photometric and location features:

(1) The lamp shall be a xenon strobe type or equivalent.
(2) The color shall be clear or nominal white(i.e., unfiltered or
clear filtered white light).
(3) The maximum pulse duration shall be tow-tenths of one second (0.2 sec) with a maximum duty cycle of 40 percent. The points of 10 percent of maximum signal.
(4) The intensity shall e a minimum of 75 candela.
(5) The flash rate shall be a minimum of 1 Hz and a maximum of 3 Hz.

(6) The appliance shall be placed 80 inches (2030 mm) above the highest floor level within the space or 6 in (152 mm) below the ceiling, whichever is lower.
(7)In general, no place in any room or space required to have a visual signal appliance shall be more than 50 ft (15 M) from the signal (in the horizontal plane). In large rooms and spaces exceeding
100 Ft (30 m) across, without obstruction 6 ft. (2 m) above the finish floor, such as auditoriums, devices may be placed around the
perimeter, spaced a maximum 100 ft. (30 m) apart, in lieu of suspending appliances from the ceiling.
(8) No place in common corridors or hallways in which visual alarm signaling appliance are required shall be more than 50 ft (15
m) from the signal.

Washington State Regulation

51-20-3106 (o) Alarms. 1. Audible Alarms. Audible alarms shall produce a sound in accordance with UBC Standard No. 14-1.

Appendix, Chapter 31 Division IV. 51-20-92118 (b) Audible Alarms. Audible alarms shall exceed the prevailing equivalent sound level in the room or space by at least 15 decibels, or shall exceed any maximum sound level with a duration of 30 seconds by 5 decibels, whichever is louder. Sound levels for alarm signals shall not exceed 120 decibels.

51-20-3106 (o) 2. Visible Alarms. Visible alarms shall be located not less than 80 inches above floor level, or 6 inches below the ceiling, whichever is lower, and at an interval of not less than 50 feet horizontal, in rooms, corridors and hallways.

In rooms or spaces exceeding 100 feet in horizontal dimension, with no obstructions exceeding 6 feet in height above the finished floor, visible alarms may be placed around the perimeter at intervals not to exceed 100 feet horizontally.

Guidelines for visible alarm type, color, intensity and flash rate
are found in Appendix Chapter 31, Division V.

Appendix Chapter 431 Division V.
51-20-93119 (b) Visible Alarms. Visible alarm signals shall have the following minimum photometric and location features:
1. The lamp shall be a xenon strobe type.

2. The color shall be clear (i.e., unfiltered or clear filtered white light).
3. The intensity shall be a minimum of 75 candela seconds And a maximum of 120 candela seconds.
4. The flash rate shall be a minimum of 1 Hz and a maximum of 3 Hz.
5. the appliance shall be placed a minimum of 80 inches above the highest floor level within the space.
6. No place in any room shall be more than 50 feet form the signal(in the horizontal plane).
7. No place in corridors or hallways shall be more than 50 feet from the signal.

Commentary

PNE Sound level requirement is contained only in appendix of UBC Standard No. 14-1 and Appendix, Chapter 31. Therefore, it is not enforceable.

NE Performance criteria are found in the appendix, Appendix language is not enforceable.

ADA Requirements

4.28.4* Auxiliary Alarms. Units and sleeping accommodations shall
have a visual alarm connected to the building emergency alarm system or shall have a standard 110-volt electrical receptacle into
which such an alarm can be connected and a means by which a signal from the building emergency alarm system can trigger such an
auxiliary alarm. When visual alarms are in place the signal shall be
alarm or receptacle shall be provided.

4.29 Detectable Warnings.

4.29.1 General. Detectable warnings required by 4.1 and 4.7 shall
comply with 4.29.

4.29.2* Detectable Warnings on Walking Surfaces. Detectable warnings shall consist of raised truncated domes with a diameter of

nominal 0.9 in (23 mm), a height of nominal 0.2 in (5 mm) and a center-to-center spacing of nominal 2.35 in (60 mm) and shall contrast visually with adjoining surfaces, either light-on-dark, or
dark-on-light.

The material used to provide contrast shall be an integral part of the
walking surface. Detectable warnings used on interior surfaces shall
differ from adjoining walking surfaces in resiliency or sound-on-cane
contact.

4.29.3 Detectable Warnings on Doors To Hazardous Areas. (Reserved).

4.29.3. Detectable Warnings at Stairs. (Reserved).

Washington State Regulation

51.20-3105 (d) Alarms. Alarm systems where provided, shall include both audible and visible alarms. The alarm devices shall be located in all sleeping accommodations and common-use areas including toilet rooms and bathing Facilities, hallways, and lobbies.

51-20-3106 (o) 3. Access to Manual Fire Alarm Systems. Manual fire alarm devices shall be mounted not more than 54 inches above the floor provided that parallel approach is provided.

51-20-3106 (q) Detectable Warnings.

51-20-3106 (q) Detectable Warnings. 1. Walking surfaces. Detectable warnings on walking surfaces shall consist of raised truncated domes having a diameter of 0.9 inches nominal, a height of 0.2 inches nominal and a center-to-center spacing of 2.35 inches nominal, and shall contrast visually with adjoining surfaces.

See also Appendix Chapter 31, Divisions III and VI same as ADAAG Appendix A4.29.2.

51-20-3106 (q) Door to Hazardous Areas. Knobs or handles or other operating hardware on doors leading to loading platforms, stages, mechanical equipment rooms or other areas hazardous to the blind shall be knurled or otherwise rough to

the touch. Such surfaces shall not be provided for emergency exit doors or any doors other than those to hazardous areas. Textured surfaces for detectable door warnings shall be consistent within a building, facility, site or complex of buildings.

Commentary

ADA Requirements

4.29.4 Detectable Warnings at Hazardous Vehicular Areas. If a walk crosses or adjoins a vehicular way, and the walking surfaces are not separated by curbs, railings, or other elements between the
pedestrian areas and vehicular areas, the boundary between the areas shall be defined by a continuous detectable warning which is
36 in (915 mm) wide, complying with 4.29.2.

4.29.5 Detectable Warnings at Reflecting Pools. The edges of reflecting pools shall be protected by railings, walls, curbs. Or detectable warnings complying with 4.29.2.

4.29.6 Standardization (Reserved).

4.30 Signage

4.30.1* General. Signage required to be accessible by 4.1 shall comply with the applicable provisions of 4.30

4.30.2* Character Proportion. Letters and numbers on signs shall have a width-to-height ratio between 3:5 and 1:1 and a stroke-width-to-height ratio between 1:5 and 1:10.

4.30.3 Character Height. Character and numbers on signs shall be sized according to the viewing distance from which they are to be read. The minimum height is measured using an upper case X. Lower case characters are permitted.

Height Above Finished Floor	Minimum Character Height
Suspended or Projected Overhead in compliance with 4.4.2	3 in (75 mm) minimum

51-20-3106 (d) 9. Vehicular Areas. Where an accessible

route of travel crosses or adjoins a vehicular way, and where there are no curbs, railings or other elements detectable by a person who has severe vision impairment separating the pedestrian and vehicular areas, the boundary between the areas shall be defined by a continuous detectable warning not less than 36 inches wide, complying with Section 3106 (g).

51-20-3106 (d) 6. Edge Protection. Guardrails designed and constructed in accordance with Section 1712 shall be provided on any portion of an accessible route of travel which is more than 30 inches above the grade or floor below. Any portion of the edge of an accessible route of travel which is more than 1/2 inch above adjacent grade or floor shall be provided with a protective railing with the top of the rail at a height of 34 inches nominal and a mid-rail at a height of 18 inches nominal.

51-20-3106 (p) Signage.

51-20-3106 (p) 4. Character Proportion and Height. Letters and numbers on signs shall have a width-to-height ratio between 3:5 and 1:1 and a stroke-width-to-height ratio between 1:5 and 1:10.

51-20-3106 (p) 4. Characters and numbers on signs shall be sized according to the viewing distance from which they are to be read. The minimum character height for signs that are suspended or projected overhead is 3 inches for upper case letters. Lower case letters are permitted.

Commentary

PNE Equivalent if reference is to 3106(q).

116 ADA/Washington State May 14, 1993

Technical Assistance Document

ADA Requirements

4.30.4* Raised and Brailled Characters and Pictorial Symbol Signs (Pictograms). Letters and numerals shall be raised 1/32 in, upper case, sans serif or simple serif type and shall be accompanied with
Grade 2 Braille. Raised characters shall be at least 5/8 in (16 mm)
high, but no higher than 2 in (50 mm). Pictograms shall be accompanied by the equivalent verbal description placed directly below the pictogram. The border dimension of the pictogram shall be 6 in (152 mm) minimum in height .

4.30.5* Finish and Contrast. The characters and background of signs shall be eggshell, matte, or other non-glare finish. Characters
and symbols shall contrast with their background -- either light characters on a dark background or dark characters on a light background.

4.30.6 Mounting Location and Height. Where permanent identification is provided for rooms and spaces, signs shall be installed on the wall adjacent to the latch side of the door. Where
there is no wall space to the latch side of the door, including at
double leaf doors, signs shall be placed on the nearest adjacent wall.
Mounting height shall be 60 in (1525 mm) above the finish floor to
the centerline of the sign. Mounting location for such signage shall
be so that a person may approach within 3 in (76 mm) of signage without encountering protruding objects or standing within the swing of a door.

Washington State Regulation

51-20-3106 (p) S. Raised and Brailled Characters and Pictorial Symbol Signs (Pictograms). Letters and numerals shall be raised not less than 1/32 inch; shall be upper case, simple typeface; and shall be accompanied with Grade 2 Braille. Raised characters shall be not less than 5/8 inch or more than 2 inches in height. Where provided, pictograms shall be placed accompanied by the equivalent verbal description
directly below the pictogram. The border dimension of the pictogram shall be not less than 6 inches in height.

51.20.3106 (p) 3. Finish and Color. Characters and symbols shall have a high contrast with their background. The character and background of interior signs shall be eggshell, matte, or other nonglare finish.

See also Appendix Chapter 31 Division VI, same as ADAAG, Appendix A3.30.5.

All interior and exterior signs depicting the International Symbol of Access shall be white on a blue background.

51-20-3106 (p) 2. Mounting Location and Height. Signs shall

be installed on the wall adjacent to the latch side of the door. Signs shall be centered at 60 inches above the finished floor. Mounting location for signange shall be such be such that a person
may approach within 3 inches of signage without encountering protruding objects or standing within the swing of a door.

Commentary

ADA Requirements

4.30.7* Symbols of Accessibility.

(1) Facilities and elements required to be identified as accessible
by 4.1 shall use the international symbol of accessibility. The symbol shall be displayed as shown in Fig. 43(a) and (b).

Fig. 43 International Symbols.

Fig. 43(a) Proportions, International Symbol of Accessibility.
The diagram illustrates the International Symbol of Accessibility on a
grid background.

Fig. 43(b) Display Conditions, International Symbol of Accessibility. The symbol contrast shall be light on dark, or dark on
light.

(2) Volume Control Telephones. Telephones required to have a volume control by 4.1.3(17)(b) shall be identified by a sign containing a depiction of a telephone handset with radiating sound
waves.

(3) Text Telephones. Text telephones required by 4.1.3(l7)(c) shall be identified by the international TDD symbol, (Fig 43(c)). In
addition, if a facility has a public text telephone, directional signage
indicating the location of the nearest text telephone shall be placed

adjacent to all banks of telephones which do not contain a text telephone, Such directional signage shall include the international
TDD symbol. If a facility has no banks of telephones, the directional
signage shall be provided at the entrance (e.g., in a building directory).

(4) Assistive Listening Systems. In assembly areas where permanently installed assistive listening systems are required by 4.1.3(19)(b) the availability of such systems shall be identified with
signage that includes the international symbol of access for hearing
loss (Fig 43(d)).

4.30.8* Illumination Levels, (Reserved).

Washington State Regulation

51-20-3103 (b) 4. Signs. A. International Symbol of Access. 1. International Symbol of Access. A. General, The International Symbol of Access shall be as shown below. (Note: picture of International Access Symbol.)

51-20-3106 (p) 1. B. Text Telephones. Text Telephones required by Section 3105 (d) 2. shall be identified by the International Text Telephone symbol as shown below: (Note International TDD Symbol pictured.)

51-20-3106 (p) 1. C. Assistive Listening Systems. Permanently installed assistive listening systems that are required by Section 3103 (a) 2. B. shall be identified by the International Symbol of Access for Hearing Loss as shown below: (Note: International Symbol of Access for Hearing Loss pictured.)

51-20-3106 (p) 1. D. Volume Control Telephones. Telephones required by Section 3105 (d) 2. to have volume controls shall be identified by a handset with radiating sound waves.

Commentary

NE Section does not require directional signage at banks of phones which do not contain TDDS.

ADA Requirements

4.31 Telephones.

4.31.1 General. Public telephones required to be accessible by 4.1
shall comply with 4.31.

4.31.2 Clear Floor or Ground Space. A clear floor or ground space at least 30 in by 48 in (760 mm by 1220 mm) that allows either a forward or parallel approach by a person using a Wheelchair shall be
provided at telephones (see Fig. 44). The clear floor or ground space shall comply with 4.2.4. Bases, enclosures, and fixed seats Wheelchairs.

Fig. 44 Mounting Heights and Clearances for Telephones.

Fig. 44(a) Side Reach Possible. If a parallel approach is provided at a telephone in an enclosure, the wing walls and shelf may extend beyond the face of the telephone a maximum of 10 inches (255 mm).

Fig. 44(b) Forward Reach Required. If a front approach is provided at a telephone with an enclosure, the shelf can extend beyond the face of the telephone a maximum of 20 inches (510 mm). A wing wall may extend beyond the face of the telephone a maximum of 24 inches (610 mm). If the wing wall extends more than 24 inches (610 mm) beyond the face of the telephone, an additional 6 inches (150 mm) in width of clear floor space shall be
provided.

4.31.3* Mounting Height. The highest operable part of the telephone shall be within the reach ranges specified in 4.2.5 or 4.2.6.

4.31.4 Protruding Objects. Telephones shall comply with 4.4.

Washington State Regulation

51-20-3106 (n) Telephones.

51-20-3106 (n) 1. Clear Floor or Ground Space. A clear floor or ground space not less than 30 inches by 48 inches that allowed either a forward or parallel approach shall be provided in front of telephones. Bases, enclosures and fixed seats shall

not project into the clear floor space.
Where parallel approach is provided, any shelf or enclosure shall not project further than 10 inches beyond the face of the telephone.

Where a forward approach is provided, any shelf shall not project further than 20 inches beyond the face of the telephone; any enclosure panels shall be a minimum 30 inches apart, and where less than 36 inches apart, shall project no more than 24 inches beyond the face of the phone.

51-20-3 1 06 (Sn) 2. Height. The highest operable part of a telephone shall be within the reach ranges specified in Sections 3106 (b) 2.D. or 3106 (b) 2. E.

Commentary

PNE This section is equivalent only if the numbers referenced are changed to 3106 (b) 4. D. and 3106 (b) 4. E.

ADA Requirements

4.31.5 Hearing Aid Compatible and Volume Control Telephones Required by 4.1

(1)Telephones shall be hearing aid compatible.

(2) Volume controls, capable of a minimum of 12 dbA and a maximum of 18 dbA above normal, shall be provided in accordance with 4.1.3. If an automatic reset is provided then 18 dbA may be exceeded.

4.31.6 Controls. Telephones shall have pushbutton controls where

service for such equipment is available.

4.31.7 Telephone Books. Telephone books, if provided, shall be located in a position that complies with the reach ranges specified in
4.2.5 and 4.2.6.

4.31.8 Cord Length. The cord from the telephone to the handset shall be at least 29 in (735 mm) long.

Washington State Regulation

51-20-3106 (n) 3. Equipment for Persons with Hearing Impairments. Telephones shall be equipped with volume controls and shall be hearing aid compatible. Volume controls shall be capable of increasing volume not less than 12 dbA or more than 18 dbA above normal.

51-20-3106 (n) 4. Controls. Telephones shall have pushbutton controls where service for such equipment is available.

51-20-3106 (n) 5. Cord Length. The card from the telephone to the handset shall be not less than 29 inches in length.

Commentary

PNE
120 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

4.31.9* Text Telephones Required by 4.1,

(1) Text telephones used with a pay telephone shall be permanently affixed within, or adjacent to, the telephone enclosure.
If an acoustic coupler is used, the telephone cord shall be sufficiently long to allow connection of the text telephone and the
telephone receiver

(2) Pay telephones designed to accommodate a portable text telephone shall be equipped with a shelf and an electrical outlet within or adjacent to the telephone enclosure. The telephone handset shall be capable of being placed flush on the surface of the
shelf. The shelf shall be capable of accommodating a text telephone
and shall have 6 in (I52 mm) minimum vertical clearance in the area
where the text telephone is to be placed.

(3) Equivalent facilitation may be provided, For example, a portable text telephone may be made available in a hotel at the registration desk if it is available an a 24-hour basis for use

with
nearby public pay telephones. In this instance, at least one pay telephone shall comply with paragraphs of this section. In addition,
if an acoustic coupler is used, the telephone handset cord shall be
sufficiently long so as to allow connection of the text telephone and
the telephone receiver. Directional signage shall be provided and shall comply with 4.30.7.

4.32 Fixed or Built-in Seating and Tables.

4.32.1 Minimum Number. Fixed or built-in seating or tables required
to be accessible by 4.1 shall comply with 4.32.

4.32.2 Seating. If seating spaces for people in wheelchairs are provided at fixed tables or counters, clear floor space complying with 4.2.4 shall be provided. Such clear floor space shall not overlap knee space by more than 19 in (485 mm) (see Fig. 45).

4.32 3 Knee Clearances. If seating for people in wheelchairs are provided at tables or counters, knee spaces at least 27 in (685 mm)
high, 30 in (760 mm) wide, and 19 in (485 mm) deep shall be provided (see Fig. 45).

Washington State Regulation

51-20-3106 (n) 6. Text Telephones. Text telephones shall be permanently affixed within, or adjacent to the telephone enclosure. Where an acoustic coupler is used, the telephone cord shall be sufficiently long to allow connection of the text telephone and the telephone receiver.

51-20-3106 (n) 7. Shelf and Electrical Outlet. Shelves and an electrical outlet shall be located within or adjacent to the telephone enclosure. The shelf shall be not less than 10 inches by 10 inches in dimension, with a vertical clearance above the shelf of not less than 6 inches. The telephone handset shall be capable of being placed flush on the surface of the shelf.

51-20-3106 (s) Seating, Tables, and Sinks.

51-20-31 06 (a) 1. Clear Floor Space. Seating spaces at tables, and sinks shall have a clear floor space of not less than

30 inches by 48 inches that allows forward approach. The - clear floor space shall not overlap knee space by more than 19 inches.

51-20-3106 (s) 2. Knee Clearances. Knee space at tables, counters, and sinks shall be provided in accordance with Section 3106 (b) 2. B. No projection which might obstruct the arm of a Wheelchair may intrude into this clearance height, within 24 inches horizontally from the table edge.
Commentary

PNE Clarification needed. This section should reference 3106 (b) 4. B. to be equivalent.

ADA Requirements

4.32.4* Height of Tables or Counters. The tops of accessible tables
and counters shall be from 28 in to 34 in (710 mm to 865 mm) above the finish floor or ground.

4.33 Assembly Areas.

4.33.1 Minimum Number. Assembly and associated areas required to be accessible by 4.1 shall comply with 4.33.

4.33.2* Size of Wheelchair Locations. Each Wheelchair location shall provide minimum clear ground or floor spaces as shown in Fig.
46.

Fig. 46 Space Requirements for Wheelchair, Seating Spaces in Series

Fig. 46(a) Forward or Rear Access. If seating space for two wheelchair users is accessed from the front or rear, the minimum space required Is 48 inches (1220 mm) deep by 66 inches (1675 mm) wide.

Fig. 46(b) Side Access. If seating space for two wheelchair users is accessed from the side, the minimum space required is 60 inches (1525 mm) deep by 66 inches (1675 mm) wide.

4.33.3* Placement of Wheelchair Locations. Wheelchair areas shall be an integral part of any fixed seating plan and shall be

provided so
as to provide people with physical disabilities a choice of admission
prices and lines of sight comparable to those for members of the general public. They shall adjoin an accessible route that also serves as a means of egress in case of emergency. At least one companion fixed seat shall be provided next to each wheelchair seating area. When the seating capacity exceeds 300, wheelchair spaces shall be provided in more than one location. Readily removable seats may be installed in Wheelchair spaces when the spaces are not required to accommodate Wheelchair users.
EXCEPTION: Accessible viewing positions may be clustered for bleachers, balconies, and other areas having sight lines that require
slopes of greater than 5 percent. Equivalent accessible viewing positions may be located on levels having accessible egress.

Washington State Regulation

51-20-3106 (s) 3. Height. The tops of tables, and sinks shall be not less than 28 inches nor more than 34 inches in height above the floor or ground.

51-20-3106 (u) Assembly Areas. 1. Wheelchair Spaces

51-20-3106 (u) 1. B. Size. Wheelchair spaces shall be not less than 33 inches in width. Where forward or rear approach is provided, Wheelchair spaces shall be not less than 48 inches in depth. Where side approach is provided, Wheelchair spaces shall be not less than 60 inches in depth.

51-20-3106 (u) 1. A. Location. Wheelchair spaces shall be an integral part of any fixed seating plan and shall be dispersed throughout the seating area. Spaces shall adjoin an accessible route of travel that also serves as a means of egress and shall be located to provide lines of sight comparable to those for all viewing areas.

EXCEPTION: Accessible viewing positions may be clustered for bleachers, balconies, and other areas having sight lines that require slopes of greater than 5 percent. Equivalent accessible viewing positions may be located on levels having accessible egress.

Commentary

PNE No specific provision for companion seating adjacent to accessible Wheelchair locations.

ADA Requirements

4.33.4 Surfaces. The ground or floor at Wheelchair locations shall be level and shall comply with 4.5.

4.33.5 Access to Performing Areas. An accessible route shall connect Wheelchair seating locations with performing areas, including stages, arena floors, dressing rooms, locker rooms, and other spaces used by performers.

4.33.6* Placement of Listening Systems. If the listening system provided serves individual fixed seats, then such seats shall be located within a 50 ft (15 m) viewing distance of the stage or playing area and shall have a complete view of the stage or playing area.

4.33.7* Types of Listening Systems. Assistive listening systems (ALS) are intended to augment standard public address and audio systems by providing signals which can be received directly by persons with special receivers or their own hearing aids and which eliminate or filter background noise. The type of assistive listening system appropriate for a particular application depends on the characteristics of the setting, the nature of the program, and the intended audience. Magnetic induction loops, infrared and radio frequency systems are types of listening systems which are appropriate for various applications.

4.34 Automated Teller Machines.

4.34.1 General. Each machine required to be accessible by 4.1.3 shall be on an accessible route and shall comply with 4.34.

4.34.2 Controls. Controls for user activation shall comply with the requirements of 4.27.

4,34.3 Clearances and Reach Range. Free standing or built-in units not having a clear space under them shall comply with

4.27.2 and
4.27.3 and provide for a parallel approach and both a forward and side reach to the unit allowing a person in a Wheelchair to access
the controls and dispensers.

Washington State Regulation

51-20-3106 (u) 1. C. Surfaces. The ground or floor surfaces at wheelchair locations shall be level and shall comply with Section 3106 (g)

51-20-3106 (u) 2. Access to Performance Areas. An accessible route of travel shall connect Wheelchair seating locations with performance areas, including stages, arena floors, dressing rooms, locker rooms and other spaces used by performers.

51-20-3106 (u) 3. Placement of Assistive Listening Systems. Where an assistive-listening system serves individual fixed seats, such seats shall have a clear line of sight and shall be located not more than 50 feet from the stage or performance area.

Commentary

NE No accessibility requirements for ATMS.

NE

NE

ADA Requirements

4.34.4 Equipment for Persons with Vision Impairments. Instructions
and all information for use shall be made accessible to and independently usable by persons with vision impairments.

4.35 Dressing and Fitting Rooms.

4.35.1 General. Dressing and fitting rooms required to be accessible by 4.1 shall comply with 4.35 and shall be on an accessible route.

4.35.2 Clear Floor Space. A clear floor space allowing a person using a Wheelchair to make a 180-degree turn shall be provided in every accessible dressing room entered through a swinging or sliding door. No door shall swing into any part of the turning space. Turning space shall not be required in a private dressing room entered through a curtained opening at least 32 in (815 mm) wide if clear floor space complying with section 4.2 tenders the dressing room usable by a person using a Wheelchair.

4.35.3 Doors. All doors to accessible dressing rooms shall be in compliance with section 4.13.

4.35.4 Bench. Every accessible dressing room shall have a 24 in by 48 in (610 mm by 1220 mm) bench fixed to the wall along the longer dimension (of the bench). The bench shall be mounted 17 in to 19 in (430 mm to 485 mm) above the finish floor. Clear floor space shall be provided alongside the bench to allow a person using a Wheelchair to make a parallel transfer onto the bench. The structural strength of the bench and attachments shall comply with 4.26.3. Where installed in conjunction with showers, swimming pools, or other wet locations, water shall not accumulate upon the surface of the bench and the bench shall have a slip-resistant surface.

Washington State Regulation

51-20-3106 (x) Customer Service Facilities. 1. Dressing and Fitting Rooms.

51-20-3106 (x) 1. A. Clear Floor Space. Dressing and fitting rooms shall have a clear floor space complying with Section 3106 (b).

EXCEPTION: Dressing and fitting rooms that are entered through a curtained opening need not comply with Section 3106 (b) 2.

51-20-3106 (x) 1. B. Doors. All doors to accessible dressing and fitting rooms shall comply with Section 3106 (i).

51-20-3106 (x) 1. C. Benches. Every accessible dressing or fitting room shall have a bench installed adjacent to the longest

wall in the room. The bench shall be not less than 24 inches in width and 48 inches in length, and shall be mounted not less than 17 inches nor more than 19 inches above the finished floor.

Clear floor space shall be provided adjacent to the bench to allow for parallel transfer, and the structural strength of the bench shall comply with Section 3106 (k) S. C.

Where benches are installed in dressing and fitting rooms adjacent to showers, swimming pools, or other wet locations, - water shall not accumulate upon the surface of the bench and the bench shall have a slip-resistant surface.

Commentary

NE

ADA Requirements

4.35.5 Mirror. Where mirrors provided in dressing rooms of the same use, then in an accessible dressing room, a full-length mirror,
measuring at least 18 in wide by 54 in high (460 mm by 1370 mm), shall be mounted in a position affording a view to a person on the
bench as well as to a person in a standing position

5. RESTAURANTS AND CAFETERIAS.

5.1* General. Except as specified or modified in this section, restaurants and cafeterias shall comply with the requirements of 4.1
to 4.35. Where fixed tables (or dining counters where food is consumed but there is no service) are provided, at least 5 percent,
but not less than one, of the fixed tables (or a portion of the dining
counter) shall be accessible and shall comply with 4.32 as required
in 4.1.3(18). In establishments where separate areas are designated
for smoking and non-smoking patrons, the required number of accessible fixed tables (or counters) shall be proportionally

distributed between the smoking and non-smoking areas. In new construction, and where practicable in alterations, accessible fixed
tables (or counters) shall be distributed throughout the space or facility.

5.2 Counters and Bars. Where food or drink is served at counters exceeding 34 in (865 mm) in height for consumption by customers seated on stools or standing at the counter, a portion of the main
counter which is 60 in (1525 mm) in length minimum shall be provided in compliance with 4.32 or services shall be available at
accessible tables within the same area.

5.3 Access Aisles. All accessible fixed tables shall be accessible by
means of an access aisle at least 36 in *915 mm) clear between parallel edges of tables or between a wall and the table edges.

Washington State Regulation

51-20-3106 (x) 1.D. Mirrors. Where provided, mirrors in accessible dressing and fitting rooms shall be not less than 18 inches in width by 54 inches in height and shall be mounted opposite the bench.

51-20-3106 (a) 2.A. General. All Group A Occupancies shall be accessible as provided in this chapter.

51-20-3106 (d) 5. Fixed or Built-in Seating or Tables. Where fixed or built-in seating or tables are provided at least 5 percent, but no fewer than two, shall be accessible. Accessible fixed or built-in seating or tables shall comply with Section 3105 (s). In eating and drinking establishments, such seating or tables shall be distributed throughout the facility.

51-20-3106 (v) 2.C. Counters and Bars. Where service of food or drink is provided, at counters more than 34 inches in height, to customers seated on stools or standing, a portion of the main counter shall be provided in compliance with Section 3106 (s), or service shall be available at accessible tables within the same area.

51-20-3106 (v) 1. Restaurants and Cafeterias. !. Aisles. Aisles to fixed tables required to be accessible shall comply with 3106 (s).

51-20-3106 (t) Aisles. All aisles, including check out aisles, food service lines and aisles between fixed tables, shall be not less than 36 inches in width.

Commentary

PNE Clarification needed. 3106 (s) is not the correct section.

125 ADA/Washington State May 14, 1993
Technical Assistance Document

ADA Requirements

5.4 Dining Areas. In now construction, all dining areas, including raised or sunken dining areas, loggias, and outdoor seating areas, shall be accessible. In non-elevator buildings, an accessible means of vertical access to the mezzanine is not required under the following conditions: 1) the area of mezzanine seating measures no more than 33 percent of the area of the total accessible seating area; 21 the same services and decor are provided in an accessible space usable by the general public; and, 3) the accessible areas are not restricted to use by people with disabilities. In alterations, accessibility to raised or sunken dining areas, or to all parts of outdoor seating areas is not required provided that the same services and decor are provided in an accessible space usable by the general public and are not restricted to use by people with disabilities.

5.6 Food Service Lines. Food service lines shall have a minimum clear width of 36 in (915 mm), with a preferred close width of 42 in (1065 mm) to allow passage around a person using a wheelchair. Tray slides shall be mounted no higher than 34 in (065 mm) above the floor (see Fig. 53). If self-service shelves are provided, at least 50 percent of each type must be within reach ranges specified in 4.2.5 and 4.2.6.

Washington State Regulation

51-20-3103 (a) 2. A. General. All Group A Occupancies shall be accessible as provided in this chapter.

EXCEPTION: In the assembly area of dining and drinking establishments or religious facilities which are located in non-elevator buildings; where the area of mezzanine seating is not more than 25 percent of the total seating. an accessible means of vertical access to the mezzanine is not required; provided that the same services are provided in an accessible space which is not restricted to use only by persons with disabilities. Comparable facilities shall be available in all seating areas.

51-20-31 12 (e) 8. Assembly Areas.. In alterations, accessibility to raised or sunken dining areas, or to all parts of
outdoor seating areas is not required provided that the same services and amenities are provided in an accessible space. - usable by the general public and not restricted to use by people with disabilities.

51-20-3106 (v) 2. Food Service Lines A. Clear Floor Space. Food service lines shall comply with Section 3106 (t) (3106 (t) requires 36 inch aisle width).

51-20-3106 (v) S. B. Height. Tray slides shall be mounted not more than 34 inches in height above the floor.

51-20-3105 (d) 6. Storage, Shelving and Display Units. In other than Group R, Division 1 apartment buildings, where fixed or built-in storage facilities such as cabinets, Shelves, closets and drawers are provided in accessible spaces, at least one of each type provided shall contain storage space complying with Section 3106 (r).

Self-service shelves or display units in retail occupancies shall-,
be located on an accessible route in accordance with Section 3103 (b) 2.

Commentary

NE ADAAG requires 50% of self service shelves in food service lines to be accessible. WSR has no specific; provision, only a general provision (see 3105 (d) 6).

ADA Requirements

5.6 Tableware and Condiment Areas. Self-service shelves and dispensing devices for tableware, dishware, condiments, food and beverages shall be installed to comply with 4.2 (see Fig. 54).

Fig. 54 Tableware Areas.

The maximum height is 54 inches (1370 mm).

5.7 Raised Platforms. In banquet rooms or spaces where a head table or speaker's lectern is located on a raised platform, the platform shall be accessible in compliance with 4.8 or 4.11. Open edges of a raised platform shall be protected by placement of tables
or by a curb.

5.8 Vending Machines and Other Equipment. Spaces for vending machines and other equipment shall comply with 4.2 and shall be located on an accessible route.

5.9 Quiet Areas. (Reserved).

Washington State Regulation

51-20-3106 (v) 2. D. Tableware and Condiment Areas. Self-service Shelves and dispensing devices for tableware, dishware, condiments, food and beverages shall be installed to comply with Section 3106 (s).

51-20-3103 (a) 2. A. General. All Group A Occupancies shall be accessible as provided in this chapter....

. . . In banquet rooms or spaces where the head table or speaker's lectern is located on a permanent raised platform, the platform shall be accessible in compliance with Section 3106. Open edges an a raised platform shall be protected by a curb with a height of not less than 2 inches.

Commentary

PNE Clarification needed. 3106 (s) is not correct section.

NE

ADA Requirements

6. MEDICAL CARE FACILITIES.

6.1 General. Medical care facilities included in this section are those in which people receive physical or medical treatment or care and where persons may need assistance in responding to an emergency and where the period of stay may exceed twenty-four hours. In addition to the requirements of 4.1 through 4.35, medical care facilities and buildings shall comply with 6.

(1) Hospitals - general purpose hospitals, psychiatric facilities, detoxification facilities - At least 10 percent of patient bedrooms and toilets, and all public use and common use areas are required to be designed and constructed to be accessible.

(2) Hospitals and rehabilitation facilities that specialize in treating conditions that affect mobility, or units within either that specialize in treating conditions that affect mobility - All patient bedrooms and toilets, and all public use and common use areas are required to be designed and constructed to be accessible.

(3) Long term care facilities, nursing homes - At least 50 percent of patient bedrooms and toilets, and all public use and common use areas are required to be designed and constructed to be accessible.

51-20-3103 (a) 6. Group 1 Occupancies. All Group I Occupancies shall be accessible in all public use, common use and employee use areas, and shall have accessible patient rooms, cells and treatment or examination rooms as follows:
51-20-3103 (a) 6. A. In Group I. Division 1.1 hospitals which specialize in treating conditions that affect mobility, all

patient
rooms in each nursing unit, including associated toilet rooms and bathrooms.
51-20-3103 (a) 6. B. In Group I, Division 1.1 hospitals which do not specialize in treating conditions that affect mobility, at least 1 in every 10 patient rooms in each nursing unit, including associated toilet rooms and bathrooms.
51-20-3103 (a) 6. C. In Group I, Division 1.1 and Division 2 nursing homes and long-term care facilities, at least 1 in every 2 patient rooms, Including associated toilet rooms and bathrooms.
51-20-3103 (a) 6. D. In Group I, Division 3, mental health Occupancies, at least 1 in every 10 patient rooms, including associated toilet roams and bathrooms.

Commentary

NE Under ADA, the percentages do not apply to treatment and exam rooms. All treatment and exam rooms are "common use" areas. All must be accessible. WSR's percentages for patient rooms are equivalent.

ADA Requirements

(4) Alterations to patient bedrooms.

(a) When patient bedrooms are being added or altered as part of a planned renovation of an entire wing, a department, or other

discrete area of an existing medical facility, a percentage of the
patient bedrooms that are being added or altered shall comply with
6.3. The percentage of accessible rooms provided shall be consistent with the percentage of rooms required to be accessible by the applicable requirements of 6.1(1), 6,1(2), or 6.1(3), until the
number of accessible patient bedrooms in the facility equals the overall number that would be required if the facility were newly constructed. For example, if 20 patient bedrooms are being altered
in the obstetrics department of a hospital, 2 of the altered rooms
must be made accessible. If, within the same hospital, 20 patient

bedrooms are being altered in a unit that specializes in treating mobility impairments, all of the altered rooms must be made accessible.) Where toilet/bathrooms are part of patient bedrooms which are added or altered and required to be accessible, each such
patient toilet/bathroom shall comply with 6.4.

(b) When patient bedrooms are being added or altered individually, and not as part of an alteration of the entire area, the
altered patient bedrooms shall comply with 6.3, unless either: a) the
number of accessible rooms provided in the department or area containing the altered patient bedroom equals the number of accessible patient bedroom that would be required if the percentage requirements of 6,1(1), 6.1(2), or 6.1(3) were applied to
that department or area; or b) the number of accessible patient bedrooms in the facility equals the overall number that would be required if the facility were newly constructed. Where toilet/bathrooms are part of patient bedrooms which are added or altered and required to be accessible, each such toilet/bathroom shall comply with 6.4.

6.2 Entrances. At least one accessible entrance that complies with
4.14 shall be protected from the weather by canopy or roof overhang. Such entrances shall incorporate a passenger loading zone that complies with 4.6.6.

Washington State Regulation

51-20-3112 (a) 4. G. where patient rooms are altered in an existing Group I Occupancy, a percentage of the altered rooms equal to the requirement of Section 3103 (a) 6., but in no case more than the total number of rooms required by Section 3103 (a) 6. shall comply with Section 3106 (w). Where toilet or bath facilities are part of the accessible rooms, they shall comply with Section 3106 (k).

51-20-3103 (a) 6. . . .In Group I, Division 1.1 and 2 Occupancies, at least one accessible entrance that complies with Section 3103 (b) shall be under shelter. Every such entrance shall include a passenger loading zone which complies with Section 3108 (b) 3.

Commentary

ADA Requirement

6.3 Patient Bedrooms. Provide accessible patient bedrooms in compliance with 4.1 through 4.35. Accessible patient bedrooms shall comply with the following:

(1) Each bedroom shall have a door that complies with 4.13.

EXCEPTION: Entry doors to acute care hospital bedrooms for in-patients shall be exempted from the requirement in 4.13.6 for maneuvering space at the latch side of the door if the door is at least 44 in (1120 mm) wide.

(2) Each bedroom shall have adequate space to provide a maneuvering space that complies with 4.2.3. In rooms with 2 beds, it is preferable that this space be located between beds.

(3) Each bedroom shall have adequate space to provide a minimum clear floor space of 36 in (915 mm) along each side of the bed and to provide an accessible route complying with 4.3.3 to each side of each bed.

6.4 Patient Toilet Rooms. Where toilet/bath rooms, are provided as a part of a patient bedroom, each patient bedroom that is required to be accessible shall have an accessible toilet/bath room that complies with 4.22 or 4.23 and shall be on an accessible route.

Washington State Regulation

51-20-3106 (w) Patient Bedrooms. Each patient room shall be designed and constructed to provide a 180-degree turn that complies with Section 3106 (b) 1. Each patient room shall have a minimum clear floor space not less than 36 inches on each side of the bed.

3106 (i) Doors. 1. General. Doors required to be accessible shall comply with Section 3304 and provisions of this section. For the purposes of this section, gates shall be considered to be doors.

6. Group I Occupancies. All Group I Occupancies shall be accessible in all public use, common use and employee use areas, and shall have accessible patient rooms, cells and treatment or examination rooms as follows:

6. A. In Group I, Division 1.1 hospitals which specialize in treating conditions that affect mobility, all patient rooms in each nursing unit, including associated toilet rooms and bathrooms.
6. B. In Group I, Division 1.1 hospitals which do not specialize in treating conditions that affect mobility, all patient rooms in each nursing unit, including associated toilet rooms and bathrooms.
6. C. In Group I, Division 1.1 and Division 2 nursing homes and long-term care facilities, at least 1 in every 2 patient rooms. including associated toilet rooms and bathrooms.
6. D. In Group I, Division 3, mental health occupancies, at least 1 in every 10 patient rooms, including associated toilet rooms and bathrooms.

ADA Requirements

7. BUSINESS AND MERCANTILE.

7.1 General. In addition to the requirements of 4.1 to 4.35, the design of all areas used for business transactions with the public shall comply with 7.

Washington State Regulation

51-20-3103 (a) 3. Group B. Occupancies. All Group B Occupancies shall be accessible as provided in this chapter. Assembly spaces in Group B Occupancies shall comply with Section 3103 (a) 2. B.
51-20-3103 (a) 7. Group M Occupancies. Group M, Division 1 Occupancies shall be accessible.

ADA Requirements

7.2 Sales and Service Counters, Teller Windows, Information Counters.

(1) In department stores and miscellaneous retail stores where counters have cash registers and are provided for sales or distribution of goods or services to the public, at least one of

each type shall have a portion of the counter which is at least 36 in (915 mm) in length with a maximum height of 36 in (915 mm) above the finish floor. It shall be on an accessible route complying with 4.3.
The accessible counters must be dispersed throughout the building or facility. In alterations where it is technically infeasible to provide requirements may be provided.

(2) At ticketing counters, teller stations in a bank, registration
counters in hotels and motels, box office ticket counters, and other counters that may have a cash register but at which goods or services are sold or distributed, either:

(i) a portion of the main counter which is a minimum of 36 in (915 mm) in length shall be provided with a maximum height of 36 in (915 mm); or

(ii) an auxiliary counter with a maximum height of 36 in (915 mm) in close proximity to the main counter shall be provided; or

(iii) equivalent facilitation shall be provided (e.g., at a hotel registration counter, equivalent facilitation might consist of: (1) provision of a folding shelf attached to the main counter on which an individual with disabilities can write, and (2) use of the space on the side of the counter or a the concierge desk, for handling materials back and forth)

All accessible sales and service counters shall be on an accessible route complying with 4.3.

(3)* Assistive Listening Devices. (Reserved).

Washington State Regulation

51-20-3103 (a) 7. Group M. Occupancies. Group M, Division 1 occupancies shall be accessible.

EXCEPTIONS: 1. Private garages, carports and sheds are not required to be accessible if they are accessory to dwelling units which are not required to be accessible.

51-20-3105 (d) 7. B. Counters and Windows. Where customer safes and service counters or windows are provided a portion of the counter or at least one window, shall be accessible in accordance with Section 3106 (x).

51-20-3106 (x) 2. Counters and Windows. Where counters

are required to be accessible, the accessible portion shall be not less than 36 inches in length and not move than 36 inches in height above the finished floor.

Where accessible windows are required, they shall be no more than 36 inches in height above the finished floor.

EXCEPTION: An auxiliary counter with a maximum height of in (915 mm); or
36 inches is installed in close proximity to the main counter.

7.30 Check-out Aisles.
(1) In new construction, accessible check-out aisles shall be provided in conformance with the table below:

Total Check-out Aisles of Each Design	Minimum Number of Accessible Check-out Aisles Of Each Design
1 - 4	1
5 - 8	2
8 - 15	3
over 15	3, plus 20% of additional aisles

EXCEPTION: In now construction, where the selling space is under 5000 square feet, only one check-out aisle is required to be accessible.

EXCEPTION: In alterations, at least one check-out aisle shall be accessible in facilities under 5000 square feet of selling space. In facilities of 5000 or more square feet of selling spice, at least one of each design of check-out aisle shall be made accessible when altered until the number of accessible check-out allies of each design equals the number required in now construction.

Examples of check-out aisles of different "design" include those which are specifically designed to serve different functions. Different "design" includes but is not limited to the following features length of belt or no bolt; or permanent signage designating the aisle as an express lane.

(2) Clear aisle width for accessible check-out aisles shall comply with 4.2.1 and maximum adjoining counter height shall not exceed 38 in (965 mm) above the finish floor. The top of the lip shall not exceed 40 in (1015 mm) above the finish floor.

(3) Signage identifying accessible check-out aisles shall comply with 4.30.7 and shall be mounted above the check-out aisle in the same location where the check-out number or type of check- out is displayed.

Washington State Regulation

51 -31 06 Id) 7. D. Check-out Aisles. Accessible checkout aisles shall be installed in accordance with Table 31-E and Section 3106 (x).

Table No. 31-E
Required Check-out Aisles

Total Check-out Aisles Units on Site	Minimum Number of Accessible Check-out Aisles
1 - 4	1
5 - 8	2
8 - 15	3
Over 15	3 plus 20% of additional aisles

51-20-3106 (x) 3. Check-out Aisles. The width of accessible check-out aisles shall comply with Section 3106 (t), Counters in accessible check-out aisles shall be not more than 33 inches in height, and the top of the raised edge of the counter shall not exceed 40 inches in height above the finished floor.

Accessible check-out aisles shall be Identified by the International Symbol of Access in accordance with Section 3106 (p) 1.

Commentary

7.4 Security Bollards. Any device used to prevent the removal of

shopping carts from store promises shall not prevent access or egress to people in Wheelchairs. An alternate entry that is

equally convenient to that provided for the ambulatory population is acceptable.

8. LIBRARIES.

8.1 General. In addition to the requirements of 4.1 to 4.35, the design of all public areas of a library shall comply with 8, including reading and study areas, stacks, reference rooms, reserve areas, and special facilities or collections.

8.2 Reading and Study Areas. At least 5 percent or a minimum of one of each element of fixed seating, tables, or study carrels shall comply with 4.2 and 4.32. Clearances between fixed accessible tables and between study carrels shall comply with 4.3.

8.3 Check-out Areas. At least one lane at each check-out area shall comply with 7.2(1). Any traffic control or book security gates or turnstiles shall comply with 4.13:

8.4 Card Catalogs and Magazine Displays. Minimum clear aisle space at card catalogs and magazine displays shall comply with Fig.55. Maximum reach height shall comply with 4.2, with a height of 48 in (1220 mm) preferred Irrespective of approach allowed.

Fig, 55 Card Catalog.

The lowest shelf of a card catalog share be 18 inches (455 mm).

8.5 Stacks. Minimum clear aisle width between stacks shall comply with 4.3. with a minimum clear aisle width of 42 in (1065 mm) preferred where possible. Shelf height in stack area is unrestricted
(see Fig. 56).

Washington State Regulation

51-20-3106 (y) Libraries.

51-20-3106 (y) Libraries. 1. Reading and Study Areas. At least 5 percent or a minimum of one of each element of fixed seating, tables or study carrels shall comply with Section 3106 (s). Clearances between fixed accessible tables and study, carrels shall comply with Section 3106 (s).

51-20-3106 (x) 2. Check-out Areas. At least one lane at each check-out area shall comply with Section 3106 (t). Any traffic control or book security gates or turnstiles shall comply

with Section 3106 (j).

51-20-3106 (x) 3. Card Catalogs, Magazine Displays and Reference Stacks. A. Aisles. Aisles between card catalogs, magazine displays or reference stocks shall comply with Section 3106 (t)

51-20-3106 (x) 3. B. Height. Card catalogs, magazine displays or reference stacks shall have a reach height of not more than 54 inches for side approach and not more than 48 inches for forward approach.

See 51-20-3106 (x) 3. Above.

Commentary

PNE No specific provision found, Interpretation needed as to whether security bollards are allowed to obstruct the accessible route or means of egress.

NE All "stacks" must have an accessible route unless they are areas used solely as work areas. WSR's language appears to apply only to "reference stacks."

ADA Requirements

9. ACCESSIBLE TRANSIENT LODGING.

(1) Except as specified in the special technical provisions of this section, accessible transient lodging comply with the applicable requirements of 4.1 through 4.35. Transient lodging includes facilities or portions thereof used for sleeping accommodations, when not classed as a medical care facility.

Washington State Regulation

51-20-1201 Group R Occupancies Defined.
Group R Occupancies shall be:
Division 1. Hotels and apartment houses.
Congregate residences (each accommodating more than 10 persons).
Division 2. Not used.
Division 3. Dwellings, family child day care homes and lodging houses.

Congregate residences (each accommodating 10 persons or less).

51-20-3103 (a) B. Group R. Occupancies. A. General. All Group R Occupancies shall be accessible as provided in this chapter. Public- and common use areas and facilities such as recreational facilities, laundry facilities, garbage and recycling collection areas, mailbox locations, lobbies, foyers and management offices, shall be accessible,

Number of Dwelling Units. In all Group R, Division 1 apartment buildings the total number of Type A dwelling units shall be as required by Table No. 31-B. All other dwelling units shall be designed and constructed to the requirements for Type B units as defined in this chapter.

EXCEPTIONS: 1. Group R Occupancies containing three or fewer dwelling units.

PNE A question exists as to whether the provisions for hotels and motels apply here. Clarification is needed.

DJ 202-PL-121
DJ 202-PL-273

MAY 20

Kent W. Colton
National Association of Home Builders
15th and M Streets, N.W.
Washington, D.C. 20005

Dear Mr. Colton:

This letter is in response to your letter requesting information about the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You have asked for a clarification of the guidance in the Department's Technical Assistance Manual for title III concerning model homes. Specifically, you ask whether sales offices within model homes are subject to the ADA's barrier removal requirements. As you correctly stated in your letter, although model homes are not covered as places of public accommodation under the ADA, any places of public accommodation that are located within model homes, such as sales offices, are covered. This means that all areas of the model home used for the purposes of the sales office, including parking, building entrances, and internal areas, must comply with title III of the ADA, including its requirements for the removal of barriers.

Title III requires that all barriers to access be removed from existing places of public accommodation if removal is readily achievable. Readily achievable means easily accomplishable without much difficulty or expense. The readily achievable standard applies individually to each barrier, so that the expense of making a building entrance accessible does not a public accommodation of the obligation to remove barriers inside the facility, as long as removal of those internal barriers is readily achievable. If the removal of a barrier to access is not readily achievable, the public

cc: Records, Chrono, Wodatch, Magagna, Novich, FOIA
Udd:Novich:Policy:273

01-02235

accommodation must provide any readily achievable alternatives to barrier removal. Thus, using your example of the entrance to a model home/sales office that cannot be made accessible, if there is an accessible location to which the sales office could be moved without much difficulty or expense, an accessible alternative sales office location must be provided.

I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Chief Executive Officer

August 3, 1992

Mr. John Wodatch
Office on Americans with Disabilities
U.S. Department of Justice
10th St. and Constitution Ave.
Washington, D.C. 20530

Dear Mr. Wodatch:

Last October, we wrote your office requesting the Department to clarify that model homes are not covered under the Americans with Disabilities Act (ADA). We are pleased that the Department addressed this issue in its Technical Assistance Manual issued earlier this year. While this document provides necessary clarification, it appears that there is still some confusion on how the regulations apply to model homes used as sales offices. Based on our reading of the ADA and the Department's regulations, as well as on conversations we have had with attorneys in your office, it appears that the obligation to provide accessibility to a sales office in a model is subject to the barrier removal regulations found at 28 C.F.R. Sections 36.304 and 36.305. We would appreciate it if your office could formally confirm our understanding an this issue.

On page four of the January 24, 1992, Technical Assistance Manual, a copy of which is attached, the Department stated that model homes are not places of public accommodation, and therefore are not covered under ADA. In the same paragraph, the Department stated "(i)f, however, the sales office for a residential housing development were located in a model home, the area used for the sales office would be considered a place of public accommodation."

What is missing from this paragraph, however, is a reference to the barrier removal requirements of ADA. The manual does not explain that while the area would be considered a place of public accommodation, accessibility to the area in question would be subject to the barrier removal rules. Thus, an individual reading the Technical Assistance Manual with little understanding of the ADA regulations could interpret this paragraph to mean that a builder would have to reconstruct the sales area to provide accessibility in all cases regardless of cost or difficulty. This result is inconsistent with the ADA.

01-02237

Mr. John Wodatch
July 30, 1992
Page two

We believe that the builder's obligation to provide accessibility to the sales area should be analyzed in light of the Department's barrier removal regulations, specifically, 28 C.F. R. Sections 36.304 and 36.305. While accessibility to the area used as a sales office should be provided, builders are only required to provide accessibility if it is reasonable to do so given the particular circumstances. If it is not reasonable to provide accessibility because of the cost or because it is structurally not practicable, the regulations provide that it is acceptable to relocate sales activities to an accessible location. The following examples illustrate these principles.

An accessible route to the front door should be provided, if it can be done easily and without much cost. If it is not reasonable to provide accessibility to the model, then an alternative solution should be used. This could mean relocating the sales activity to another location. For example, if there are one or two steps to the front door, a ramp could be provided without much cost. If, however, there is a flight of stairs to the front door, then it may not be reasonable or practical to provide an accessible entrance. In that case, it would be acceptable to relocate the sales activity to an accessible location. An accessible location could be the customer's residence, another office of the builder, or any mutually agreeable location.

Within the model, an accessible route to the sales area should be provided if this can be easily accomplished. If a desk is provided for sales purposes, then the furniture should be usable by someone with a disability. If an accessible route or accessible furniture is not readily achievable, then a builder can meet his obligations under ADA by relocating sales activities to an accessible location.

With respect to restrooms, there is no requirement that a public restroom be provided. However, if a restroom is open to the public, then it should be accessible subject to the barrier removal requirements. This means that if the restroom is not accessible, it should be made accessible if accessibility can be achieved without much difficulty or expense. For example, a ramp can easily be installed if there are a few steps up to the restroom. If, however, the measures necessary to provide accessibility would be too costly or too difficult, a builder is not required to construct an accessible restroom. In that situation, a builder can meet his obligation to provide an accessible restroom by directing persons to the closest accessible facility. Such a restroom might be in another model on the site, or could be the closest public restroom in the area.
01-02238

We believe this interpretation is consistent with the Department' s regulations. Because of the importance of this issue to the building industry, we would appreciate it if you would formally confirm our understanding on this issue as soon as possible. We would also like to request the Department to clarify this issue in the Technical Guidance Document by inserting a statement indicating that the obligation to provide accessibility to the sales office area of a model home is subject to the barrier removal rules set forth in 28 C.F.R. Sections 36.304 and 36.305. We believe these actions will greatly assist our members as well as other interested parties in complying with ADA.

Sincerely

Kent W. Colton
Executive Vice President and
Chief Executive Officer

Mr. John Wodatch
Office on the
Americans with Disabilities Act
Civil Rights Division
U.S. Department of Justice
Washington, DC 20530

Dear Mr. Wodatch:

On behalf of the 153,000 members of the National Association of Home Builders, I would like to commend your office on the regulations issued recently implementing the Americans with Disabilities Act. As we stated in our April 23, 1991, comment letter on the proposed regulations, we support the ADA objective of making public accommodations and commercial facilities accessible to, and usable by, persons with disabilities. While we believe the final regulations meet this objective without imposing undue burdens on owners of such structures, we would like to call to your attention an issue that the Department apparently overlooked in the final regulations.

Our review of the regulations indicates that accessibility

requirements for model homes are not clear. We are therefore requesting that the Department clarify that model homes are not covered under the ADA. We believe that such clarification is necessary in order to assure that compliance with ADA will proceed in an orderly manner in the building industry.

Typically, when a builder develops a subdivision, the first few homes to be completed are set aside as "models." These homes are fully furnished to give the potential buyer an opportunity to compare different designs. The models may have a small area furnished with a desk and a phone for sales purposes.

As stated in our comment letter on the proposed rules, a model home is not a "commercial facility" or a "public accommodation" under the ADA. A model home is a building designed or intended for occupancy as a residence. As such, under Section 301(2) of ADA,

it is expressly excluded from the definition of "commercial facility." Furthermore, a model home does not qualify as a "public accommodation" since it is neither a "sales and rental establishment" or a "place of lodging."

The question arises as to whether a model home is transformed into a "public accommodation" merely because it is open to the public for a limited time for sales purposes. We do not believe that it is. A model home is, by definition, a residential structure, temporarily used for sales purposes. To require accessibility to these homes would force builders to change the essential character of the home. For example, widening doorways or changing room dimensions might be necessary. It would be deceptive to the potential purchaser to require accessibility since the actual home for sale might not incorporate accessibility features. In addition, it would pose an undue hardship on a builder to make a model home meet accessibility requirements since once the model is no longer required, the home would have to be changed back to it original design at the time of sale. This is not a reasonable approach to accommodating persons with disabilities.

The Department has recognized that a private home used exclusively as a residence is not covered by ADA because it is neither a "commercial facility" nor a "place of public accommodation." 56 Fed. Reg. 35559 (July 26, 1991). However, Section 36.207 of the regulations requires that where a private home is not used exclusively as a residence, but operates as a place of public accommodation in all or part of the home, that portion used exclusively in the operation of a place of public accommodation is covered by ADA. Section 36.207 also states that the portion of a private residence used both for the place of public accommodation and for residential purposes is covered by ADA. This section contemplates a long-term use of a portion of the residence as a public accommodation.

A model home does not meet the criteria set forth in Section 36.207. It is in fact a residence and no portion of the home is used exclusively as a place of public accommodation. Furthermore, since a model home is only temporarily used for sales purposes, there is no point in time at which any portion of the home is used both as a private residence and as a place of public accommodation. Therefore, no accessibility should be required in the home itself.

In our view, only a sales office that is separate from the actual residence, such as a sales trailer, should be required to be accessible. This type of structure is exclusively used for sales purposes and therefore qualifies as a "public accommodation". Such an interpretation will not only insure that public has access to sales facilities, but will also insure that residential

structures are maintained as such. We believe this interpretation is consistent with the ADA as well as the Department's regulations.

Because of the building industry's need for immediate guidance, we would appreciate it if your office would issue an interpretative opinion clarifying this issue. We would be pleased to provide you with additional information should you so desire.

Thank you for your immediate attention.

Sincerely

Kent W. Colton
Executive Vice President and
Chief Executive Officer

01-02243

Are model homes places of public accommodation? Generally, no. A model home does not fall under one of the 12 categories of places of public accommodation. If however, the sales office for a residential housing development were located in a model home, the are used for the sales office would be considered a place of public accommodation. Although model homes are not covered, the Department encourages developers to voluntarily provide at least a minimal level of access to model homes for potential homebuyers with disabilities. For example, a developer could provide physical access (via ramp or lift) to the primary level of one of several model homes and make photographs of other levels within the home as well as of other models available to the customer.

III-1.3000 Commercial facilities. The requirements of title III for new construction and alterations cover commercial facilities, which include nonresidential facilities, such as office buildings, factories, and warehouses, whose operations affect commerce. This category sweeps under ADA

coverage a large number of potential places of employment that are not covered as place of public accommodation. A building may contain both commercial facilities and places of public accommodation.

III-1.3100 Exceptions. Commercial facilities do not include rail vehicles or any facility covered by the fair Housing Act. Residential dwelling units, therefore, are not commercial facilities. In addition, facilities that are expressly exempted from coverage under the Fair Housing Act are also not considered to be commercial facilities. For example, owner-occupied rooming house providing living quarters for four or fewer families, which are exempt from the Fair Housing Act, would not be commercial facilities.

Even though private air terminals are not considered to be places of public accommodation, are airports covered as commercial facilities? Yes, private air terminals are commercial facilities and, therefore, would be subject to the new construction and alterations requirements of title III. Moreover, while a private air terminal, itself , may not be a place of public accommodation (because the ADA statutory language exempts air transportation), the retail stores and service establishments located within a private airport would be places of public accommodation. (In addition, private airports that receive Federal financial assistance are subject to the requirements of section 504 of the Rehabilitation Act of 1973, which prohibits discrimination on the basis of disability in programs and activities of recipients of Federal funds. Airline operations at private airports may also be subject to the nondiscrimination requirements of the Air Carrier Access Act.) Air terminals operated by public entities would be covered by title II of the ADA, not title III; but any private any private retail stores operated within the terminal would be places of public accommodation covered by title III.

III-1.4000 Examinations and courses. Private entities offering examinations or courses covered by title III are subject to the requirements discussed in III-4.6000 of this manual. If the private entity is also a public accommodation or has responsibility for a commercial facility, it would be subject to other applicable title III requirements as well.

III-1.5000 Religious entities. Religious entities are exempt from the requirements of the title III of the ADA. A religious entity, however, would be subject to the employment obligations of title I if it has enough employees to meet the requirements for coverage.

DJ 202-PL-135

MAY 20 1993

Thomas Hirsch

Bureau of Long Term Support
State of Wisconsin
Department of Health & Human Services
1 West Wilson Street
P.O. Box 7851
Madison, Wisconsin 53707

Dear Mr. Hirsch:

This is in response to your letter requesting information about the Americans with Disabilities Act (ADA). I apologize for the delay in responding to your inquiry.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You ask whether and to what extent the ADA covers, as social service center establishments, transitional housing where some non-residential services are provided. You also ask what type of services are included in the definition of "social services," especially whether medical care, personal assistance with daily living activities and activities such as counseling, meals, recreation, and transportation would be included, and whether some of those services per se trigger ADA coverage. You also request clarification of whether the optional or mandatory nature of services provided affects ADA coverage.

Title III of the ADA applies to privately owned or operated facilities that are either commercial facilities or that fall within one of the twelve categories of "places of public accommodation" listed in that title. Strictly residential facilities are not included in the twelve public accommodation categories and are expressly exempted from the definition of commercial facilities. Thus, strictly residential facilities are not covered by the ADA. Of course, residential facilities may

cc: Records, Chrono, Wodatch, Bowen, Novich, FOIA
Udd:Novich:Policy:135

01-02244

have to meet the Fair Housing Act's nondiscrimination and accessibility requirements relating to people with disabilities.

A facility that provides both housing and social services is covered by the ADA as a place of public accommodation where a significant enough level of social services is provided that the facility itself can be considered a social service center establishment. In this situation those portions of the facility that are used in the provision of social services are covered by the ADA. If the social services are provided throughout the facility, including in the individual housing units, then the entire facility is a place of public accommodation.

Neither the ADA nor the Department's regulation defines the term "social services." We believe that a textual analysis of the list of terms in the definition of public accommodation and the legislative history of the ADA calls for an expansive reading of the term "social service center establishment." Social services in the context of the ADA would include medical care, assistance with daily living activities, which you have termed "personal care services," and those activities you have termed "social services," such as the provision of meals, transportation, counseling, and some recreational activities. No one of these services will automatically trigger ADA coverage. Rather, the determination of whether a private entity provides a significant level of social services will depend on the quantity, quality, and combination of these services. Please note that whether services are optional or mandatory is irrelevant to the determination of ADA coverage.

You should also be aware that strictly residential and mixed use facilities may be subject to requirements under title II of the ADA, if they are owned or operated by a state or local government, or by an instrumentality of the state. Title II coverage is not dependent upon the level of services provided or upon whom the facility serves. Please consult the enclosed regulations under titles II and III, and Technical Assistance Manuals for those titles, for further discussion of these and other ADA issues.

I hope this information is useful to you.

Sincerely,

John L. Wodatch
Chief

April 8, 1992

John Wodatch, Director
Office on the Americans with Disabilities Act
U.S. Department of Justice
Washington, DC 20530

Dear Mr. Wodatch:

I have just concluded a telephone conversation with Operator #1 via the ADA Hotline on the subject of treatment of "social service establishments" under the Americans with Disabilities Act and the implementing regulation, 28 CFR Part 36. In particular we tried to determine the extent of ADA coverage in places where both housing and services are offered. I would like written confirmation of my understandings and, in addition, clarification of some other issues.

The simple cases defining "social service establishments" are 1) those places where services are not optional, e.g., group homes and other supported living arrangements, which unquestionably are covered by ADA, and 2) housing owned by a social services provider but where services are provided off-site, which are not subject to ADA. The not well defined situations include transitional housing where services are provided on-site. In such case DOJ's interpretations are that ADA applies to the area where social services are provided, and, at least until a court determines otherwise, separate living units are not covered by ADA. I would appreciate confirmation of these interpretations.

The implication of services being optional was not conclusively addressed, and I would also appreciate clarification on this. In addition, I note that in neither the Act nor 28 CFR Part 36 is "social services" defined, nor any distinction among medical services (e.g., those performed by a nurse or home health aide), personal care services (including assistance with activities of daily living), and social services, which include counseling, meals, recreation, and transportation, some of which would commonly be found in retirement housing for persons who are elderly. How would each type of service be treated under the Act? What services, per se, trigger ADA coverage and

which ones, if any, do not? What level of services triggers the Act?

01-02246

I may be reached at 608-266-7797, if you wish to discuss these matters with me.

Sincerely yours,

Thomas Hirsch

Miami, Florida 33137

Dear XX

This letter responds to your inquiry of March 4, 1993, requesting information about the protections offered by the Americans with Disabilities Act of 1990 ("ADA") for individuals with disabilities who use service animals.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

In general, title III of the ADA makes it illegal for any place of public accommodation to discriminate on the basis of disability. In particular, the title III regulation enforced by the Department of Justice requires public accommodations to make reasonable modifications in its policies and practices to permit the use of a service animal by an individual with a disability. Under title III, a service animal is any animal that has been individually trained to provide assistance to a person with a disability.

Title III of the ADA, however, does not apply to strictly residential facilities, and therefore would not appear to address the situation you describe with respect to your landlord and neighbors. The situation you describe may be covered by the federal Fair Housing Act, and you may want to contact the Department of Housing and Urban Development ("HUD"), which is the

federal agency that investigates alleged violations of that Act. You may telephone HUD's Fair Housing Office at (800) 795-7915.

Enclosed for your information is a copy of the Department of Justice's Technical Assistance Manual for title III. It discusses the rules applying to service animals on page 23. The Manual also discusses the application of title III to commercial facilities and public accommodations (pages 1 to 4), and the fact that title III does not apply to strictly residential facilities (page 1 of 1993 supplement). I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

Philip L. Breen
Special Legal Counsel

Re: The Americans with Disabilities Act("AWDA") and assistance animals

Dear Mr. Breen:

Respectfully, I request technical assistance regarding the Americans with Disabilities Act("AWDA") of 1990, regarding physically handicapped people, especially the elderly and pets(i.e. cats) and landlords, and their to ban assistance animals of any kind, so long as they do not violate the rights of neighbors by noise, smells and other problems.

The technical assistance that I respectfully request, are:

1. What determines noise, smells and other problems levels?

2. What constitutes other problems and determines at what point neighbors rights may be violated?

3. What technical assistance can I actually receive from the Justice Department or other federal agency(ies) and State of Florida agency(ies)--please specify name, address, and telephone number(if possible, their toll free telephone number) if the landlord violates the Americans With Disabilities Act?

4. What other laws, statutes, etc. for the physically disabled and/or elderly applying to abuse of the elderly and/or the physically disabled handicapped apply to restraining landlords threatening the elderly and/or physically handicapped over assistance animals(i.e. cats) as an example?

01-02250

5. Please send literature or copies of the Americans With Disabilities Act of 1990; title and Register regarding assistance animals and the landlord/tenant situation.

6. In general, how does the Americans with Disabilities Act protect the elderly and/or physically handicapped(who may or may not be elderly) from evictions by landlords?

I know that I have asked a lot from you, but the need is real and I hope you will do what you can to assist me in this matter.

Thank you for your cooperation and early reply.

Sincerely,
XX
(b)(6)

01-02251

T. 5-14-93

DJ 202-PL-210

MAY 20 1996

Mr. Gary P. Langlais, AIA
Project Manager
The Mehlburger Firm, Inc.
P.O. Box 3837
Little Rock, Arkansas 72203-3837

Dear Mr. Langlais:

I am responding to your letter requesting a determination about the application of title III of the Americans with Disabilities Act of 1990 (ADA) to a project that you are designing. I apologize for the delay in responding to your inquiry. If you have already proceeded with the alteration that was the subject of this inquiry, I hope that this information will be helpful to you in future alterations.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a determination by the Department of your rights or responsibilities under the ADA, and it is not binding on the Department.

You have asked for a determination that a ramp with a slope of 1:9.5 complies with the ADA requirement to provide access to an addition to a manufacturing plant. The Department of Justice regulation implementing title III requires ramps that are part of an accessible route to have a slope that does not exceed 1:12; to have a level landing at the top and bottom of each ramp; and to have handrails mounted between 34" and 38" above the ramp on each side. In alterations and additions where existing site constraints make it technically infeasible to provide a ramp with a 1:12 slope, a ramp with a slope between 1:8 and 1:10 is permitted for a maximum rise of 3 inches. The Department of Justice cannot waive these requirements.

If the addition that you are designing is an area that will be used only by employees as a work area, it may be subject to

cc: Records, Chrono, Wodatch, Bowen, Blizard, FOIA, Library
n:\udd\mercado\plcrtltr\langlais.jlb

one of the limited exemptions to providing full access. This Department's title III regulation provides that all public and common use areas in a covered facility must be fully accessible; but it permits areas used only by employees as work areas to be designed so that employees can approach, enter, and exit the area. A covered entity is not required to provide maneuvering room in a work area or an accessible route through the area. If the addition you are designing will be used exclusively as a work area, you must ensure, at a minimum, that people with disabilities may approach, enter, and exit the area. Thus, if the ramp in question is part of the entrance to the work area or is part of the accessible route to the work area, the ramp must comply with the standards of the ADA Accessibility Guidelines. If, however, the ramp in question is within a larger work area, the ramp need not comply with the ADA accessibility requirements.

Your letter states that the addition will not include toilet facilities or parking. The ADA does not require you to provide parking or restroom facilities for the addition, and the absence

of such elements does not affect the application of the ADA to other elements of the addition that you are designing. You should be aware, however, that if there are restrooms or parking spaces at the existing facility that will serve the addition that you are designing, the ADA may require you to alter those facilities to provide access.

Under the ADA, an addition is regarded as an alteration to the existing facility. When a covered entity alters an area of an existing facility that contains a primary function of the facility, it must make the path of travel to the altered area, and the restrooms, drinking fountains, and telephones serving the altered area, accessible unless the cost of these additional measures would exceed 20 per cent of the cost of the overall alteration. Therefore, your planned addition should include plans to spend up to 20 per cent of the cost of the addition to make the path of travel (including accessible parking, if parking is provided) to the addition and the restrooms, drinking fountains, and telephones that serve the addition accessible.

For your information, I am enclosing a copy of the Department's regulation implementing title III, which was published in the Federal Register on July 26, 1991, and our title III technical assistance manual. The requirements that apply to new construction and alterations are contained in subpart D (pp. 35599-35602); the standards for accessible design are contained in the appendix (pp. 35605-35691). These requirements are also addressed in the preamble to the rule (pp. 35574-35589), and in sections III-5.000 to III-7.000 of the technical assistance manual.

01-02253

I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Request for a Legal Determination

Gentlemen:

I am an architect in Little Rock, Arkansas and have a project in design that I need a legal determination on.

The project is an adhesive mixing room (1200 S.F.) and warehouse storage (2400 S.F., total 3600 S.F.) addition to a manufacturing plant in north Arkansas. The addition is a Hazardous Occupancy. The addition has been designed to resist explosive forces and to contain sprinkler water run off and adhesive spills. The containment function requires that the slab level of the addition be two feet lower than the main manufacturing floor level. Ramps have been included for operation of fork lift trucks and these ramps are at the slope of 1" in 9.5", with safety railings. There is insufficient dimension in the layout of these spaces to provide ramps at 1" in 12". There are no toilet facilities or additional parking facilities provided with this addition.

This addition has only one employee that uses the adhesive mixing room and there is no one in residence in the warehouse.

It is highly unlikely that this manufacturing company would employ a person, with an ambulatory disability, to work in this space due to the nature and hazard of the area.

I request the determination that this addition be allowed to use the ramps at their designed slope of 1" in 9.5" for entrance to this limited access facility.

Sincerely,

THE MEHLBURGER FIRM, INC.

Gary P. Langlais, AIA
Project Manager

01-02255
DJ 202-PL-348

MAY 20 1993

Mr. Robert H. Linn
1140 North Providence Road

Media, Pennsylvania 19603

Dear Mr. Linn:

This letter is in response to your inquiry of September 30, 1992, about the definition of a place of public accommodation and the requirements for toilet rooms under the Americans with Disabilities Act ("ADA") and the ADA's architectural Standards for Accessible Design. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

Your letter inquires about ''manufacturing type facilities" and whether certain kinds of public contact would bring them within the definition of public accommodation in title III of the ADA. We begin by assuming that the types of facilities you are describing do not fall within any one of the twelve categories of places of public accommodation listed in the statute. 42 U.S.C. S 12181(7). Accordingly, they are "commercial facilities" having obligations under the statute for alterations and new construction, but not for barrier removal in existing facilities.

You ask first whether visits to this type of facility by vendors or outside salespersons are activities that would change the statutory categorization for the facility and bring it into the category of a place of public accommodation. Second, you ask whether the portion of a manufacturing facility where job applications are accepted and interviews take place qualifies as a place of public accommodation.

cc: Records, Chrono, Wodatch, Magagna, Contois, FOIA
Udd:Contois:PL:Linn.JAM

01-02256

If an entity does not fall within one or more of the twelve categories of public accommodations designated in the statute, then it is not a place of public accommodation within the meaning of title III. The fact that such facilities may be frequented by salespersons or job applicants does not alter that conclusion. However, as your letter acknowledges, a commercial facility may have an independent obligation under title I of the statute to make some accommodations for job applicants with disabilities.

Your letter also inquires about the requirements of the Standards for Accessible Design with respect to toilet rooms. The Department of Justice cannot certify or approve particular designs for toilet rooms or any other architectural features. However, the drawing you have provided appears to comply with the requirements of the Standards. Other configurations might also comply with the Standards, including, for instance, a room of slightly smaller dimensions, with the toilet and sink on the long wall across from the door. Using such a design, the room could be approximately 6'-8" by 5'-0", and would allow for both a front and side transfer from a wheelchair to the toilet. The design you have provided does not appear to allow for a side transfer.

I hope this information is useful to you in understanding the requirements of the ADA and the Standards for Accessible Design.

Sincerely,

John L. Wodatch
Chief
Public Access Section

RE: Interpretations
Title III ADA Legislation

Dear Sir or Madam:

As an architectural firm, we have performed ADA Title III facility surveys for numerous clients over the past year. During the course of our facility evaluations, several issues and questions seem to consistently recur. Although we have researched various sources and attempted to interpret the legislation, we feel that we need some additional guidance from the Department of Justice.

We would appreciate your interpretation of the following issues, in order that we can guide our clients in complying with both the letter and spirit of the legislation.

1. Many manufacturing type facilities clearly match the definition of "commercial", with the possible exception of two types of public contact.

   a. The first type of "visitor" would be a vendor or outside salesperson. In our interpretation, since the salesperson is providing a good or service to the facility, instead of the facility providing a good or service to the salesperson, then this type of individual would not trigger the definition of public accommodation". Are we correct in this interpretation?

   b. The second issue centers around a facility that accepts employment applications at their facility. Does the portion of the facility where the application and interview take place fall under the Title III definition of "public accommodation", and therefore require review for "readily achievable", barrier removal, or is it more of a Title I issue relative to employment practice?

01-02258

2. We recognize that the illustrations in the ADAAG are for individual plumbing fixtures and not the toilet room as a whole. Based upon the clearances illustrated for a lavatory Figure 32, a toilet in Figure 28, and the requirement for a five (5) foot diameter unobstructed turning radius per Section 4.22.3, we feel that a single user floor mounted toilet room must be a minimum of 51-2" x 7'-6". Does this appear to be consistent with the requirements? (See attached sketch.)

We appreciate any assistance you can provide in helping us to correctly interpret these issues. Thank you.

Respectfully submitted,

Robert H. Linn
Registered Architect

MAY 20 1996

Ms. Susan K. McFadden
Account Executive
The Prouty Company
309 Court Avenue, Suite 510
Des Moines, Iowa 50309

Dear Ms. McFadden:

I am responding to your letter concerning the implementation of title III of the Americans with Disabilities Act of 1990 (ADA). I apologize for the delay in responding to your inquiry.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA, and it is not binding on the Department.

You have asked if the ADA applies to non-profit organizations. Title III of the ADA applies to any non-profit entity whose business operation falls within the categories of coverage defined under the Act. Title III prohibits discrimination by private entities that own, operate, lease, or

lease to a private entity whose operations fall within one of the twelve categories identified in section 36.104 of the Department of Justice's regulation implementing title III. Entities that fall within these categories are "places of public accommodation" that are subject to the nondiscrimination requirements of section 302 of the ADA and the requirements for new construction and alterations contained in section 303 of the statute.

Section 303 of the ADA also requires that commercial facilities, which are nonresidential facilities whose operations affect commerce, comply with the new construction and alterations requirements of the Act. In addition, section 309 of the ADA

cc: Records, Chrono, Wodatch, Bowen, Blizard, FOIA, Library
n:\udd\mercado\plcrtltr\mcfadden.jlb

01-02262

prohibits discrimination by private entities that offer courses or examinations related to professional or occupational licensing or certification. If a business entity falls within one of these categories, its operations are subject to the requirements of the ADA.

You have also asked if an organization that holds a convention or other event at a facility that does not comply with the ADA may be held liable for failure to comply with the Act. When a private entity leases a place of public gathering, it becomes a "public accommodation" that is obliged to comply with the nondiscrimination requirements of the ADA. The owner/lessor of the property is also a public accommodation subject to the Act. In such a situation, both the lessor and the lessee are responsible for ensuring that the requirements of the ADA are met. The lessor and lessee may, by contract, allocate the responsibility for ADA compliance between them, but such a contract would be binding only between the parties. In the event of an ADA enforcement action, both parties may be held liable for compliance.

For your information, I am enclosing a copy of the Department's regulation implementing title III, which was published in the Federal Register on July 26, 1991, and our title III technical assistance manual. I hope that this information is

helpful to you.

Sincerely,

John L. Wodatch

To Whom It May Concern:

As I have been unable to contact you by telephone, I am writing this letter requesting a response either by fax, telephone, or written correspondence. Please address the following issues:

* Do non-profit organizations fall under the requirements of The American Disabilities Act?

* Is it true that if an organization holds a convention or function at a location that does not meet the requirements of The American Disabilities Act, that the responsibility will fall upon the organization?

  What if the organization is a non-profit association?

  If someone takes action, can the organization be enjoined on this issue?

I have attempted at least five times to contact you - at times being put back on hold ten to fifteen times - and still could not get through. Therefore, would you please respond to my above questions.

Sincerely,

Susan K. McFadden
Account Executive

Dear XX

This letter is in response to your letter regarding the design of parking spaces. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation

of the statute and it is not binding on the Department.

You stated that you would appreciate a statement from this office that parking access aisles are to be diagonally striped with a 36" access aisle, as illustrated in A4.6.3. Please note that the information in the appendix is advisory. The applicable portions of the regulation are sections 4.1.2(5)(a) and 4.6. Section 4.1.2(5)(a) states, in part, " . . . access aisles adjacent to accessible spaces shall be 60 in (1525 mm) wide minimum." Section 4.6 states, in part, that " . . . Parking access aisles shall be part of an accessible route to the building or facility entrance and shall comply with 4.3. Two accessible parking space s may share a common access aisle (see Fig. 9)." Please note that Figure 9 shows a parking space with a minimum width of 96" and an access aisle of 60" minimum. The accessible route must be 3611 minimum as explained in section 4.3 and shown in Figure 9. Please also note, that there is no striping in the access aisle, but it must be demarcated. Therefore, it is not necessary to diagonally stripe the access aisle.

cc: Records, Chrono, Wodatch, Bowen, Johansen, F0IA
Udd:Johansen: XX

(b)(6)

01-02265

The "60" min" dimension in Figure A5 refers to the access aisle. This is not a typographical error. (See Table 1, Graphic Conventions, on page 35607 of the regulations).

We hope this answers your concerns. We are also enclosing our Technical Assistance Manual, as requested.

Sincerely,

L. Irene Bowen
Deputy Chief

Office on the Americans with Disabilities Act
Civil Rights Division
U. S. Department of Justice
P. 0. Box 66118
Washington, D.C. 20035-6118

Dear Sirs:

On Des Moines, Iowa we are getting very good cooperation with the merchants in setting up their parking lots as per ADA of 1990. We have one large parking lot contractor, that refuses to include the 36" accessible route at the head of the handicapped & van accessible aisle, nor will he stripe the access aisles diagonally, even though these items are illustrated on page 35531 - 36 CFR 1191 - A4.6.3 Parking spaces. He claims it isn't written in the law, that the stripes are to be diagonally, so he can stripe them straight across, nor does it mention the 36" access aisle.

I have discussed this matter with Sanda Ellis and Harlan Cauthron of Phoenix, Arizona (copy of note enclosed) who I understand were very active in writing the parking portion of the ADA.

I would appreciate a statement from your office that the access aisle are to be diagonally striped and a 36" aisle as illustrated in Section A 4.6.3 Parking Space.

For your information, there is a typographical error in the measurements of the HC parking space and the aisle. I'm enclosed a highlighted copy.

Please send me a copy, of the technical assistance manual, January 26, 1992.

Sincerely,
XX

A4.6 Parking and Passenger Loading Zones

A4.5.3 Carpet. Much more needs to be done in developing both quantitative and qualitative Criteria for carpeting (i.e., problems associated with texture and weave need to be studied) are well established. When both carpet and However, certain functional characteristics are well established. When both carpet and padding are used, it is desirable to have minimum movement (preferably none) between the floor and the pad and the pad and the carpet which would allow the carpet to hump or warp. In heavily trafficked areas, a thick soft (plush) pad or cushion, particularly in combination with long carpet pile makes it difficult for individuals in wheelchairs and those with other ambulatory disabilities to get about. Firm carpeting can be achieved through proper selections and combination of pad and carpet. Sometimes with the elimination of the pad or cushion and with proper installation. Carpeting designed with a weave that causes a zig-zag effect when wheeled across is strongly discouraged.

A4.6 Parking and Passenger Loading Zones.

A4.6.3 Parking Spaces. The increasing use of vans with side-mounted lifts or ramps by persons with disabilities has necessitated some revisions in specifications for parking spaces and adjacent access aisles. The typical accessible, parking space is 96 in (2440 mm) wide with an adjacent 60 in (1525 mm) access aisle. However, this aisle does not permit lifts or Ramps to be deployed and still leave room for a person using a wheelchair or other mobility aid to exit the lift platform or ramp. In test conducted with actual lift/van/wheelchair combinations, (under a Board-sponsored Accessible Parking and Loading Zones Project) researchers found that a space and aisle totaling almost 204 in (5180 mm) wide was needed to deploy a lift and exit conveniently. The "van accessible" parking space required by these guidelines provides a 96 in (2440 mm) wide space with a 96 in (2440 mm) adjacent access aisle which is just wide enough to maneuver

and exit from a side mounted lift. If a 96 in (2440 mm) access aisle is placed between two spaces, two "van accessible" spaces are created. Alternatively, if the wide access aisle is provided at the end of a row (an area often unused),it may be possible to provide the wide access aisle without additional space (see Fig. A5(a)).

A sign is needed to alert van users to the presence of the wider aisle, but the space is not intended to be restricted only to vans.

Universal Parking Space Design. An alternative to the provision of a percentage of spaces with a wide aisle, and the associated need to include additional signage, is the use of what has been called the universal parking space design. Under this design all accessible spaces are 132 in (3350 mm) wide with a 60 in (1525 mm) access aisle (see Fig. A5(b)). One

A6 3-13-92 Fred as you well know Fig A5 was developed by the Fire Dept, Sandra Ellis & myself. Diagonal lines are a requirement as it is designed to place driver "on notice" Court Terminology. ILLEGIBLE

MAY 2 5 1993

John M. Barnett
Executive Director
Nebraska Polio Survivors Association
P.O. Box 37139
Omaha, Nebraska 68137

Dear Mr. Barnett:

This letter is in response to your letter requesting information about the Americans with Disabilities Act (ADA). I apologize for the delay in our response.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You ask several questions about the conditions under which a retail store owner must rearrange display racks to provide accessible aisles. You request a policy statement on when rearrangement of racks is not readily achievable. You also ask whether retail store owners need not rearrange racks if to do so would result in a significant loss of revenue, and whether the store owner has the option of either rearranging racks or providing a clerk to retrieve inaccessible items.

"Readily achievable" means easily accomplishable and able to be carried out without much difficulty or expense. The definition of "readily achievable" in section 36.104 of the regulation states that the determination of whether an action is readily achievable should include consideration of several factors, including the overall financial and other resources of the covered entity. Section 36.304(f) of the regulation specifies that rearrangement of display racks is not readily achievable "to the extent that it results in a significant loss of selling or serving space." (As you point out, the reference to loss of revenue was not included in the final rule.) Aside from this regulation, the Department cannot issue a categorical

cc: Records, Chrono, Wodatch, Bowen, Novich, FOIA
Udd:Novich:Policy:215

statement on when rearrangement is or is not readily achievable. As stated in the preamble to the title III regulation, "[w]hether or not any of these measures is readily achievable is to be determined on a case-by-case basis in light of the particular circumstances presented and the factors listed in the definition of readily achievable (S 36.104)." You can find this discussion on page 35568 of the enclosed title III regulation and a list of the factors to be considered in whether removal is readily achievable an page 35594.

You are also correct in your understanding that a retail store cannot satisfy ADA requirements by providing a clerk to retrieve inaccessible items if accessible rearrangement of display racks is readily achievable. Section 36.305 of the title III regulation specifies that alternatives to barrier removal may satisfy the statute only "[w]here a public accommodation can demonstrate that barrier removal is not readily achievable."

I hope this information is useful to you.

Sincerely,

L. Irene Bowen
Deputy Chief
Public Access Section

Re: ADA Regulations

1. NPSA requests that the Department of Justice render a policy statement to clarify when it would NOT be readily achievable for retail store to rearrange display racks to provide accessible aisles.

2. When I called the Department of Justice yesterday with this question, I was told that stores do not have to move display racks if to do so would result in significant loss of revenue. It is my understanding that this (Section 36.304 (f)(1)) was deleted from the final rule. Please verify.

3. As I read the regulations, a retail store is not given a choice between moving its racks to provide access OR providing a clerk to retrieve inaccessible merchandise; the racks must be moved unless merchants can prove that it is not readily achievable to do so. Please verify.

Sincerely,

John M. Barnett
Executive Director

DJ 202-PL-082

MAY 25 1993

Dave McDowell
Fusch-Serold & Partners AIA
5950 Berkshire Lane
Suite 1000
Dallas, Texas 75225

Dear Mr. McDowell:

This letter is in response to your inquiry about the application of the Americans With Disabilities Act (ADA) to senior living communities. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You are concerned with facilities you describe as senior living communities, which provide residents with some assistance with daily living activities, but which generally do not provide daily skilled nursing care. The community consists of dwelling units, which you refer to as Catered Living areas, some common areas which are open to the public, and a nursing center for skilled care. You believe that the ADA applies to the public common areas and the nursing care center, but you ask if and how the ADA applies to the Catered Living areas.

As you correctly stated in your letter, any areas in your communities that are not reserved for the exclusive use of

residents and their guests are covered by the ADA, if they function as one of the twelve categories of places of public accommodation listed in title III. Therefore, any admission or rental office is covered by title III, and your nursing care facility and any recreational facilities in your communities are required to comply with title III if they are open for the use of persons other than tenants and their guests.

cc: Records, Chrono, Wodatch, Bowen, Novich, FOIA
Udd:Novich:Policy:82

01-02272

Furthermore, all areas of the facility are covered by the ADA if the facility provides a significant enough level of social services that it can be considered a social service center establishment. Social services in the context of the ADA include medical care, assistance with daily living activities, provision of meals, transportation, counseling, and some recreational activities. Not one of these services will automatically trigger ADA coverage. Rather, the determination of whether a private entity provides a significant level of social services will depend on the nature, level, and quantity of services.

If a community provides a significant enough level of social services such that it can be considered a social service center establishment, all of those portions of the community that are used in the provision of social services are covered by the ADA, including the nursing center and the living areas, if social services are provided in those areas.

Your letter also asked whether, if the living areas are subject to the ADA, section 6 of the Americans With Disabilities Act Accessibility Guidelines (ADAAG), which applies to medical care facilities, contains the applicable architectural standards. Section 6 does not apply to your Catered Living areas, because section 6's coverage is limited to facilities in which people receive physical or medical treatment. If, as your letter implies, medical or physical care in your communities is provided in the nursing care facility and not in the living units, section 6 does not apply to them. Nonetheless, you might find it beneficial to apply the section 6.1(3) standards for nursing homes to your living facilities if your communities cater to a population with a high percentage of persons with mobility

impairments and other disabilities. Application of the accessibility standards in section 6.1(3) may result in your communities being more attractive to a growing population of elderly persons with accessibility needs.

If you choose not to apply the standards of ADAAG section 6, you should follow the general ADAAG standards, meeting the applicable standards from sections 4.1 to 4.35.

I hope this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Re: Brighton Gardens by Marriott

Dear Ms. Mazz:

As we discussed recently, Marriott Corporation has been actively developing a series of senior living communities named Brighton Gardens. These communities, known as Catered Living facilities, serve the senior resident who may require assistance with daily living activities, but who does not require skilled nursing care. Designed as residential living environments, these projects have been carefully tailored to promote independence among its residents, while still providing the support structure required to assist the residents with their daily living needs should this be necessary. Also contained in each of these projects is a small on-site nursing care center. This center provides skilled nursing services to those residents requiring short-term or long-term care. It also serves as a rehabilitation center with the goal of returning a resident to a more independent status as soon as possible.

Marriott is currently operating four Brighton Gardens communities

located in three states - Arizona, Texas and Virginia. Several additional projects are proposed in Florida and Illinois. As Architect for the Brighton Gardens projects I have been involved in the design of all of these facilities.

My telephone call to you last month concerned the application of the ADA regulations to these projects. I indicated to you that I understand and agree with the regulation's application to the public, employee and skilled nursing portions of these projects. I am uncertain, however, if Chapter 6 - Medical Care Facilities applies to the Catered Living areas.

As we discussed, I have received many different occupancy classification interpretations from local authorities with respect to the Catered Living areas. These interpretations have ranged from I-2 Institutional per UBC and I-1 Institutional per BOCA to R Residential per SBCCI. The State Health Department interpretations have varied with respect to licensing criteria, but these areas have generally been classified as Residential Board and Care occupancies as described in Chapter 21 of the NFPA 101 Life Safety Code. The definition of Residential Board and Care is "a building or part thereof used to provide lodging, boarding, and personal care services for four or more residents unrelated by blood or marriage to its owners or operators.

01-02274

Personal Care means "protective care of a resident who does not require chronic or convalescent medical or nursing care". This describes the Catered Living part of our facility and is consistent with Marriott's concept of care. These definitions are also consistent with the I-1 classification group listed in BOCA (which references board and care facilities), the R classification group listed in SBCCI, and reflects the residential nature of the living environment.

Prior to the passage of the ADA Regulations, I had been applying the Fair Housing Amendment criteria to the Catered Living part of our facility. This was acceptable to local and state authorities and reflects the residential nature of the facility and the care administered. Since the ADA was passed, I have been trying to determine its impact, if any, on these Catered Living areas.

Chapter 6 of the ADA describes Medical Care Facilities as "those in which people receive physical or medical treatment or care and where persons may need assistance in responding to an emergency and where the period of stay may exceed twenty-four hours". It also lists "long-term care facilities" as needing to comply with these regulations. These are broad definitions. While the Catered Living portion of our facility may assist the residents with daily activities; may assist the residents in responding to an emergency; and has people who stay for more than twenty-four hours, I don't think it is viewed upon as a Medical Facility. With respect to this, I am asking for your assistance in clarifying this with the ADA Regulators. This will provide me with a better understanding of the intent of the ADA Regulations as I continue with the design of these and similar facilities.

Should you require any additional information, or would like to discuss this further, please contact me at (214)696-0152.

Respectfully,

Dave McDowell, AIA
Partner

The Marriott Family

Meet Mrs. Alice S. Marriott Co founder and Vice President,
Marriott Corporation, and her sons, JW Marriott, Jr.,
Chairman and President, and Richard F. Marriott,
Vice Chairman and Executive Vice President

Here at Marriott, we have always placed a great deal of
emphasis on the importance of family. We believe it is
the true source of strength and stability in American
life--the tie that binds us all. And it is this commit
ment to basic family values, such as respect and service to others,
that we strive for in all Marriott senior living communities.

Throughout our corporation, service to others is more than
our business philosophy--it is a family tradition. We were
founded as a family business and we've been serving the needs
of America's families for over 60 years. This is why we strive to
create a true sense of family at each of our communities.

We have bold and exciting plans to build 150 senior living
communities across the nation in this decade. This corporate and
financial commitment to America's seniors is strengthened by
our own personal resolve to improve the quality of life for all those
we hope to serve.

As we introduce Catered Living at Brighton Gardens, we
invite you to experience this new concept in senior living.

Mrs. Alice S. Marriott J.W. Marriott, Jr. Richard F. Marriott

Answering the Need for a Little More
Help, a Little More Independence.

It's a fact that today's seniors are healthier, more active and more productive than ever before. Still, there are times when a little help with such everyday activities as bathing, grooming and dressing can make a big difference in how much you enjoy life. Times when compassionate care and old-fashioned neighborliness can fill your days with sunshine and laughter.

We've heard from you.

As the needs of seniors have changed, the range of options available in senior living communities has changed, too. In order to create the ideal community, Marriott went straight to the experts--people like you. We did a lot of listening and we learned that many of you desire some assistance with daily living.

You asked that help be close by whenever you need it. And you want more personalized care than the average retirement community can provide...but not the institutional environment of a nursing home. You want a community with sound financial backing...the simple pleasures of delicious and nutritious food, comfortable surroundings, good friends and a caring, competent staff.

Based on the concerns you expressed, we set out to develop a place that offers the care you need, when you need it.

Introducing Catered Living at Brighton Gardens.

Marriott's Catered Living at Brighton Gardens offers the assisted living, personal care and licensed nursing services* needed to bring peace of mind to seniors and their loved ones...

all in one delightful rental community. We invite you to discover how Catered Living can make a difference in your life or the life of someone you love.

*Depending on state regulations, some communities may not offer licensed nursing care.

1

01-02278

A Community for Common Interests and Private Reflections.

Brighton Gardens has the cheerful atmosphere you find when you combine well-planned services and amenities with caring people. You'll feel it as soon as you enter our welcoming reception area. Experience the warmth of our cozy library and comfortable living room. Then step outside to the courtyard and relax on the covered back porch.

Visit our country store, where you may purchase necessities, snacks, ice cream and more. Or stop in at the beauty and barber shop for a shampoo, haircut or maybe even a manicure.

A delightful dining room.

For good food and good conversation, discover our warmly decorated dining room, where three delicious meals are served daily in the finest Marriott tradition. Marriott has always been known for hearty entrees, imaginatively prepared salads, fresh fruits and vegetables and delectable baked goods. The chefs, waiters and waitresses at Brighton Gardens have been carefully selected to meet our exacting standards. There is also a comfortable dining room in the Health Care Center.*

Community gathering places.

A residents' community kitchen is ready and waiting for those who like to cook. The kitchen is adjacent to a private family dining room where you can enjoy your own dinner

parties and celebrations, either prepared by you or catered by the Brighton Gardens staff.

For those who prefer to do their own personal laundry, Brighton Gardens provides a laundry room with washers, dryers and a convenient area for socializing.

The Brighton Gardens community center offers residents a variety of places to mingle and pursue various interests. You'll enjoy a creative arts room and an entertainment room with a large-screen TV, piano, stereo and VCR.

(Picture)
An architectural rendering of Brighton Gardens Southwest--one of several architectural styles designed to adapt to the architecture of each local community.

The private suites.

You may furnish your suite with favorite family treasures or we can provide furniture. Our custom draperies and wall-to-wall carpeting have been carefully chosen to enhance your decor.

Each suite is spacious and bright. The large windows are perfect for enjoying the warmth of the sunshine or the beauty of a sunset. Regular housekeeping, as well as weekly towel and linen service, is included in your monthly fee and helps to keep things neat and comfortable.

Complete safety features.

At Brighton Gardens, extraordinary measures have been taken to ensure fire safety-including the installation of sprinklers and smoke detectors in all areas of the community. Our round-the-clock emergency call response system, located in the bedroom and bathroom of all suites, enables residents to summon help or talk directly with the staff in the event of an emergency

Assistance With Daily Living:
As Unique As You Are.

The principle goal of Catered Living is to provide each and every resident with the care they need, when they need it. At Brighton Gardens, we'll tailor a program of assistance with daily living activities to meet your own special requirements.

Brighton Gardens has been designed to provide a package of Catered Living services at an affordable monthly fee. Should you require additional services, a program can be adapted to your needs at a modest additional charge.

Helping you enjoy each day to the fullest.

Our competent and compassionate staff will assist you and your loved ones with the utmost sensitivity. Grooming is an area where an expert's touch is often welcome. Bathing, dressing, cheerful reminders to take daily medication and mealtimes are other areas where our staff can be of help.

The staff can even schedule appointments for you with your physician or other professional service providers.

The Health Care Center:
A Place To Start Feeling Better.

If a resident's health care needs change and nursing care is required, it's convenient to move to our on site Health Care Center. The Center has been designed to provide residents, as well as seniors in the local community, with varying levels of care...from round-the-clock skilled nursing to intermediate nursing to assistance with walking and other daily living activities. After a period of restorative or recuperative care, many seniors then move back to their residences.

Care among friends...close to home.

Our team of licensed nurses will assess and reassess each resident's health...even subtle changes will be monitored. From the friendly nurse's aide who keeps you comfortable to the encouraging therapist-every member of our team is dedicated to helping you get well and stay well. And while you're on the road to recovery, you can still keep in touch with spouses, friends and neighbors ...they're all close by.

Regulations do vary from state to state with regard to the extent of care, staff licensure and requirements for admission to the Health Care Center. Be assured that the Health Care Center at Brighton Gardens will comply with all regulations and set the highest standards in the delivery of care to our residents.

01-02280

A Calendar Filled With
Pleasures and Pastimes.

Everyone has their own
idea of a good time.
For some it's the op-
portunity to learn a
new skill...polish up an old
one. Others love a battle of wits
over chess, bridge or other dis-
plays of gamesmanship. Some
people want to get out to the
theatre or spend time in the
fresh air and sunshine. Others

enjoy spending an afternoon relaxing, chatting, competing in spelling bees or attending an ice cream social.

Something for everyone.

At Brighton Gardens, we can truly say there is something for everyone...health and wellness seminars, needlework and hobby sessions, cooking classes, croquet, trivia games, dart tournaments, current events discussions, birthday parties, shopping trips, theatre outings, worship services, exercise classes, holiday events and Bingo!

And, of course, we provide scheduled transportation to any outings planned by the recreation director. At Brighton Gardens, there are plenty of ways to express the fine art of being yourself.

Friendship, Family and Someone to Lean On.

Companionship, emotional security and the reassurance and support that is needed to live free from fear, anxiety and depression-these are all integral parts of Marriott's Catered Living concept. We are deeply committed to the happiness of all members of the Brighton Gardens extended family-residents, their loved ones and staff.

Lasting Friendships.

The friendships made here between residents are ones that

last...because they are born of shared experiences, interests and neighborly concern. And the Brighton Gardens staff is here whenever you need them. To share a laugh...a smile...a helping hand...and the simple joys of everyday living. These friendships-between residents and staff-are the foundation of this community's unique emotional support network.

When you choose Brighton Gardens, you're home. You're family.

The Time is Right.

We invite you to be a part of this special community. When you become a resident at Brighton

Gardens, the Catered Living concept adapts and changes to fit your needs-not the other way around. It works for you because it's designed for you.

Changes for the better.

Catered Living does-and doesn't-change lives. You can still do the things you enjoy in a familiar neighborhood with interesting new friends. You can still entertain friends and family, as well as tell stories to your grandchildren. But, you and your loved ones don't have to worry so much about your daily living activities. You have the perfect balance-the independence you want and the care you need. And this leaves you more time to concentrate on life's special people and pleasures. That's a change for the better. When every day brings a new sense of well-being, a new amusement, a new friend, well...

There is no greater feeling.

01-02285

DJ 202-PL-00035

MAY 25 1993

Mr. Rod W. Simmons, AIA
HKS, Inc.
1111 Plaza of the Americas North, LB 307
Dallas, Texas 75201

Dear Mr. Simmons:

I am responding to your letter asking for clarification of the requirements of title III of the Americans with Disabilities Act of 1990 (ADA), Pub. L. 101-336, 104 Stat. 327 (July 26, 1990), 42 U.S.C. 12101 et seq., and this Department's regulation implementing title III, 56 Fed. Reg. 35544, to be codified at 28 C.F.R. pt. 36.

The ADA authorizes the Department to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA, and it is not binding on the Department of Justice.

Your letter notes that the ADA and this Department's regulation provide that the ADA does not invalidate any Federal, State, or local law that provides greater or equal protection to people with disabilities, and asks us to clarify how we would expect this provision to apply in specific fact situations.

In your first question, you ask which law to apply when there is a Federal, State, or local law that is broader in scope than the ADA, i.e., that law covers entities not covered by the ADA, but it establishes technical requirements that are not as stringent as the ADA'S. If a particular facility is subject to a Federal, State, or local law, but is not within the scope of the

ADA (for example, it is a private club) then only the requirements of the other statute would apply. If a particular building is covered by the ADA and another statute, then both

cc: Records, Chrono, Wodatch, Bowen, Blizard, FOIA, Library
n:\Udd\mercado\plcrtltr\simmons.jlb

01-02286

laws apply. To meet the requirements of both laws, you should with the technical requirements of each law that provide the greatest degree of access.

Your second question addresses remedies. You ask whether, if a Federal, State, or local law provides greater access than the ADA, but has less significant remedies, the ADA will be applied to enforce the substantive requirements of the other statute. The ADA enforcement process may be used only to enforce the requirements of the ADA. However, it is possible that in a situation where the failure to provide access may violate more than one statute, an aggrieved party may file a single lawsuit alleging violations of the ADA, and each of the other applicable statutes, and seek the remedies available under each statute. In this situation, the appropriate remedy will be determined by the court.

Finally, you ask if the failure of a governmental entity to enforce laws that provide for greater access than the ADA violates the ADA. Title II of the ADA prohibits discrimination on the basis of disability against individuals with disabilities in the programs, services, and activities of State and local governments. States are required to comply with title II, and may be held liable for noncompliance. It is possible that, in some circumstances, a failure to enforce an existing State law could be found to violate title 11. In addition, the operation of State statutes or case law may affect the State's liability for failure to enforce State laws or regulations.

I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

01-02287

Rod W Simmons AIA
04 March 1992

Mr. John Wodatch, Director
Office on the Americans with Disabilities Act
Civil Rights Division
U. S. Department of Justice
Washington, D.C. 20530

RE: Americans with Disabilities Act of I 990 (ADA)
Dear Mr. Wodatch:
The following issues are being submitted for clarification of the intent of the referenced rules.

Section 36.103, Relationship to Other Laws, includes paragraph (c) Other laws, which states: "This part does not invalidate or limit the remedies, rights, and procedures of any other Federal laws, or State or local laws (including State common law) that provide greater or equal protection for the rights of individuals with disabilities or individuals associated with them."

The Department of justice preamble (Federal Register page number 35547) to this section states in part: "Paragraph(c) makes clear that Congress did not intend to displace any of the rights or remedies provided by other Federal laws or other State or local laws(including State common law)that provide greater or equal protection to individuals with disabilities. A plaintiff may choose to pursue claims under a State law that does not confer greater substantive rights, or even confers fewer substantive rights, if the alleged violation is protected under the alternative law and the remedies are greater. A plaintiff may join a State tort claim to a case brought under the ADA."

The ATBCB preamble (Federal Register page 35412) relative to this same section states in part: "An entity that is covered by both the ADA and another Federal law or regulation which requires compliance with accessibility standards must comply with the specific provisions that provide for greater accessibility."

The concept of complying with the standard that provides for greater protection is generally clear; however, it is not clear what remedies maybe applied to enforce compliance with either applicable standard, nor how the two standards should be integrated.

If another Federal, State or local law requires accessibility in a greater scope (for example, in facilities not covered by the ADA or in a greater percentage of accessible elements), but greater accessibility would be provided in the same facilities if the ADA technical standards were applied to the facility covered by the other Federal, State, or local law (but not covered by the ADA scoping provisions), which technical standards and which scoping provisions must be followed?

01-02288

If another Federal, State, or local law requires compliance with a specific provision that provides for greater accessibility, but has a relatively insignificant remedy (or none at all), and the corresponding ADA standard provides for the same or less accessibility, but has a greater remedy, is the greater remedy (ADA) applied to enforce the other standard that provides for greater accessibility?

If another Federal, State, or local administrative authority does not enforce their own standard which provides for greater accessibility than the ADA, is this other Federal, State, or local administrative authority in violation of the ADA or other Civil Rights law?

Please respond to the above questions as soon as possible.

Sincerely,

Rod Simmons

01-02289

DJ 202-PL-146

MAY 25 1993

Ms. Nancy R. Snow
State of Colorado
Department of Regulatory Agencies
Civil Rights Division
1560 Broadway, Suite 1050
Denver, Colorado 80202-5143

Dear Ms. Snow:

This letter is in response to your request for information about the provisions of title III of the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You have asked whether title III of the ADA covers certain areas within existing multi-family dwellings: (1) an office where people make inquiries and applications; (2) common areas, such as meeting rooms or club houses, used only by residents and their non-paying guests; (3) common areas available to be rented to the public; and (4) parking areas and exterior access routes in buildings that contain offices or common areas that must comply with the ADA. You have also asked for a definition for "short-term" rentals such that a residential hotel offering them would be a place of lodging covered by the ADA, and whether congregate care facilities other than homeless shelters, such as nursing homes, which offer medical or social services, are covered by the ADA.

Title III of the ADA, which applies to certain privately owned and operated facilities, does not apply to strictly residential dwellings. However, common areas in residential buildings, such as rental offices and meeting rooms, that fall in one of the twelve categories of places of public accommodation

cc: Records, Chrono, Wodatch, Magagna, Novich, FOIA
Udd:Novich:Policy:146

01-02290

under title III and that are not intended for the exclusive use of tenants and their guests are subject to the ADA. For example, rental offices that are open to the public would be considered rental establishments or service establishments under title III. Meeting rooms, if not restricted to tenants and their guests, would be a place of public gathering covered by the ADA. Parking, entrances, access routes, and restrooms serving the areas covered by the ADA would also be covered. In determining whether the ADA applies to a particular part of a residential facility, it makes no difference whether the facility has, or is required to have, accessible living units.

The Department has not established a definition of "short-term" rentals in the context of ADA applicability to places of lodging. Such determinations can only be made on a case by case basis. We have concluded in one specific situation that a facility intended or used for stays of one week or less is a "public accommodation" offering "short-term" rentals, and thus

subject to ADA coverage. However, that finding does not preclude ADA coverage of facilities where longer stays are permitted.

Congregate care facilities offering medical or social services are covered by the ADA, regardless of the transience of their occupants, if they are determined to be "social service center establishments," one of the ADA's twelve categories of places of public accommodation. The preamble to the title III regulation specifically states that nursing homes and homeless shelters providing social services to their occupants are covered as social service center establishments, independent of their coverage as places of lodging. Further discussion of this issue is included on pages 35551-52 of the title III Federal Register publication.

I hope this information is responsive to your inquiry. To provide additional information, I have enclosed copies of the regulations and technical assistance manuals for both titles II and III of the ADA.

Sincerely,

John L. Wodatch
Chief
Public Access Section

STATE OF COLORADO
CIVIL RIGHTS DIVISION Department of Regulatory Agencies
JACK LANG y MARQUEZ, Director Steven V. Berson
Executive Director

April 16, 1992

U.S. Department of Justice
Civil Rights Division
Coordination and Review Section
P.O. Box 66118
Washington, D.C. 20035-6118

Sirs:

We would like to ask your interpretation of the Public Accommodations section of the ADA, more specifically, when and how it overlaps the Fair Housing Act in its application to services or

facilities within residential buildings. The only clarification we find of this is in the ADA preamble of when residential facilities can also be either "places of lodging" or social service center establishment.

The Colorado Civil Rights Division is a substantially equivalent agency under the Fair Housing Act and, as such, accepts and investigates both federal and state charges of housing discrimination on the basis of race, religion etc. The Division expects approval soon to also process charges of handicap discrimination. Meanwhile, we are receiving many questions about the interplay and overlapping of the FHA and the ADA, and we would like answers to the following questions, so that we can give out proper information to the public. It is important for us to understand the distinction because of the very significant difference between the FHA and the ADA, namely, that the tenant is responsible for making structural changes in existing buildings under the FHA, but the responsibility falls to the owner under the ADA.

1. If an existing multifamily dwelling contains an office where the public comes to make inquiries or applications, does this office come under the ADA? Does it make any difference to this question if there are no handicapped units (which were not required prior to passage of the ADA)?

2. If an apartment complex/subdivision has common areas, such as a meeting room or club house, which are used only by residents and their non-paying guests, is there any ADA requirement?

3. If these same facilities are sometimes rented to the public, do these facilities then come under the ADA?

4. If the answer to #1, #2 or #3 is yes, does parking, exterior access etc. then also have to meet ADA handicap requirements?

01-02292

5. The preamble states that residential hotels which offer short term rentals come under the ADA requirements because they are considered "places of lodging". Has the Department established a standard for what length of time is "short term"?

6. There are many kinds of residential facilities other than the homeless shelters referred to in the preamble which offer congregate care, for example nursing homes and adult foster care homes. By their very nature they are offering certain types of medical or social services. Do these come under the ADA, even though they also come under the FNA, or are they only

subject to the ADA if they offer transient or short term care? (The architectural standards, section 9.5, refers to "transient lodging" in this kind of facility, but there is no mention in the main body of the regulations.)

Sincerely,

Nancy R. Snow
Housing Compliance Specialist

U.S. Department of Justice

Civil Rights Division

Office of the Assistant Attorney General Washington, D.C. 20530

MAY 26 1993

The Honorable Don Young
U. S. House of Representatives
2331 Rayburn Building
Washington, D.C. 20515

Dear Congressman Young:

This is in response to your recent letter on behalf of your constituent, (b)(6) XX , who suggests that the Americans with Disabilities Act of 1990 (ADA) should be amended to consider the needs of each business in determining what demands businesses, especially small businesses, should be required to meet in order to comply with the law.

The ADA provides civil rights protections to individuals with disabilities, and includes requirements applicable to both State and local governmental entities under title II of the ADA, and to private businesses under title III of the ADA. The ADA also authorizes the Department of Justice to provide technical assistance to individuals and entities with rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation and is not binding on the Department.

Title II of the ADA prohibits discrimination against qualified individuals with disabilities in all programs, activities, and services conducted by or on behalf of State and local governments, as explained in section 35.149 of the title II regulation (copy enclosed). The concept of program accessibility is discussed in section II-5.000 of the enclosed title II Technical Assistance Manual.

Title III of the ADA prohibits discrimination on the basis of disability by private entities that own, lease, lease to, or operate places of public accommodation (such as restaurants,

hotels, retail stores, or private schools) and establishes requirements for the new construction and alteration of places of public accommodation and commercial facilities (such as factories

and warehouses). Copies of the title III regulation and Technical Assistance Manual are also enclosed.

As your constituent urges, it is important that a law such as the ADA recognize that the ability of a business to make changes is affected by a number of factors, and, in particular, by the resources available to that business. The ADA was drafted with that point in mind and reflects throughout a careful balance between the rights of individuals with disabilities and the legitimate concerns of affected businesses. For example, in existing facilities that are not otherwise being altered, the ADA only requires businesses to remove architectural barriers when such barrier removal is "readily achievable", that is, "easily accomplishable and able to be carried out without much difficulty or expense." In determining whether something is readily achievable, the regulation explicitly permits a business to consider a number of factors, including the cost of the proposed action and the resources available to the business, either directly, or through a parent corporation. See section 36.104 of the title III regulation.

Similarly, section 35.150(a)(3) of the title II regulation provides that a State or local government is not required to take any action that it can demonstrate would result in undue financial and administrative burdens. Other limitations on the obligations of covered entities occur throughout the ADA. The two enclosed Technical Assistance Manuals should assist (b)(6) in determining more accurately the extent of his obligations under the ADA.

Although the Department of Justice is not able to issue determinations regarding the obligations of specific parties under the ADA, you may wish to suggest to your constituent that he further explore with his tenant, the Alaska Department of Fish and Game, the exact nature of the changes that should be made in the Galena facility. The ADA does not require that existing facilities be brought up to the standards for new construction. As pointed out above, State and local governments are required to ensure "program access", that is, to make certain that the programs and activities of the entity, when viewed in their entirety, are available to citizens with disabilities. As discussed in the title II Technical Assistance Manual, it may be possible to achieve program access by methods other than physical alterations. For example, a government service that is provided in an inaccessible second floor location could be moved to the first floor when service is required by an individual who is unable to climb steps.

01-02295

Also, while a precise determination of the responsibilities of the parties in this particular situation would require an analysis of the lease, in general, a title III (private) landlord does not take on the obligations of a title II (government) tenant merely by leasing space to that tenant. For example, if a private landlord is leasing an existing office building that does not contain any places of public accommodation (that is, a building that is purely a commercial facility) to a governmental entity, the landlord's only ADA obligations with respect to that building arise when the landlord makes alterations to the building. When such alterations are made, the ADA requires that the landlord follow the accessibility standards that are included as Appendix A to the title III regulation. The government tenants obligations arise independently under title II. Again, the lease itself may impose additional obligations on the landlord, but these obligations are not affected by the ADA.

I hope this information will be useful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Honorable Donald Young
House of Representatives
Washington, D.C. 20515-0201

February 18, 1993

Dear Representative Young,

Attached is a letter sent in response to requirements we may have to follow in order to continue renting office space to the state. It is self explanatory. The costs to meet these demands will exceed twenty-five thousand dollars! Although we own and rent out many small buildings within our four villages, we are a small company. If we have to do this to each of our buildings we will have to shut them down. These expenses will be prohibitive and could break us financially.

Most small native corporations are in similar situations. Please reconsider having the ADA law amended to consider each business, its location, and who its customers are.

Sincerely
XX

Mr. Elmer Sorensen February 18,1993
Facility Manager
Alaska Dept, of Fish & Game
P.O. Box 25526
Juneau, AK 99802-5526

Dear Mr. Sorensen,

I am writing in response to the Transition Plan for the State of Alaska pertaining to your local office currently being rented from our company. I received a copy of this plan late last week from Mr. Timothy Osborne and so was unable to meet your January 26, 1993 deadline.

I really am at a loss for words on your plans to meet the needs required by ADA. Rather than berate you, the state government and the federal government for your incessant encroachments on business with ridiculous regulations, I will go through your list of required repairs and show the ludicrousness of it all.

#'s 1 & 2 --- Parking and parking spaces. We have over an acre of "accessible" parking right in front of Tim's office. It may be covered by dirt but is solid. If you mean by `solid surface' an area paved with asphalt or concrete then you are asking for a lot more than the $2500 in the checked column. The only paved area in Galena besides the runway is on the airbase. We have over ten miles of dirt road that have been sufficient for the areas residents for over thirty years. Is there some special, overriding reason why a disabled persons vehicle needs a `solid surface'? As for signage, we can put up a sign that disabled people can park wherever they please. The area in front of the ramp is never blocked and always available.

#4 --- Exterior accessible route.? Again, there is a very large area available with hard packed dirt that makes access to the ramp very easy. I have seen disabled people on crutches, in wheel chairs, etc. get around in dirt very well. And why a cedar walkway? Local treated lumber would be just as adequate and cost far less.

#6 --- Ramps. I do not understand this one. Your report says there are no

handrails. I went out to look and I saw handrails! The ramp is there! There is a slope that looks no more challenging than any other handicap ramp I have seen. I asked around, since I have only been here one year, and no one else has ever seen that ramp used. As far as I know Tim has not had any disabled people coming in asking for hunting or fishing information.

#7 --- Entrance and Egress doors. You're very unclear about what is wrong here. Do you want us to construct another ramp and landing?

01-02298

#10 - Exterior signage. Fish & Game is more than welcome to put up a sign on the exterior of the building showing where their office is. Access sign? Unless you're blind it is quite obvious where the ramp and access is. Perhaps you meant a Braille sign so the blind could figure it out themselves?

#11 - Interior sign. Do you want us to put up a sign that says `Private Office'? Why cant you if you are so concerned about it? By the way, how does this benefit a disabled person?

#13 - Stairs. Again, I had to go out and look, but yes, there were handrails there! Lower landing? Why? Anybody using the stairs, disabled or not can easily make the first step.

#14 - Toiletroom. The public will have access to bathrooms in our corporate offices as will any disabled people. Tim can keep his toilet private. He can place a `Private Toilet' sign there also.

#16 -- Accessories. Thermostat. What business does a disabled person have adjusting the thermostat? We will post a sign that the public is not to touch the thermostat. Also, we will put a locking cover on the thermostat so only my property manager can adjust the temperature. Tim has many kids visit his office. I would not want them playing with it.

#17 - Interior doors. Since the bathroom is private there will be no need to change the door. Why reverse a door? Presumably a disabled person has to go both ways through a door so what difference does it make which way it opens?

I do not want to sound insensitive to the needs of disabled people. I have a disabled daughter. But there needs to be reasonable adjustments made based on each location. We are a remote site. Very few disabled persons come through this town If they do there are all kinds of people willing to help them out. If they feel that puts them in an unnecessary hardship situation, then welcome to the Bush. We all put up with considerable hardship and do without a lot of the luxuries of civilization. If at some time in the future, in the unlikely event you hire a disabled person to take Tim's place, then we will do whatever is necessary to make it a comfortable and easy office.

Putting out that kind of money for occasional use will put our small business out of business. You need to be reasonable and consider what effect these added costs will have on business. You are welcome to look around town for another office that meets your requirements. I doubt you will find one in this village. We are willing to work with you within reason.

Sincerely,
XX
XX (b)(6)

Sen Frank Murkowski
Rep Donald Young

01-02299

MAY 26 1993

The Honorable Phil Gramm
United States Senator
2323 Bryan Street, #1500
Dallas, Texas 75201

Dear Senator Gramm:
(b)(6)

This is in response to your inquiry on behalf of your constituent, XX inquiry concerns the application of the Americans with Disabilities Act to a meeting room used for a monthly immunization clinic.

The Americans with Disabilities Act authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the Act's requirements. However, it does not constitute a legal interpretation and it is not binding on the Department.

Title III of the Americans with Disabilities Act requires that public accommodations, which would include private entities that own, operate, or lease clinics or meeting rooms, in existing facilities remove barriers to access by persons with disabilities, to the extent that such barrier removal is readily achievable. The preamble to the Department's implementing regulation under title III of the Act explains that "readily achievable" means easily accomplishable and able to be carried out without much difficulty or expense. Therefore, in the

situation described by your constituent, the chamber of Commerce would be obliged to remove barriers to access to the meeting room used as an immunization clinic only if it is readily achievable to do so.

cc: Records; Chrono; Wodatch; McDowney; Bowen; Miller; FOIA.
\udd\millerc\policy\gramm.ltr

01-02300

Factors that would be taken into account in determining if a particular action is readily achievable include the nature of the suggested renovations, the total resources available to the Chamber of Commerce, and other factors described in the regulation. See 28 C.F.R. S 36.104, "readily achievable." Without more information about the particular situation, however, we are unable to offer any further guidance as to whether the full renovations described by your constituent would be required under the Act.

Please note, also, that title II of the Americans with Disabilities Act requires State and local governments to make their programs and services accessible to persons with disabilities unless doing so would pose a fundamental alteration of the program or service or would amount to an undue financial or administrative burden. 42 U.S.C. S 12132; 28 C.F.R. S 35.150(3). Thus, the Act would require that the Texas Department of Health offer its immunization clinic in an accessible setting or offer an alternative means of access to its service, such as providing an alternate location which is accessible or taking the immunization directly to persons with disabilities.

I hope this information is helpful in responding to your constituent.

Sincerely,

James P. Turner

The Honorable Senator Phil Gramm
241 SDOB
Washington, D.C. 20510

Dear Senator Phil Gramm,

Free innoculations for all children is a wonderful objective for the health and welfare of our nation. Prevention is one of the best ways to offset the increasing expense of our health care system.

However, there is something that I think that you should be aware of. Our Chamber of Commerce has been allowing the Department of Health to use our meeting room, free of charge, once a month for immunization clinics where free or reduced fee innoculations are given. Approximately 1,200 children are immunized a year. About the first of the year we received a notice that our facility (one room) has been checked for compliance with the American Disabilities Act. They

recommended that approximately $5,000 worth of renovations were needed to comply with the ADA and for the Texas Department of Health to be able to continue to utilize our meeting room. Mabank is a small town with limited funds. We have no choice but to notify them that our facility is no longer available for free or reduced fee innoculations.

What happened is in their effort to help a few, they have hurt many. Until government begins to live in the real world, among real people, I do not see much hope of things improving for the masses.

A concerned citizen,

MAY 26 1993

The Honorable John F. Kerry
United States Senator
One Bowdoin Square
Tenth Floor
Boston, Massachusetts 02114

Dear Senator Kerry:

This letter is in response to your inquiry on behalf of your constituent, XX (b)(6) , concerning the applicability of the Americans with Disabilities Act (ADA), 42 U.S.C. S 12181 - 12189, to individuals with gender identity disorder.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal

guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

Section 511 (b) of the ADA lists conditions, including gender identity disorders not resulting from physical impairments, that are not considered disabilities under the ADA. Section 511 was added to the ADA during Senate consideration of the bill and was adopted in the final passage of the Act.

Because of the addition of section 511, individuals with gender identity disorder are not covered by the ADA unless the gender identity disorder results from a physical impairment or unless they are discriminated against because of another covered "disability" as defined in Section 3 (2) of the Act.

cc: Records; Chrono; Wodatch; McDowney; Magagna; Nakata; FOIA.

Senator John Kerry
Russel Senate Office Building
Room 421
Washington D.C., 20510

Dear Senator John Kerry,
I am writting you to ask you to give me just a few minutes to read my essay I wrote on behalf of the sufferers of a psychological disorder called Gender Identity Disorder. After, if you wish to see some evidence about my position, please refer to the table of contents on the back of the last page of this package.

I am a sufferer of Gender Identity Disorder and I find myself with no legal protection from discrimination with work, housing or health care. Due to my disorder I now survive on Social Security Disability. I am actively trying to remedy this situation by preparing myself to attain self sufficiency. I am in college to become an occupational therapist In order to achieve my goal of self sufficiency, I need some legal recognition of my civil rights. I need help with getting the representation within the government of United States for citizens whose needs have clearly been neglected by the United States Government.

Once after you've read my essay and you have further questions about the subject I would be happy to answer any questions you have. If you'd like to refer to deal with a psychiatric professional you should make contact with Dr. David Seil, 196 W. Springfield Rd. Boston, Mass., 02118 at Phone number (617) 536-2665.

I would also appreciate any legal resources or assistance you know that can assist me with pursuing federal court action on elimination of the exclusion of Gender Identity Disorder in the Americans with Disabilities Act clauses 508 and 511.

Also, I wish to participate in the National Gay, Lesbian, Bisexual, and Transgendered political march on the weekend of April 23rd, 24th, and 25th. If you can offer assistance with transportation, board, or monetary assistance it would be appreciated.

I want you to know, if you wish not assist in any way, thats fine. I am not going to be a parasite or begger. My only wish is that you work with me on revising the ADA so I may be a productive U.S. citizen with recognition that people like me have been oppressed. I really appreciate your time. I want you to know this package is being distributed to many of your colleagues, several news agencies, and talk shows so I can bring attention to the problem. Again thanks for your patience and attention, I really appreciate it.

Sincerly,
XX

"The New Gender Gap" by XX (b)(6)

I know most people are familiar with the subject of Transsexuals. Many talk shows use the topic to develop controversy and interest. Now for the rest of the story. Transsexualism is an emotional and mental disability. It is a component of a larger problem defined by the psychiatric community as Gender Identity Disorder, GID for short.

This is a diagnosis defined by the American Psychiatry Association. Pages 71-79 in the manual of Psychological Disorders called the Diagnostic and Statistical Manual - III-R, or DSM-III-R for short. GID has also covered Transvestism, Transvestic Fetishism, or Transgenderism.

Before I continue, I want to introduce you to a new term "gender-orientation." No, this has no connection with "sexual-orientation". The Kinsey Institute For Research in Sex, Gender, and Reproduction of Indiana University has determined in its research 2 scales of human behavior in this environment. The Kinsey scale of Hetero-Homosexual range scale 0 to 6 and the Gender Dysphoria Scale with a range of 0 to 6. This is proof that gender orientation and sexual orientation are indeed independent entities.

The people that live with GID are called the Gender Community or GC for short. I believe that the non-recognition of the GC is a great misjustice. In fact the GC hasn't been, since 30 years after Christine Jorgenson, is beyond me. The dismissal or the gender community by U.S. legal and governmental agencies has self destructive effects on all citizens of the U.S.

One reason why the U.S. government hasn't addressed the issue is the way the media has approached the subject. Most stories in the media have portrayed the GID victim as sick, exhibitionistic, psychotic, or just plain stupid. The result is the general public hasn't been accurately educated.

You look at the tabloid, talk and news programming that people see. You can get the idea that the subject of GID is just there to entertain people. Tabloid and talk TV sensationalizes the GID problem. Most people interviewed have had greater financial resources to get proper treatment medically and mentally giving a false image of how most are well off. Most or the GID victims end up substance abusers, homeless, and/or prostitutes. The interviewed subjects are a tiny few of the GC that use their position to just get attention and not to really assist the other men and women who really are hurting. Such interviews also don't educate the general public about the extreme depression, extreme anxiety, and dissociative disorders that accompany GID.

When the GID issue reaches the news media, it usually is because that persons who suffer act out in antisocial behaviors: Exhibition, Assault Rape, Murder. Violence or violent activity has never been associated with GID suffers. These are psychotic classed behaviors and not neurotic classed like GID. This terrifies the GC because the general public believe that GID sufferers are hideous monsters and should be incarcerated.

GID sufferers fear discovery by the public as a result. Often, they become paranoid. Most GID victims just want to be free to actively participate in becoming constructive citizens of the U.S. The news media doesn't mention the discrimination those people with GID bear. Work is almost impossible. They're

turned down jobs only because of GID. This makes the GC hide in a closet. Proof of this is the Tiffany Club of Wayland Massachusetts, where people pay money to hide themselves in a house on Alpine St.

This leads me to another problem. Insurance carriers refuse to accept the psychiatric and medical professionals understanding that medical care for GID are a medical necessity. The processes you have to undertake to accomplish gender re-orientation are not paid for by insurers. The insurance firms use many methods to discriminate the use of their funds for gender-reorientation treatments.

An MMPI Subscale (Gd): To Identify Males with Gender Identity Conflicts

Stanley E. Althof, Leslie M. Lothstein

Case Western Reserve University School of Medicine

Abstract: This study reported on the development and cross-validation of a 31-item MMPI Gender Dysphoria subscale (Gd) which accurately discriminates between gender identity patients and matched controls, and identifies males with gender dysphoria syndrome. Both the validity and reliability of the Gd scale has been demonstrated and there is every expectation that the scale has excellent potential for clinical usage. In the construction of the Gd scale, we have addressed the major methodological problems of previous studies which have used psychological tests to assess gender role and identity disturbances: small criterion groups, a lack of an appropriate control group, and prediction of too many false positives.

The clinical disorder of transsexualism has historical roots in ancient civilizations (Green, 1969) and was first medically documented at the beginning of the 19th century (Friedreich, 1830).It wasn't until the publication of Psychopathia Sexualis (Kraft-Ebing,1894), however, that the condition was considered worthy of medical investigation. Initially, transsexualism was seen as a rare disorder characterized by a compulsive belief or wish to become a member of the opposite sex (I am a man/woman trapped in a woman's/man's body) and an insistent request for sex reassignment surgery (SRS). Fisk (Note 2) introduced the term "gender dysphoria syndrome" in 1973, as an alternative to the now accepted diagnosis of Transsexualism (DSM-III-302.5x). The concept of gender dysphoria syndrome is broader than that of transsexualism in that it includes all individuals who are distressed about their gender roles and identities, but may not desire SRS. Thus, the term gender dysphoria more accurately described the clinical variants who present with gender role and identity disturbances. It is estimated that there are currently 30,000 patients with gender role and identity disturbances who have labeled themselves transsexuals; a sizeable minority of these patients have received Sex Reassignment Surgery (Berger, Green, Laub, Reynolds, & Walker, & Wollman, Note 1). Early estimates of the prevalence of gender identity disorders involving requests for SRS in the United States were: 1/100,000 for males and 1/130,000 for females (Pauly, 1969). It is now apparent that these are conservative figures (Berger et al., Note 1), as increasing numbers of gender dysphoria patients requesting SRS are being seen in outpatient psychiatric clinics (Volkin, 1979).

An objective diagnostic instrument, used in conjunction with a clinical interview, would be of great assistance to mental health professionals in assessing gender dysphoria. Moreover, there are many patients whose initial clinical presentation of atypical depression and mixed psychotic

symptoms are confusing-and it is only much later that their gender identity disturbances are recognized. Because gender dysphoria patients may be willing to talk about their wishes to be of the opposite sex (related to their fears of being stigmatized), it is often difficult to appropriately diagnose them. A diagnostic test which could bypass their defensive proc-

esses and identify their possible gender dysphoria, would provide clinicians with the basis for making appropriate clinical interventions.

Psychological Testing

No single measure, or standardized battery of tests, has ever been consistently employed to compare groups of gender dysphoric patients from different geographical, racial, and socio-economic backgrounds. The published studies have reported on either group or individual data from diverse measures as: Thematic Apperception Test (Doorbar, 1969;Hill,1980); Rorschach Inkblot Test (Nachbahr,1977); Draw-A-Person (Doorbar, 1969); Fleming, Koocher & Nathans,1979; Hill,1980; Money & Wang,1966); Body Image Scale (Pauly & Lindgren,1976); Feminine Gender Identity Scale (Freund, Langevin, Satterberg & Steiner,1977); Wechsler Adult Intelligence Scale (Doorbar,1969; Hill,1980); Tennessee Self-Concept Scale (Roback, Staesberg, McKee, & Cunningham,1977; Sadoughi, Jayaram & Bush,1978); Sexual Functioning Inventory (Derogatis, Meyer, & Vazquez,1978; Nachbahr,1977); and the Bender Gestalt (Hill,1980).

The MMPI, however, has shown the most promise as a clinical instrument for identifying and predicting gender dysphoria. The published studies have used the MMPI to: (a)determine psychiatric diagnosis (Finney, Brandsma, Tondow, & LeMaestre,1975); (b)describe a mean MMPI patient profile (Lothstein,1980; Lothstein, Althof, Jones, & Shen, Note 3; Paitich, Note 4);(c)contrast gender dysphoria patients with other patient groups, using mean profiles (Lothstein et al., Note 3); and (d)contrast the patient's pre- and post treatment scores on a single measure (Fleming, Cohen, Salt, Jones, & Jenkins,1981; Hill,1980). The results of these studies respectively indicate: (a)a preponderance of hysterical diagnoses; (b)elevations on Scale 5, with the most prevalent two-point clinical codes being 5-4/4-5 and 5-8/8-5; (c)the mean profiles of gender patients suggest less psychopathology than those of outpatients in control groups; (d)treatment significantly lowers patients' scores on MMPI clinical scales. A diagnosis of "gender dysphoria syndrome," based on elevated Scale 5 and/or clinical profiles 5-4/4-5 or 5-8/8-5, would yield large numbers of false positives. In addition, methodological problems in the development of Scale 5 preclude its being used as the sole basis for the diagnosis of gender dysphoria. In this study we set out to expand the above findings to determine if an MMPI gender dysphoria scale for males could be constructed. It was hoped that such a scale would not only be of theoretical interest but also of practical clinical importance. It was recognized that such a study would have to meet the major methodological objections to the published studies (that is, employing small criterion groups, and yielding too many false positive diagnoses of gender dysphoria using mean profile scores). With these considerations in mind, the following study was designed with the aim of

developing a clinically usable MMPI gender dysphoria subscale for males.

Subjects

The item selection phase of this study included criterion and control groups. Group I, the criterion group, included 52 males (35 whites; 17 blacks) who applied to the Case Western Reserve University Gender Identity Clinic for SRS between 1975 and 1978. White patients had a mean age of 30 and 12 years of education; Blacks had a mean age of 25 and 11 years of education. The Whites were predominantly from working class backgrounds as opposed to the lower class backgrounds of Blacks.

Group II, the control group, included 52 male psychiatric outpatients. They were matched with the criterion group for age, sex, and race. These patients were chosen from lists of patients with completed MMPIs on file at two psychiatric outpatient facilities in Cleveland.

01-02308

2. Fetishistic TV. This is the transvestite usually ranging from exclusively to mostly heterosexual (Kinsey Scale 0-2). This individual dresses periodically in clothing of the opposite sex, usually wearing garments under male clothing. Transvestites, as described by Benjamin, are almost entirely male.
3. True transvestite (ranging from 0-2 on the Kinsey Scale) often dresses in women's clothing and may actually live as a female. This individual is heterosexual except when cross dressed.
4. Nonsurgical transsexual. This person ranges from 1-4 on the Kinsey Scale and cross-dresses, often with insufficient relief of the gender dysphoria from the cross-dressing. The sense of gender discomfort in this individuals because of their ambivalence.
5. True transsexual, moderate. This person ranges between 4 and 6 on the Kinsey Scale(usual to exclusive homosexuality). He or she lives and works as a member of the opposite sex, if possible, but may have tried to adapt to the normal sex roles of the biological gender and may have married and had children. Usually surgery is indicated in this individual.
6. True transsexual, intense. this person tends to be exclusively homosexual, as defined by the biological gender, although they see themselves as heterosexual. Their gender discomfort is intense, and they get very little relief from cross-dressing. These individuals are usually clinically evident at an early age and truly believe themselves to be trapped in the wrong body.

The "true transsexual" will likely give an early childhood history of wishing to be a member of the opposite sex, often from earliest memory. Cross-dressing usually begins quite early in life and is usually accompanied by stereotypical cross-gender play and the choice of playmates of the opposite gender. For the biological male, this often involves playing with dolls or playing house, and for the biological female, this usually involves a reluctance to wear dresses or to play with dolls or other sedentary play. Girls typically will seek out rough and tumble play, whereas gender dysphoric

boys will avoid it. Usually at some point, the gender dysphoric male is labeled a "sissy" and is often socially ostracized because of this. the gender dysphoric female is likely to be labeled a "tomboy" but is less likely to suffer negative social consequences and may actually be rewarded for this behavior.

The transvestite typically has a later onset of cross-dressing, often at puberty. Cross-dressing is usually fetishistic in nature and is accompanied by sexual arousal to the cross-dressing itself. The transsexual, on the other hand, tends to be more asexual and is so aversive to the genitals that there is often a reluctance to masturbate by touching them. Although they are usually attracted to members of the same biological gender, they see themselves as heterosexual since they themselves are in the wrong body. They may also be homosexual or bisexual but are most likely to be heterosexual. It should be noted that in the mid-thirties, a transvestite is frequently observed to become ore gender dysphoric and may actually lose the fetishistic nature of masturbation. It is not uncommon that individuals previously diagnosed as transvestite later in life request sex reassignment surgery and may be appropriate for it.

EGODYSTONIC HOMOSEXUAL

It should be pointed out that individuals suffering from genetic or hormonal abnormalities demonstrated by an ambiguous genitalia should first be treated by procedures commonly accepted for those medical conditions. It is likely that patients with Klinefelter's Syndrome will have a higher incidence of gender dysphoria than the normal population, and may be candidates for a gender treatment program, after appropriate medical treatment. Psychological conditions which are commonly confused with transsexualism include schizophrenia, multiple personality disorder, and dissociative conditions. Occasionally, a patient who has been sexually abused will consciously decide to be a member of the opposite gender in an attempt to avoid sexual abuse in the future (Satterfield, 1984). This usually occurs in females. Males with a very poor self-image have been misdiagnosed as transsexual because they feel that their passivity and lack of stereotyped male behavior is inconsistent with

other staff there is a right of return to their old jobs. Two cases are known to have been dealt with by British Gas.

At British Airways there is an agreed policy that transexuals may remain in employment. British Airways employs such people as female (or male) prior to the operation. After the operation they are reclassified under their new gender. They are however, usually moved from their existing posts. Following the operation the employee is kept on his or her existing salary until a new post is found for which they must complete in the normal way. Until a new post is found, no increments are paid.

It is understood that these policies date back to a meeting of the nationalized industries chairmen and personnel directors groups in the early 1980's.

In local authorities, the policy is usually to keep the transexual in employment in the existing post. There are at least four known cases in London boroughs. A case in the court service led to a justices clerk taking early retirement instead of remaining in employment. The Civil Services treats each case on its merits but clearly security considerations are taken into account.

The agreed Civil Services policy is to keep the transexual in employment but to redeploy after surgery has been performed. There are believed to have been at least 20 cases in the Civil Services in the last decade.

In the National Health Services administrative staff and annual workers are kept in post after gender changes there are three known examples. In the case of nursing staff, the transexual is taken off duty before the operation, but may be reemployed after surgery. There are two known cases of nurses changing gender.

In the education field, transexuals are normally not employed in the period before the operation but are reemployed afterwards. Six cases are known. In the universities, two academics are known to have changed gender without any major problems.

In the private sector there are wide variations in practice. The approach is often sympathetic when it involves staff at lower levels though this is less common in smaller companies. At the more senior level, it is usual for the employee to leave but some organizations have given help to individuals in setting up their own business.

Employment law as it relates to transvestites and transexuals is largely an uncharted are. This is probably because the individuals concerned usually wish to avoid the publicity and trauma which legal action entails. Many do not feel able to face the reaction of their employer and their workmates, preferring to resign quietly and take the risk of looking for another job.

Unfair dismissal

An employee with at least two years of continuous services who is dismissed because he is a transvestite may be able to claim unfair dismissal on the basis that his off-duty behavior is of no concern to the employer. In many cases this would be a powerful argument. However, in some situation, the employer might be able show substantial reason for dismissal under section 57 (1b) of the Employment Protection (Consolidation) Act and persuade the tribunal that dismissal was a reasonable response to the circumstances. For example, dismissal of a senior employee in a position of trust, on discovery that he is a transvestite might be found

largely a manager's ability to control his subordinates might be undermined if they found out about his transvestism.

Another possible substantial reason for dismissal might be pressure to dismiss from the transvestite's fellow employees, or from an important customer. In such a case the tribunal would probably expect a reasonable employer to seek to protect the employee from irrational bigotry, and to consider whether it is possible to transfer him to an alternative post among unprejudiced colleagues. However, a tribunal would probably find that as a last resort, dismissal was a genuine attempt to protect business interests and consequently within the range of the responses available to a reasonable employer.

Similar considerations would apply to unfair dismissal claims by transexuals. in Calvin Standard Telephones and Cables Inc., a sex discrimination case brought by a pre-operative transexual, the company argued that there would be "organizational" problems in employing such an individual. For example, it would be embarrassing for employees or visitors to the factory to see an individual entering the male toilets wearing female clothes and it was impracticable to provide separate toilet facilities. In an unfair dismissal case, such matters would probably be found to amount to a substantial reason for dismissal.

Unfair dismissal law therefore provides limited protection to transvestites and transexuals. But what about sex discrimination law? The problem here is that under the Sex Discrimination Act 1975 an applicant has to show that he or she has suffered discrimination "on the ground of his (or her) sex." The case of White v British Sugar Corporation concerned a woman who had for many years treated herself as if she were a man. BSC employed here assuming that she was a man and she used the men's toilet rooms and changing facilities. Rumors began to circulate and she was soon dismissed. Her sex discrimination claim failed. The tribunal found that the company had not treated here less favorably than they would have treated a man who held himself out to be a woman, who had been employed as such and who used the women's toilets. in Calvin v STC (see above) a male job applicant did not hide the fact that he was preparing to change sex. but the tribunal similarly found that it was not unlawful sex discrimination for the company to refuse to interview him because a pre-operative female transexual would not have been interviewed either.

By contrast a male employee (or prospective employee) who suffers inferior treatment because he is a transvestite may stand a greater chance of succeeding in a sex discrimination claim, on the basis that a female cross-dresser would have been treated better (it is generally thought that it is easier for a woman to pass dressed as a man than vice verse).

Where a transexual continues in employment after undergoing a change of gender, there may be problems of reclassification as the opposite sex. This may be relevant for certain contractual purposes. In Corbett v Corbett a court decided that a person who was born a male but had undergone a sex change operation was not a woman who could validly marry a man. However, an employer and employee can get around this by expressly agreeing on which sex the latter is to be for contractual purposes. But if the employee was subsequently to bring a sex

LABOR RELATIONS

THE LEGAL STATUS OF TRANSSEXUALS IN THE WORKPLACE

Hundreds of Americans undergo sex reassignment each year. it is well documented that these individuals referred to as transsexuals are misunderstood and scorned by society. As a matter of fact, "questions of sexual deviation and sexual abnormalities probably provoke more emotional responses to society generally than almost any other subject." many employers, influenced by harmful stereotypes, perceive transsexuals as unstable or incapable of performing their jobs. The result of this attitude is that transsexuals are refused employment or terminated from jobs upon discovery of their status. Because of this treatment, the courts have been grappling with the employment difficulties of transsexuals.

In simplest terms, transsexualism (or gender identity disorder) is the enduring, pervasive, compelling desire to be a person of the opposite sex. The American Psychiatric Association (PA), which has classified transsexualism as a mental disorder since 1980's, states that transsexuals suffer from moderated to severe personality disturbances and frequently experience considerable anxiety and depression, attributable to their inability to live in the role of the desired sex. In these instances, "depression is common, and can lead to suicide attempts."

Although transsexuals are often confused with homosexuals and transvestites, the three types of individuals are considered distinct by most legal and medical authorities. Transsexuals are individuals who suffer from gender identity disorders; homosexuals are individuals who are attracted sexually to members of their own sex; and transvestites are primarily heterosexual men who experience psychological relief and sexual arousal by dressing in women's clothes. Both homosexuals and transvestites are content with the sex into which they were born.

The treatment programs for transsexual patients typically require cross dressing as long as two years while undergoing hormonal treatments,

psychotherapy and psychosocial adjustment training. If the attending psychiatrist concludes that the patient is psychologically and physically ready, the sex-reassignment surgery is performed. Postoperative follow-up is aimed at the total assimilation of the individual not society in the new sex role. Estimates on the number of male-to-female transsexuals outnumber female-to-male transsexuals by a ratio of as high as eight to one, and as low as two to one.

Preoperative and postoperative transsexuals have unsuccessfully challenged employment discrimination under Title VII of the Civil Rights Act of 1964. That statue prohibits discrimination on the basis of race, color, religion, sex and national origin. With the exception of one trial court, no federal court has held that Title VII's ban on sex discrimination protects transsexuals. The most recent case, Ulane vs. Eastern Airlines, Inc., is representative of how these courts have resolved transsexual claims.

For a decade, Karen Ulane had been a male pilot with an excellent employment record at Eastern Airlines. An increasing desire to become a woman led Ulane to undergo female hormone treatment. Ulane continued to fly until finally taking a leave of absence to undergo gender-reassignment surgery. After surgery, she was given permission to resume flying by the Federal Aviation Administration. Eastern, however, refused to reemploy Ulane as a pilot. The airline contended that Ulane was too much of a psychiatric risk to vest with the responsibility of piloting a commercial aircraft. Ms. ulane filed suit in the US District Court for the Northern District of Illinois. In a bench trial, the district court held that Eastern had violated Title VII of the Civil Rights Act of 1964 by discriminating against Ms. Ulane as a transsexual and as a female.

The US Court of Appeals for the Seventh Circuit reversed the district court's ruling and relied on reasons to support its holding that Title VII did not protect transsexuals.

First, the appeals court held that the word sex in Title VII meant a man or woman, not an individual suffering from a sexual-identity disorder. Second, the court found that the legislative his-

Transsexual Healing: Medicaid Funding of Sex Reassignment Surgery

Eric B. Gordon, MD., J.D.

Federal requirements for state Medicaid programs are surveyed, and case law regarding Medicaid funding of sex reassignment surgery is reviewed. State have attempted to exclude sex reassignment surgery (SRS) from Medicaid coverage on various bases, concluding for example, that the procedure constituted "cosmetic surgery." Judicial scrutiny of such exclusions has usually resulted in the state action being found violative of the federal Medicaid statute and accompanying regulations. In those cases upholding the state exclusion, the primary judicial obstacle to funding has been a

determination that SRS is "not medically necessary" or is "experimental." The author explores the recent scientific literature concerning long-term outcomes following SRS and concludes that the procedure, for purposes of Medicaid funding, is neither "unnecessary" nor "experimental," and that the categorical exclusion of SRS from Medicaid determinations of eligibility for Medicaid Funding, utilizing the standards of care promulgated by the Harry Benjamin International Gender Dysphoria Association.

KEY WORDS: gender dysphoria; Medicaid, sex reassignment surgery; Social Security; transsexualism.

THE MEDICAID SCHEME

Medicaid, Title XIX of the Social Security Act, was enacted in 1965. Reflecting the concept of "cooperative federalism," Medicaid gives each state broad discretion in devising a program to best suit the needs and

To whom all correspondence should be addressed at McDermott, Will and Emery, 2029 Century Park East, Los Angeles, California 90067.

it substituted its own medical judgement based upon its own notion of the significance of a treating physician's mental status examination. While the court's holding was limited, by its terms to the facts of the case, the decision in reality permitted a categorical denial of funding by the Department of Social Services. This conclusion is reflected in the reasoning of the lower court dissent in Denise R. v. Lavine (1975): "the Legislature certainly never intended to authorize the payment of substantial public funds for the dubious sex change operation here in question... Such claims were never within the contemplation of the lawmakers."

Several subsequent cases have held a state regulation precluding funding for SRS void as violative of 42 C.F.R. section 440.230(c). In Doe v. Department of Public Welfare (1977), the Minnesota Supreme Court held void an absolute

exclusion of SRS from Medicaid reimbursement. The plaintiff in Doe had applied for Medicaid funding for SRS and was denied. She appealed to Phe county welfare department, which found the surgery medically necessary and granted the benefits. The state welfare department reversed, holding that (I) funding of SRS was absolutely prohibited under agency provisions, and (ii) the petitioner had not proved that "if she has the surgery, her psychological problems will be alleviated to the point that she will no longer be disabled and will become self-supporting." The trial court affirmed the state welfare department's
decision.

On appeal, the Minnesota Supreme Court found, first, that the absolute exclusion violated 45 C.F.R. section 249.10 [now 42 C.F.R. section 440.230(c)]. noting that "[I] there was no explicit provision appearing in the Federal statues that would prohibit the payment of medical benefits for impatient hospital care for transsexual surgery." Second, the court held invalid the state welfare department's requirement that treatment found it unreasonable to require the applicant to prove that an operation would be successful; it noted that the "self-supporting" requirement, uniformly applied, would serve to deny palliative treatment to terminally ill patients.

The court ruled that future applications for SRS would need to be decided by the state agency on a case by case basis involving a "thorough, complete and unbiased medical evaluation" to determine the medical necessity of the requested operation. Because the record before it disclosed an uncontroverted finding of medical necessity by the county hearing officer, the court ordered the state welfare department to fund Doe's surgery.

In Pinnek v. Preisser (1980), the Eighth Circuit held Iowa's absolute exclusion of Medicaid coverage for SRS void. The court found that "from this record, it appears that radical sex conversion surgery is the only medical

treatment available to relieve or solve problems of a true transsexual." Thus, it ruled that a state plan absolutely excluding the only available treatment known at this stage of the art for a particular condition must be considered an arbitrary denial of benefits based solely on the "diagnosis, type of illness, or condition" and therefore contrary to 42 C.F.R. section 440.230(c).

The court further held that Iowa's policy, which established an irrebuttable presumption of non-necessity without any formal rule making proceedings or

hearings, was contrary to the objectives of the Medicaid statue and that the decision as to medical necessity should rest with the recipient's physician "and not with clerical personnel or government officials." This latter holding has been criticized on the ground that it invests too much power it the treating physician, an interested party in the decision as to funding. However, Pinneke may be reasonably interpreted as holding only that the initial determination of medical necessity must be made by the treating physician; this determination would then be subject to medical review by the state agency and the courts. The Pinneke court's concern was that the Iowa policy created an absolute preclusion on an administrative, and not a medical basis. "This approach reflects inadequate solitude for the applicant's diagnosed condition, the treatment prescribed by the applicant's physicians, and the accumulated knowledge of the medical community. The Supreme Court has emphasized the importance of a professional medical judgement in this contest."

A similar result was reached by the district court in Rush v. Parham (1980). The court held that an express exclusion of SRS from the Georgia State Plan was void; "Judgements of medical necessity must be made for individual patients and what may be cosmetic, experimental, palliative, or unnecessary for some, may be deemed essential for another. It follows that the state may not administer a State Plan which irrebuttably denies coverage of any services or procedures within the five required categories (ILLEGIBLE). Similarly, the state may not deny any medical services solely because (ILLEGIBLE) diagnosis, type of illness or condition." The court ruled that states (ILLEGIBLE) provide all medically necessary services; the power to determine (ILLEGIBLE) was vested solely in the treating physician. The Fifth Circuit (ILLEGIBLE) and remanded, finding the case "unripe for summary disposition." (ILLEGIBLE) held that the state should have been permitted to show at trial (ILLEGIBLE) Georgia's Medicaid program had a ban against reimbursing ex-(ILLEGIBLE) treatment because such treatment is unnecessary and (ii) that (ILLEGIBLE) surgery is experimental or (iii) that the Medicaid plan provided (ILLEGIBLE) reimbursement but denied payment to plaintiff on an individual-

The Gender Identity Movement: A Growing Surgical-Psychiatric Liaison

Ira B. Pauly, M.D. and Milton T. Edgerton, M.D.

The evaluation and treatment of individuals with gender identity problems has resulted in an interesting and productive collaboration between several specialties of medicine. In particular, the psychiatrist and surgeon have joined hands in the management of these fascinating patients who feel they are trapped in the wrong body and insist upon correcting this cruel mistake of nature by undergoing sex reassignment surgery. Over the last two decades, some 40 centers have emerged in which interdisciplinary teams cooperate in the evaluation and treatment of these gender dysphoric patients. The model for this collaboration began at The John Hopkins Hospital, where the Gender Identity Clinic began its operation in 1965 (Edgerton, 1983; Pauly, 1983). This "gender identity movement" has brought together such unlikely collaborators as surgeons, endocrinologists, psychologists, psychiatrists, gynecologists, and research specialists into a mutually rewarding arena. This paper deals with the background and modern era of research into gender identity disorders and their evaluation and treatment. Finally, some data are presented on the outcome of sex reassignment surgery. This interdisciplinary collaboration has resulted in the birth of a new medical subspecialty, which deals with the study of gender identification and its disorders.

KEY WORDS: transsexualism; interdisciplinary; gender identity; genital surgery; sex change.

This paper was presented at the Eighth International Gender Dysphoria Association Meeting, in Bordeaux, France, on September 16, 1983.
Department of Psychiatry and Behavioral Science, University of Nevada School of Medicine, Reno, Nevada 89557.

MAY 28 1993

The Honorable Butler Derrick
Member, U.S. House of Representatives
Post Office Box 4126
Anderson, South Carolina 29622

Dear Congressman Derrick:

This letter is in response to your inquiry on behalf of your constituent, (b)(6) , who suffers from heart disease. (b)(6) has suggested that the Americans with Disabilities Act ("ADA") may impose an obligation on food service establishments to modify their practices so as to provide certain nutritional information regarding the foods and condiments they offer and to provide reasonable food substitutes for the benefit of persons with special dietary needs.

The ADA authorizes this Department to provide technical assistance to individuals and entities that have rights or responsibilities under the ADA. Therefore, this letter provides informal guidance to assist you in responding to (b)(6) However, this technical assistance does not constitute a legal interpretation, and it is not binding on the Department of Justice.

Under title III of the ADA, a public accommodation, including a food establishment, is obligated to make reasonable modifications in its policies, practices, or procedures when the modifications are necessary to ensure that individuals with disabilities have access to the same goods and services that are offered to persons without disabilities, unless the modifications would fundamentally alter the nature of those goods and services. Accordingly, a food service establishment may need to reasonably modify its policies, practices, or procedures to ensure that persons with disabilities who have special dietary needs are provided with nutritional information regarding the food that is customarily served, unless the modifications would fundamentally alter the nature of its goods and services. For a fuller discussion of this issue, please refer to section 36.302 of the

cc: Records, Chrono, Wodatch, Breen, Delaney, McDowney, FOIA

enclosed title III regulation, pages 22-24 of the enclosed Title III Technical Assistance Manual, and page 4 of the January 1993 Supplement to the Manual.

However, title III of the ADA does not require a food service establishment to alter its inventory to provide special food products for those persons who may have special dietary needs, unless, in the normal course of its operation, it makes special orders an request for unstocked goods, and if the accessible or special goods can be obtained from a supplier with whom the public accommodation customarily does business. For a fuller discussion of this issue, please refer to section 36.307 of the enclosed title III regulation and pages 23-24 of the Technical Assistance Manual.

(b)(6) also may wish to contact the Food and Drug Administration ("FDA") of the Department of Health and Human Services concerning the FDA's authority to require nutrition labeling on foods. See, e.g., 21 U.S.C. SS 343(q) and 343(r).

I hope this information is helpful in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Congressman Butler Derrick
315 South McDuffie Street
Anderson, SC 29621

Dear Butler:

I have heart disease which was discovered in onset of a heart attack. I have experienced a gre through medical and lifestyle treatment. To continue the recovery I must continue with prescribed exercise, stress control, and a healthy, balanced diet.

My dietary habits must exclude caffeine, cholesterol, fats; must reduce sodium; and must increase certain nutrients. I am able to do this and have done so without exception with home prepared foods, but I must have some assistance in being able to accomplish it as a patron of food service establishments.

I need for nutritional information to be supplied for all foods and condiments offered so that I may regulate my treatment regarding my disabling condition, and I need for some reasonable substitutes to be offered in certain areas.

XX

These two needs regarding my disability, (1) being the nutritional information and (2) certain reasonable substitutes, are the same as the needs of a large percentage of our population, including those with allergies, asthma, certain types

of arthritis, many types of cancer, diabetes, obesity, and many others, as well as a growing segment of the population seeking to avoid and prevent these and other conditions. Thus, it has been hoped, since it would be "good" for all patrons as well as being needed by so many, and therefore obviously good for business in general, that these needs would have been met by food service establishments. However they have not been met except to the extent of some labeling by some fast food chains.

01-02322

The Americans With Disabilities Act has been in effect since January of 1992 as to places of public accommodation and it requires that these needs be met.

The Americans With Disabilities Act provides in some of the general, pertinent parts:

> "No individual should be discriminated against on the basis of disability in the full and equal enjoyment of the goods, services, facilities, privileges, advantages or accommodations of any place of public accommodation by any private entity who owns, leases (or leases to), or operates a place of public accommodation."
>
> ***
>
> "A public accommodation shall make reasonable modifications in policies, practices or procedures when the modifications are necessary to afford goods, services, facilities, privileges, advantages or accommodations to individuals with disabilities, unless the public accommodation can demonstrate that making the modifications would fundamentally alter the nature of the goods, services, facilities, privileges, advantages or accommodations."

I have addressed the subject of the application of the ADA to food service establishments with labor attorneys who specialize in the ADA and it has been confirmed that these

provisions do apply to impose upon food service entities the duty of assisting all of us with disabilities in the full and equal enjoyment of their offerings.

These two reasonable modifications are essential to millions of Americans with disabilities and are desired by millions more who seek to prevent the onset of adverse health conditions. Yet the food service industry is ignoring the problem and I cannot find an appropriate agency to begin communicating this and enforcing the ADA. I will appreciate it if you can locate the proper, interested agency - and hopefully a named individual - with whom I could address the problem and seek the enforcement of the ADA in this area.

I believe that this approach will have a long term, favorable effect on the difficult health care issue and I suggest that wellness, healthy lifestyles, and nutritious offerings in all food service establishments be incorporated into the national health care reform package.
01-02323

Thank you for your attention to these remarks and thank you for whatever assistance you can provide. Let me know if you need additional information or more specific data.

Sincerely,

XX

MAY 28 1993

XX
XX
(b)(6)

Dear XX

This letter is in response to your inquiry to Senator Glenn seeking information on filing a complaint under the Americans with Disabilities Act of 1990 ("ADA").

ADA enforcement is divided primarily among four Federal agencies: the Equal Employment Opportunity Commission, the Department of Transportation, the Department of Justice, and the Federal Communications Commission. Each enforcement agency has issued regulations to implement the provisions of the ADA that are within the agency's area of responsibility, and each agency has established a mechanism through which alleged violations of

the Act may be investigated. Complaints alleging violations of the ADA should be sent to the appropriate enforcement agency, as follows:

1) Title I (Employment)

U.S. Equal Employment Opportunity Commission (EEOC)

To find the nearest EEOC office, call
(800) 669-4000 (voice) or (800) 800-3302 (TDD).

2) Title II (Public transportation)

U.S. Department of Transportation
400 Seventh Street, S.W.
Washington, D.C. 20590

3) Title II (Public services)

Eight Federal agencies designated in section 35.190 of the Department of Justice title II regulation (copy enclosed). For the convenience of complainants, complaints may be sent to the following address at the

Department of Justice, which will ensure that they reach the appropriate Federal agency.

Coordination and Review Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66118
Washington, D.C. 20035-6118

4) Title III (Public accommodations/commercial facilities/entities that provide professional certification/private transportation providers)

Public Access Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66738
Washington, D.C. 20035-6738

5) Title IV (Telecommunications)

The Federal Communications Commission
1919 M Street, N.W.
Washington, D.C. 20554.

All complaints should be in writing and should set forth, in as complete a manner as possible, the factual circumstances surrounding the complaint.

The Americans with Disabilities Act authorizes the Department of Justice to investigate alleged violations of title III, which prohibits discrimination against persons with disabilities by public accommodations and commercial facilities. However, the Department of Justice may seek judicial relief only in instances where there appears to be a pattern or practice of discrimination or where an issue of general public importance is involved. Any such action is taken an behalf of the United States. We do not act as an attorney for, or representative of, an individual. Please be aware that because of the large volume of complaints we have received, and our limited resources, we are not able to investigate each complaint.

For your reference, I have enclosed copies of the Department of Justice regulations implementing titles II and III of the ADA and the Department's technical assistance manuals.

I hope that this information is helpful to you in understanding the provisions of the ADA.

Sincerely,

John L. Wodatch

Chief
Public Access Section
Civil Rights Division

March 12, 1993

Dear Senator Glenn:

The March 11 issue of the Columbus Dispatch carried an AP article that highlighted the "Americans with Disabilities Act". Emphasis on on the fact that only 10 lawyers were assigned to handle all cases that now total 900. On the surface, this appears to be gross understaffing.

However, the purpose of my letter is that I may have a valid complaint as well. Can you provide the address of the agency to which I should send my correspondence.

Yours truly,
XX

Re: Old Complaint Number XX
New Complaint Number XX

Dear Mr. XX (b)(6)

This letter constitutes the Department of Justice's Letter of Findings with respect to the complaint filed with our office on July 13, 1992, against the City of East Lansing, Michigan, under title II of the Americans with Disabilities Act (ADA). (Please note the new complaint number.)

Your complaint alleges that the City of East Lansing, and, more specifically, East Lansing's paramedics, fire department, and police department, do not adequately address the needs of individuals with seizure disorders. You point to a specific incident which occurred on April 25, 1992, when you had a seizure and were restrained and taken to the hospital against your will. This letter does not address the other incidents you mentioned in your letter (the deaths of two boys at the University Center Boys Home and the incident at Sparrow Hospital in which you were allegedly given too much valium), as these incidents occurred well before the effective date of the ADA.

The Civil Rights Division has completed its investigation of your complaint. Our investigation revealed that East Lansing trains its police and paramedics in the handling of individuals who are experiencing seizures. The City of East Lansing requires that paramedics be certified by the State of Michigan. In order to gain this certification, and in order to be recertified every three years, Michigan requires extensive training, which includes lectures, demonstrations, and practice on the handling of individuals with seizure disorders. Additionally, police officers are provided training in first aid, which includes training on the management of individuals experiencing seizures.

cc: Records CRS Chrono Friedlander Milton.complnts.38-8.lof

01-02330

East Lansing also has adopted by ordinance a policy that prohibits discrimination against people with disabilities in public accommodations or public services. The ordinance provides at section 1.127(3)(b)(i) that a person shall not "Deny an individual the full and equal enjoyment of the goods, services, facilities, privileges, advantages, or accommodations of a place of public accommodation or public service because of . . . handicap . . . ." This policy applies to all services provided by the city, including police, fire, and paramedic services. This policy provides for a dispute resolution process which is in addition to the dispute resolution process provided for in the City's ADA grievance process.

Furthermore, the City of East Lansing has worked directly with you in the past to provide training to businesses and City departments on the needs of persons with seizure disorders. A chart used in the training was mailed to businesses in the City so that, in the event business operators could not get the training directly, they would at least have a copy of the instructional chart.

With regards to the incident of April 25, the evidence indicates that the actions of the police and the paramedics were not discriminatory. You had apparently had many seizures in the past which had not been treated with restraint and hospitalization. In this instance, you had hit your head fairly hard, and the police and paramedics were concerned by your combativeness upon coming out of the seizure, which is something you had not exhibited in the past. Additionally, you informed the paramedics that you had had twenty-two seizures in the past month, and they were concerned that your medication was no longer appropriate and that you might be suffering from low blood sugar. There is no evidence, and you make no allegation, that the restraint of the police or the paramedics was excessive.

Finally, Gary Eisenberg, a Human Relations Specialist with the City of East Lansing, has had a working relationship with you for six years. During this time he has mediated many disputes for you and helped you make East Lansing law enforcement and public service employees aware of your needs. In May of 1992, after experiencing many intense seizures and almost falling down a flight of stairs, you called Mr. Eisenberg to get his help. He suggested that you get definitive written instructions from your doctor concerning the proper treatment of your seizures that could be communicated to police, paramedics, and public service employees. This letter, dated June 12, 1992, written by Drs. XX and XX , who regularly treat you, confirms that, in some instances, appropriate treatment may require acute medical

management. Based on this letter, the City could not be expected to preclude the possibility of hospital treatment in certain circumstances.

Based on the foregoing information, we have concluded that East Lansing has adequately addressed the needs of individuals with seizure disorders.

This letter constitutes our Letter of Findings with respect to your allegations of discrimination in your administrative complaint. If you are dissatisfied with our determination, you may file a private complaint in the United States District Court under title II of the ADA.

This letter does not address other potential claims of discrimination on the basis of disability that may arise from the activities of East Lansing's paramedics, fire department, and police department. Rather, this letter is limited to the allegations presented in your complaint.

Under the Freedom of Information Act, 5 U.S.C. 522, we may be required to release this letter and other correspondence and records related to your complaint in response to a request from a third party. Should we receive such a request, we will safe-guard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information that could constitute an unwarranted invasion of your or other's privacy.

Sincerely,

Stewart B. Oneglia

Monessen, Pennsylvania XX (b)(6)

Dear XX

This letter responds to your correspondence regarding the application of the Americans with Disabilities Act (ADA) to the location of accessible parking spaces relative to an accessible entrance.

The ADA authorizes the Department of Justice to provide technical assistance and information to individuals and entities who have questions about the Act, including the Department's regulations and its standards for accessible design. This letter provides informal guidance to assist you in understanding and complying with the ADA accessibility standards. However, this technical assistance should not be viewed as legal advice or a legal opinion about your rights or responsibilities under the ADA and it is not binding on the Department of Justice.

The Department's accessibility standards at section 4.6.2 (page 35631 of the enclosed Federal Register document) do require that accessible parking spaces serving a particular building must be located on the shortest accessible route of travel to an accessible entrance. In some instances, local fire engine access requirements prohibit parking immediately adjacent to a building; if such is the case, a marked crossing may be used as part of the accessible route to the entrance.

Please feel free to contact the Public Access Section when you have questions or need information. The Department maintains a telephone information line to provide technical assistance regarding the rights and obligations of individuals, businesses, agencies, and others covered or protected by the ADA. This

technical assistance is Available by calling 202-514-0301 (voice)

XX (b)(6)

Dear Sir,

I am inquiring about the recent American Disability Act passed.
I need information as to the rules and regulations or requirements of handicapp parking. My question refers to the location of this parking - such as it should be a requirement to be as close to the entrance of any public building -not to need to cross over the traffic area. Is there any such ruling. Handicapp parking should be closest to an entrance so as not to require a person trying to walk across traffic is it not? Please send me any information refering to this particular problem. Thank you.

DJ 202-PL-232

JUN 7 1993(stamp)

Mr. Richard Buchanan, AIA
Vice President
Building Analytics
528 State Street
Glendale, California 91203

Dear Mr. Buchanan:

This letter responds to your correspondence regarding the application of the Americans with Disabilities Act (ADA) to existing buildings and facilities of the California State University system.

The ADA authorizes the Department of Justice to provide technical assistance and information to individuals and entities who have questions about the Act or the Americans with Disabilities Act Accessibility Guidelines (ADAAG). This letter provides informal guidance to assist you in understanding and complying with the ADA accessibility standards. However, this technical assistance should not be viewed as legal advice or a legal opinion about your rights or responsibilities under the ADA.

Section 35.150 of the Department of Justice's Final Rule for Title II states that a public entity, such as a State University, is required to provide "program accessibility," i.e., each service, program, or activity conducted by a public entity, when viewed in its entirety, must be readily accessible to and usable by individuals with disabilities. This requirement is not a mandate to make all buildings accessible but rather to assure that, in the most integrated setting appropriate, individuals with disabilities can participate in the services, programs, or activities that are provided by the university. Structural changes (physical changes) in existing facilities are required only when there is no other feasible way to provide program accessibility.

In existing buildings, when program accessibility can be provided only through architectural modifications of the physical

cc: Records, Chrono, Wodatch, Magagna, Harland, FOIA, Friedlander
n:\udd\mercado\plcrtltr\buchanan.ewh

01-02336

plant, those alterations must be done in compliance with ADA standards. Section 35.151 establishes that either the Uniform Federal Accessibility Standards (UFAS) or the Americans with Disabilities Act Accessibility Guidelines (ADAAG) may be used, except that the ADAAG elevator exemption does not apply. The ADA establishes minimum standards for accessibility but does not preempt other accessibility regulations in force in the locality. If a particular provision of a State or local accessibility code, such as California's Title 24, is more stringent than a similar ADA provision, conformance with the local provision is still required.

When a public entity has already complied with self-evaluation requirements of a regulation implementing section 504 of the Rehabilitation Act of 1973, the self-evaluation required by 35.105 applies only to policies and practices not included in the earlier self-evaluation. However, because programs and functions may have changed in the years since the 504 evaluation was done, a public entity may choose to evaluate all its programs and practices in light of the ADA requirements.

We hope that this information is helpful to you in understanding the requirements of the ADA regulations.

Sincerely,

John L. Wodatch
Chief
Public Access Section

File No.: 92115

Reference: Request for clarification on specific requirements of the Americans with Disabilities Act

Dear Sirs:

The Los Angeles office of Building Analytics has contracted with the California State University system to prepare a Transition Plan for all campus facilities in accordance with the Americans with Disabilities Act. It

is our understanding of the ADA regulations that under Title II, public entities such as the state university system should utilize the UFAS regulations to identify the existence of architectural barriers. Corrective work to undertaken to remove barriers should follow either the UFAS regulations or Title 24, the California State Building Code whichever is most stringent. Please advise if our understanding of the regulations is correct.
In addition, our understanding of the subparagraph section 4.1.6 Accessible Buildings: Alterations, is that if the building was constructed before 1984, and meets the requirements of ANSI 1961/1971, than no corrective action would be required to make the building accessible. However, if the building did not comply with the requirements of the ANSI Standard, then corrective action should be undertaken to comply with the requirements of UFAS. If the building was constructed after 1984, and meets the requirements of UFAS, than no corrective action would be required. However, if the building did not comply with the requirements of UFAS corrective would be required at the current time to comply.
Again,
any corrective action would have to comply with Title 24 of the California Administrative Code in addition to UFAS, whichever is more stringent.

Please advise if our understanding of the intent of the regulations is correct.
Sincerely,
BUILDING ANALYTICS

Mr. Francis Masson
Accessible Services Coordinator
Alameda-Contra Costa Transit District
1600 Franklin Street
Oakland, California 94612

Dear Mr. Masson:

This letter responds to your inquiry regarding the applicability of Department of Justice regulations to signage at

your transit district's bus stops and to printed materials produced by your transit district.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

Your letter asks about requirements for signs at bus stops which provide route and schedule information, timetables, maps, etc. You also inquire into which, if any, of the published materials you offer must be printed in accessible formats for persons with vision impairments.

The applicable federal regulation in this area was issued by the Department of Transportation. Under DOT's regulation, both public and private entities must make available to individuals with disabilities adequate information concerning transportation services. This obligation includes making communications and information available by accessible formats and technology (e.g., Braille, large print, TDDs, etc.), to enable users to obtain information and schedule service. For more detail, see the enclosed DOT regulation at 49 C.F.R. 37.167(f) at page 45640 and page 45755 ("Construction and Interpretation" Appendix).

John Wodatch
Department of Justice, Civil Rights Division
Office of ADA

P.O. Box 66118
Washington, DC 20035-6118

Dear Mr. Wodatch:

This letter is to confirm my understanding of the Department of Justice's ADA requirements for two specific issues. I spoke with one of your ADA specialists over the phone who was very helpful, and who answered the two questions outlined below. Could you please respond in writing as to whether my understanding is correct?

ISSUE 1: Does the DOJ have any regulations for specific type-face requirements for signs at bus stops which provide route/schedule information, timetables, maps, etc.?

ANSWER: No, there are no DOJ regulations on this. I should contact the Architectural and Transportation Barrier Compliance Board at 202-272-5434.

ISSUE 2: Does the DOJ have any regulations regarding requirements for type-face size for printed materials, in-house or public? Under what circumstances are we required to produce Braille, tape, large print information? Are these supplementary formats necessary for:

a) all published materials?
b) only information published to the public?
c) only public notices for hearings?
d) only information requested by individuals?

ANSWER: There is some mention of this issue in the DOJ analysis of ADA in the Federal Register, July 1991. Also, DOJ published a Technical Assistance Manual on ADA two weeks ago which deals with this (a copy is being mailed to AC Transit).

Thank you very much.

Sincerely,

(Signature)

202-PL-00102

Mr. Len Krick
Lambert Land Company, Inc.
700 Felicity
Bay Saint Louis, Mississippi 39520

Dear Mr. Krick:

I am responding to your letter about the application of The Americans with Disabilities Act (ADA), 42 U.S.C. 12101 et seq., to the alteration of existing ships. I apologize for the delay in our response.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA, and it is not binding on the Department.

Your letter did not specify the nature of the ship that is being altered. The requirements applicable to ships vary depending on whether they are owned by public or private entities, and whether they are used primarily to provide transportation or they are "places of public accommodation."

Privately owned ships are subject to the requirements of The Department of Justice regulation implementing title III if they are "places of public accommodation" as that term is defined by the ADA. Publicly owned ships that are used for purposes other than providing transportation are subject to this Department's regulation implementing title II of the ADA.

Ships operated by a private entity that is primarily engaged in the business of providing transportation and ships operated by public entities as part of a public transportation system (e.g., ferries) are subject to the ADA requirements established by the U.S. Department of Transportation's regulation implementing titles II and III of the ADA, 49 C.F.R. Part 37. Depending on the specific use of a vessel, it is possible for a ship to be

cc: Records, Chrono, Wodatch, Bowen, Blizard, FOIA, Friedlander
n:\udd\mercado\plcrtltr\krick.jlb

01-02342

subject to the requirements of both the Department of Justice and the Department of Transportation regulations.

The Department of Justice regulation implementing title III of the ADA applies to private entities that own, operate, lease, or lease to a private entity whose operations fall within one or more of twelve specified categories. Among those categories are places of lodging, places that serve food or drink, places of public gathering, and places of recreation or entertainment. If a ship is used for a purpose described in these categories, the ship is a place of public accommodation that is subject to the Department of Justice title III regulation to the extent that the operators are subject to the laws of the United States.

If a ship is operated as a place of public accommodation, it must comply with the title III requirements applicable to the provision of goods and services, which include nondiscriminatory eligibility criteria; reasonable modifications in policies, practices, and procedures; provision of auxiliary aids; and the removal of barriers in existing facilities. However, at this time, a ship is not required to comply with specific accessibility standards for new construction or alterations because no Federal standard for the construction of accessible ships has been developed.

A ship that is owned and operated by a public entity is subject to the nondiscrimination requirements of this Department's title II regulation, 28 C.F.R. Part 35. The Title II regulation requires that programs, services, and activities conducted by public entities' in existing facilities must be made accessible to people with disabilities unless the public entity can demonstrate that providing access will result in undue financial and administrative burdens. The title II regulation does not establish any specific design or construction requirements for ships.

Under the regulation issued by the Department of Transportation, privately owned ships may be subject to that Department's regulation if they are operated by a private entity that is primarily engaged in the business of providing transportation. Publicly owned ships that are used as part of a system of public transportation system are also subject to the requirements of the Department of Transportation's rule.

The Department of Transportation has not yet established specific requirements applicable to ships; however, that Department has stated that ships registered under foreign flags that operate in United States ports may be subject to United States regulations (which would include the title III regulation

discussed above) unless there are specific treaty prohibitions that preclude enforcement. Additional information about the regulation issued by the Department of Transportation may be
01-02343

obtained from the Office of the General Counsel, U.S. Department of Transportation, 400 7th Street, S.W., Washington, D.C. 20590.

Copies of the Department of Justice regulations implementing title II and title III, the Title II Technical Assistance Manual, and the Title III Technical Assistance Manual are enclosed for your information. I hope that this information is helpful to you.

Sincerely,

L. Irene Bowen
Deputy Chief
Public Access Section

P. 0. Box 66118
Washington, DC 20035-6118

Dear Mr. Wodatch:

Please send us the applicable regulations and requirements of the Act which apply to U. S. registered ships operating in the United States. We are currently in a very crucial phase of a project to refit an old ship.

Also could you please answers the following specific questions:

1. Are the-standards/requirements different for ships built before January 26, 1992 and after that date?

2. Our ship was built in the late 1970's. Would it have to meet the newer standards if the refit is completed before January 26, 1992? What if it is completed after the effective date?

3. This ship does not have an elevator. It is cost-prohibitive to Install an elevator (over $250,000) Is there any other way that is feasible to enable access to all areas?

4. U. S. Coast Guard requires raised-thresholds for external doorways. We understand that U. S. C. G. believes that ramping on either side defeats the intended reasoning for raised thresholds: water-tight compartmentalization and flood control. How can this be handled?

5. Is access to all decks and spaces by the disabled required by the Act?

6. Do foreign-flagged vessels trading in the U. S., such as the ships in Florida, also come under the Act?

BAY COVE HARBOUR
DOCKSIDE CASINO

01-02345 (handwritten) 202-PL-00102

7. If a vessel is used in a semi-permanently moored mode(operated at a pier) does that make a difference in application of the Act with regard to U. S. registered vessels.

8. If a ship is operated at a pier (i.e. does not cruise), can the access requirements of the Act be satisfied by building multiple ramped gangways on land by which the disabled can access each deck? If so, would this relieve the business from the responsibility to provide internal access to each deck?

We would appreciate an expeditious reply to these questions, as we were currently suspending the completion of the refit work until we know what the Act requires in the various ship related situations.

Sincerely,

Len Krick
General Manager

Re: Old Complaint Number XX
New Complaint Number XX

Dear Ms. XX (b)(6)

This letter constitutes the Department of Justice's Letter of Findings with respect to your complaint against New Hanover County, North Carolina, under title II of the Americans with Disabilities Act (ADA). Your complaint alleges that the County failed to post notices required by title II, that County supervisors discriminatorily released your medical files, and that then-County Commissioner Barfield made discriminatory statements at a County Board meeting that was addressing your grievance against the County.

The Civil Rights Division has completed its investigation of your complaint. Our investigation revealed the following information.

New Hanover County purchased posters that inform employees and other interested persons of the protection afforded by title II. These posters have been circulated to all County departments with the instructions that they be placed in a conspicuous location within the department. Furthermore, you informed us in

a phone call on November 17, 1992, that the notices had been posted. The matter you raised about the County's failure to post such notices has thus been resolved.

We received from the County a copy of your personnel file. It does not appear that any medical records were placed in those files as you claimed. The County informed us, furthermore, that your medical files are kept in the locked desk drawer of your supervisor and that the letter addressed to you at Psychiatry-2 South, N.C.M.H., about which you specifically complained, will be moved into that file or destroyed. We therefore find no cause to

cc: Records CRS Chrono Friedlander Milton.complnts.54.5.loft
FOIA Breen

01-02347

determine that a violation of the ADA has occurred because of the handling of your medical records.

We also received from you and from the County information regarding the statement made by then-commissioner Barfield at your grievance hearing during the County Board meeting. Mr. Barfield apparently asserted that an employee who has consulted a psychiatrist is unable to supervise other employees. While this may have been an inappropriate assertion that theoretically could contribute to a hostile environment, you make no allegation of a nexus between this statement and the Commissioners, finding against you in the hearing, and a single statement, without more, does not rise to the level of discrimination under existing civil rights laws. We therefore find no cause to determine that a violation of the ADA has occurred because of Mr. Barfield's statement during your grievance hearing.

Finally, in May of 1992, the County amended its personnel policy to include a provision stating that "[a]ll personnel responsible for recruitment and employment will . . . assure that equal employment opportunity is being actively observed, to the end that no employee or applicant for employment, will suffer discrimination because of . . . physical or mental handicap."

Based on the foregoing information, we have concluded that

all of your allegations of discrimination by New Hanover County have either been resolved or do not constitute violations of the ADA. However, if you are dissatisfied with our determination, you may file a private complaint in the United States District Court under title II of the ADA.

This letter does not address other potential claims of discrimination on the basis of disability that may arise from the activities of New Hanover County. Rather, this letter is limited to the allegations presented in your complaint.

Under the Freedom of Information Act, 5 U.S.C. 522, we may be required to release this letter and other correspondence and records related to your complaint in response to a request from a third party. Should we receive such a request, we will safe-guard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information that could constitute an unwarranted invasion of your or other's privacy.

01-02348

If you have any questions concerning this letter, please feel free to call Naomi Milton at (202) 514-9807. Please note the new complaint number assigned to this case.

Sincerely,

(Signature)

T. 6-11-93

DJ 202-PL-341 June 14, 1993
DJ 202-PL-409

Mr. W.E. Olson
Engineering Supervisor
CR/PL, Inc.
P.O. Box 389
Nevada, Missouri 64772

Dear Mr. Olson:

This letter responds to your letters to Irene Bowen, dated September 29, 1992, and December 1, 1992, asking a series of questions about the implementation of the Americans with Disabilities Act (ADA). It also confirms the information provided to you by the Public Access Section staff members who met with you and other industry representatives on December 15, 1992, about the issues raised in your letters. Please note that

our responses to your inquiry will only address the application of the Department's regulation to private entities subject to title III of the ADA. You should be aware, however, that the ADA Standards for Accessible Design (Standards) may also be applied to the new construction of, or alterations to, public facilities subject to title II of the Act.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you to understand the ADA. However, this technical assistance does not constitute a determination by the Department of your rights or responsibilities under the ADA, and it is not binding on the Department.

You have asked if the Department intends to adopt, as the standard for new construction and alterations under the ADA, the American National Standards Institute accessibility standard (CABO/ANSI A117.1-1992), which was published by the Council of American Building Officials in January 1993 as a private-sector "voluntary standard."

The ADA Standards are published in Appendix A to the Department of Justice regulation implementing title III, 28 C.F.R. pt. 36. These Standards were originally published as the

cc: Records, Chrono, Wodatch, Bowen, Blizard, FOIA, Friedlander
n:\udd\blizard\adaltrs\olson

ADA Accessibility Guidelines by the Architectural and Transportation Barriers Compliance Board (Access Board) Pursuant to section 504 of the ADA. The ADA requires the Department to issue accessibility standards that are consistent with the guidelines developed by the Access Board. Thus, the Department adopted the Board's Guidelines as the title III standards. The Department would on its own initiative only make changes to the Standards that are consistent with the Access Board's Guidelines and would, of course, only do so after allowing public comment. We would also only follow such a course of action in close coordination with the Access Board. If the Access Board itself changed its Guidelines, the Department would seek to amend the Standards to make them consistent with the Guidelines.

At this time, the Access Board has not announced any plans to adopt the ANSI Standard. As a member of the ANSI A117.1

Committee, the Access Board is committed to working cooperatively with ANSI. The Board relied extensively on the 1980 and 1986 ANSI standards and early drafts of the new ANSI standard in developing the ADA Accessibility Guidelines. However, it is the Access Board, not the ANSI Committee, that is authorized to develop the Federal accessibility guidelines. In developing these guidelines, the Access Board must comply with the requirements of the Administrative Procedure Act, which establishes the formal requirements for the issuance of Federal regulations. The ANSI committee, like any other person or group, may petition the Access Board to consider changes in its Guidelines that could result in the adoption of new language based on ANSI recommendations; however, amendments to the ADA Accessibility Guidelines may only be made after the Access Board engages in a rulemaking proceeding that includes public notice, the opportunity for public comment, and the completion of any revisions to the proposal that are deemed to be required after public comment.

The title III regulation provides that the Department may provide technical assistance to private sector organizations that develop model accessibility standards or codes, in order to assist them to determine if their models are consistent with the requirements of the ADA. At the request of CABO, which serves as the secretariat for the ANSI A117.1 Committee, the Department is now reviewing the ANSI standard to determine if it is consistent with the ADA requirements. It is premature for us to speculate as to whether the revised ANSI A117.1 standard will be determined to be consistent with the ADA requirements.

Your letter indicates that you are having some difficulty applying the ADA Standards. To apply the Standards properly, you must understand that the ADA is Federal civil rights legislation, not a building code. To eliminate discrimination in the built environment, the ADA required this Department to establish minimum standards for the design and construction of new

buildings and for alterations to existing buildings. The Standards provide guidance to those in the building industry as to how to provide minimum levels of accessibility; the Standards do not constitute a strict formula for design, nor are they intended to constrain design innovations that provide equal or greater access. (See, e.g., ADA Standards 2.2, discussed below.)

Title III of the ADA is enforced through compliance reviews, complaint investigations, and litigation initiated by the Department of Justice, and through litigation initiated by private parties. The ADA is not enforced by State or local

building officials, and there is no Federal equivalent to the State code enforcement process. Neither the Department of Justice, nor any other Federal agency, functions as a "building department" to review plans, to issue building permits or occupancy certificates, or to provide "interpretations" of the Standards in that context. The ADA, like all other Federal civil rights laws, requires each covered entity to use its best professional judgment to comply with the statute and the implementing regulations.

For example, section 2.2 of the ADA Standards expressly provides that "[d]epartures from particular technical and scopinq requirements of this guideline by the use of other designs and technologies are permitted where the alternative designs and technologies used will provide substantially equivalent or greater access to and usability of the facility." However, the ADA does not provide for a mechanism through which the Department of Justice, the Access Board, or any other entity may certify any specific variation from the standards as being "equivalent."1 Proposed alternate designs, when supported by available data, are not prohibited, but in any ADA investigation or lawsuit, the covered entity would bear the burden of proving that any alternative design provides equal or greater access.

Sections 3.1, Graphic Conventions, and 3.2, Dimensional Tolerances, which you have questioned, are drawn directly from ANSI A117.1-1980 and ANSI A117.1-1986. They are not further defined in the regulation. Read together, they establish the principle that all of the technical requirements of the regulation must be followed in the design and construction of the

1 The ADA permits the Department, upon the request of a State or local government, to certify that a State or local accessibility code meets or exceeds the requirements of the ADA. Compliance with a certified code is considered evidence of compliance with the ADA. If the certified code's technical requirements differ in some respect from the ADA standard, compliance with those code requirements may be considered "equivalent facilitation."

elements of a facility that are required to be accessible, while recognizing that the idiosyncrasies of specific sites may result in minor variations from these technical specifications when the element is built or installed.

You have also asked whether the appendix to the ADA Standards is enforceable. The appendix, like the appendix to the ANSI standard, is not enforceable; it simply provides

supplementary information to assist people in applying the Standards (see ADA Standards 3.3).

Please note that the requirements of the ADA Standards apply only to new construction and alterations (as defined in the title III regulation). Facilities built or altered prior to the effective date of the ADA are considered to be existing facilities and they are not required to comply with the new construction requirements. Places of public accommodation in existing facilities are required to remove barriers in these existing facilities to the extent that it is readily achievable to do so; however, there is no requirement to retrofit existing facilities to new construction standards.

Your letter correctly notes that section 4.16.3 of the ADA Standards requires that the height of an accessible toilet shall be between 17 and 19 inches, measured to the top of the toilet seat. In new construction, or when a toilet is being altered, this requirement must be followed strictly. The ADA regulation defines "new construction" as a building or facility that is designed and constructed for first occupancy after January 26, 1993.

You have asked specifically if you may follow section 4.20.3.1 of the CABO/ANSI A117.1-1992 accessibility standard as the standard for leg clearances at accessible sinks and lavatories rather than requirements of the ADA regulation (4.19.2 and Fig. 31). Both the ADA Standards and the ANSI Standard require a knee clearance of at least 27 inches beneath sinks. The ADA requirement is absolute, but the ANSI standard would permit an entity to ignore the dip of the overflow valve on a lavatory when determining the knee and leg clearances on lavatories. We would not advise ignoring the dip because an obstruction into the knee space, even one of a small magnitude, could prevent clearance by some individuals. For example, an obstruction in the center of a lavatory could prevent its use by a person who uses a wheelchair and whose legs are held together by a brace.

You have also asked for an explanation of the dimensions in Section 4.21.2, Shower Stalls. As we discussed in December, the dimension measurements for the 36 inch by 36 inch shower, the 36 inch by 60 inch (min) shower, and the 30 inch (min) by 60 inch (min) shower are interior dimensions. Section 9.1.2, applying to

transient lodging, permits the use of either of the roll-in showers with folding seats shown in figure 57.

The stall sizes are consistent with other requirements

contained in the ADA Standards. For example, the shower dimension of 30 inches (min) by 60 inches (min) (4.21.2 and Fig. 35 (b)) is consistent with the requirement for a 60 inch maneuvering clearance in an alcove deeper than 15 inches (4.2.4.2 and Fig. 4(e)). In the 36 inch by 60 inch shower (9.1.2 and Fig. 57 (b)), the 36 inch width is necessary to ensure that a wheelchair can make a turn into the shower from the 36 inch wide opening into the 36 inch wide space in front of the shower head. These dimensions are consistent with those required under the accessible route provisions (4.3.3 and Fig. 7(a)).

As shown in Figure 35, the measurements of the 36 inch by 36 inch stall are absolute. The 36 inch width dimension is essential to allow the person seated on the seat to use grab bars and shower controls. The measurements of the 30 inch by 60 inch stall are minimum dimensions. As shown in Figure 57(b), the 36 inch dimension for the stall width is absolute. As in the 36 inch by 36 inch stall above, this width is necessary to allow a person seated on the folding seat to use the opposite grab bar for support. All other dimensions are minimums.

As discussed above with respect to sections 3.1. and 3.2, all dimensions are subject to conventional building industry tolerances for field conditions, as provided in section 3.2. Similarly, as provided in section 4.26.2, the clearance between the grab bars and the wall is required to be 1 1/2 inches, an absolute dimension subject to dimensional tolerances allowed under section 3.2. It is important to note that these dimensional tolerances apply to the construction, manufacture, or operation of a system, not to the design. However, even close tolerances during construction or manufacture cannot ensure continued conformance to a given standard. Entities covered by the ADA cannot rely on dimensional tolerances as a justification for problems caused by inadequacies in maintenance, design, or construction.

In response to your question related to section 4.21.7, which prohibits curbs on roll-in showers, several approaches have been used to keep water in the shower area. Two examples that were discussed at your meeting with Department staff are: (1) having the floor of the room slope gently toward the drain in the shower, or (2) having a 1/2 inch beveled edge at the shower (as allowed under section 4.3.8) with the shower area sloping gently to the drain.

You are correct that the issue of shower "curtains" and their location is not addressed in the Standards; therefore, there are no technical specifications that a shower curtain must

meet. However, the ADA Standards do require that if bathtub enclosures are provided, they shall not obstruct the controls or transfer from wheelchairs (4.20.7).

The provisions that apply to in-tub seats are contained in section 4.20.3. Figure 33(a) illustrates the placement of such seats in tubs and the required clear floor area. The illustration is simply representational. The figure contains no no additional dimensions or requirements for in-tub seats. In contrast, figure 33(b) contains additional requirements for a built-in seat at the head of the tub showing not only where the the seat should be located but also its required depth, 15 inches.

We have discussed your questions on where measurements are to be taken with the Access Board and have been informed that the Board is currently investigating several issues related to the measurement of showers and shower seats. If you wish, we will arrange a meeting for you, or other representatives of your industry, with the Access Board staff, at which you may discuss your concerns.

I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Office on the Americans with Disabilities Act
Civil Rights Division
U. S. Department of Justice
P. O. Box 66738
Washington, D. C. 20035-9998

Attention: Ms. L. Irene Bowen, Deputy Chief
Public Access Section, Civil Rights Division
Reference: Americans with Disabilities Act (ADA) - Clarifications

Dear Ms. Bowen:
Due to pending jobs in progress and in light of your comments made at the ASPE Technical Session, listed below are areas that need immediate interpretation and clarification.

1. Section 4.19.2 ADA Acceptance of 6-15-92 Draft of A117.1 on Knee and Toe Clearances. My letter to Mr. John Wodatch on Sept. 29, 1992. (Your acknowledgement DJ 202-PL-341 dated 11-3-92.)

2. Section 4.16.3 Closet Seat Height - ADA is min. 17" - Max. 19" - At ASPE Meeting you stated 19 1/4"-19 1/2" was alright. Please clarify.

3. Section 4.21.2 Shower Stalls - Size and Clearance
   A. 36" x 36" Size
   (1.) Where is measurement taken - inside or outside?
   (2.) If this is inside is the measurement taken on centerline, front, back, etc.?
   (3.) What is the tolerances on the 36 inch dimension? It is being interpreted as 36 inch without any tolerances per Section 3.1 as dimensions being absolute.

   B. 60" x 30"
   (1.) Where is measurement taken - inside or outside?
   (a.) If it is inside, the shower will not fit into the pace required for a bathtub. A standard bathtub is 60" x 30" on the outside.
   (b.) If it is outsider what is the minimum inside dimension? In Figure 57(b) the minimum opening as I interpret is 36" minimum. Is this correct?
   (2.) What is the tolerances on the 60" x 30" dimensions? It is being interpreted as 6O" without any tolerances and 30"

minimum. The 60" being absolute per Section 3.1.

(3.) In Figure 57(b) the front to back dimension is shown as 36". Is this to mean that you have to have (2) two sizes: 60" x 30" min. and 60" x 36"?

CR/PL,INC. P.O. Box 389 Nevada, Mo. 64772 417-667-6048

C. Section 4.21.3 Seats - If the seat extends the full depth of the stall this will force the shower curtain to hang outside the unit allowing water to fall on the floor outside of the unit causing a wet slippery unsafe condition to exist.

D. Section 4.26.2 Grab Bars - Clearance between grab bar and wall is called out as 1 1/2 inches. What is the tolerance on this dimension. It is being interpreted as absolute per Section 3.1- it must be 1 1/2 inches no more no less.

E. Section 4.21.7 Curbs - 60" x 30" - Calls cut no curb - What keeps water from running out across floor?

4. Section 4.18.2 Urinals - What constitutes an elongated urinal? There is no definition that I can find.

5. Section 2.2 Equivalent Facilitation - Where do we go to receive an interpretation of this Section?

6. Section 3.2 Dimensional Tolerances - Can you define "all dimensions are subject to conventional building industry tolerances for field conditions"?

7. Section I PURPOSE - The purpose states that "This document sets guidelines for accessibility to places The ADA is being interpreted as absolute law with no variations. If it is not just like the illustrations or verbage it is wrong. Different interpretations whether it is inside or outside dimensions etc.

8. Section 3.1 Graphic Conventions - "Dimensions that are not marked minimum or maximum are absolute, unless otherwise indicated in the text or captions."

This is the section that people are referring when they say that there is no tolerances or variations. This section needs to be deleted or changed.

9. Section 4.20.3 Seat - "In the tub seats" shown in Fig. 33 are not available due to liability concerns.

10.There is no mention of a shower curtain on bathtubs and/or showers. Is it not to be used? Where is it to be located if it is to be used?

11.Is the Appendix part of the enacted law? Are the explanations in the Appendix mandatory?

12.Since the ADA Accessibility Board is a member of the ANSI A117.1 Standards Committee, will the ADA adopt the new language and changes made to the ANSI A117.1 Standard Final Draft dated 6-15-92? If they do, when will it go into affect?

It was a pleasure talking with Ms. Janet Blizard on the above concerns. As Ms. Blizard and I discussed, we, CR/PL, L. P. and the Plumbing Fixture Manufacturers, would be interested in attending a Meeting with the ADA Accessibility Board and the Department of Justice to discuss the above areas of concern. I feel that with some clarifications and explanations that the intent of the Americans with Disabilities Act (ADA) could be made more understandable and useful.

If further information is needed or questions arise on the above, please let me know.

Thank you.

Sincerely,

CR/PL, L.P.

Re: Old Complaint Number XX (b)(6)
New Complaint Number XX

Dear Ms. Pulis:

The Coordination and Review Section of the Civil Rights Division (CRS) has completed its investigation of the above-referenced complaint filed against St. Louis County, Missouri (County), under title II of the Americans with Disabilities Act of 1990 (ADA), 42 U.S.C. 12131-12134, and the Department of Justice's implementing regulation, 28 C.F.R. pt. 35, Because we have been unable to resolve this complaint informally, this is a noncompliance Letter of Findings as required under 28 C.F.R.

35.172. We will, however, continue our settlement efforts by endeavoring to negotiate a voluntary compliance agreement as required under 28 C.F.R. 35.173.

The Coordination and Review Section is responsible for investigation and resolution of administrative complaints alleging violations of title II by certain components of State and local governments, including courts. Title II protects qualified individuals with disabilities from discrimination in the programs, services, and activities of public entities. The complainant, XX alleges that the St. Louis County Court does not ensure effective communications for individuals who are hard of hearing. Specifically, he alleges that the County does not provide assistive listening systems (ALS's) for individuals who request such assistance in order to observe courtroom proceedings.

01-02359

Through letters dated October 19, 1992, and February 4, 1993, and a series of telephone conversations made on October 29, October 30, and December 1, 1992, and March 8, 11, and 16, 1993, we advised you of our receipt of the complaint and sought information about the policies and procedures of the County relating to providing ALS's for courthouse spectators. Based upon our review of the information provided by the complainant and the documents and information the County provided, we have determined that the County is in violation of title II. The basis for our determination is discussed below.

Under the Department of Justice's title II regulation, "no qualified individual with a disability shall, on the basis of disability, be excluded from participation in or be denied the benefits of the services, programs, or activities of a public entity, or be subjected to discrimination by any public entity." 28 C.F.R. 35.130(a) (see also 42 U.S.C. 12132). The title II regulation further requires that public entities "shall take appropriate steps to ensure that communications with applicants, participants, and members of the public with disabilities are as effective as communications with others." 28 C.F.R. 35.160(a). Moreover, a public entity "shall furnish appropriate auxiliary aids and services where necessary to afford an individual with a disability an equal opportunity to participate in, and enjoy the benefits of, a service, program, or activity conducted by a public entity" (28 C.F.R. 35.160(b)) unless the public entity can demonstrate that provision of auxiliary aids "would result in a fundamental alteration in the nature of a service, program, or

activity or in undue financial and administrative burdens." 28 C.F.R. 35.164.

(b)(6)

Before filing his complaint, XX spoke with a representative from the county courthouse and was told that no auxiliary aids were available for individuals who were hearing. impaired. At a later date, on March 17, 1993, XX again visited the County Courthouse to ask if auxiliary aids were available to those who needed them. Again he was informed that the Courthouse did not have any assistive listening devices. The County claims that no request for auxiliary aids at the Courthouse has been denied since the effective date of the ADA. However, the evidence indicates that XX made two requests and that both requests were denied. In denying XX XX requests, the County did not refute or question his need for an auxiliary aid.

The County has submitted a policy statement providing that "any person with business before this court or interested in employment with this court, regardless of disability, whether physical or mental, shall be reasonably accommodated to insure their participation in and/or benefit of all employment opportunities, services and programs conducted by the court." To that end, the County has written an outline of steps to be

followed in securing a sign language interpreter for hearing impaired individuals who have business before the Court or are interested in employment opportunities. This policy, however, does not make provisions for members of the public who do not have specific business before the Court and who are not interested in employment with the Court. Nor does it provide for hearing impaired individuals who cannot understand sign language.

When the County was contacted by CRS staff to determine its willingness to provide assistive listening devices in the County Courthouse, the County stated that its policy was to "accommodate individual situations on a case by case basis." The County disagreed with the Department of Justice's interpretation of its regulations, stating that existing courtroom facilities need not "accommodate any and all spectators of judicial proceedings." In fact, the County stated several times that, while it might be willing to provide ALS's in certain circumstances, such as when the hearing impaired relative of one of the parties to a proceeding was a spectator to the proceeding, it would almost certainly not provide an ALS for a spectator who had no other connection to the proceeding.

As an instrumentality of the St. Louis County government, the St. Louis County Court is a public entity as defined in

section 35.104 of the title II regulations. The court proceedings are part of the "service, program, or activity" offered by the public entity (see 28 C.F.R. 35.130(a)). Complainant XX has a hearing impairment and needs auxiliary aids for effective communication. He is a qualified individual with a disability, as defined in section 35.104.

Section 35.160(a) requires effective communication with "members of the public." The complainant is a member of the public who wishes to benefit from the program provided by the Court. As such, he is entitled to auxiliary-aids-necessary for effective communication, unless the County can demonstrate that provision of the aids would result in a fundamental alteration in the nature of the program or undue financial and administrative burdens (see 28 C.F.R. 35.164).

The County has not demonstrated that the provision of auxiliary aids would fundamentally alter the nature of the program or activity. The County's stated reasons for maintaining its policy regarding auxiliary aids, as provided in its March 16, 1993, letter to the undersigned, are that "[j]udicial proceedings are not a means of governmental entities communicating with members of the public as contemplated by ADA," and "[w]e can find no basis for any requirement that individuals with or without disabilities be accommodated in any manner when their participation in an activity, program or service of any public entity is prohibited and/or the benefit to them is nonexistent as is the case with spectators at judicial proceedings in which they

are not personally or directly involved." While the County does cite expense as one reason for its reluctance to comply with the Department of Justice's regulations, it has not demonstrated that complying with the regulations would result in undue financial and administrative burdens, and, of course, the burden of proving that compliance would result in undue financial and administrative burdens rests with the County. It is clear that the County's failure to comply is based on a legal disagreement about whether compliance is mandated by the ADA, rather than on either the defense of fundamental alteration or that of undue financial and administrative burdens.

The County has indicated that it hired a consultant to determine, among other things, whether the ADA will require that the County's "broadcast systems" be altered by July of 1995, the statutory deadline for making structural changes to government buildings. However, this three year period applies only to structural changes, not to the provision of auxiliary aids. Moreover, no structural changes are required in order to provide

portable assistive listening devices.

The County's stated policy of not providing assistive listening devices to courtroom spectators, without regard to the needs of the individual with a disability, violates the statutory requirement that it provide an equal opportunity for qualified individuals with disabilities to participate in and benefit from its program or activity (see 28 C.F.R. 35.130(a)) and its obligation to provide effective communications (see 28 C.F.R. 35.160). In particular, the policy violates title II of the ADA with regard to complainant XX who requested and was denied the needed auxiliary aid. In order to remedy this violation, the County must change its policy and agree to ensure effective communications, including provision of appropriate auxiliary aids such as assistive listening devices, for participants in and observers of courtroom proceedings.

The Department remains open to discussing these issues and exploring any remedies that could lead to a satisfactory resolution. In that regard, Naomi Milton, the attorney assigned to the case, (202) 514-9807, will be in contact with you in the near future to ascertain whether the County is interested in entering into voluntary compliance negotiations. If the County does not wish to negotiate, or if negotiations are unsuccessful, we are required by 28 C.F.R. 35.174 to refer this matter to the litigating unit, the Public Access Section, for appropriate action.

Of course, this Letter of Findings only addresses the County's policy of not providing ALS's to spectators at the County Courthouse as set forth in the County's letter of March 16, 1993, referenced above. Failure to discuss other policies

and practices in this letter does not constitute a finding with respect to those policies and practices.

Under the Freedom of Information Act, it may be necessary to release this document and related records on request. In the event that we receive such a request, we will seek to protect, to the extent provided by law, personal information which, if released, could constitute an unwarranted invasion of privacy.

Sincerely,

(Signature)

Mr. Garry Stotts JUN 14 1993
Secretary
Kansas Department of Corrections
900 S.W. Jackson - Suite 404N

Topeka, Kansas 66612

Re: Program Accessibility at Lansing State Prison,
Complaint No. XX

Dear Mr. Stotts:

The Coordination and Review Section of the Civil Rights Division has completed its investigation of the complaints filed against the Kansas Department of Corrections (KDOC) under section 504 of the Rehabilitation Act of 1973, as amended, 29 U.S.C. S 794, and the Department of Justice's implementing section 504 regulation, 28 C.F.R. Part 42, subpart G. Since the complainants' allegations of discrimination, if true, are on-going in nature, we also reviewed the allegations under title II of the Americans with Disabilities Act of 1990 (ADA), 42 U.S.C. 12131-12134, and the Department of Justice's implementing regulation, 28 C.F.R. Part 35, which became effective on January 26, 1992. In his letter constitutes the Department of Justice's Letter of Findings and contains our factual findings and legal conclusions with respect to the allegations raised in the complaint.

The Coordination and Review Section investigates administrative complaints alleging violations of section 504 by recipients of Federal financial assistance provided by the National Institute of Corrections, Department of Justice. In addition, this office investigates allegations of discrimination under title II by components of State and local governments in the area of the administration of justice, including correctional institutions, under 28 C.F.R. 35.190(b)(6).

Section 504 prohibits discrimination against qualified individuals with disabilities in the programs, services, and activities of a recipient of Federal financial assistance. KDOC is a recipient of Federal financial assistance from the National Institute of Corrections, Department of Justice and, therefore, it is subject to section 504's requirements.

Title II protects qualified individuals with disabilities from discrimination in a public entity's programs, services, and activities. As an instrumentality of State government, KDOC is a "public entity" subject to the requirements of title II of the ADA. 28 C.F.R. 35.104.

The complainants allege that the programs and activities

provided at the Lansing Correctional Facility (LCF) operated by KDOC are inaccessible to and unusable by individuals with mobility impairments and those individuals whose health would be placed in serious jeopardy should they be required to climb stairs.

One complainant alleged that the following LCF programs, services, and activities are inaccessible to and unusable by individuals who use wheelchairs for -mobility and those individuals whose health would be placed in serious jeopardy should they be required to climb stairs: (1) the library; (2) religious services; (3) legal aid services; (4) the canteen; (5) innate activities; (6) movies shown in the auditorium; (7) special programs; and, (8) a mailbox. This complainant further claimed that these programs, services and activities "... are all (located in] different buildings, the only ones which have a ramp is the dormitory and [it is] in [the] back of the dining room. The disrepair of the ramp in the dormitory has, and is a safety hazard to those confined to wheelchairs."

Another complainant asserted that "[t]he Kansas Department of Corrections ... does not make available to handicapped persons any form of 'athletic', or related equipment, for handicapped participation ...." The complainant further asserted that the "KDOC does not make available any form of Area Vocational Training although the KDOC operates an Area Vocational Training School (AVTS) program ... Such programs are denied to the handicapped."

With respect to the complainants' allegations, we have determined that the Kansas Department of Corrections (KDOC) has not violated title II and section 504 or the pertinent implementing regulations. This conclusion is based on a review of KDOC's policies, procedures, records and documents, photographs, and interviews.

Applicable Regulatory Standards

As a recipient of Federal financial assistance from the National Institute of Corrections, the Department of Justice section 504 regulation requires that KDOC "... shall insure that no qualified handicapped person is denied the benefits of, excluded from participation in, or otherwise subjected to the

discrimination under any program ... because [KDOC's] facilities are inaccessible to or unusable by handicapped persons." 28

C.F.R. 42.520.

In existing facilities, KDOC 11 ... shall operate each program ... so that the program, when viewed in its entirety, is readily accessible to and usable by handicapped persons." 28 C.F.R. 42.521(a). The comments to the Department's section 504 regulation state:

> Facilities available to all inmates ... such as classrooms, infirmary, laundry, dining areas, recreational areas, work areas, and chapels, must be readily accessible to any handicapped person who is confined to the facility.

45 FR 37,629, 36,630 (1980). "This section does not require [KDOC] to make each of its ... facilities (that existed on July 3, 1980] accessible to and usable by handicapped persons." 28 C.F.R. 42.521(a). KDOC may achieve program accessibility by the "... acquisition or redesign of equipment, reassignment of services to accessible buildings, assignment of aids to [inmates], delivery of services at alternative accessible sites, alteration of existing facilities, or any other method that results in making its program accessible to handicapped persons. [KDOC] is not required to make structural changes in existing facilities where other methods are effective in achieving compliance with [the requirements for program accessibility]. In choosing among methods for meeting (program accessibility, KDOC] shall give priority to those methods that offer programs to handicapped persons in the most integrated setting appropriate to obtain the full benefits of the program." 28 C.F.R. 42.521(b).

In addition to the access to the physical space where the program, service, or activity is located, related amenities, such as restroom facilities and water fountains, that are provided to participants must also be accessible.

Section 504's requirement that a recipient provide access to its programs, activities, and services in its existing facilities is the same standard that is contained in the Department's title II regulation. 28 C.F.R. 35.150. Therefore, we have used the same standard for determining KDOC's compliance with section 504 and title II with respect to the accessibility of LCF's programs, services, and activities.

1-02366

Analysis of Facts and Compliance Status

The issues examined during this investigation were the following:

(1) Whether KDOC assigns individuals with mobility impairments to LCF.

(2) Whether any or all of the following LCF programs, activities, or services are located in facilities inaccessible to or unusable by individuals with mobility impairments: (1) the library; (2) religious services; (3) legal aid services; (4) the canteen; (5) inmate activities; (6) movies; (7) special programs; (8) educational programs; and, (9) postal privileges.

(3) With respect to any or all of the LCF programs, activities, or services listed in issue number 2 that are located in inaccessible facilities, whether KDOC has met its program accessibility requirements through alternative means such as (a) acquisition or redesign of equipment; (b) reassignment of inmates; (c) delivery of services at alternative accessible sites; (d) alteration of existing facilities; or, (e) any other method that results in making these programs accessible to individuals with mobility impairments that require the use of wheelchairs and to those who cannot climb stairs without seriously jeopardizing their health.

Our analysis of each issue is presented below.

Issue Number 1

Whether KDOC assigns individuals with mobility impairments to LCF.

Analysis of Issue Number 1

KDOC assigns numerous inmates to LCF who have mobility impairments. In addition to other factors, KDOC assigns prisoners to LCF due to its proximity to medical care that is available to prisoners at nearby locations. In response to our request for information, LCF's warden stated:

The availability of medical services has often been an important consideration for inmates assigned to LCF. Due to its proximity to the Kansas City metropolitan area, LCF has access to more medical specialists and

hospitals then [sic] KDOC facilities in the more rural areas.

As a result of the special medical care that may be obtained, many inmates who have mobility impairments have been assigned to LCF.

In a February 6, 1992, report, KDOC identified 58 persons assigned to LCF who are mobility impaired and use wheelchairs for mobility or cannot climb stairs without seriously jeopardizing their health. Of the 58, 30 were assigned to maximum security, 23 to medium security and five were assigned to the infirmary.

Conclusion

KDOC assigns prisoners to LCF who are mobility impaired.

Issue Number 2

Whether any or all of the following LCF programs, activities, or services are located in facilities inaccessible to or unusable by individuals with mobility impairments: (1) the library; (2) religious services; (3) legal aid services; (4) the canteen; (5) inmate activities; (6) movies; (7) special programs; (8) educational programs; and, (9) postal privileges.

Analysis of Issue Number 2

LCF is divided into four physically separate areas. These include: (1) the central unit with 588 beds in the maximum security compound and 699 beds in the medium security compound; (2) an infirmary located in both the maximum and medium security compounds; (3) the east unit with 40 beds in maximum security and 216 beds under minimum security; and, (4) the minimum security north and south compound with 10 beds and 80 beds respectively.

LCF's maximum and medium security areas are physically separated. The allegedly inaccessible programs are located in both areas. The facilities in the maximum security area contain many architectural barriers to accessibility because they are older. The newer facilities in the medium security area are accessible. KDOC submitted several photographs which show the entrances, path of travel, and architectural barriers for the buildings that house the allegedly inaccessible programs.

Maximum Security

In addition to postal services and movie privileges, we reviewed information concerning nine maximum security programs

and/or services. The athletic and recreational program, vocational education program, and canteen services are located in accessible areas. Six other programs were located in areas of facilities that were inaccessible to individuals with mobility impairments. A brief description of the facilities and programs located in them is as follows:

Building Number 26

Athletic and recreational program: One program, which includes the game and weight rooms, is offered in this one-story building. The entrance to the building is at street level and is accessible to individuals who use wheelchairs. Entrance and interior doors are wider than 35".

Restroom facilities serving this program are accessible but the water fountains are not. Prisoners who cannot access a water fountain due to physical impairments, however, either carry a cup or are provided a cup upon request which permits them to access the water fountains.

Building Number 27

Vocational Education: The vocational education program is offered in this one-story facility. The entrance to the building is at street level and is accessible to individuals who use wheelchairs. All entrance and interior doors are greater than 35" wide.

The restrooms serving this program are accessible but the water fountains are not. Prisoners who cannot access a water fountain due to physical impairments, however, either carry a cup or are provided a cup upon request which permits them to access the water fountains.

Building Number 28

Sex Offender Program: Building Number 28 is a two-story building housing a special program for the treatment of sex offenders on the second floor. The original building was constructed in 1927 and the area that serves the program was renovated in 1987. Since the building is not served by an elevator, an inmate must climb a flight of stairs to reach the program. All entrance and interior doors to the program are greater than 35".

The restrooms and water fountains serving the program are accessible.

Building Number 29

Six programs or services, the canteen, inmate activities, the library, religious services, legal aid services, and academic educational programs are located in Building Number 29. Building Number 29 is a three-story building with a basement that is not served by an elevator. The building was originally constructed in 1936. In 1985, many areas of the building were renovated. It is necessary to use stairs to reach the basement and the upper

levels of this building. The entrance, served by a concrete ramp, is accessible.

All restrooms on all floors in the service and program areas are accessible.

Canteen: Renovated in 1990, the canteen is located on the first floor in a 72' by 60' room. The entrance door to the canteen is over 35" wide and is approximately 36" above street level and is served by an exterior concrete ramp.

Inmate Activities: Inmate activities, which include such endeavors as crafts classes and self-help groups, are located in the basement in several rooms occupying an area 124' by 90' that was renovated in 1985. Entrance and interior doors to all rooms are greater than 35" wide. Inmates must descend a flight of partially-covered, exterior stairs to participate in the programs offered here.

Library Services: Library services, which include a law library and a regular library, are located on the second floor. This area was renovated in 1985. The entrance doors serving all the rooms are more than 35" wide. An inmate must climb stairs to reach the library.

Academic Educational Services: Academic educational services are offered on the third floor. The entrance and interior doors to the various rooms on this floor are over 35" wide. An inmate must climb stairs to reach this program.

Religious Services: Religious services are offered in a chapel on the third floor in an area 901 by 641 that was renovated in 1983. The entrance and interior doors are wider than 35". An inmate must climb stairs to reach the area where religious services are offered.

Legal Aid: Legal aid is located in the basement in a 28' by 19' room. The entrance door to the room is wider than 35". An inmate must descend an exterior, partially covered flight of stairs to reach this room.

Other Services

Postal Services: One complainant alleged that a mailbox serving maximum security prisoners was not accessible because it was located on the second floor requiring one to climb stairs. As with other services, the-focus of our review was whether mailing services when viewed in their entirety are accessible to individuals with mobility impairments.

KDOC reported that inmates receive incoming mail in their living units and indicated that mailboxes are located throughout

the prison site. KDOC also reported that inmates send out packages through the business office and central property room. A mailbox is located in the maximum and medium security yards. Based on photographs provided by KDOC it appears that these mailboxes are accessible to inmates with mobility impairments. In any event, the fact that an inmate has numerous alternatives for mailing materials in addition to the use of one mailbox supports the conclusion that, when viewed in their entirety, LCF's mailing services are accessible.

Movies: one complainant alleged that the movies were inaccessible to maximum security inmates. LCF stated that movies are shown by closed circuit television in an inmate's living quarters. Therefore, LCF provides access to its movies to all inmates on equal terms without regard to their disability status.1

Medium Security

The seven programs serving the medium security inmate population are all located in accessible buildings. The programs include: (1) religious services; (2) inmate activities; (3) athletics programs; (4) legal aid and library services; (5) vocational education services; (6) academic education services; and, (7) the canteen.

Academic educational services, inmate activities, the library, legal aid and the canteen are located in Building Number 44 which was constructed in 1987. All restrooms and water fountains serving these programs are accessible. Vocational

education services are offered in Building Number 38 which was Constructed in 1985. Religious and athletic programs are located in Building Number 40 which was constructed in 1986. All these programs are located in areas that are accessible to and usable by individuals with mobility impairments.

Conclusion

Six programs or activities located in the maximum security area of the prison are inaccessible because they are located in areas of buildings that require the use of stairs to access them. The programs, activities, and services provided in the medium security section are accessible to and usable by individuals with mobility impairments.

1 The only movie facilities identified by KDOC were located in Building 40 in the medium security section of the prison, which is accessible.

Issue Number 3

With respect to any or all of the LCF programs, activities, or services listed in issue number 2 that are located in inaccessible facilities, whether KDOC has met its program accessibility requirements through alternative means such as: (a) acquisition or redesign of equipment; (b) reassignment of inmates; (c) delivery of services at alternative accessible sites; (d) alteration of existing facilities; or, (e) any other method that results in making these programs accessible to programs with mobility impairments that require the use of wheelchairs or to those who cannot climb stairs without seriously jeopardizing their health.

Analysis of issue Number 3

In the maximum security section of LCF, a prisoners freedom to move about the prison area is limited due to security concerns. According to the KDOC Inmate Handbook, "[m]aximum security inmates may move throughout the facility without escort, but only when they are in possession of a properly signed pass. Use of the appointment pass is governed by [LCF's] general orders." All doors to individual buildings are access points which have guards. Under the pass system, no inmate is permitted entry into a building without showing an appropriate pass.

To achieve program accessibility in inaccessible areas of the maximum security facilities, KDOC has acquired three portable

wheelchair lifts. The wheelchair lifts are operated by prison guards assigned to the access points to each building. When an inmate with a mobility impairment presents his pass to a guard at the entrance to a building, the guard admits the inmate and operates the portable lift for the inmate. When the inmate is ready to leave the building, a prison employee contacts the guard who operates the portable lift to bring the employee back to the entrance to the building.

One portable lift is used to access the sex offender program in Building Number 28. Another portable lift is used to access the educational programs, chapel, and library located in Building Number 29. The third portable wheelchair lift is used to access the special education program in Building Number 24.

Conclusion

All the inmates in the maximum security facilities have limitations on their independence of travel. Therefore the use of a lift system that requires assistance is an acceptable method of providing access to maximum security programs, services, and activities that are located in areas where stairs must be climbed to gain access.

Compliance Determination

This case is closed as of the date of this Letter of Findings. This letter does not address other potential claims of disability discrimination that may arise with respect to KDOC or any of its facilities. Rather, this letter is limited to the allegations of discrimination presented in these complaints.

Under the Freedom of Information Act, 5 U.S.C. 552, we may be required to release this letter and other correspondence and records related to this complaint in response to a request from a third party. Should we receive such a request, we will safeguard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information which could constitute an unwarranted invasion of an individuals privacy.

We appreciate the cooperation and assistance that you and Mr. Charles Simmons, Chief Legal Counsel, extended to Ms. Brenda Sheppard, our investigator, and Louis M. Stewart, our attorney, during the course of the investigation.

If you have any questions about this matter, please contact

Louis M. Stewart at (202) 616-7779.

Sincerely,

(Signature)

T. 6/7/93

JUN 14 1993 (stamp)

Mr. Robert R. Wolting, City Manager
Fairbanks City Hall
Fairbanks, Alaska 99707

Re: Department of Justice Complaint Number XX

Dear Mr. Wolting:

This letter constitutes the Department of Justice's Letter of Findings with respect to the complaint filed with our office under title II of the Americans with Disabilities Act (ADA). The complainant alleged that (1) a ramp designed to provide access to the Municipal Utilities System Building (MUSB) located at 645 5th 5th Avenue does not comply with the requirements of title II; and and (2) the slope of the curb ramp to the sidewalk next to the MUSB

is too steep.

With reference to the first allegation, the complainant stated that "(t]he railing attached to the side of the [MUSB] does not run the full length of the ramp. The handrail on the building begins six inches after the start of the ramp. The handrail (attached to the building) ends five feet and five inches prior to reaching the doorway." Additionally, the complainant states that 11[t]he city apparently wanted to beautify the ramp, so they have placed three flower boxes at the top of the ramp. This has seriously diminished the five foot turning circle proscribed [sic]-for patrons using wheelchairs." With reference to the second allegation, the complainant asserted that "[t]he ramp incorporated into the sidewalk leading from the driveway to the building rises 5 3/4" in 13"."

Title II of the ADA prohibits discrimination against qualified individuals with disabilities on the basis of their disability in the services, programs, or activities of a local government such as the city of Fairbanks. Our office enforces the requirements of title II of the ADA, as applied to the issues raised by the complainant, through investigation, negotiation, and, if necessary, referral for possible litigation.

cc: Records CRS Chrono Friedlander Stewart.wolting3.lof

1 Formerly Department of Justice Complaint Number XX XX

By a letter dated November 4, 1992, this office requested information necessary to review the complainant's allegations. In addition, we provided the city with a copy of our title II regulation, 28 C.F.R. Part 35, our title II Technical Assistance Manual, and the ADA Handbook. In a letter dated December 10, 1992, Mr. W.R. Scouten, a Project Engineer with the city's Engineering Department, responded to our request for information.

The Facts

The MUSB was constructed in 1959 and contains no programs, services, or activities that receive Federal financial assistance. The contract for the construction of the ramp to the side of the MUSB was executed on September 20, 1991, and the construction was paid for exclusively by State funds. Construction began soon after the contract was signed. The city

relied upon the 1980 American National Standards Institute Standards as a basis for the design of the ramp. The installation of the ramp was part of an overall project to make the services provided in the MUSB building accessible to individuals with disabilities.

The city admitted that the handrail attached to the building's side did not extend the whole length of the slope of the ramp. Subsequently, on March 4, 1993, the city extended the handrail for the whole length of the ramp's slope. In addition, the city has removed the flower boxes located on the landing at the top of the ramp.

With respect to the curb ramp to the sidewalk from the driveway next to the MUSB, the city generally admits that at the time of the filing of the complaint on July 11, 1992, the rise was around 5 3/4 inches for a curb ramp that was only thirteen inches in length. Since both the curb ramp and the sidewalk were in existence prior to the commencement of the building ramp project, the city states that the curb ramp was not part of the project to make the entrance to the MUSB accessible. Before our November 5, 1992, notification to the city of this investigation, the curb ramp was altered in August, 1992, so that it now has a slope of 1:12 inches with a maximum of 1:10.

Legal Standards

With respect to facilities such as the ramp to the MUSB, which was constructed prior to January 26, 1992, the effective date of title II, the city's obligation is to "... operate each service, program, or activity so that the service, program, or activity, when viewed in it's entirety, is readily accessible to and usable by individuals with disabilities." 28 C.F.R. 35.150(a). This requirement for existing facilities is known as "the program accessibility" standard. No particular design standard such as the Uniform Federal Accessibility Standards

(UFAS) or the Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) is required, as long as the city provides program accessibility to the programs services, or activities in its facilities.

With respect to new construction of or alterations to facilities that are begun after January 26, 1992, the effective date of title II, a public entity is required to follow the design standards of UFAS or ADAAG. See 28 C.F.R. 35.151. Therefore, alterations such as the one to the curb ramp in August 1992, must be done in a manner that complies with UFAS or ADAAG.

Issues and Analysis

Issue #1: Whether access to the programs, services, and activities located in the MUSB (i.e., program access) is provided by the ramp to the side of MUSB.

The requirements for program access in existing facilities apply to the ramp at the side of MUSB because the ramp was installed prior to the effective date of the title II regulation. After initiation of our investigation, the city extended the handrail and removed the flower pots from the landing of the ramp. Therefore, it is our determination that the city is in compliance with the program access requirements of title II with respect to this ramp.

Issue #2: Whether the August 1992 alteration to the curb ramp complies with either UFAS or ADAAG.

The August 1992 alteration that the city made to the curb ramp has an acceptable slope between 1:10 and 1:12 for a maximum rise of 6 inches. This meets the requirements of ADAAG or UFAS for slope during alterations. See ADAAG at 4.1.6(a)(6)(i) or UFAS at 4.1.6(4)(a). Therefore, the city is in compliance with the new construction and alteration requirements of title II with respect to the curb ramp.

Conclusion

The City of Fairbanks is in compliance with title II of the ADA with respect to the allegations investigated. This letter does not address any other issues concerning the city's compliance with title II.

Under the Freedom of Information Act, 5 U.S.C. 552, we may be required to release this letter and other correspondence and records related to this complaint in response to a request from a third party. Should we receive such a request, we will safeguard, to the extent permitted by the Freedom of Information

Act and the Privacy Act, the release of information that could constitute an unwarranted invasion of the complainant's or other's privacy.

We wish to thank Mr. Scouten for his valuable assistance in resolving this matter. Should you have any questions concerning this letter, please call Louis M. Stewart, the attorney assigned to this case, at (202) 616-7779.

Sincerely,

Stewart B. Oneglia

Re: Department of Justice Complaint Number 204-6-2
Dear Mr. (b) (6)

This letter responds to your complaint filed with our office under title II of the Americans with Disabilities Act (ADA) alleging that (1) a ramp designed to provide access to the City of Fairbanks' Municipal Utilities System Building (MUSB) located at 645 5th Avenue does not comply with title II of the ADA; and (2) the slope of the curb ramp to the sidewalk next to the MUSB is too steep. As the attached letter to Mr. Wolting, Fairbanks City Manager, reflects, we conclude that the city is in compliance with title II of the ADA with respect to the allegations you raised.

This letter and enclosure constitute our Letter of Findings with respect to your allegations of discrimination in your administrative complaint. If you are dissatisfied with our determination, you may file a complaint presenting your allegations of discrimination in an appropriate United States District Court under title II of the ADA.

Under the Freedom of Information Act, 5 U.S.C. 552, we may be required to release this letter and other correspondence and records related to this complaint in response to a request from a third party. Should we receive such a request, we will

Enclosure

JUN 15 1993

Dear

(b) (6)

This letter is in response to your inquiry about the Americans With Disabilities Act (ADA).

Your letter states that you own a condominium in a complex that has no accessible resident parking spaces, although accessible spaces for visitors are provided. You ask whether the ADA requires the condominium association to make common areas accessible, and whether it requires that accessible parking spaces be installed for residents.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation and it is not binding on the Department.

The ADA does not apply to privately owned facilities that are strictly residential. Title III of the ADA applies to places of public accommodation and commercial facilities. Residential buildings are not commercial facilities, according to the title III definition, which appears on pages 35593 and 35547-48 of the enclosed title III regulation. Furthermore, title III defines places of public accommodation as facilities that are privately owned, affect commerce, and function as one of twelve categories of facilities listed in that title. The twelve categories of places of public accommodation are listed and discussed on pages 35594 and 35551-35552 of the title III regulation. Assuming that your condominium complex does not provide enough social services to be considered a social service center establishment, and assuming that it does not offer such short term stays that it could be considered a place of lodging, your condominium complex does not fit into any of the twelve categories of places of public accommodation, and it is thus not subject to title III of the ADA.

cc: Records, Chrono, Wodatch, Breen, Magagna, Novich,
Friedlander, FOIA , Cager
Udd:Novich:Policy:263

01-02380

Title II does, however, apply to any areas within a residential complex that are open for the use of persons other than residents and their guests, if those areas function as one of the twelve categories of places of public accommodation. For instance, if your complex has a sales office, or if it has any recreational facilities that are open to persons other than residents and their guests, title II covers these facilities.

A parking garage serving any of the places of public accommodation within the facility would be covered by title III. Title II would not apply to parking areas used exclusively by residents and their guests. It would, however, apply to spaces designated for the sales office or any recreational facilities that are not restricted to use by residents and their guests.

The Federal Fair Housing Act, as amended, does cover residential facilities and prohibits discrimination on the basis of disability. That Act requires landlords to make reasonable accommodations in rules, policies and practices. For more information on the Fair Housing Act, you may contact:

(b) (6)

Office of the ADA
Civil Rights Division
U.S. Dep't of Justice
PO Box 66738
Washington,D.C. 20035-9998

Mr. or Ms.:

I currently reside in XX NY. on a full time basis.
I own, and spend some time in, a condominium I own in Florida. I am disabled and normally have an accessible handicapped parking space for my car in NY. This Florida condominium does not have any parking places for the disabled residents, only for the visitors to the place.

This is a high rise unit with assigned parking places. I can find no discussion of any specific or uniquely numbered parking places in the ownership papers of my unit. I don't think this should make any difference though. This would then mean that a cripple might have to park a quarter of a mile from the front door if that is where their assigned parking slot was.

I realize that the new "Americans with Disabilities Act" (ADA) does not pertain to the individual units. I question if this new law pertains to any common areas of the condominium. It appears that the visitor parking is, and should be, covered by the ADA law. It would appear only right for the parking for residents to be covered at least the same way. The question is, are they ?

Could you please reply, indicating if the condominium association has to observe the ADA laws in the common areas of the condominium? Are they required to have disabled parking for the residents, or can they have resident parking located so that some disabled people can be a quarter mile from the front door.

Thank you,

David L. Rollison
Texas Department of Mental Health
and Mental Retardation
San Antonio State School
P.O. Box 14700, Harlandale Station
San Antonio, Texas 78214-0700

Dear Mr. Rollison:

This letter is in response to your inquiry about the application of the Americans With Disabilities Act (ADA) to group homes provided for persons with mental retardation.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation and it is not binding on the Department.

Your letter states that your organization, an agency of the State of Texas, contracts with private citizens for placement of persons with mental retardation into their homes. You ask if these homes are considered places of public accommodation under the ADA, and, if so, what are the State's and owners obligations to upgrade the accessibility of these homes.

The ADA is implicated in your group home program in several respects. Title II prohibits discrimination on the basis of disability by State and local governments. Because your program involves a State agency contracting with private entities for the provision of services, the State must ensure that the contract activities are carried out in a way consistent with the State's title II responsibilities. This principle is set out in sections 35.102(a) and 35.130(b) of the enclosed title II regulation and further explained in the preamble to the regulation at page 35696.

cc: Records, Chron, Wodatch, Breen, Magagna, Novich,
Friedlander, FOIA, Cager
Udd:Novich:Policy:184

01-02383

In existing facilities, title II requires the State to ensure "program access," which means that the program, when viewed as a whole, must be accessible to qualified persons with disabilities. Achieving program access does not necessarily entail making every facility used in the program accessible. Your agency, then, must ensure that its group homes program, but not necessarily each individual home, is accessible to persons with disabilities. One method of creating program access might be to determine the number of homes that should be made accessible based on past accessibility needs of applicants, residents, and their guests. Title II also requires the State to administer its services, programs, and activities in the most integrated setting appropriate to the needs of qualified individuals with disabilities.

The homes themselves are not covered by title II. They would fall under title III if they fit into one of twelve categories of places of public accommodation listed in the Act. Strictly residential facilities are not included in this list and are not covered by title III. The homes would only be covered by title III if they are social service center establishments, i.e., if they provide a significant enough level of such social services as medical care, meals, transportation, and counseling. The homes would not be subject to title III if they provide simply a family-like living arrangement, without significant social services.

Title III requires owners and operators to remove architectural barriers to access from existing places of public accommodation where their removal is readily achievable. "Readily achievable" means easily accomplishable and able to be done without significant difficulty or expense. If each group home is considered a social service center establishment, then, title III requires that each one be made accessible to the extent that it is readily achievable to do so. Discussion of these provisions, including the factors to be considered in whether a barrier is readily achievable to remove, can be found at pages 35553-35554 of the enclosed title III regulation, and at pages

28-32 of the enclosed title III Technical Assistance Manual.

I hope this information has been helpful to you.

Sincerely,

John L. Wodatch

P.O. Box 66118
Washington, D.C. 20035-6118

Dear Sir/Madam:

In brief, this agency (the San Antonio State School), often seeks contracts with private citizens for the purpose of placing mentally retarded citizens in their home. This facilitates the assimilation of the mentally retarded citizen into the mainstream of the community, and; permits continued quality of care and support for that citizen. Homes selected as a "private provider home" are of typical (local) residential construction and are evaluated for occupancy based on the standards outlined in the National Fire Protection Association's, 1988 Edition, "Life Safety Code" 101 (LSC), Chapters 21 or 22.

The distinguishing feature between a chapter 21 and a chapter 22 occupancy (for our purpose) is the number of non-related (non-family member) occupants residing in the home.

Chapter 21, "Residential Board and Care Occupancy," is divided into two sections; Small and Large Facilities. A "small" Chapter 21 facility would have at least four non-family occupants, but not

more than 16.

Chapter 22, "One- and Two-Family Dwellings" are those homes with three or less non-family occupants.

Most of the "private provider homes" selected in our program are of a chapter 22 occupancy. All homes in our program which are of a chapter 21 occupancy have less than eight non-family residents and the home is of typical residential construction.

Is it the intent of the Americans with Disabilities Act (ADA) to identify these homes as a "public accommodation?" And, therefore require compliance for a "barrier free" environment?

01-02385
As a point of comment; bathrooms in most existing (local) private residential homes have not been designed to accommodate citizens with disabilities. To convert a bathroom in a private residence to meet ADA "barrier free" standards would require significant costs to the home owner for renovation. A difficulty, with bathrooms, is in the requirements for "clear floor space" as illustrated and stated in Appendix A of the ADA Standard. Normally, the swing of the door penetrates the "clear floor space" or the area is insufficient. Another concern is that most sinks in bathrooms are placed in a "vanity" style cabinet which does not permit a straight-in approach or the available floor place hampers a side approach.

If all other standards, grab bars, seats, mirrors, etc., are met, can exceptions be made for clear floor space requirements?

Lastly, homes that are currently under contract. Is it a requirement to renovate (upgrade) them to ADA standards? Even if there are no physically challenged persons (non-family) residing in the residence.

I realize it is difficult to develop a written standard that meets the needs of everyone, for all situations, and; that ours is a unique situational effort for citizens who are not just physically challenged but who have the added challenge associated with being mentally retarded as well.

Thank you in advance for any assistance or guidance you can provide me in this matter.

Sincerely,

David L. Rollison
Safety Director

01-02384

DJ 202-PL-280/300 JUN 15 1993

Robert L. Thompson
President
Wiston Management
7007 College Boulevard
Suite 420
Overland Park, Kansas 66211

Dear Mr. Thompson:

This letter is in response to your inquiries about the application of the Americans With Disabilities Act (ADA) to leasing offices in apartment complexes.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

Your correspondence indicates that you understand that the ADA applies to leasing offices within apartment complexes. You state that you have completed a survey of leasing facilities, but you are unsure of how to comply with ADA requirements.

Your understanding that the ADA applies to leasing offices within apartment complexes is correct. Although title III of the ADA does not apply to strictly residential dwellings, it does cover areas within residential buildings, such as leasing offices, that function as one of the ADA's twelve categories of places of public accommodation and that are not intended for the exclusive use of tenants and their guests. In order for your leasing offices to comply with the ADA, the offices themselves, as well as the parking, building entrances, access routes, and restrooms and drinking fountains serving the offices must also comply.

The portions of Title III relevant to your leasing offices require that in existing places of public accommodation, all structural barriers to access be removed if their removal is readily achievable. Readily achievable means easily accomplishable without much difficulty or expense. If the

cc: Records, Chrono, Wodatch, Breen, Magagna, Novich, Friedlander, FOIA, Cager
Udd:Novich:Policy:280

01-02387

removal of a barrier to access is not readily achievable, the public accommodation must provide any readily achievable alternatives to barrier removal. For instance, if it is not readily achievable to make the entrance to one of your offices accessible, offering leasing services in a different, accessible location for persons with disabilities might be a readily achievable alternative.

Examples of potential structural barriers to access, in or on the route to the leasing office, that you should be evaluating for their accessibility are: entrances, doorways, passageways, telephones and restrooms that are available for public use; drinking fountains, door knobs and other controls; alarm systems; and signage to designate rooms, information, and parking. Section 36.304 of the enclosed title III regulation, at page 35597, lists 21 examples of barriers that are probably readily achievable to remove and also suggests priorities for removal of barriers. In addition, you may want to consult pages 28-35 of the enclosed title III Technical Assistance Manual, which further discusses removal of barriers.

The title III regulation includes as an appendix the

Americans With Disabilities Act Accessibility Guidelines (ADAAG), which sets forth the ADA's technical specifications for accessibility in new construction and building alterations. When removing barriers in existing facilities, strict compliance with these specifications is not necessarily required if not readily achievable. However, departures from the guidelines are permitted only if they do not compromise safety for persons with disabilities and others. You should consult the specifications of the ADA Standards for Accessible Design as you evaluate your leasing facilities, and determine the extent to which your leasing offices can remove barriers to meet those specifications.

Although this letter has addressed only your offices' obligations to remove barriers, your offices must also comply with title III's other requirements for existing facilities. These requirements include provision of auxiliary aids and services where necessary for effective communication with persons with disabilities, reasonable modification of policies, practices or procedures where necessary for the participation of persons with disabilities, and the elimination of eligibility criteria that tend to screen out persons with disabilities. These subjects are discussed further in the title III regulation and Technical Assistance Manual. Your offices may also have responsibilities to their employees under title I of the ADA.

For more information regarding employment responsibilities, you may contact the Equal Employment Opportunity Commission (EEOC), at:

1801 L Street, N.W.
Washington, D.C. 20507
(202) 669-3362 (voice)

RE: Candletree Apartments, Omaha Nebraska

Dear Director:

Candletree Apartments is an apartment community built in 1973 in Omaha Nebraska. It is our understanding that the leasing office area of this community would be considered an area of "public accommodation" under the American with Disabilities Act.

Candletree Apartments was built prior to the new architectural Standards established for the accommodation of the handicapped. We have done a survey of the physical facilities in the leasing office area to try to determine what deficiencies there may be and what we can do to accommodate those with handicaps. We have designated handicap parking in front of the leasing office with the appropriate signage.

We have read the act and it is not clear to us exactly what we are supposed to do in order to comply. We are requesting guidance from you regarding what is necessary for us to do in order to be in compliance with the requirements of the Act.

Please let us know how we should proceed.

JUN 16 1993

XXXXXX (b) (6)
Battle Creek, Michigan 49015

Dear XXXX

This letter is in response to your inquiries about whether a dentist's office is covered by title III of the Americans with Disabilities Act of 1990 (the "ADA"), what the obligations of a dentist's office are under title III, and the allocation of responsibility under title III as between a landlord and tenant.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

Your letter inquires first about whether a dentist's office is covered by title III of the ADA. Title III applies to all privately owned places of accommodation, regardless of how many people they employ, or how large or small is their business. The title III regulation enforced by the Department of Justice specifically identifies a professional office of a health care provider as one type of service establishment which is considered to be a place of public accommodation, and therefore covered by title III.

Under title III, any private entity that owns, operates, leases, or leases to a place of public accommodation is required to take certain steps to avoid discriminating against individuals with disabilities. Among other things, title II requires public accommodations to remove architectural barriers to access in their existing facilities to the extent that it is readily achievable to do so. This means that public accommodations must remove barriers to access whenever the barriers can be removed without much difficulty or expense. Examples of readily

achievable barrier removal might include providing accessible parking, providing curb ramps, widening doors, providing entrance ramps, enlarging toilet stalls, providing grab bars,-making lavatories accessible, and the like.

cc: Records, Chrono, Wodatch, Bowen, McDowney, Contois, MAF,-FOIA
Udd:Contois:PL: (b) (6)

01-02399

The obligation to remove architectural barriers rests not only with the owner of the building which houses a place of public accommodation, but also with any private entity that operates the building, and any private entity that leases space in the building to house a place of public accommodation. Thus, the obligations of a public accommodation to remove barriers are the same whether it leases space or owns it, and if it-fails to do what is readily achievable to remove barriers to access, it can be held liable under title III regardless of whether it owns or leases the space.

The Department of Justice's technical Assistance Manual for title III discusses the application of the title III to places of public accommodation on pages 1 through 3. On page 3 there is a discussion of the responsibilities of both the landlord and tenant. The obligation to remove architectural barriers to access is discussed on pages 28 to 34. I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

L. Irene Bowen
Deputy Chief
Public Access Section

01-02400

December 11, 1992

Department of Justice
Office of ADA

I hope that you can answer a few questions for me. I have a copy of the new ADA law but no one thinks that it applies to them. I will give you just one example I have run into.

My dentist is in a building with two other offices. I am(b) (6) and I cannot get in the bathroom. The people that own the building say that they do not have to make any changes and my dentist says that he does not have to make any changes.

I have read the law through many times and on paper it applies but when one question them they all seem to have a loophole.
Can you help?

Sincerely,

Battle Creek Mi 49015 (b) (6)

01-02401

T. 6/15/93

DJ 204-016-00013

Dear Mr.
(b) (6)

This is in response to your letter concerning requirements for playgrounds under the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding provisions applicable to playgrounds. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Under section 35.151(c) of the ADA title II regulations, public entities, such as schools, can choose to design facilities either in accordance with the Americans, with Disabilities Act Accessibility Guidelines or in accordance with the Uniform Federal Accessibility Standards. (A copy of the title II regulations is enclosed.) Neither of those standards, however, contains specific sections on playgrounds. Guidelines for recreational facilities are currently in the process of being developed by the Architectural and Transportation Barriers Compliance Board. Until such time as those guidelines are finalized, playgrounds need not be built in compliance with any specific design standards.

However, playgrounds are not exempt from the ADA. Section 35.130 of the title II regulations requires that qualified individuals with disabilities be given an equal opportunity to participate in a public entity's programs. Providing an equal opportunity may entail provision of some accessible equipment and an accessible surface in a public playground.

cc: Records CRS Chrono Friedlander
Milton.letters.recreatn. FOIA

01-02402

For your further information, an interim draft recreation standard, which contains advisory guidance on playgrounds at page 756 is enclosed. The section on playgrounds indicates that level, firm paths and surfacing should be provided to allow playground facilities to be used by people with limited mobility. This interim draft standard has not been adopted and is not in effect and is provided for guidance only.

I hope this information has been helpful to you.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

NOV 23, 1992

Mr. Andy Yasenovsky
Safety/Loss Control Analyst
San Bernardino Country
Superintendent of Schools
601 North E Street
San Bernardino, California 92410-3093

Dear Mr. Yasenovsky:

I am writing in response to your letter regarding playground surface materials and the accessibility requirements of the Americans with Disabilities Act (ADA).

The ADA authorizes the Access Board to provide technical assistance with respect to accessibility requirements of the law. However, the Department of Justice, not the Access Board, is responsible for enforcement of certain titles of the ADA. This letter provides informal guidance only. It is not a determination of your legal rights or responsibilities under the ADA and is not binding on the Access Board or the Department of Justice.

Title II of the ADA prohibits discrimination on the basis of disability in State and local government programs. The Department of Justice has issued regulations implement title II of the ADA which require newly constructed and altered State and local government facilities to be readily accessible to and usable by individuals with disabilities. 28 C.F.R. 35.151 (a) and (b). The Department of Justice's title II regulations permit State and local government entities to comply with either the Uniform Federal Accessibility Standards (UFAS) or Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) which was developed by the Access Board, in new construction and alternations. 28 C.F.R. 35.151 (c). Neither UFAS nor ADAAG contain specific provisions for recreational facilities. The Access Board plans to begin developing specific provisions for recreational facilities, including playground equipment, for inclusion in ADAAG during 1993. The provisions will be published in the Federal Register and will be subject to public comment before they are finally adopted by the Access Board.

Even though a particular type or element of a newly constructed or altered State or local government facility may not be specifically addressed by the accessibility standards referenced in the Department of Justice's title II regulations, it is nonetheless required to be 'readily accessible to and

usable by individuals with disabilities.' This means that, with respect to a facility or a portion of a facility, that it can be approached, entered, and used by individuals with disabilities (including mobility, sensory, and cognitive impairments) easily and conveniently.

ADAAG provides the following additional guidance with respect to recreational facilities:

Although the final guidelines do not include accessibility guidelines for children's environments and recreational facilities at this time, newly constructed or altered children's facilities and recreational facilities subject to title II of the ADA must comply with these guidelines where applicable. For example, an accessible route must be provided to a swimming pool deck area even though the guidelines do not presently include specific requirements for providing access to the pool itself. Technical assistance is available from the Board in this area."
56 F.R. 35412 (July 26, 1991).

The same guidance would apply to State and local government facilities that use UFAS or ADAAG to comply with the new construction and alterations requirements of the Department of Justice's title II regulations.

We understand from the materials enclosed with your letter that California law requires at least a portion of any playground constructed after January 1, 1979 to be readily accessible to and useable by individuals with disabilities. The California Department of Parks and Recreation has advised its applicants that under current State standards new or redone playground areas must provide a firm, but resilient surface and that sand, shredded rubber, or loose wood chips are not acceptable surfaces. The California Department of Parks and Recreation has also provided its applicants with a list of manufacturers that produce suitable surface materials for accessible playground areas and has further stated that most manufacturers of play equipment offer one or more surfaces that meet the California standards.

Until final accessibility standards for playgrounds are issued under the ADA, a playground that meets current California standards, as advised by the California Department of Parks and Recreation, should also be considered readily accessible to and usable by individuals with disabilities for purposes of the ADA.

I hope that this information is helpful to you.

Sincerely,

James J. Raggio
General Counsel

JUN 17 1993

XXXXXXXXXXXx
Sherman, Texas 25090 (b) (6)

Dear XXXXXXXXXXXXX

This letter is in response to your inquiry about whether developmentally disabled children are protected by the Americans with Disabilities Act of 1990 (the "ADA"), and if so, whether it prevents discrimination by companies that provide health insurance. I apologize for the delay in our response.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

Your letter inquires first about whether children with developmental disabilities are considered individuals with disabilities and are covered by the ADA. Under the ADA, the definition of "disability" includes any physical or mental condition that substantially limits one or more major life activities, such as caring for one's self, performing manual tasks, walking, learning, or working. Thus, it appears that the mental or physical condition of your XX would be considered a disability within the meaning of the ADA, and that they would be entitled to its protections against discrimination.

You correctly point out in your letter that in providing goods and services, public accommodations may not discriminate on the basis of disability. With respect to the purchase of insurance, the ADA allows insurance companies to charge more for insurance, or to refuse to insure someone with a disability, only if the higher charges or refusal to provide coverage is based on

sound actuarial data and principles, and not on speculation. Thus, while the ADA does provide some protection for individuals with disabilities in their dealings with insurance companies, it does not prohibit the use of legitimate actuarial considerations.

cc: Records, Chrono, Wodatch, Bowen, Breen, Contois, Friedlander, FOIA
Udd:Contois:PL:

01-02406

The laws of your State may provide different or additional protections for your children, and you may want to inquire with the appropriate State officials in Texas.

Enclosed for your information is a copy of the Department of Justice's Technical Assistance Manual for title II of the ADA. It discusses the definition of disability on pages 8-10, and the requirements applicable to insurance companies on pages 18- 19. I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Title III Technical Assistance Manual

01-02407

CIVIL RIGHTS DIVISION
PUBLIC ACCESS SECTION

Office of the American Disability Act
Civil Rights Division
U.S. Department of Justice

I received a Title III highlights outline and
it's somewhat vague and I could use some interpretation
assistance.

My situation is this.

I am xx employed and have been for xx. (b)(6)
Prior to that I was an employee for a company that was
sold. Upon my termination I selected xx coverage
for myself and my family. My family consists of XXX
boys xx who are developmentally delayed.
At we must still feed, dress, etc the boys. One is
only starting to walk and neither can talk. However
we have not been able to get a diagnosis on the
boys. No name for what they have. All the doctors
say we will just have to wait for them to progress.
Because of this I would assume they are considered
individuals with Disabilities. Now the problem
my xx coverage is about to expire and every
insurance company I have contacted refuses to write
health insurance coverage on the boys. Why? Because
they do not know what they have. Are they not being
discriminated against? Under eligibility
for Goods and Services as you outline it is stated: In providing
goods and services, a public accommodation may not use
eligibility requirements that exclude or segregate
individuals with disabilities under the requirements
are "necessary" for the operation of the public accommodation.
01-02408

If the boys are not covered under this act for the xx issuance of health Insurance, is there any other area that would help. If not - why not? I know we are not the only ones that have this problem. Your assistance would be greatly appreciated.

Respectively

DJ 202-PL-379

James A. Hackman
Parfitt/Ling Consulting Engineers
101 S. Fraser Street
State College, Pennsylvania 16801-3850

Dear Mr. Hackman:

This letter is in response to your inquiry about the Americans with Disabilities Act of 1990 (ADA). We regret the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department.

You ask whether the ADA applies to a privately owned apartment building for elderly persons. You describe the building as one of eleven units comprising a continuing care retirement community, designed to provide independent living for older people.

Title II of the ADA applies to privately owned or operated facilities that are either commercial facilities or that fall within one of the twelve categories of "places of public accommodation" listed in that title. Strictly residential facilities are not included in the twelve public accommodation categories and are expressly exempted from the definition of commercial facilities. Thus, strictly residential facilities are not covered by the ADA. As your letter noted, however, residential facilities may have to meet nondiscrimination and accessibility requirements under the Fair Housing Act.

Although the ADA does not apply to strictly residential facilities, it has two possible applications to your apartment building. First, common areas within residential buildings, such as rental offices and meeting rooms, that function as one of the

ADA's twelve categories of places of public accommodation and that are not intended for the exclusive use of tenants and their

cc: Records, Chrono, Wodatch, Magagna, Breen, Novich, Friedlander, FOIA
Udd:Novich:Policy:379

01-02410
guests constitute "places of public accommodation" within the meaning of title II, and must comply with the ADA. Rental offices, for example, are by their nature open to the public and would be considered rental establishments or service establishments within the meaning of the ADA. Meeting rooms, if not restricted to the exclusive use of tenants and their guests, would be a place of public gathering covered by the ADA.

Second, a facility that provides both housing and social services is covered by the ADA as a place of public accommodation where a significant enough level of social services is provided that the facility itself can be considered a social service center establishment. In this situation those portions of the facility that are used in the provision of social services are covered by the ADA. If the social services are provided throughout the facility, including in the individual housing units, then the entire facility is a place of public accommodation. Social services in the context of the ADA would include medical care, assistance with daily living activities, provision of meals, transportation, counseling, and some recreational activities. No one of these services will automatically trigger ADA coverage. Rather, the determination of whether a private entity provides a significant enough level of social services will depend on the quantity, quality, and combination of these services.

I have enclosed the regulations promulgated under title III, and the Technical Assistance Manual for that title. I hope this information is helpful to you.

Sincerely,

Joan A. Magagna

Re: Woodcrest Villa Apartments
Mennonite Home
Americans With Disabilities Act
P/L Project No. 9115

Dear Sir or Madam:

The referenced construction project is a 142 unit privately-owned apartment building for the elderly. The building is the first of eleven buildings comprising a Continuing Care Retirement Community. The Community is designed for independent living. The only requirement for admission is age.

On Friday, October 23, I telephoned the ADA Information Line((202 514-0301) and was told that the referenced project does not fall under the ADA Guidelines. I was told that the HUD Fair Housing Act applies.

Please send me a letter confirming my understanding of the conversation.
Please call if there are any questions.

Sincerely,

James A Hackman
Project Engineer

DJ 202-47-2

Mr. Michael D. Jenkins
Executive Director
Governor's Commission on Disability
State of New Hampshire
57 Regional Drive
Concord, New Hampshire 03301-8506

Dear Mr. Jenkins:

This letter is in response to your request that this Section review the proposed New Hampshire Barrier Free Design Code to determine if it meets or exceeds the requirements of title II of the Americans with Disabilities Act (ADA). The State of New Hampshire is proposing to adopt a modified version of the standards for accessible design established by the Department's title III regulation as the State accessibility requirements for places of public accommodation that are now subject to the State's prohibition on discrimination based on physical disability. The proposed code has yet to be adopted. As we have discussed with you, only codes that have been adopted under State law may be certified. It would, therefore, be premature for us to undertake a formal review of your proposed code.

Because the ADA does authorize the Department to provide technical assistance to individuals and entities that have rights or responsibilities under the Act, this letter provides technical assistance to assist you in understanding how New Hampshire's proposed code compares to the ADA requirements. This technical assistance does not constitute a determination by the Department of Justice of the State's rights or responsibilities under the ADA, and it is not binding on the Department. Please note that it is our policy generally to limit this type of technical assistance to comments on the scoping provisions of a proposed code. We have not considered the technical requirements of your code. In addition, we have not considered the application of the proposed code to government facilities because title II of the ADA applies only to private entities.

cc: Records, Chorono, Wodatch, Bowen, Blizard, FOIA, Friedlander
n:\udd\blizard\cert\newhamp.ltr

01-02413

We do not consider the proposed New Hampshire Architectural Barrier Free Design Code to be equivalent to the ADA for Several reasons, including:

1) Under New Hampshire law, places of public accommodation for purposes of the proposed code include only places of transient lodging, places where food and drink are served, and theaters, concert halls, and other places of public gathering or places of exhibition. The ADA applies to any private entity that owns, operates, leases (or leases to), a private entity whose operations fall within one of twelve categories identified in the statute. In addition, the new construction and alterations requirements of the ADA apply to all commercial facilities; the proposed State code does not.

The ADA permits the Department to certify a State's accessibility requirements if they meet or exceed the requirements of the ADA. If a State's accessibility requirements do not apply to all of the public accommodations and commercial facilities that are subject to title III, we cannot certify that the State's requirements are equivalent.

I have enclosed copies of the Department of Justice regulation implementing title III and our Title III Technical Assistance Manual for your information. The ADA coverage provisions are contained in section 36.104 of the Department's regulation. The requirement is further explained in the preamble to the regulation (pp. 35547-35555), and in sections III-1.1000 through III-1.3100 of the Technical Assistance Manual.

2) The proposed code will apply only to people with physical disabilities, while the ADA prohibits discrimination against any individual who has a physical or mental impairment that substantially limits one or more major life activities. The scope of this requirement is established in section 36.104 of the enclosed regulation. It is discussed in the preamble to the rule (pp. 35547-35555), and in sections III-2.1000 through III-2.7000 of the Technical Assistance Manual. In our view, the accessibility requirements of building codes should afford protection to all people with disabilities, to the extent that protection is provided by the ADA standards.

3) The proposed code will apply only to new construction of and substantial alterations to places of public accommodation. The ADA applies to all new construction of, and any additions or alterations to, places of public accommodation and commercial facilities, regardless of whether the addition or alteration is considered "substantial." These requirements are contained in

sections 36.401-36.404 of the enclosed regulation. They are discussed in the preamble to the rule (pp. 35574-35584), and in sections III-5.1000 through III-6.3000 of the Technical Assistance Manual.

4) The proposed code recognizes the possibility of waivers" due to economic reasons or historic considerations in both new construction and alterations. Title III of the ADA does not permit waivers based on economic considerations in any new construction or alterations. The Department's title III regulation recognizes that historic buildings and facilities present unique challenges that may require the use of alternative methods of providing access; however, there is no provision for a "waiver" of the requirements for historic properties. This requirement is contained in section 36.405 of the enclosed regulation and in section 4.1.7 of the ADA standards. It is discussed in the preamble to the rule (pp. 35584 and 35588), and in section III-6.4000 of the Technical Assistance Manual.

In addition, we note that the proposed code purports to "amend" the requirements of the ADA. Any action taken by the State of New Hampshire with respect to its State code is effective only as a matter of State law. The State does not have the authority to amend the ADA regulations, or to excuse any person or entity subject to the ADA from full compliance with these Federal requirements.

If you have any questions about this letter, please contact Janet Blizard, Supervisory Attorney, Public Access Section at (202) 307-0847.

Sincerely,

John L. Wodatch

Re: DJ
Holiday Inn
5th & C Sts., S.W.
Washington, D.C. 20002

Dear Mr.XX

This letter is in response to your correspondence in which you allege a violation of title III of the Americans with Disabilities Act of 1990, 42 U.S.C. SS 12181-12189, and the Department of Justice implementing regulation, 28 C.F.R. pt. 36, by the above-referenced Holiday Inn. In particular, you indicated that an AT&T Access 2000 unit, a card-operated telephone with TDD capability located in the hotel lobby, would not accept your credit card for a local call. In addition, the AT&T telephone unit would not accept coins and the adjacent coin-operated telephones were not accessible because no TDDs were present.

The Americans with Disabilities Act ("ADA") authorizes the Department of Justice to investigate alleged violations of title 111. 42 U.S.C. S 1218,8 (b) (1) (A). However, after considering the information you have provided to us, we have concluded that the facts presented do not constitute a violation of title II of the ADA.

As an existing place of public accommodation, the Holiday

Inn is, among other things, obligated to remove communication barriers that are structural in nature, where such removal is readily achievable; to provide auxiliary aids and services where necessary to ensure effective communication; and to ensure generally that individuals are not denied, an the basis of disability, an equal opportunity to participate in or benefit from the goods, services, and facilities of the hotel. See generally 28 C.F.R. SS 36.202, 36.303, 36.304.

Accordingly, if the hotel offers its clients or customers the opportunity to make outgoing telephone calls on "more than an incidental convenience basis," such as providing in-room telephone service for its guests, the hotel must make TDDs available on request in private guest rooms. A hotel also is required to have a TDD at the front desk on request so that guests with hearing or speech impairments can contact the front desk from their rooms. However, as an existing place of public accommodation, the hotel is not obliged to provide TDDs in common areas such as lobbies.

The ADA Standards for Accessible Design for new construction and alterations are more stringent. With regard to new construction, for example, if four or more public pay telephones are provided on a hotel site, including at least one that is located in the interior of the hotel, the hotel is required to provide at least one TDD. In addition, in new buildings with banks of three or more interior public pay telephones, at least one public pay telephone in each bank must be equipped with a shelf and a power outlet to accommodate a Portable TDD. See ADA Standards at sections 4.1.3 (17)(c) and 4.1.3 (17)(d) . A hotel would be obligated to provide a coin-operated TDD if the other pay telephones are coin-operated. If the hotel only provided a card-operated TDD unit, the hotel would deny individuals, on the basis of a disability, an equal opportunity to benefit from the goods, services, and facilities of the hotel in violation of 29 C.F.R. 202(b).

If you have any questions concerning our action on this complaint, please feel free to contact me at (202) 307-6309.

Sincerely,

Sheila K. Delaney
Attorney
Public Access Section

Enclosure
01-02417

T. 6-16-93

JUN 24 1993

(b)(6)
Sebastian, Florida 32976

Dear XX

I am responding to your letter asking about the requirements of the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights and responsibilities under the Act. This letter provides informal guidance but does not constitute a determination by the Department of Justice of any State's rights or responsibilities under the ADA, and it is not binding on the Department.

You have asked if the ADA requires States to amend their building codes to incorporate the ADA Standards for Accessible Design. The ADA does not require States to amend their building codes that apply to the construction of private buildings to incorporate the requirements of the ADA. However, private entities subject to title II are required to comply with the ADA's accessibility requirements, rather than State code requirements, in circumstances where local code requirements are less stringent than the ADA. If the State code establishes accessibility requirements that are more stringent than the ADA requirements, then the State code provisions must be followed.

The illustration provided in your letter indicates that

you are concerned specifically with the construction of a dock
That will be used by the occupant of a private, residential
property. Your example does not specifically state whether the land on
which the dock is located is privately owned. If the land on
which the dock is located is privately owned, and the dock
is exclusively used by the occupant of the residence, then it
is not subject to title III of the ADA because a purely residential
facility is neither a "place of public accommodation" nor a
"commercial facility" as those terms are defined under the
ADA. If the land is publicly owned, then the state or local
government that owns the land would be required to comply with title
II of the ADA in permitting the use of this land. Title II

cc: Records, Chrono, Wodatch, Breen, Blizard FOIA, Friedlander
n:\udd\blizard\adaltrs\(b)(6)

01-02418

prohibits discrimination on the basis of disability in the operation of the programs, services, and activities of a public entity.

Please note that although docks and piers are "facilities" subject to the requirements of the ADA, neither the ADA Accessibility Guidelines issued by the Architectural and Transportation Barriers Compliance Board, nor the regulations issued by the Departments of Justice or Transportation, currently contain specifications for the construction or alteration of accessible docks and piers. Because the ADA has not preempted State regulation in the area of accessible design, the State of Florida is permitted by the ADA to issue regulations that establish accessibility requirements for facilities for which no Federal accessibility standard now exists.

For your information, I am enclosing copies of the Department's regulations implementing titles 11 and III, and our technical assistance manuals for titles II and III. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief

Mr. John Wodatch
Public Access Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66738
Washington D.C. 20035-6738

Dear Mr. Wodatch:

I recently contacted an operator at the Department of Justice regarding information on the American Disabilities Act of 1990 (ADA). The operator was helpful and provided an answer; however, I would like a written response, and the operator suggested that I write you. My question is as follows:

Is the State of Florida, or any agency thereof, required by the ADA to incorporate ADA requirements into the agencies' rules/requirements for permitting/authorizing private, single-family residential docks and piers?

Example: An owner of a single-family residential lot makes application to the state to construct a dock to serve his or her lot. The adjacent waterbody is sovereignty, submerged (public) land, and the dock is to be used only by the lot owner and his or her guests for recreational purposes (e.g., boating, fishing). It is not intended to serve the public at large. Does the ADA require the state to permit/authorize only structures that comply with ADA requirements?

Please respond in writing to the above address. If you have any questions, please contact me at the above phone number. Thank you for your prompt response and your attention in this matter.

Sincerely,

Ms. Anna G. Trachtenberg
Sayler Inc.
60 East Third Avenue #302
San Mateo, California 94401

Dear Ms. Trachtenberg:

This letter is in response to your inquiry about the application of the Americans with Disabilities Act (ADA) to common areas within condominium and townhouse complexes. We regret the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

Title III of the ADA does not apply to strictly residential dwellings. However, common areas within residential buildings or complexes, such as rental offices or club houses, that function as one of the ADA's twelve categories of places of public accommodation and that are not intended for the exclusive use of residents and their guests constitute "places of public accommodation" within the meaning of title III, and must comply with the ADA. Sales or rental offices, for example, are by their nature open to the public and would be considered service establishments within the meaning of title III. A club house, if not restricted to residents and guests, would be a place of public gathering covered by title III. The parking, entrances, access routes, and bathrooms serving the place of public accommodation would also be subject to title III requirements.

SAYLER INCORPORATED
Marketing/Design Consultants

November 5, 1992

Office on the Americans with Disabilities Act
Civil Rights Division
U. S. Department of Justice
Washington, DC 20530

Dear Official:

This firm serves as design and marketing consultants to homeowner associations of condominiums and planned developments, and as such we are concerned about the applicability of the ADA.

Can you please give me an answer to this question:

Are condominium and townhouse developments covered by Title III of the ADA?

It is not clear to me whether the common areas, clubhouse and recreational facilities of such developments would be considered "commercial facilities" and/or "places of public accommodation." (I assume that the individual units would not be covered).
What is your agency's interpretation on this?

An early response would be much appreciated.

Sincerely,

SAYLER INCORPORATED

Michael A. Cassavoy, P.E., R.A.
Principal
CID Associates, Inc.
108 Lincoln Street
Boston, Massachusetts 02111

Dear Mr. Cassavoy:

This letter responds to your correspondence regarding the application of the Americans with Disabilities Act (ADA) to the requirement for areas of rescue assistance in new construction.

The ADA authorizes the Department of Justice to provide technical assistance and information to individuals and entities who have questions about the Act or the Department's Standards for Design. This letter provides informal guidance to assist you in understanding and complying with the ADA Standards for Accessible Design. However, this technical assistance should not be viewed as legal advice or a legal opinion about your rights or responsibilities under the ADA.

The new construction scoping requirements for accessible means of egress in section 4.1.3(9) of the standards allow areas of rescue assistance to be included as part of an accessible means of egress from occupiable levels above or below a level of accessible exit discharge. In a multi-story building, it may be impossible to provide means of egress independently accessible by persons unable to use stairs. Areas of rescue assistance allow such individuals to remain in a protected area for a short time awaiting the assistance of trained emergency personnel. The standards allow an exemption to the requirement for areas of rescue assistance in buildings equipped with a supervised automatic sprinkler system. This exemption does not affect the requirement that accessible means of egress equal in number to exits required by local regulations be provided from an accessible exit discharge level.

We hope this information is helpful to you. Please contact

the Public Access Section any time you have questions or need information. The Department maintains a telephone information line to provide technical assistance regarding the rights and

cc: Records, Chrono, Wodatch, Breen, Harland, FOIA, Friedlander

Re: ADA Tech. Assistance
Section 4.1.3, Paragraph 9

Dear Ms. Harland:

I am writing to you on behalf of Mr. Michael Cassavoy. Through one form or another of miscommunication, a letter (See attached copy), which Mr. Cassavoy wrote to the Department of Justice on September 4, 1992, has not been responded to in writing. Evidently, you and Mr. Cassavoy spoke on October 27, 1992 and you provided an opinion on the subject in question. We would be very thankful if you would provide an answer or answers in writing at your earliest convenience as this matter is of great concern to us and our clients.

Respectfully,

CID ASSOCIATES, INC.

Re: ADA Tech Assistance
Section 4.1.3 Paragraph (9)

To Whom It May Concern:

We are interested in receiving an interpretation relative to the exception statement of Section 4.1.3, Paragraph (9) ["EXCEPTION: Areas of rescue assistance are not required in buildings or facilities having a supervised automatic sprinkler system."].

Does the exception statement pertain to the egress requirement found in the first sentence of Paragraph (9)?

Are we to understand that the exception pertains to only the areas of rescue assistance requirement found in Paragraph (9)?

More specifically, concerning buildings that have sprinkler systems, do we need to make all required egress exits that are on accessible levels, accessible or does the exception eliminate the requirement?

Any clarification regarding this particular Section's exception statement would be very much appreciated.

Very truly yours,
CID Associates,

Michael A. Cassavoy, P.E.R.A.
Principal

(b)(6)

JUN 28 1993

Ms. Gail Barmoy
Safe Watch
301 Mariner Drive
Tarpon Springs, Florida 34689

Dear Ms. Barmoy:

Attorney General Reno has asked me to respond to your recent letter extending your congratulations on her appointment and recommending an amendment to the Department's regulation implementing the Americans with Disabilities Act (ADA). I am sure that you understand that it is not possible for the Attorney General to respond personally to all of the letters that she receives. However, Attorney General Reno wants you to know that she appreciates your taking the time to write to express your good wishes.

Your letter recommends that the Department of Justice amend its regulation implementing title III of the ADA to require the provision of devices (such as the "DoorScope" that you manufacture) that will enable people with disabilities to make a visual identification of visitors in places of transient lodging, such as hotels or motels.

Rulemaking authority under title III (public services) and title II (public accommodations) of the ADA is divided between the Architectural and Transportation Barriers Compliance Board (Access Board) and the Department of Justice. The ADA requires the Access Board to develop the minimum guidelines and requirements for accessible design that will apply to the new construction or alteration of buildings and facilities that are subject to the ADA. The Department of Justice is required to adopt enforceable standards that are consistent with the guidelines published by the Access Board.

Pursuant to these requirements, the Department has adopted the Standards for Accessible Design, which are published as Appendix A to the Department's regulation implementing title III. The Standards were originally published by the Access Board as the ADA Accessibility Guidelines. The Department would on its

own initiative only make changes to the Standards that are

cc: Records, Chrono, Wodatch, Blizard, McDowney FOIA, Friedlander
n:\udd\blizard\control\barmoy

01-02428

consistent with the Access Board's Guidelines. If the Access Board amends its Guidelines, the Department would then amend the Standards to make them consistent with the Guidelines.

We note, from your letter, that you have already been in contact with the Access Board. Any follow-up you may wish to pursue with regard to that agency's conduct of an additional rulemaking procedure on this issue should be addressed to:

The Honorable Kathleen K. Parker
Chairperson
U.S. Architectural and Transportation
Barriers Compliance Board
1331 F Street, N.W., Suite 1000
Washington, D.C. 20004-1111

I hope that this information is helpful to you.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

March 15, 1993

Janet Reno, Esq.
Attorney General of the United States
10th and Pennsylvania Avenue, N.W.
Washington, D. C. 20004

RE: ADA

Dear Attorney General Reno:

CONGRATULATIONS !!!!!!!

We wish to extend our very best to you as you begin another phase of public service. We applaud your integrity and have confidence that with the Lord's help, you will continue to have high standards and will be an outstanding Attorney General.

Because the Justice Department has jurisdiction over ADA compliance we are writing you to let you know of our concern and experience regarding the ADA's lack of provision.

We are wearing two (2) different hats as we write to you. The ADA law affects us, as well as many others.

First, XX . We travel often and as we stay in various motels and stay in rooms designated for the handicapped, we find most rooms ill-prepared for the wheelchair bound guest as far as providing viable visibility for the guest of visitors to the room. Sometimes there is the traditional "peephole" placed at eye level for the standing guest and sometimes there is the same type of "Peephole" placed at wheelchair eye level (the view from here is the abdominal area of the visitor!). Because they are typically only 1/2" in diameter and more times than not they give only a limited and distorted view, plus from a wheelchair, they are practically useless, we feel the ADA law should make provision for a device that will enable the disabled guest to see much more clearly who their visitor is. This could also be placed at eye level for those in a standing position in all the disabled rooms for the safety and convenience of all disabled guests.

Our second hat is related to our business. We have been selling and installing for over two years a product called "DoorScope". We are pleased to enclose a Product Information sheet and a color brochure for your review. When the ADA was made law, we were excited because we knew our product would bean answer for the disabled in a variety of applications. As we reviewed the law, however, we were extremely disappointed to find no provision made for visual identification in terms of specific law or guideline. In our experience calling on the hotel/motel industry, we continually hear that because there is no specific requirement, there is no impetus to spend dollars not required by law. Obviously, this is a short-term perspective and though it will save owners some current dollar outlay, the safety and well-being of the guests appears not to be a consideration for those hotel/motel owner.

We have written to the Architectural and Transportation Barriers Compliance Board. We appreciate their role of input to facilitate the ADA in its efforts to provide equal access and convenience as well as providing guidelines and recommendations for ensuring the safety of the disabled.

We understand a specific product can't be recommended. We are most interested in having provision made that will mandate providing visual identification guidelines which will result in the safety of the disabled.

We do not mean to limit the application of safe visual identification only to the hotel/motel industry.

We appreciate your consideration in this matter.

Sincerely,

SAFE WATCH

SAFE WATCH

P R 0 D U C T I N F 0 R M A T I 0 N

The DOORSCOPE is a newly patented safety and security device that renders the conventional door viewer obsolete. A person using the DOORSCOPE can actually stand at a distance of up to seven (7) feet from inside the door and acquire a true image of the visitor waiting outside. Children and the handicapped are able to benefit from the DOORSCOPE in that a person can be 12 to 15 inches below or on either side of the product and still see the outside. For added, security, the visitor is unable to look through the DOORSCOPE to see inside. Safe Watch is unaware of any product that might compete with the DOORSCOPE with the exception of a video surveillance camera at many times the price of the DOORSCOPE.

Safe Watch in Tarpon Springs has distribution rights making the product available to those states east of the Mississippi. GP Visions of Orange California has been awarded the distribution rights making the product available to those states west of the Mississippi.

The characteristic that differentiates the DOORSCOPE from other door viewing devices is that the DOORSCOPE utilizes a real "prism" image (less than 5% to 7% concave), thereby projecting a true image to the user. Due to the clarity provided by his method, even elderly and visually impaired can more accurately identify visitors by allowing the use of both eyes.

The DOORSCOPE has been fire rated by a Warnock Hersey International report. During the first quarter of 1991, Warnock Hersey conducted a 60 minute fire test. The DOORSCOPE successfully passed this test and is not the only door viewer on the market with this rating. The DOORSCOPE is WHI authorized for use in wood doors with the following ratings: 1/3 hr. 3/4 hr., and 1 hr. as tested to ASTM E-152, CAN 4-S104 (ULC-S104), NFP252, UBC 43-2 and UL-10(b) Fire Door Test Standards.

The DOORSCOPE is manufactured incorporating the latest technology in advanced optics. In a series of two prisms and two plano-convex lenses the DOORSCOPE provides a super-wide angle of view, producing 132 degrees of horizontal visibility. The product is available in ABS-Resin plastic silver aluminum or a bronze anodized unit.

The DOORSCOPE is easy to install. The tools necessary to install the DOORSCOPE are a standard power drill and a 2-3/8" hole saw and 1/8" drill bit. The average time required for first time installation is approximately ten (10) minutes. The product is sold with easy to follow

instructions for installation in either solid wood, hollow-core or metal doors.

01-02432

JUN 28 1993

The Honorable J. Bennett Johnston
United States Senate
136 Hart Senate Office Building
Washington, D.C. 20510-1802

Dear Senator Johnston:

This letter is in response to your inquiry an behalf of your constituents, the doctors at the Goodwood Woman's Center. The physicians have asked whether they are required by the Americans with Disabilities Act to provide interpreters to their patients with hearing impairments when the cost of doing so exceeds the fee charged for an office visit.

The Americans with Disabilities Act authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituents in understanding the Act's requirements. It does not, however, constitute a legal interpretation, and it is not binding on the Department.

The Americans with Disabilities Act requires physicians to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities. A physician may not impose a surcharge on any particular individual with a disability to cover the costs of measures, such as providing auxiliary aids, that are required by the Act. The applicable regulatory provisions appear in sections 36.301(c) and 36.303 of the enclosed title III regulation, at pages 35596 and 35597, respectively. Also enclosed are the Department's Title III Technical Assistance Manual and the January 1993 Supplement to the Manual, which may provide further assistance to your constituents. Pertinent discussion may be found in the Technical Assistance Manual at pages 22 (surcharges) and 25-28 (auxiliary aids)"

cc: Records; Chrono; Wodatch; McDowney; Bowen; Miller; FOIA, MAF
\udd\millerc\policy\johnson.cng

Under section 36.301(c) of the regulation, the cost of an interpreter must be absorbed by the doctor in circumstances when an interpreter is necessary. However, as provided in section 36.303(a), a doctor is not required to provide any auxiliary aid that would result in an undue burden, i.e., significant difficulty or expense. The flexibility of the auxiliary aids requirement, the undue burden limitation, and the ability to spread costs over all patients should minimize any burden on a medical provider.

What constitutes an effective auxiliary aid or service will depend upon the unique facts of each situation, including the length and complexity of the communication involved. For example, in some instances a doctor may satisfy the auxiliary aid or service requirement by using a note pad and written materials where a deaf patient is making a routine office visit. By contrast, a discussion of whether to undergo major surgery will generally require the provision of an interpreter. Other situations may also require the use of interpreters to ensure effective communication, depending on the facts of the particular case. Further discussion of this point may be found on page 35567 of the enclosed regulation.

I hope this information will be helpful to you in responding to your constituents.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

February 19, 1993

Senator J. Bennett Johnson
United States Congress
Washington, D.C. 20510-1802

Dear Senator Johnson:

We are writing you over concerns regarding the recently passed Americans with Disabilities Act. More and more today it seems that laws and regulations are being passed by government with little regard to the actual affects of these laws when put into practice. The above stated Act requires that we provide a person fluent in sign language for all hearing impaired patients. As we have recently learned the cost of providing such an interpreter is a minimum of $60.00

When seeing an obstetrical patient covered by Medicaid we are reimbursed $27.00. For private pay patients the fee is $33.00. Thus for each hearing impaired obstetrical visit, we will lose from $27.00 to $33.00 not including overhead costs. Where we as physicians are often asked or required to provide our services free of charge, we are now being required to pay to care for patients.

Prior to the act we have always provided medical care for the hearing impaired with little difficulty, however, now this is becoming financially impossible. With the rising costs of medicine being a real concern today, regulations such as the Americans with Disabilities Act will only serve to make matters worse.

Sincerely,

Michael T. Perniciaro, M.D. Debra A. Baehr, M.D.

Renee S. Harris, M.D. Kathy H. Guidry, M.D.

Susan F. Puyau, M.D.

01-02435

T. 6-17-93

Control No. X93052009925

The Honorable Ike Skelton
Member, U.S. House of Representatives
4th District
514 B North 7 Highway
Blue Springs, Missouri 64014

Dear Congressman Skelton:

This letter is in response to your inquiry on behalf of your constituent, Mr. W.E. Olson, Sr., concerning the requirements of title III of the Americans with Disabilities Act (ADA), 42 U.S.C. 12101 et seq., and this Department's regulation implementing title III, 28 C.F.R. Part 35.

Mr. Olson wrote to the Department of Justice on September 29 and December 1, 1992, asking, among other things, for interpretations of the ADA requirements for the design and construction of accessible plumbing elements. Following Mr. Olson's second letter, the Civil Rights Division's Public Access Section convened a meeting at which Mr. Olson (and other plumbing industry representatives selected by Mr. Olson) met with senior staff members to discuss the issues raised in Mr. Olson's letters. Section staff promised to confirm the discussions at the meeting with a written response. This response was sent recently to Mr. Olson. A copy is enclosed for your information. We regret the delay in sending this response.

When Mr. Olson initially requested interpretations of the ADA requirements from this Department, we assumed that he was merely seeking clarification of the standards for accessible design. Because the ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act, we offered to meet with Mr. Olson and the other industry representatives to address plumbing manufacturers' concerns. The technical assistance that we provided at that meeting and in our subsequent response to Mr. Olson's letters is informal guidance, not a legal interpretation by the Department, and it is not binding on the Department

Over the course of time, it has become clear to us That

Mr. Olson is not seeking an explanation of the rule. His true concern is that some of the products he manufactures may not conform to the rule's specifications and therefore could not be

cc: Records, Chrono, Wodatch, Blizard, McDowney FOIA
Friedlander
n:\udd\mercado\congltrs\skelton.jlb
01-02436

installed in buildings subject to the Act. Therefore, he wants the Department of Justice to issue an "interpretation" of the ADA standards that will permit covered entities (e.g., building owners and contractors) to continue to install, as" accessible," products that do not comply with the ADA regulation. Neither the ADA nor the Administrative Procedure Act permit the Department to modify a regulation in this manner.

The ADA, like other Federal civil rights laws, is enforced through compliance reviews, complaint investigations, and litigation initiated by the Department of Justice. (It may also be enforced through litigation initiated by private parties.) The ADA does not authorize the Department of Justice, or any other Federal agency, to function as a "building department" to review plans, to issue permits, or to provide "interpretations" of the standards. The ADA, like all other Federal civil rights laws, requires each covered entity to use its best professional judgment to comply with the applicable regulations.

The Administrative Procedure Act, which establishes the formal requirements for issuing Federal regulations, requires amendments to regulations to comply with the same procedures as the initial publication. That is, proposed changes must be made through a rulemaking proceeding that includes public notice, the opportunity for public comment, and the completion of any revisions to the proposal that are deemed to be required after public comment.

We have informed Mr. Olson, and others in the plumbing industry, that the appropriate means of seeking changes in the ADA requirements is to address a petition for further rulemaking to the Architectural and Transportation Barriers Compliance Board (Access Board), which is the Federal agency designated by the ADA to develop the guidelines for the accessible design of buildings and facilities subject to the ADA. The Department of Justice is required by the ADA to adopt enforceable standards that are consistent with the Access Board's guidelines.

I hope that this information is helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Reference: ADA/DOJ Interpretation Requests
Dear Congressman Skelton:

I would like to request your help in securing interpretations from the ADA Access Board and/or DOJ in regards to the ADA ("Americans with Disabilities Act").

The following pages cover my attempts to deal directly with the ADA-Access Board and the Dept. of Justice (DOJ) in trying to resolve these areas.

The areas of concern apply to plumbing fixtures which we manufacture at various locations all over the country.

The whole plumbing fixture industry is in a state of confusion because of the different interpretations that are being given by various agencies (i.e.: federal, state, regional, municipalities, etc.) on the same ADA Law verbage.

The way the ADA is currently being strictly interpreted there is not a premanufactured (acrylic/gel-coat) shower stall that meets the ADA.

Also the ADA-Access Board nor DOJ will answer the question of whether they will accept the revised CABO/ANST A117.1-1992 standard entitled "American National Standard for Accessible and Usable Buildings and Facilities." The ADA-Access Board was on the Committee that revised the

CABO/ANSI A117.1-1992 which was published in December 1992. Some of my questions would be answered by ADA/DOJ accepting the verbage contained in the new CABO/ANSI A117.1.

All of the pre-March 10, 1992 information was sent to or hand delivered or both to both the ADA-Access Board and the Dept. of Justice. The first letter written was acknowledged by the DOJ and they had promised to respond "expeditiously." I feel that answers to my letters should not take (7) seven months much less after seven months not even to know when you will receive an answer.

JUL 6, 1993

The Honorable Dave Camp
Member, U.S. House of Representatives
135 Ashman
Midland, Michigan 48640

Dear Congressman Camp:

This letter is in response to your inquiry on behalf of the Gordonville United Methodist Church of Midland, Michigan, Which seeks information on any available funding to assist the Church in installing an elevator to comply with the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance about the application of the ADA; however, this technical assistance does not constitute a determination by the Department of the rights or responsibilities of any individual under the ADA, and it is not binding on the Department.

No Federal funds have been appropriated to cover the cost Of ADA compliance by covered entities, even though the Internal Revenue Code, as amended in 1990, does allow a deduction of up to $15,000 per year for expenses associated with the removal of qualified architectural and transportation barriers and permits eligible small businesses to receive a tax credit for certain costs associated with ADA compliance. However, it well may be that this has no relevance to the Church because religious entities are exempt from the requirements of title III of the ADA.

The exemption covers all of the activities of a religious entity, whether religious or secular. In addition, a private, nonreligious entity operating a place of public accommodation in a religious entity's space. free of charge is also exempt from

cc: Records; Chrono; Wodatch; Blizard; McDowney; FOIA. MAF.
\udd\blizard\control\camp

title III's requirements. On the other hand, a private, nonreligious tenant operating a place of public accommodation in a religious entity's facility is subject to title II if a lease exists under which rent or other consideration is paid.

If the Church rents its facility to a private, nonreligious entity that operates a place of public accommodation (e.g., a day care center) in the Church's facility, the entity operating the place of public accommodation is required to comply with title III. The Church, however, remains exempt, even if its tenant is covered. That is, the title II obligations of a landlord for a place of public accommodation do not apply if the landlord is a religious entity.

For your information, I have-enclosed copies of the Department of Justice regulation implementing title III of the ADA and the Department's Title II Technical Assistance Manual. I hope that this information is helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

JUL 2 1 1993

The Honorable Charles E. Grassley
United States Senate
135 Hart Senate Office Building
Washington, D.C. 20510-1501

Dear Senator Grassley:

This letter is in response to your inquiry on behalf of your constituent, the Maytag Company, which inquired about the application of the Americans with Disabilities Act (ADA) to washing machines. We apologize for any inconvenience caused by the delay in answering your constituent's request for a policy interpretation.

Your constituent's letter asked several questions about the applicability of the ADA to washing machines. It asked whether washing machines must comply with reach range requirements found in the Standards for Accessible Design (the "Standards"), and, if so, how many washing machines must meet those requirements. It also asked whether requirements found in the Standards may be waived if assistive devices are provided on request. Third, it asked whether the Standards require Braille lettering on laundry and vending equipment. Finally, it asked which accessibility standards may be used by university dormitories. These questions raise complex issues under the ADA and necessitate this unusually long and detailed response.

I have enclosed five documents that are referred to in the discussion below: the Americans with Disabilities Act Accessibility Guidelines (ADAAG) and its preamble, issued by the Architectural and Transportation Barriers ompliance Board (ATBCB) (these guidelines were adopted by the Department of Justice as the Standards); the regulation promulgated by the Department of Justice under title III of the ADA, which includes the Standards; the regulation promulgated by the Department of Justice under title II of the ADA; the Uniform Federal

2019

Accessibility Standards (UFAS); and proposed accessibility guidelines under title II of the ADA, issued by the ATBCB. After a period of notice and comment, final accessibility guidelines for title II facilities will be issued. Until the Department of Justice adopts final standards under title II, the current title II rule provides that either the Standards or the requirements found in UFAS may be used for title II facilities.

The extent to which the ADA requires washing machines to adhere to the Standards' reach range requirements depends on several factors: whether the facility in which they are located is covered by title III or title II of the ADA, whether such washing machines are necessary to the full and equal enjoyment of a facility's services by persons who use wheelchairs, whether a facility is being newly constructed or altered.

Title III of the ADA applies to places of public accommodation and commercial facilities. The Standards, which were developed as the accessibility requirements for new construction and alteration of title III facilities, contain requirements for the accessibility of washing machines, including the reach range requirements noted in your constituent's letter. Title II of the ADA applies to facilities owned or operated by state or local government entities. As noted above, entities covered by title II may apply either the Standards or UFAS to their facilities until final standards are adopted under title II.

For your convenience, Part I of this letter summarizes the way in which the ADA requirements apply to washing machines in covered facilities and programs. Parts II through V address in detail the requirements with respect to title III, title II, Braille controls, and university dormitories.

I. Summary

The ADA does not impose an obligation on manufacturers of washing machines to produce machines of a particular design. However, the law may require that facilities and programs covered by the ADA ensure accessibility of washing machines, depending on several factors. First, in facilities covered by title III, sections 36.201 and 36.202 of the title III regulation require a place of public accommodation to make its services accessible to persons with disabilities. To do this, the public accommodation must either provide a sufficient number of accessible washing machines, or it may provide assistive devices, so that persons with disabilities may fully and equally enjoy the services offered. Second, also in facilities covered by title III, places

of public accommodation and commercial facilities must follow the requirements of the Standards, including reach range requirements, when installing fixed or built-in machines in a newly constructed or an altered facility. In new construction and

alteration, the Standards must be followed, and assistive devices are not acceptable. In existing places of public accommodation that are not otherwise being altered, built-in or free- standing machines must be made accessible, using the Standards and its reach range requirements, if to do so would be readily achievable. If it would not be readily achievable, alternatives that are readily achievable, such as assistive devices, may be used.

In facilities covered by title II, the Standards, which prescribe maximum reach ranges, or UFAS, which requires front-loading machines, must be followed in new construction or alterations, and assistive devices are insufficient for ADA compliance. In existing facilities, covered entities must provide access to washing machines that are part of an offered program, but they may do this by using assistive devices.

Braille controls are not required for equipment under the new construction or alteration Standards. However, Braille controls are required in places of public accommodation covered by title III, if necessary to provide effective communication with persons with disabilities, unless it would be an undue burden to provide them. They may also be required under sections 36.201 or 36.202. Under title II, Braille controls are required if necessary to provide communication to those with disabilities that is equally as effective as the communication provided to others, unless to do so would pose an undue burden.

Finally, privately owned university dormitories are covered by title III, which uses the Standards; State or locally owned university dormitories are covered by title II, which currently uses the Standards as adopted by title II or UFAS; and universities that receive Federal funds, which can fall into either of the other two categories, are covered by the Rehabilitation Act, and must follow UFAS.

II. Entities Covered By Title III

Title III of the ADA covers laundry facilities in two ways. First, sections 36.201 and 36.202 of the title III regulation obligate places of public accommodation to make their services fully and equally enjoyable by persons with disabilities. Second, the title III provisions for new construction and alteration, which are applicable to fixed machines only, and for

barrier removal, which are applicable to washing machines regardless of whether they are fixed or free-standing, require machines to be accessible to persons who use wheelchairs. This requirement is not related to the inquiry concerning whether accessible washing machines are necessary to the full and equal enjoyment of services.

A. Coverage under sections 36.201 and 36.202

Sections 36.201 and 36.202 of the title III regulation prohibit public accommodations from denying persons with disabilities "the full and equal enjoyment" of the services and facilities offered. See title III regulation and preamble, 36.201 and 36.202, at pages 35595 and 35555-56. For example, a laundromat or hotel guest laundry room may need to provide some washing machines with lower controls in order to afford persons who use wheelchairs an equal opportunity to benefit from its services and facilities, if the lack of accessible washing machines effectively denies such persons a full and equal opportunity to benefit from the facility's services. See preamble to title III regulation, at page 35572. These sections do not require a specific number of accessible machines, only that enough machines be accessible for persons with disabilities to have a full and equal opportunity to enjoy a facility's services.

Sections 36.201 and 36.202 apply to all places of public accommodation, such as laundromats or homeless shelters, whether newly constructed, altered, or neither; but they do not apply to commercial facilities, such as corporate office buildings. Although these sections require that the service be made accessible, they do not require that washing machines meet the Standards. Therefore, a place of public accommodation may satisfy these sections' requirements through alternative means, such as assistance provided on request. Any alternative means, however, must afford persons with disabilities a full and equal opportunity to enjoy the service. Thus, if personal assistance is offered, it must be available at all times, and it must be as effective for persons with disabilities as the service is for other persons.

B. Coverage under new construction, alteration, and barrier removal provisions

In addition to any obligations under sections 36.201 and 36.202, all places of public accommodation and commercial facilities must comply with ADA requirements for new construction

of facilities and alterations to existing facilities. Places of public accommodation must also comply With ADA requirements for barrier removal from existing facilities not otherwise being altered. The Standards are the accessibility requirements applicable to this area of coverage, but they apply only to equipment that is built into the structure of a building -- attached to a wall or floor -- not equipment that is free-standing. See preamble to ADAAG, at page 35415.

The Standards include maximum allowable reach ranges in accessible areas and requirements for controls and operating mechanisms. Section 4.2 provides that an object over which a person must reach, such as a washing machine, may be no higher than 34" from the floor to be accessible. Section 4.27 addresses clear floor space, reach, and operation of controls. The Standards do not restrict the types of machines that can be used. However, ANSI A117.1-1980 and 1986, UFAS, and other accessibility standards require the use of front-loading machines; research has demonstrated that they can be used more readily by some people with disabilities, because the opening for loading and unloading clothes is visible and reachable from a wheelchair. Under the Standards, top-loading machines are permitted, as long as they can be operated within the requirements for reach and controls. This would include reach to load and unload clothes, as well as reach to the controls and/or coin mechanism.

The extent to which a covered entity may deviate from the Standards depends on whether the covered facility is being newly constructed, altered, or neither. In new construction of all facilities covered by title III, the Standards must be adhered to strictly, unless to do so would be structurally impracticable or equivalent facilitation is provided. See section 36.401(c) of the regulation (pages 35599 and 35600) and the preamble (pages 35557 and 35589); sections 2.2, A2.2, and 4.1.1(5)(a) of the Standards and title III regulation preamble, at pages 35607, 35611, 35674, and 35577. See also preamble to ADAAG at pages 35413 and 35415. The "structurally impracticable" exception is a narrow exception that would not apply to washing machines. When alterations are performed in covered facilities, the Standards must be followed, unless to do so would be technically infeasible. Compliance is technically infeasible only if it would require the removal of a load-bearing member of the essential structural frame of a building, or if other existing physical or site constraints prohibit compliance. See Standards 4.1.6(j) and title III regulation preamble, at pages 35617,

35600, and 35581; see also preamble to ADAAG at page 35428. Thus, in new construction and alteration of facilities, in most cases, the accessibility requirements must be followed for built-in washing machines. While assistive devices may also be offered, they do not relieve the covered entity from compliance with these requirements.

In existing places of public accommodation covered by title III that are not otherwise being altered, the ADA requires that architectural barriers to access be removed where the removal is readily achievable. See title III regulation and preamble, 36.304, at pages 35597 and 35568-70. This requirement does not apply to commercial facilities. Readily achievable means capable of being done without much difficulty or expense. See title III regulation and preamble, 36.104, at pages 35594 and 35553-54. Thus, under barrier removal, washing machines must be modified if

it is readily achievable to do so. Even free-standing machines may need to be made accessible to persons who use wheelchairs, because barrier removal obligations are not limited to built-in equipment.

If removing barriers from existing facilities is not readily achievable, the ADA requires that alternatives to removing barriers be undertaken, as long as those alternatives are readily achievable. See title III regulation and preamble, 36.305, at pages 35596 and 35570-71. In such existing facilities, then, controls on washing machines must be modified to be within an accessible reach range for persons who use wheelchairs, if such modification is readily achievable. Assistive devices that are provided on request may be sufficient for ADA compliance in this context only if modifying the machines is not readily achievable.

In new construction and alteration of facilities covered by title III, the number of fixed or built-in washing machines that must meet the reach range and other requirements of the Standards depends on the type of facility in which the machines are located. For transient lodging in hotels, motels, or dormitories, sections 9.1 and 9.2.2 of the Standards require all fixed or built-in facilities located in public and common use areas, and fixed or built-in facilities located within sleeping units that are required to be accessible, to comply with accessibility standards. In social service center establishments, such as shelters or group homes, section 9.5.1 requires at least one of each type of fixed or built-in machine in common areas to be accessible. As noted above, these standards apply strictly to new construction and alteration of covered facilities. In existing places of public accommodation not covered by sections 36.201 and 36.202, these standards must

be met if to do so would be readily achievable.

III. Entities covered by title II

Title II of the ADA applies to programs and facilities owned or operated by State or local government entities or instrumentalities. New construction and alteration of title II facilities must follow either the Standards or UFAS, until final standards are adopted under title II. In existing title II facilities, responsible entities must ensure that each program, when viewed as a whole, is accessible to persons with disabilities. Structural changes are not necessarily required under this standard, if programs can be made accessible in other ways. See title II regulation and preamble, 35.150, at pages 35719-20 and 35708-09. Therefore, under the "program access" standard, use of assistive devices may result in compliance with the ADA as long as the assistive devices function to make that aspect of the program accessible to persons with disabilities.

IV. Braille controls

Under title III, the extent to which washing machines are required to have Braille controls depends on whether the facility in which they are located is a place of public accommodation or a commercial facility. Public accommodations are required by section 36.303 of the title III regulation to furnish auxiliary aids and services where necessary to ensure effective communication with persons with disabilities, unless doing so would pose an undue burden or would fundamentally alter the service offered. See title III regulation and preamble, S 36.303, at pages 35597 and 35565-68. Therefore, a place of public accommodation that offers washing machines with words on them must provide an effective way of communicating any words on the machine to persons with vision impairments. Braille lettering is one such method of communication. However, the Braille lettering need not be built into the equipment controls; equipment controls can be Brailled by templates or adhesive labels. Braille lettering may also be required under sections 36.201 or 36.202 of the rule, as discussed above in part II.A. Commercial facilities are not required to modify washing machines to have Braille lettering, because commercial facilities are not covered by the auxiliary aids and services requirements or by sections 36.201 and 36.202.

In facilities covered by title II, auxiliary aids and services must be provided to ensure communication with persons with disabilities that is equally as effective as communication with others, unless to do so would pose an undue burden or a

fundamental alteration to the service. See title II regulation and preamble, 35.160, at pages 35721 and 35711-12.

V. University Dormitories

University dormitories, if privately owned, are covered by title III of the ADA. They therefore must comply with sections 36.201 and 36.202 of the title III regulation, if applicable, and they must apply the Standards in new construction and alterations, and, if readily achievable, in existing facilities not being altered. Universities owned and operated by State or local governments are covered by title II of the ADA, and currently may choose between the Standards, which do not necessarily require front-loading washing machines, and UFAS, which specifically requires front-loading machines. (Whichever standard is chosen must be used throughout the facility.)

In addition, the proposed ADA guidelines for residential units covered by title II specify that at least one washing machine in any laundry facility must be front-loading, and must meet other requirements from the Standards for controls. See proposed title II guidelines and preamble, 13.3.5, at pages 60663 and 60639. Moreover, any university, public or private,

that receives Federal funds is also covered by section 504 of the Rehabilitation Act of 1973; application of UFAS generally satisfies the new construction and alteration requirements of the section 504 regulations.

I hope this information is helpful to you in responding to your constituent. Please do not hesitate to contact me if we can provide additional assistance on this or any other matter.

Sincerely,

M. Faith Burton
Acting Assistant Attorney General

The Honorable Janet Reno
Attorney General
Department of Justice
Constitution Avenue between 9th
and 10th Streets
Washington, D.C. 20530

Dear Madam Attorney General:

I wanted to bring to your attention a matter of considerable concern to a major employer in my home state of Iowa.

The Maytag Company is a major manufacturer of home appliances headquartered in Newton, Iowa. The company has been unable to obtain from the Department of Justice certain interpretations of final rules that the Department has issued under Title III of the Americans with Disabilities Act.

Since September, 1992 Maytag has made numerous requests for information and has sought meetings to clarify these rules which are essential to the production and sale of clothes washers and other manufactured products. Despite repeated requests for assistance to the Department's ADA office, none has been forthcoming.

I would request that you look into this matter personally with the hope that a decision could be forthcoming. I am not asking for a specific decision... only that a decision be made.

Thank you for your assistance.

Sincerely,

Charles E. Grassley
United States Senator

CEG/jb

T. 7-13-93

DJ 202-PL-595 JUL 21 1993

Ms. Pat McPartland
Code Specialist
Office of the State Architect
Department of General Services
State of California
400 P Street, 5th Floor
Sacramento, California 95814

Dear Ms. McPartland:

I am responding to your letter concerning the application of title III of the Americans with Disabilities Act (ADA), 42 U.S.C. 12101 et seg., and the Department of Justice regulation implementing title III, 28 C.F.R. pt. 36 (1992), to the design and construction of facilities that are subject to title III and to the requirements of the California State Building Code.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you to understand the ADA. However, this technical assistance does not constitute a determination by the Department of your rights or responsibilities under the ADA, and it is not binding on the Department.

Your letter states that the State of California recently amended its State Building Code and that the State plans to seek ADA certification of the amended code. You have asked if, in the interim period between the effective date of the amended State code and the date of this Department's determination on the request for certification, the Department will regard compliance with the California State Building Code as compliance with the ADA.

Title III of the ADA requires all places of public accommodation and commercial facilities that are designed and constructed for first occupancy after January 26, 1993, and those that are altered after January 26, 1992, to comply with the Standards for Accessible Design (28 C.F.R. pt. 36, Appendix A) contained in the Department of Justice regulation implementing

title III. Title II does not, however, preempt all State

cc: Records, Chrono, Wodatch, Bowen, Blizard FOIA Friedlander
n:\udd\blizard\cert\calif.ta

01-02453

regulation in the area of accessible design. States may enact and enforce code provisions that provide equal or greater access than the ADA Standards. However, if the State code provisions differ from the ADA requirements in a way that results in less accessibility, then an entity subject to title III is required to comply with the Federal standard.

Congress recognized that individuals involved in the design and construction of facilities subject to the Act may want to be able to rely on compliance with State or local codes as a "safe harbor." Therefore, title III permits the Department of Justice, in response to a request from a State or local government, to certify that the accessibility provisions of a State or local building code meet or exceed the requirements of the ADA. Certification of a code by the Department does not ensure that a facility constructed in compliance with the code will comply with the ADA, but it does enable a party in litigation that alleges a violation of title III to point to compliance with a certified code as rebuttable evidence of compliance with the ADA.

Compliance with a State code can be offered as evidence of compliance with the ADA only after the State code has been certified. Until the code has been certified, individuals responsible for the design, construction, or alteration of facilities subject to title III must ensure that those facilities meet or exceed the minimum requirements of the ADA standards.

You have also asked if the Department will undertake an informal review of the State code to identify any areas of conflict with the ADA, so that entities subject to the California code may rely on that code while the State's request for certification is pending. Although the Department does provide technical assistance to State governments that plan to seek certification, the Department does not have the resources available to undertake reviews of completed codes prior to a formal request for certification. This type of "informal" review cannot be substituted for the formal review process (including the opportunity for public comment) that must precede a preliminary determination of equivalency, and it could not support the use of the State code as a "safe harbor" until

certification is obtained.

Your letter did ask for technical assistance about one particular issue: the California specifications for a roll-in/transfer shower stall in hotel rooms (hereafter referred to as the "California shower"). You asked if the California shower design is equivalent to the accessible shower stalls required by the ADA. The California shower is 42 inches wide and 48 inches deep, with an entrance opening of 36 inches. A folding seat is located on the wall opposite the controls. There is a 36 inch by 48 inch clear space at the entrance to the shower.

The design of the California shower varies significantly from the shower designs allowed by the ADA Standards for Accessible Design (28 C.F.R. pt. 36, Appendix A, 4.21 and 9.2). The most significant differences in the designs are the 42 inch width of the shower and the lack of the required 30" by 48" clear floor area adjacent to and perpendicular to the shower seat.

The 36 inch width specified for the ADA transfer shower in section 4.21 is absolute; it is not a minimum dimension. The California shower width of 42 inches will make it difficult, if not impossible, for many people to reach and use the controls or the showerhead while seated on the bench. The appendix to the ADA Standards (Fig. A3(a)) illustrates that the maximum forward reach of a person seated in a wheelchair is 31 inches from the centerline of the individual's body and approximately 36 inches from the backrest of a wheelchair. This reach is possible when an individual is able to grasp the wheel rim of the chair and lean forward to extend his/her reach out over his/her feet, which are resting on footplates and support this reach. The required reach to use the California shower could be up to 42 inches from the wall at the back of the seat to the controls and showerhead on the opposite wall. This reach is 6 inches beyond the 36 inch reach allowed in the ADA Standards for a person seated in a wheelchair. The difficulty of achieving this reach would be further complicated by the fact that it occurs in a shower, a wet and generally less supportive environment than an individual's own wheelchair.

The clear floor area required in the California shower is not located adjacent to the transfer seat as required in the ADA Standards. Although the California shower requires a 36 inch by 48 inch clear floor area, the space is allowed to be 12 inches away from the transfer seat, not located immediately adjacent and perpendicular to the bench as required in the standards. These problems are further complicated by the provision in Section

3105.(b.1) 1 B.(1) that states "(c)ompartments shall be 42 inches in width... with an entrance opening width of 36 inches. Although it is unclear where this opening may be located, if it is located between the clear floor area and the shower seat, the 36 inch entrance opening would further obstruct an individual's ability to transfer from a wheelchair to the shower seat.

I hope that this information is responsive to your inquiry.

Sincerely,

John L. Wodatch
Chief
Public Access Section

DEPARTMENT OF GENERAL SERVICES SATE OF CALIFORNIA PETE WILSON GOVERNOR
OFFICE OF THE STATE ARCHITECT
400 P Street, 5th Floor, Sacramento 95814
(916) 323-0291

April 13, 1993

Mr. John Wodatch, Chief
Public Access Section
Department of Justice
P. 0. Box 66738
Washington, D. C. 20035-9998

Dear Mr. Wodatch:

The Office of the State Architect (OSA) has responsibility for building standards for accessibility in California. California has just completed the process of adopting new regulations for accessibility into the California State Building Code. The purpose of the new regulations is to bring California's accessibility requirements up to the standard in 'the American's with Disabilities Act Accessibility Guidelines (ADAAG). OSA will be submitting this new code to the Department of Justice (DOJ) for certification as ADAAG equivalent momentarily. However, it is our understanding that the certification process can be lengthy, and the building community in California has expressed some concern that they may place themselves in jeopardy if they use an uncertified code to conform to ADAAG in the interim.

Throughout this code adoption process in California, a process which has taken two years to complete, the staff of OSA has been in close touch with both DOJ and the Architectural and Transportation Barriers Compliance Board (ATBCB) and OSA is confident that our new code meets all

requirements for certification. OSA is concerned about the difficulty caused to builders and building officials in complying with and enforcing two separate building codes, and we would like to assure them both that use of California's code alone will suffice. We have two requests of DOJ to help us during this difficult interim period.

1. ADAAG "safe harbor" by use of California regulations.
We understand that DOJ is in an awkward position as far as guaranteeing a code without opportunity for adequate review. While you may not feel comfortable assuring California code users that using the code would provide a "safe harbor" against any objections. We would appreciate it if you could informally review the attached code and let us know of any conflicts that might jeopardize certification. In addition, any comments you could make on how compliance with California regulations might be viewed by DOJ or the courts in case of complaint would be appreciated.

01-02456

2. Design for accessible showers in hotel rooms. A particular issue which is of concern to the hotel industry, concerns the design of accessible showers in hotel rooms. There have been requirements for accessible showers in California since 1982. (Specifications are enclosed). This shower design has proven very satisfactory in use. It allows the user the option of either roll-in or transfer to a seat, and provides comfortable space for both.

The options for accessible showers shown in ADAAG have problems, in our opinion. There are several designs, and each of them has critical flaws. It is our opinion that the California shower is more stringent than the ADAAG showers, and we have thus retained it as our standard.

The hotel industry needs some assurance that compliance with the California shower fully meets the obligation of ADAAG, or they feel threatened. This is an architectural feature that would not be easy to change. We would appreciate it if DOJ would review the California design, and provide a written response that would increase the comfort level of the hotel industry on this issue. We could of course accept these showers as equivalent facilitation, but this is a cumbersome process which does not always lead to a satisfactory resolution of conflict. Our preference is your agreement that the California standard is equally valid.

Thank you for your help in both these matters. We would appreciate a response as quickly as possible, so that we can proceed with confidence in this important endeavor.

Sincerely,

Pat McPartland
Code Specialist
Access Compliance Section

ACCESSIBLE ROLL-IN SHOWER
TITLE 24, PART 2, CALIFORNIA BUILDING CODE

SECTION 3105. (b.1) I B. Compartment Showers. Compartment showers shall conform to the following requirements:

(1) Compartments shall be 42 inches in width between wall surfaces and 48 inches in depth with an entrance opening width of 36 inches. Grab bars shall comply with Subsection 3105. (b.1) 2 H.

(2) When a threshold or recessed drop is used, it shall be a maximum of 1/2 inch in height and shall be beveled or sloped at an angle not exceeding 45 degrees (100 percent gradient) from the horizontal.

(3) The shower floor shall slope toward the rear to a drain located within 6 inches of the rear wall. Maximum slope of floor shall be 1/2 inch per foot in any direction. The floor surfaces shall be of Carborundum or grit-faced tile or of material providing equivalent slip-resistance.

(4) Shower accessories shall include:

a. A folding seat located on the wall opposite controls and mounted 18 inches above the bathroom floor.

NOTE: See Figure 31-2A.

b. Grab bars located on walls adjacent to and opposite the seat. Grab bars shall also comply with the diameter, loading and projection requirements of Subsection 3105. (b.1) 2 H. L-shaped shower grab bars, otherwise meeting the requirements of Subsection 3105. (b.1) 2 H, shall be not less than 24 inches x 36 inches in length positioned on the wall of the shower. The 36 inch side shall extend on the wall having the shower head and controls. Grab bars shall be mounted 33 inches to 36 inches above the shower floor.

NOTE: See Figure 31-2A.

c. Soap dish shall be located on the control wall at a maximum height of 40 inches above the shower floor.

01-02458

(5) Enclosures, when provided for shower stalls, shall not obstruct transfer from wheelchairs onto shower seats.

ACCESSIBLE SHOWERS
TITLE 24, PART 5, CALIFORNIA PLUMBING CODE

Sec. 1505

(a) Water controls of a single ever design shall be located on the side wall opposite the seat and operable with a maximum force of 5 pounds per foot. The controls shall be located 40 inches above the shower floor.

(b) A flexible hand held shower unit with a hose at least 60 inches long shall be provided with head mounting height of 48 inches above the shower floor.

(c) Where handicapped shower facilities are provided in areas subject to excessive vandalism, in lieu of providing the fixed flexible hose and hand-held shower head required above two wall mounted shower heads shall be installed. Each shower head shall be controlled so that it can be operated independently of the other and shall have swivel angle adjustments, both vertically and horizontally. One shower head shall be located at a height of 40 inches above the floor.

(d) Where, within the same functional area, two or more showers are provided for the physically handicapped, there shall be at least one shower constructed opposite hand from the other or others(i.e., one left hand controls vs. right hand controls).

Re:
Dollar Cinema, Clear Lake. TX

Dear XX :

Enclosed please find a copy of Dollar Cinema's policy, which includes a provision regarding outside food and beverages in the theaters. The policy notes that although outside food and beverages are not allowed in the theaters, exceptions are made for those patrons who require outside food for medical reasons. Dollar Cinema will enforce this policy as follows:

> If a customer says they need to bring in a certain item of food or drink because of medical reasons, we will ask how much of that food or drink they would need in a particular situation. We would then advise them to only bring in that stated amount; for example, a piece of candy rather than a whole box, or a small container of drink, rather than a litre bottle, etc.

We trust that this action taken by Dollar Cinema resolves the issue of your complaint. Therefore, we are closing our file on this matter.

Thank you for your patience and assistance.

Sincerely,

Pshon Barrett
Attorney

RE: DJ XX
Dollar Cinema Clear Lake
Julia Walters - July 25, 1992

Dear Ms. Barrett:

Enclosed is a photograph of the policy sign now posted in the box office at Dollar Cinema Clear Lake. The sign is approximately 28' x 44' with one inch letters and is easily and clearly visible to all customers.

The first statement listed, "no outside food or drink allowed unless medically necessary' will be enforced as follows:

> If a customer says they need to bring in a certain item of food or drink because of medical reasons, we will ask how much of that food or drink they would need in a particular situation. We would then advise them to only bring in that stated amount; for example, a piece of candy rather than a whole box, or a small container of drink, rather than a litre bottle, etc.

The staff at all locations are aware of this policy and are instructed to contact their manager if a problem should arise regarding compliance.

You stated in our last conversation that upon receipt of this letter the case would be closed. If possible, I would like to have written confirmation of the 'closed'' status for my files and to provide same to interested parties such as stockholders and our insurance company.

Thank you so much for your consideration, understanding and cooperation in this matter.

Yours truly,

Bob Lundry
Vice President &
General Manager

01-02462

JUL 23 1993

The Honorable Elton Gallegly
Member, U.S. House of Representatives
300 Esplanade Drive
Suite 1800
Oxnard, California 93030-1262

Dear Congressman Gallegly:

This letter is in response to your inquiry on behalf of your constituent, xx , concerning the problems he has encountered in meeting the requirements of the Americans with Disabilities Act ("ADA" or "the Act").

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

Your constituent requested information concerning his obligations under the ADA and what exceptions, if any, apply to existing facilities, new businesses, and small businesses.

Title III of the ADA applies to places of public accommodation, including all sales and rental establishments. See the discussion of this issue at 36.104 of the enclosed title III regulation and p. 2 of the enclosed title III technical assistance manual. Both the landlord who owns the building that houses a place of public accommodation and the tenant who owns or operates the place of public accommodation are subject to the requirements of the Act. See the regulation at 36.201 (b)and the technical assistance manual at p. 3. There is no exception under the ADA for small businesses.

cc: Records, Chrono, Wodatch, Magagna, Perley, McDowney, FOIA, MAF

Under title II, an existing facility that is a public accommodation must remove architectural barriers to access where such removal is readily achievable. The removal of architectural barriers to access is readily achievable where such removal is easily accomplishable and able to be carried out without much difficulty or expense. The rearrangement of temporary or movable structures, such as furniture, equipment, and display racks, is not considered readily achievable, and therefore not required, to the extent that it results in a significant loss of selling or serving space. Further clarification of these issues can be found at 36.304 of the regulation and pp. 29-35 and 37-38 of the technical assistance manual.

If XX plans to alter the facility for a new tenant, such alterations that affect or could affect the usability of the facility or any part thereof must fully comply with the ADA Standards for Accessibility, which are appended to the title III regulation. The path of travel leading to the altered areas that contain a primary function, as well as the restrooms, telephones, and drinking fountains serving such areas, must also comply with the ADA Standards for Accessibility, unless the cost and scope of such alterations is disproportionate to the cost of the overall alteration. Discussion of the alteration provisions of the ADA can be found at 36.402 and 36.403 of the regulation and pp. 48-51 of the technical assistance manual.

Please be advised that many state and local building codes have additional accessibility requirements. Even though your constituent may be in compliance with the ADA, he must also comply with his state and local codes if they provide for greater accessibility.

I hope that this information is helpful. You may wish to inform your constituent that further information is available through the Americans with Disabilities Act Information Line at (202) 514-0301.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Congressman Elton Gallegly
300 E. Esplanade #1800
Oxnard, Ca. 930301202

Dear Congressman Gallegly:

It took seven months for my tenant and I to obtain a Planned Dev. Permit.

The tenant sells trash and treasures the building 900 sq. ft. has tables and shelves with some valuable antiques. The County has advised the tenant he must provide for wheelchair space and if this is done it will not only widen four doorways but tables and shelving would have to be eliminated and then chances for breakage would be great. So my tenant decided to move out.

I want to know what exceptions I can be given in this situation when I speak to a prospective tenant.

I know the County and Cities do not have the manpower to go after existing violations and there are hundreds not only restaurants but other business including Federal County and City buildings who are and will continue to be in violation.

What if the restroom is eliminated or if a Johnny if provided outside

This is without question a hardship on the small businessman and unfair to only target a new business. I would appreciate your checking into this and advising.

Sincerely

xx Oxnard 93030 485 9894

01-02465

T. 7-8-93
Control No. 3062413127
JUL 23 1993

The Honorable J. Bennett Johnston
United States Senate
Washington, D.C. 20510-1802

Dear Senator Johnston:

This letter responds to your inquiry on behalf of XX XX concerning the obligations of private hospitals and other health care providers under the American with Disabilities Act of 1990 ("ADA"). In particular, xx has inquired about the obligation of private hospitals to provide auxiliary aids and services for her son who is deaf and who has sought treatment for drug addiction.

The ADA authorizes this Department to provide technical assistance to individuals and entities that have rights or responsibilities under the ADA. Accordingly, this letter Provides informal guidance to assist you in responding to XX However, this technical assistance does not constitute a legal interpretation and is not binding on the Department of Justice.

Title III of the ADA, which became effective on January 26, 1992, prohibits discrimination on the basis of disability and governs the operations of any private entity that owns, operates, leases, or leases to a place of public accommodation, including a hospital or other service establishment. Under title III, a public accommodation is obligated to make available appropriate

auxiliary aids and services to ensure that communication with individuals with disabilities is as effective as that with nondisabled persons. The auxiliary aid requirement is a flexible one and the type of auxiliary aid or service necessary to ensure effective communication will vary in accordance with the length and complexity of the communication involved.

In many instances, the exchange of written notes with a person who is deaf will suffice to ensure effective communication. In other instances, however, such as in therapy sessions, group meetings or lectures described by XX the use of other auxiliary aids or services may be required. There are a wide variety of services and devices for ensuring effective communication with deaf persons, e.g., qualified interpreters, notetakers, computer-aided transcription services, written materials, TDDS, and closed caption devices for TVs. The

cc: Records, Chrono, Wodatch, Delaney, McDowney, FOIA, Friedlander
n:\udd\delaney\congress\johnston

use of the most advanced technology is not required as long as effective communication is achieved. For further discussion of this matter, see, e.g., section 36.303 of the enclosed title III regulation and pages 35,565-68; and sections 4.3000-4.3600 of the enclosed Title III Technical Assistance Manual at pages 25-28. Public accommodations must be given the opportunity to consult with the patient and make an independent assessment of what type of auxiliary aid, if any, is necessary to ensure effective communication.

Under the ADA, the term "individual with a disability" does not include an individual who is currently engaging in the illegal use of drugs. A public accommodation may not, however, discriminate against an individual who is not engaging in current illegal use of drugs and who "has successfully completed a supervised drug rehabilitation program or has otherwise been rehabilitated successfully; is participating in a supervised rehabilitation program; or is erroneously regarded as engaging in such use." See section 36.209(a)(2) of the title III regulation; for further discussion, see also section 36.104 of the title III regulation and pages 35,561-35,562.

The regulation also specifically provides that a public accommodation shall not deny health services, or services provided in connection with drug rehabilitation, to an individual on the basis of that individuals current illegal use of drugs, if the individual is otherwise entitled to such services.

However, it allows a drug rehabilitation or treatment program to deny participation to individuals who engage in illegal use of drugs while they are in the program. See section 36.209(b) of the title III regulation, page 35,596, and particularly the preamble discussion at page 35,561.

If a private entity receives Medicare or Medicaid assistance, then it also is subject to section 504 of the Rehabilitation Act of 1973, which prohibits discrimination on the basis of disability in federally assisted programs and activities.

I hope this information is helpful in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Enclosures (2)

01-02467

Many years ago, when my children were very young, a man gave some good advice, although it has not always been easy to follow. He told me if I were not willing to fight for the rights of my children, who would. You see, all three of my children were born deaf. Neither my husband nor I are deaf. It was good advice then, it is good advice now even if my children are grown.

My husband and I tried to teach our children to fight for their rights themselves, and in most instances they can and do. I have come to the conclusion that there are some things they don't have the courage or knowledge to be able to fight alone. Someone must help.

Our son is thirty-two, our daughters are twenty eight and twenty seven. Our children were fortunate, through many years of teaching and hard work on their part, they are able to lip read and communicate orally. Their speech is very good, sometimes too good. People tend to think because they talk so well they can hear. They can not. They are not hard of hearing, they are deaf! There is a difference. They all wear hearing aids, so what little residual hearing they have is amplified all it can be. To talk louder or yell will not make them hear anymore, they must lip read or have an interpreter.

It is a hearing world they live in. There have been many changes

in technology in the past twenty years. There are many devices available to help them in our hearing world. There are TDD's for their telephones so they can talk to each other. There are special alarm clocks to awaken them, flasher for fire alarms, door bells, and telephones. Close caption devices for their television so they can read the dialogue on close captioned programs and rental movies. Yet, when it comes to communication, little has changed. Laws have

been passed to guarantee that they are not discriminated against, that they have equal job opportunities, that they are granted the same rights and privileged that we in the hearing world enjoy and take for granted each and every day. Folks it don't happen! For most deaf and hard of hearing individuals these needs are not met adequately if at all.

For the past year and a half my son has been a crack cocaine addict. I won't go into the nightmare that in itself has been, and it has been a nightmare!

He has been through the drug addiction treatment three times at two different hospitals in the Shreveport-Bossier area. His father and I knew nothing about addiction or treatment, so on advice from someone in the treatment field, it was recommended that we put him in Riverside the first time. The only good thing I can say about his treatment at Riverside is that it kept him off the streets for about thirty days, he learned that there was treatment available somewhere, and he made one good friend. Since his release from Riverside in early March 1992, he has admitted himself to the drug

addiction unit at Doctor's Hospital three times. He spent about 34 days at Doctor's Hospital the first time there. The second time he spent only three days in detox, since he had no more hospital days allotted him for last year. January of this year he admitted himself for the third time to the addiction unit and spent twenty eight days before being discharged.

Doctor's Hospital has an excellent drug addiction program.... Their staff is excellent, the nurses are great, the doctors good, the therapists are knowledgeable .... if you are a hearing person you will have gone through a good drug addiction program. However, if you are

deaf, it is inadequate. My son did learn a lot about his addiction during this three stays there. Things we, in the hearing world, take for granted, was not available to him. Communication!

Drug and alcohol rehabilitation is about communication. From early morning until late at night, the addictive person is in meetings, therapy sessions, watching drug related films, attending AA meeting and NA meetings, group meetings and lectures. All of it involves talking and listening and being able to understand your problem and how to deal with it and stay in recovery. During all of my son's stays in these hospital only twice was there an interpreter present. That was for two Sunday afternoon meetings at Riverside at My insistence, because my daughters would not go to a family meeting unless an interpreter was present.

At both hospitals, staff knew he was deaf, they were amazed

that he had such good language and lip reading skills. Anyone who lip reads, no matter how good, misses a great deal of what is being said, even one on one. To be able to lip read the speaker must be at close range, they must speak distinctly, correctly, normally, and not mumble. The speaker cannot drop his head, turn his head, or turn his back on the person who is lip reading, if he does they are lost. Even if all of that has been done the person lip reading is still likely not to understand, they may read the word, but due to an inadequate vocabulary, not understand what you are talking about. Despite the fact that these professionals who have been providing treatment know that he cannot hear, they have expected him to get all the benefits without an interpreter. One on one it is hard at best, small group meetings it becomes confusing, large meetings are

are a total loss. If one wants to know how difficult it is, put ear plugs in your ears for one day, go to meetings of any kind, see how much you know of what is being said and going an around you.

See how frustrated you will become, and how frustrated and angry those around you will become if you have to ask what is being said repeatedly. You will find that pretty soon you will shut up and be quiet and not ask questions anymore.

My son was quite isolated even in the addictive unit, he could not telephone a friend or family member, as we who are hearing, can.

There was no TDD device for him to use, so he had to depend on other to call for him if he needed anything outside the unit. There was no close caption device for him to enjoy television in the lounge with the other patients. These devices are available and not very expensive, yet none were there. Each hospital stay, he called us to bring his close caption from home.

A week and a half ago he called a counselor- at the Deaf Action Center after yet another relapse. She recommended that he admit himself to Brentwood, which he did. To say I am upset is an under-statement, I am angry, confused and totally frustrated!

A doctor from Brentwood called and asked me to come and give some background information which I did. I expressed my concerns about my son being able to understand everything due to his deafness I was assured that this time he would get what he needs to kick his addiction. That his treatment would be different this time. After my meeting with the doctors I went upstairs to visit my son. We visited a while and he told me what had been happening up until then how great his counselor is. I asked if he had an interpreter, if the films he had watched were close captioned, if they had TDD so he could

use the telephone or a close caption for him to watch television. The answer was "no."

On Thursday his father and I went to hear an excellent lecture during family lecture with our son. The therapist was an excellent speaker, the content was informative, I just wish our son could have heard or understood everything that was presented, but he didn't.

There is no doubt in my mind that Brentwood has an excellent drug and alcohol addiction program. But if the individual who needs it, doesn't hear and understand, it isn't worth a damn.

I had always thought that if a person were hospitalized with an illness, or disease and I have been told repeatedly that drug and alcohol addiction is a disease, the hospital would and did provide what was necessary to insure good treatment or recovery. Each and every hospital has and does know that my son is deaf, yet no interpreter has been provided. The Deaf Action Center tells me that if he requests an interpreter, through staff at the hospital, one will be provided. If I am in the hospital and cannot breathe, am I going to have to ask before they bring me oxygen? No they are not, the same should apply for an interpreter.

When our son is discharged from the hospital in few weeks he will be advised to attend ninety AA or NA meetings in ninety days. As things are now if he goes he won't know what is being said or understand, but very little. He will be advised to find a sponsor, someone who has been clean and sober for over a year. Someone he can call when he needs help over the rough spots. Whom will he be advised to come back to the hospital for aftercare and the STEPS meetings, will an interpreter be provided?

He will be advised that he must stay away from old friends who use drugs and alcohol, stay away from old hangouts, that he must make new friends. As with all deaf people he has some friends in the hearing world, but is more comfortable in the deaf world with

his own kind.

According to my daughters, the majority of the deaf population under forty years of age, either use drugs or alcohol.

I asked at the Deaf Action Center how many deaf and hard of hearing person are in the Shreveport-Bossier area. They told me about 3,000, I asked how many had spent 30 days in a treatment facility for addiction. They said they thought many would go if helm were available for them at the hospitals, but why go, they won't know what is going on.

So where will our son go to make new friends? If we, in the hearing world, had to go into deaf community to make all new friends I think we would not fare too well.

These are a few of the obstacles our son has faced and is facing in his search for drug rehabilitation and some obstacles he will face when he is discharged, and comes back to the real world.

In each and every hospital stay regardless of what he got or did not get, his hospital bill was not adjusted as to what he understood and did not understand. He was charged full price and should receive all the benefits that you and I in the hearing world takes for granted each and every day.

I have written this to say if someone doesn't care enough to speak up, nothing will change. This segment of our society in our city of Shreveport and Bossier have no provision made for their needs in too many areas. We do have excellent Drug treatment program

but none for the deaf. Isn't it time that they are afforded what the rest of us enjoy and take for granted every day of our lives.

If I don't care, who will?

The "Lonely Handicap"

Deafness and hearing loss mean much more than a diminished or nonexistent auditory capacity for an individual. It also means diminished or nonexistent services for that person, particularly where drug and alcohol problems are concerned.

"Alcoholism is a problem in all of society and unfortunately, people who are deaf have even less potential for getting services, let alone actually receiving them," said Dr. Gary Austin, director of Rehabilitation Institute at Southern Illinois University.

Substance abuse programs tend to be unresponsive to the hearing impaired due to a lack of understanding of the psychosocial aspect of deafness, and certainly the very real communication barrier that exists said Dr. Alexander Boros. On the other hand counselors for the hearing impaired tend to shy away from working with deaf substance abusers because they do not have the expertise in alcoholism and drug abuse.

Dr. Boros, a staff member for Project AID (Addiction Intervention with the Disabled) at Kent State University in Ohio, said, "The combination of fear operating within the deaf community, and ignorance operating in the agency world, results in barriers for the deaf alcoholic. Consequently, they are undiagnosed, untreated, and uncounted.

This lack of current, solid data was best summarized in a report by Norton Isaacs, PhD. and Art Berman, M.S.W. who stated, "It is a sobering fact that we know more about the alcohol use patterns of the few thousand Lepcha of the Himalayas than we do about the estimated 13 million hearing impaired persons in our country."

Alcoholism and Hearing Impairment

"The deaf live in a world designed for hearing people. They live in a speech society, not a deaf society. And that always poses a problem being a minority person," said Dr. Boros.

Karen Steitler, director of the Substance and Alcohol Intervention Services for the Deaf (SAISD), at the Rochester Institute of Technology in New York, said, "When you have this kind of social isolation, when you have failures in school, an inability to hold a job, or to produce an appropriate income to raise a family, when you find you are blocked in your interaction with people because of communication problems--these are all frustrations. Frustration that is repeated with no let up create substantial amounts of stress. The big lure of drugs and alcohol is that they become a relief from that anxiety and stress."

"Deafness has been called the "lonely handicap,' and alcoholism is the lonely disease--they definitely make for a deadly duo," said Carol Wentzel, a deaf services specialist and substance abuse therapist for the hearing impaired from Cypress, California.

The isolation experienced by the deaf in a hearing world represents a unique and painful experience. Helen Keller once said, "Being blind cut me off from the world of things, but being deaf cut me off from the world of people."

Modern technology has reduced a few of the communication barriers for the deaf. With the advent of closed captioning for television, the deaf are able to enjoy a small handful of programs, that is, if the deaf person can afford the somewhat expensive decoder devices for their television.

01-02475

TDD's (teletype devices for the deaf) were an advance that for time allowed the hearing impaired access to telephone communication with the outside world. Again, however, the number of facilities that have installed TDD's and the number of deaf who can afford TDD's is limited.

In deaf household, doorbell can be hooked to lights that flash, and special devices are available that cause lights to flash alerting deaf parents of a baby's cry.

In addition to the isolation and limited communications, lack of knowledge among the hearing impaired about substance abuse issues is substantial.

Dr. Austin says the general hearing population has improved their knowledge and attitudes toward drug and alcohol abuse in the last 5 to 10 years, largely due to mass media communications. However, the deaf do not have access to much of the information that has been presented over the radio and on television pertaining to drug and alcohol education.

In an interview with The U.S. Journal, conducted via TDD, Barbara Pollard, M.S.W., L.C.S.W., an assistant professor of social work at Gallaudet College, Washington, D.C., who is hearing impaired, said, "Alcoholism has been a taboo subject in the deaf community. There is a lack of information and an inaccessibility of media programs addressing this issue.

Wentzel pointed out that the deaf do not understand the concept of alcoholism as a disease. That is reflected even in their sign language which, she says, lacks signs for words such as "addiction" and "alcoholism." "The deaf use words such as 'hooked' or 'drunk;' or would say "drink, drink, drink," all of which have very moral cannotation

Treatment and Services Availability

"If you look at the delivery systems and the intervention systems that are available, it would have to be only a minuscule part of one percent," said Dr. Austin. Dr. Boros said that the deaf people with drug or alcohol problems "tend to die as alcoholic ... they don't get help. They don't get help, at least in part, because the agencies don't respond to them.

The inability to communicate with hearing impaired accounts for a large part of the poor response. There are few substance abuse professionals or doctors who are proficient in sign language.

Cultural Considerations

Even with the communication barrier overcome, the cultural (life-style) and psychosocial components of a hearing impaired lifestyle must be understood and appreciated.

Issues that need to be taken into consideration include whether the client was brought up in a deaf home or a hearing home, and whether his/her first language was English or ASL (American Sign Language). Also, was the client educated in a deaf residential school, or mainstreamed into public schools?

Dr. Boros said, "Deaf people represent so many different back-grounds and levels of communication. Researchers lump them all together and call them deaf -- but their backgrounds are all really quite different."

He said that prevention efforts are staring in the schools with the young deaf population, because of the difficulty in reaching the deaf adults population with substance abuse problems.

Part of the problem in reaching the adult deaf is that those who have substance abuse problems "are invariably from outside of the deaf community." He explained that the deaf community refers to those deaf who work and socialize together. Those who do not mix with the deaf community are referred to as the deaf population.

"About 5% of our deaf alcoholic clients come from the deaf community, and about 95% come from the deaf population," he said. He added that because those in the deaf population cannot be reached through the deaf organizations, yet also cannot be reached through media efforts, we are starting prevention with today's population--because we can't reach the adults."

Wentzel emphasizes further that there needs to be an awareness in the professional community that, for the most part, deaf individuals d not have medical insurance, and therefore do not have the option of paid inpatient care. Even if there were more of these treatment programs available for the deaf, paying for treatment is difficult due to the number of hearing impaired unemployed and under-employed.

She said that recovering deaf and hearing impaired individuals must be encouraged to "band together and to go into the field of alcoholism counseling. The field is void of hearing impaired people who are skilled and have an understanding of drug and alcohol problems

With s sigh she added, "One in 1,000 will get help for their problems. For every one of the deaf persons in my group on Monday nights, I swear there are 1,000 others out there who are not in treatment."

Susan Thanepohn; U.S.Journal

01 -02477

JUL 23 1993

The Honorable H. Martin Lancaster

Member, U. S. House of Representatives
Room 108 Federal Building
134 N. John Street
Goldsboro, North Carolina 27530

Dear Congressman Lancaster:

This letter is in response to your inquiry on behalf of a constituent regarding a physicians obligation to provide auxiliary aids or services for persons with disabilities.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. It does not, however, constitute a legal interpretation, and it is not binding on the Department.

The ADA requires public accommodations, including physicians, to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities. A public accommodation may not impose a surcharge on any particular individual with a disability to cover the costs of measures, such as providing auxiliary aids, that are required by the ADA. These requirements appear in sections 36.301(c) and 36.303 of the enclosed ADA title III regulation, at pages 35596 and 35597, respectively. Also

enclosed is the Department's Title III Technical Assistance Manual, which may provide further assistance to your constituent. Pertinent discussion may be found at pages 22 (surcharges) and 25-28 (auxiliary aids). I have also enclosed the Department's Title III Technical Assistance Manual Supplement, which includes relevant discussion at pages 4-5.

cc: Records, Chrono, Wodatch, Breen, Nakata, McDowney, FOIZ, MAF
udd\Nakata\Congress.let\lancastr

01-02478

Under section 36.301(c) of the regulation, the cost of an interpreter must be absorbed by the public accommodation in the limited circumstances when an interpreter is necessary. However, as provided in section 36.303(f), a doctor is not required to provide any auxiliary aid that would result in an undue burden. The flexibility of the auxiliary aids requirement, the undue burden limitation, and the ability to spread costs over all patients should minimize any burden on the medical profession.

What constitutes an effective auxiliary aid or service will depend upon the unique facts of each situation, including the length and complexity of the communication involved. For example, in some instances, a doctor may satisfy the auxiliary aid or service requirement by using a note pad and written materials where a deaf patient is making a routine office visit. By contrast, a discussion of whether to undergo major surgery will generally require the provision of an interpreter. Other situations may also require the use of interpreters to ensure effective communication depending on the facts of the particular case. Further discussion of this point may be found on page 35567 of the enclosed regulation.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Mr. Tony E. Gallegos
Acting Director Equal Employment Opportunity Commission
and The Americans With Disability Act
1801 L Street, N.W.
Washington, DC 20507

Dear Mr. Gallegos:

I have received the enclosed information from a physician who is rightly concerned that he is going to have to hire an interpreter to deal with hearing impaired patients, and may not charge the patient for the cost of these services, nor bill the patient's

insurance carrier. He indicates that the cost of the interpreter will be significantly more than his reimbursement for the health care service rendered. Is the information provided to him by the Communication Accommodations Project correct? If the doctor may not bill the patient or the insurance carrier, how do you propose that this cost be defrayed? Was this kind of result intended by the legislation? It certainly was not my personal intention.

Thank you for responding to these concerns.

Sincerely yours

JUL 27 1993

PL 479,505

xx
McMinnville, Oregon 97128

Dear xx

This is in response to your inquiries regarding the Americans with Disabilities Act of 1990 (ADA). You have asked whether a small historical museum operated by a non-profit private society that does not charge for admission is covered by title III of the ADA. Specifically, you inquire whether such a facility would be considered to "affect commerce" within the meaning of title III.

The A.D.A. authorizes the Department of Justice to Provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the A.D.A.'s requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

Title III of the A.D.A. covers entities that own or operate places of public accommodation whose operations affect commerce. Places of public exhibition, such as museums, are among the types of places of public accommodation listed in the statute. The term "affect commerce" is one frequently used in Federal statutes enacted pursuant to Congress' power to regulate commerce. The fact that a private museum operates with a volunteer staff and does not charge admission is not necessarily determinative of whether a facility operates in interstate commerce. Some other factors to examine would be whether the museum is open to out-of-state visitors; whether exhibits originated or were prepared out-of-state; whether the museum has a gift or souvenir shop that sells items that have moved in interstate commerce; and whether museums of its kind, in the aggregate, would affect interstate commerce. This Department does not undertake investigations to determine whether particular facilities are covered except in the course of a complaint investigation.

Udd:Burton.Burton.Mus

01-02481

Your letter notes that the museum has no plans for alterations or new construction. If covered under title III, the museum then needs only to remove barriers to accessibility that are readily achievable to remove. According to the Department of Justice's title III regulation, a copy of which we previously provided to you, readily achievable means "easily accomplishable and able to be carried out without much difficulty or expense." Installing ramps, widening doors, and rearranging tables or display cases that obstruct an accessible route through the museum are examples of barriers that may be readily achievable for a small museum to remove. The cost of such

actions and the resources of the covered entity are factors in-deciding what is readily achievable. Any future alterations or new construction must meet the ADA standards for accessible design.

Title III of the ADA also requires covered entities to make reasonable modifications in its policies, practices, or procedures necessary to ensure that persons with disabilities may enjoy the same advantages of the museum as do others, so long as such modifications would not fundamentally alter the nature of the museum's services. For example, in order to serve blind patrons, a museum may need to modify policies to allow guide dogs in the museum. In addition to this requirement for modification of policies, title III requires the elimination of any eligibility criteria for admission and participation based upon disability, unless the criteria are necessary to the provision of the-museum's services. For example, it would be unlawful to deny admission to someone with Down's Syndrome because of that person's disability.

Finally, the museum must provide auxiliary aids and services where necessary for effective communication with persons with disabilities, unless to do so would pose an undue burden on the museum or would fundamentally alter its services. For example, if any information in the museum is given aurally, the museum may be required to provide a transcript of the information or a qualified sign language interpreter to serve a deaf patron if doing so would not be an undue burden. The cost of providing such aids and services and the resources of the covered entity are among the factors to consider in determining whether providing services and aids would be an undue burden.

I hope this information is useful to you.

Sincerely,
John L. Wodatch

P.O. Box 66118
Washington, D.C. 20035-6118

Dear Dept. of Justice:

I am writing for the xx is operated primarily through visitor donations and membership dues.

About February 24, I talked with someone in your Civil Rights Division regarding compliance with Title III of the ADA. She agreed to send me some material on standards and procedures for implementation of the act, and your opinion as to whether or not our museum is a place of public accommodation under the definition on Page 35547 of the Federal Register/Vol. 56, No. 144/ Friday, July 26, 1992/ Rules and Regulations.

According to that definition, one of the criteria that a private entity must meet before it is considered a place of public accommodation is that its operations affect commerce.

Since we do not charge for museum visitation, we have concluded that our operation does not affect commerce and therefore we are not a place of public accommodation as defined in the above-described definition.

We would appreciate your comments on this matter. We would also appreciate if you can send us a copy of the Federal Register described on page 1 of our letter.

Sincerely,

xx

P. O. Box 66118
Washington, DC 20035-6118

Dear Sirs:

Please send me information about the ADA requirements affecting public services and public accommodations.

Our concern is in regard to a small historical museum operated by a non-profit private society here in Yamhill County, Oregon. We do not have any plans for new construction or alterations at this time, but we want to be certain that we are in compliance with the law.

Is there a time table set by act or regulation for a public service such as above described?

Sincerely,

xxx

Re: Old Complaint Number
New Complaint Number

Dear Mr. xx

This letter constitutes the Department of Justice's Letter of Findings with respect to the complaint you filed against the County Sheriff's office alleging discrimination on the basis of disability. The Department of Justice is the agency responsible under title II of the Americans with Disabilities Act of 1990 (ADA) for investigating complaints filed against components of State and local government in the area of law enforcement.

Your complaint alleges that the xx County Sheriff's Office has discriminated against you by denying your participation in the patrol division because of your back injury and subsequent sick leave. The Civil Rights Division has completed its investigation of your complaint and has determined that the xx County Sheriff's office is not in violation of title II or the ADA for the reasons explained below.

Title II of the ADA prohibits discrimination in employment against qualified individuals with disabilities on the basis of disability. 28 C.F.R. 35.140(a). "Disability" is defined as a physical or mental impairment that substantially limits one or more major life activities, a record of such an impairment, or being regarded as having such an impairment. 28 C.F.R. 35.104. The preamble to the Department of Justice's title II regulation further defines what constitutes a disability as follows:

> [T)he duration, or expected duration, of an impairment is one factor that may properly be considered in determining whether the impairment substantially limits a major life activity. . . . The question of whether a temporary impairment is a disability must be resolved on a case- by-case basis, taking into consideration both the duration (or expected duration) of the impairment and the extent to which

it actually limits a major life activity of the affected individual.

56 F.R. 35699.

Our investigation of your complaint and the Sheriff's Office's response revealed that you injured your back xx xx returning to full duty xx you had recovered from your back injury and that it no longer limits you in any way. xx

Dr. xx confirmed xx Dr. wrote xxx you had recovered xx and were able to return to full duty work

Because you have recovered from your injury to the point that it no longer substantially limits any major life activities, your impairment was temporary. Furthermore, the full extent of your disability lasted ten months, and you were out of work for only two months and not on full duty for a total of six months. Because your impairment lasted a total of only ten months, and because you were able to function during much of this time, the Department has determined that you do not fall within the first prong of the definition of disability.

For the reasons stated above, you similarly do not fall within the second prong of the definition of disability: having a record of impairment which substantially limits a major life activity.

The third prong of the definition of disability is being regarded as having an impairment which substantially limits a major life activity. While it is clear that your supervisors at the Sheriff's Office were aware of your back injury and subsequent sick leave, they were also well aware of the doctor's statements mentioned above. Neither you nor the Sheriff's Office supplied any evidence that you were perceived by the Sheriff's Office as having an impairment that substantially limited a major life activity.

Based on the foregoing information, we have concluded that you are not a qualified individual with a disability entitled to the protections of title II. If you are dissatisfied with our determination, you may file a private complaint in the United States District Court under title II of the ADA.

This letter does not address other potential claims of discrimination on the basis of disability that may arise from the activities of the Washoe County Sheriff's Office. Rather, this letter is limited to the allegations presented in your complaint.

You should be aware that Federal law protects your right to file a complaint. A State or local government or recipient of Federal financial assistance may not intimidate, threaten, coerce, or engage in other discriminatory conduct against anyone who has either taken action or participated in an action to secure rights protected by the ADA or section 504. If at any time you feel you are being harassed or intimidated because of your dealings with the Department of Justice, we urge you to let us know immediately. This office would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, 5 U.S.C. S 522, we may be required to release this letter and other correspondence and records related to your complaint in response to a request from a third party. Should we receive such a request, we will safe-guard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information which could constitute an unwarranted invasion of your or other's privacy.

If you have any questions concerning this letter, please feel free to call Naomi Milton at (202) 514-9807.

Sincerely,

Stewart B. Oneglia

AUG 9 1993

The Honorable Thomas Andrews
Member, U. S. House of Representatives
136 Commercial Street
Portland, Maine 04101

Dear Congressman Andrews:

This letter is in response to your inquiry on behalf of your constituent, Dr. John W. Wickenden of Rockland, Maine, regarding the cost of providing auxiliary aids or services for persons with disabilities.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. It does not, however, constitute a legal interpretation, and it is not binding on the Department.

The ADA requires physicians to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities. A physician may not impose a surcharge on any particular individual with a disability to cover the costs of measures, such as providing auxiliary aids, that are required by the ADA. These provisions appear in sections 36.301(c) and 36.303 of the enclosed ADA title III regulation, at pages 35596 and 35597, respectively. Also enclosed is the Department's Title III Technical Assistance Manual, which may provide further assistance to your constituent. Pertinent discussion may be found at pages 22 (surcharges) and 25-28 (auxiliary aids).

What constitutes an effective auxiliary aid or service

will depend upon the unique facts of each situation, including the length and complexity of the communication involved. For example, in some instances a doctor may satisfy the auxiliary aid or service requirement by using a note pad and written materials where a deaf patient is making a routine office visit.

cc: Records, Chrono, Wodatch, Magagna, Yang, McDowney, MAF, FOIA
udd\yang\congress\andrews

By contrast, a discussion of whether to undergo major surgery will generally require the provision of an interpreter. Other situations may also require the use of interpreters to ensure effective communication, depending on the facts of the particular case. Further discussion of this point may be found on page 35567 of the enclosed regulation.

Under section 36.301(c) of the regulation, the cost of an interpreter must be absorbed by the doctor in the limited circumstances when an interpreter is necessary. However, as provided in section 36.303(f), a doctor is not required to provide any auxiliary aid that would result in an undue burden. The flexibility of the auxiliary aids requirement, the undue burden limitation, and the ability to spread costs over all patients should minimize any burden on the medical profession.

Dr. Wickenden's letter raises a specific question involving the use of interpreters. On one occasion, the family of a deaf patient made its own arrangements for a sign language interpreter, without giving the doctor the opportunity to make his own contractual arrangements for a qualified interpreter. Dr. Wickenden reports that the Maine Department of Human Services told him that he had no alternative but to accept, and pay for, the interpreter for whom the family had arranged. Of course, if that is a requirement of state law, the constraints experienced by Dr. Wickenden would have emanated from state and not Federal law and, thus, should be taken up with appropriate state officials.

However, if the Maine Department of Human Services was purporting to describe the requirements of Federal law, it did

so incorrectly. The title III regulation does not contemplate that patients who are deaf may unilaterally decide on the appropriate type of auxiliary aid, make arrangements for a particular deaf services provider to furnish the aid, and then bill the public accommodation for the services. Instead, doctors may determine how best to provide effective communication to their patients, and may themselves arrange for the necessary auxiliary aids or services. Of course, the needs and wishes of the patients should be taken into account in determining what kind of auxiliary aid is necessary to provide effective communication. Please refer to the enclosed January 1993 Supplement to the Department's Title III Technical Assistance Manual at page 5 for further discussion.

01-02490

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

5600 Fishers Lane
Rockville, MD 20857

Dear Ms. Davenport:

Enclosed is a copy of a letter I recently received from Dr. John Wickenden concerning the implementation of provisions of the Americans With Disabilities Act with respect to reimbursement for interpreters.

According to Dr. Wickenden, the Maine Department of Human Services has interpreted the ADA to require that physicians accept and pay for interpreters contracted for by the patient Dr. Wickenden is concerned that this will indirectly reduce access to health services for disabled individuals because of the high, direct costs to physicians. In his particular case, he estimates that the cost of an interpreter for one patient could exceed $1,000, for which Dr. Wickenden will not be reimbursed.

I would appreciate your review of this situation. As you may know, Congressman Andrews was a strong supporter of the ADA, and this office is committed to seeing it work. We would be concerned if provisions of the law had the unintended effect of actually reducing access to health services.

Please direct your response to me at the Portland address listed above, and don't hesitate to let me know if you require additional information.

Sincerely,
Laurie Lemley

1 February 1993

Congressman Thomas H. Andrews
U.S. House of Representatives
Washington, DC 20510-1901

Dear Congressman Andrews:

Your commitment to the disabled is well known to me. I support it. I believe that my commitment is similar to yours. I am a "liberal Democrat." I have worked for you and I have lobbied for the

Americans with Disabilities Act.

In the context of that background, please weigh my comments.

An experience last week has convinced me that the regulations with which the ADA is implemented need fine tuning.

A deaf man made an appointment in my orthopedic surgery office. His family notified me that they had retained a deaf services interpreter from Portland. They did not give me the opportunity to provide a qualified interpreter. The Maine Department of Human Services told me that I had no alternative but to accept, and pay for, the interpreter for whom they had arranged. Thereby, the man had an orthopedic consultation (#99202) for which my fee is $57.00. Medicare will approve a payment of $34.75. The interpreter will bill me at $28.00 an hour. With travel to and from Portland, my cost for the interpreter will be $140.00 (for which I can seek no other remuneration). Therefore, I will be paid $34.75. In return for that payment I will have a direct cost of $140.00 and an indirect cost of another $22.25. If this man comes to surgery (as may well happen) it could cost me well over $1,000. for interpreter services. Moreover, Medicare will not, even reimburse me an amount which would pay the overhead costs for a patient who did not pose this additional burden.

Even without the ADA, I don't collect any take-home money for caring for Medicare and Medicaid patients. I can't live with the many mandates of the government. I can't shift enough charges to my "paying patients."

01-02493

AUG 9 1993

The Honorable John Breaux
United States Senator
705 Jefferson Street
Room 103 Federal Building
Lafayette, Louisiana 70501

Dear Senator Breaux:

This is in response to your letter requesting information for your constituent, Mr. Paul A. Fontana, about the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide

technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

Much of your constituent's letter relates to discrimination in employment practices covered by title I of the ADA, which is enforced by the Equal Employment Opportunity Commission. We assume that the inquiry has also been referred to that agency. However, Mr. Fontana's question about the accessibility of an apartment complex's swimming pool for a woman with a head injury does implicate title III of the Act. Mr. Fontana states that the woman has asked the apartment complex to make reasonable accommodations to make the swimming pool accessible to her, but that a manager of the complex told her that she is responsible for making the pool accessible.

The ADA does not apply to strictly residential facilities. If the housing complex is strictly residential and the pool is intended for the exclusive use of the residents and their guests, the pool is considered an amenity of the residential complex. As such, it would not be considered a place of public accommodation subject to the ADA. Nonetheless, the apartment complex and the swimming pool would be subject to the requirements of the Fair Housing Act, which prohibits discrimination on the basis of

cc: Records, Chrono, Wodatch, McDowney, Bowen, Novich, FOIA, MAF
Udd:Burton:Poolpol

01-02494

disability and is enforced by the Department of Housing and Urban Development. Under that Act, a landlord is generally required to permit reasonable modifications to existing facilities at the tenant's expense.

If the swimming pool is made available to the general public for rental or use, or if the apartment complex is a social service center establishment, as are some retirement communities, it would be covered by the ADA. Once covered by the ADA, the owners or operators of the pool would be required to remove

architectural barriers to accessibility if their removal is readily achievable, that is, if they can be removed without much difficulty or expense.

I hope this information is useful to your constituent in understanding the apartment complex's obligations.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Center for Work Rehabilitation. Inc.

MAY 28, 1993

Senator John Breaux
705 Jefferson
Room 103

Lafayette, LA 70501

Dear Senator Breaux,

I am writing to request your assistance in obtaining answers from the Department of Justice and the Equal Employment Opportunity Commission on some matters relating to the Americans With Disabilities Act. I have attempted to obtain answers through the New Orleans and Washington, D.C. offices of each department, to no avail. When calling the Washington, D.C. phone number for either the Department of Justice or The Equal Employment Opportunity Center you do not get to speak to a person but rather to a never ending voice mail. The New Orleans field offices have not given any assistance I can use, but rather have referred me to the technical assistance manuals - which I have already tried to use to no avail.

I am a consultant to a very large private company as well as a municipality that have the same question in regards to complying with the employment requirements of the ADA. This is the scenario:

* The company/city interviews and hires the employee.
* All newly hired employees are sent to a physician for a back x-ray.
* If the x-ray is "normal" employee goes to work.
* If the x-ray is "abnormal" the employee is sent for very specific essential function testing based on the job description. Only those employees testing "abnormal" on a back x-ray are given a post hiring assessment of their ability to perform the essential functions of the job.

My understanding from all courses I've attended on the ADA is that this practice is discriminatory because it treats the "abnormal back" employee as disabled and differently from the non-disabled. The "normal back" employee does not have to prove he/she can do the job only the "abnormal back" employee.

01-02496

My first question is very straight forward. Can a company use a back x-ray and the resulting abnormal back classification to single out individuals for further testing to ensure they can perform the essential functions of the job when those with a 'normal back' x-ray do not have to prove they can do the job?

My second question is: In this context, is the Post Hiring Assessment of an employee's ability to perform the essential functions of the job considered a medical test?

Question number three: Is a functional capacity or work capacity assessment considered a medical test?

My next question that falls under the employment aspects of the ADA is as follows:

Scenario:

* An injured worker, after recovering from a lumbar back fusion, reaches maximum medical improvement and the treating physician releases him to a medium work level. Six months to a year later the recovered worker applies for a job which is considered heavy (lifting up to 100 lbs. infrequently and 50 lbs. frequently). The recovered worker passes the initial screening and is hired by the new employer.

* Upon "conditional offer of employment" the worker is sent to the company physician for a physical. Upon review of the worker's previous medical history the physician learns of the worker's previous fusion. With no further testing to ascertain whether the worker can perform the essential function of the job, the physician states the worker should not be allowed the job because of the heavy work it involves. The worker states he can perform the job safely but is not tested and is terminated:

Question:

Can an employer place restrictions or even terminate a worker based on previous work restrictions without testing whether or not a worker can perform the job?

My question concerning the ADA and the Department of Justice involves a head injured adult and an apartment complex. I might further state there is no way this head injured person would be able to deal with and gain any useful information from the never ending voice mail system the Department of Justice is utilizing
01-02497
Senator John Breaux
May 28, 1993

The woman has requested the apartment complex make reasonable accommodations to ensure the complex's swimming pool is accessible to her. One apartment manager told her this is her responsibility and not that of the apartment complex.

Question: What is this woman's options and how does she get the apartment complex to comply with the ADA?

I certainly appreciate any assistance your office can provide in getting answers - especially those involving the EEOC and employment issues. These companies are attempting to comply, but we are not getting sufficient Answers from those making the rules.

If I can provide additional insight or clarification to my questions and concerns please give me a call. I have a meeting scheduled for July 8, 1993 where these answers would be most helpful. I look forward to hearing from your office.

Sincerely,

Paul A. Fontana
PRESIDENT
CENTER FOR WORK REHABILITATION, INC.
CENTER FOR FUNCTIONAL EXCELLENCE, INC.

PAF:els

01-02498

AUG 9 1993

DJ 202-PL-612

Mr. Marc Fiedler
Koonz, McKenney, Johnson & Regan
2020 K Street, N.W.
Suite 840
Washington, D.C. 20006

Dear Mr. Fiedler:

This letter is in response to your inquiry of July 12, 1993, about whether the Americans with Disabilities Act of 1990, 42 U.S.C. 12101 et seq. ("ADA"), applies to places of public accommodation housed in federally owned buildings or facilities.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

You are correct to assume that a privately owned, operated, or leased place of public accommodation which is housed in a federally owned facility may be covered by the Architectural Barriers Act of 1968, 42 U.S.C. 4151 et seq. ("ABA"), and may have to comply with the Uniform Federal Accessibility Standards. However, wholly apart from the question of whether such a place of public accommodation must comply with the ABA, it is covered by, and must comply with, the ADA.

Title II of the ADA prohibits discrimination on the basis of disability by any person who owns, operates, leases, or leases to, a place of public accommodation. 42 U.S.C. 12182(a). See also 28 C.F.R. 36.201(a). Thus, even if a private entity does not own the facility housing a place of public accommodation, if that private entity operates or leases a place of public accommodation, it is covered by title III of the ADA. The fact that the landlord in a particular case is not covered by the ADA -- such as the federal government in the case you describe -- does not negate the ADA's coverage of the private entities which lease or operate places of public accommodation within the

facility. Thus, there may be cases where a place of public

cc: Records, Chrono, Wodatch, Magagna, Contois, FOIA MAF
Udd:Contois:PL:Fiedler

01-02504

accommodation operated by a private entity is covered both by the ADA and ABA (because it is housed in a federal facility).

I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Re: Request for Interpretive Letter or Amicus Participation

Dear Ms. Magagna:

I am writing to request an interpretive letter from your office or your office's involvement on an amicus curiae basis with respect to an issue that has arisen in the case of Fiedler v. American Multi-Cinema, Inc., Civil Action No. 92-0486 (TPJ), now pending in the United States District Court for the District of Columbia.

The case involves claims for compensatory damages and injunctive relief under the Americans with Disabilities Act, the District of Columbia Human Rights Act, and the common law by myself, a wheelchair-user, against American Multi-cinema, Inc. (AMC) which operates the AMC Union Station Nine Theatres in Washington, D.C. The claims arise from the fact that seating for wheelchair-users in all nine theaters of the Union Station multiplex (one of which has a seating capacity greater than 300) is clustered in or behind the back row of seats. The action seeks dispersal of wheelchair seating in each of the theaters.

AMC has now moved for summary judgment. One of their arguments is that they are exempt from compliance with Title II of the ADA because the Union Station Nine Theatres is located in a federal building and is leased from the federal government.

In light of the foregoing, the following question is presented: Is a private entity that meets the definition of a place of public accommodation under Title II of the ADA and the Justice Department's rules and regulations exempt from the application of the statute and rules by virtue of the fact that it leases its space from the federal government and is located in a federal building and therefore is required under the Architectural Barriers Act to comply with the Uniform Federal Accessibility Standards? I would appreciate it if your office could issue an interpretive letter on this matter or could enter an appearance as an amicus curiae to respond to AMC's argument. Our response to the motion for summary judgment is due on August 31, 1993.

For your information, I am enclosing a copy of the Amended Complaint, the Answer to the Amended Complaint, AMC's motion for summary judgment, AMC's motion for leave to file an amended answer to the Amended Complaint, and the most recent scheduling
order.

Thank you kindly for your attention to this matter. Please do not hesitate to contact me if you need further information.

Very truly yours,

Marc Fiedler

MF/jmm

Enclosures

01-0250

T. 7-28-93
Control No. 30629113538

AUG 09 1993

The Honorable Phil Gramm
United States Senate
370 Russell Senate Office Building
Washington, D.C. 20510-4302

Dear Senator Gramm:

This is in response to your recent inquiry on behalf of your constituent, Jim W. Sealy, who has raised questions about the enforcement provisions of the Americans with Disabilities Act (ADA). Specifically, Mr. Sealy asserts that the ADA is not being implemented because "design professionals cannot deal with the [ADA] interpretation process and the local governing authorities are prohibited from helping."

Although Mr. Sealy expresses a general concern that the ADA is not being implemented adequately by the Federal government, his remarks, in fact, are focused on only one aspect of the ADA: the Federal mandate for accessible building design. In fact, the ADA is much more than that. Through the ADA, Congress intended to "provide a clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities." 42 U.S.C. 12101(b)(1). Title III of the ADA prohibits discrimination on the basis of disability by public accommodations; it requires new construction of (and alterations to) places of public accommodation and commercial facilities to comply with the ADA Standards for Accessible Design; and it requires certain examinations and courses to be offered in an accessible place and manner. In addition to complying with the ADA Standards for Accessible Design in new construction and alterations, public accommodations must comply with a range of title III requirements, including nondiscriminatory eligibility criteria; reasonable modifications in policies, practices, and procedures; provision of auxiliary aids; and removal of barriers in existing facilities. I have enclosed a status report highlighting the Department's recent efforts at enforcing

title III of the ADA.

The ADA is intended to provide strong and consistent Federal Standards addressing discrimination against individuals with disabilities, 42 U.S.C. 12101(b)(2), and to ensure that the Federal Government plays a central role in enforcing these standards, 42 U.S.C. 12101(b)(3).

cc: Records, Chrono, Wodatch, Blizard, McDowney, FOIA, Friedlander
n:\udd\blizard\control\gramm.4
01-02499

Therefore, the ADA requires the Attorney General to issue regulations implementing title III, and makes the Department of Justice primarily responsible for enforcing title III through compliance reviews, complaint investigations, and litigation. (Title II may also be enforced through lawsuits initiated by private parties.)

With respect to design and construction of buildings and facilities that are subject to title II, Mr. Sealy is correct that there is no ADA enforcement mechanism that is analogous to the traditional State building code enforcement process. No Federal agency is authorized by the ADA to act as a "building department" to review plans, issue building permits or occupancy certificates, or provide the type of interpretations of design standards usually provided by local code officials. The ADA, like other Federal civil rights statutes, requires each covered entity to use its best professional judgment to comply with the statute and the implementing regulations.

State and local government officials are neither required nor authorized to enforce title III of the ADA. However, they are not, as Mr. Sealy asserts, "prohibited from helping" in the process of ADA implementation. Nothing in the ADA or the title III regulation prevents State or local code officials from offering advice or assistance to individuals who are seeking to implement the ADA's requirements.

The ADA Standards recognize that there are times when judgment must be exercised in the application of the Standards. Where permitted by their local laws, code officials who are familiar with the ADA Standards may be able to assist covered entities in applying the title III requirements to specific projects. However, State or local code officials may not issue binding interpretations of the ADA Standards or take any action that purports to relieve a public accommodation or commercial facility of its obligation to comply fully with the ADA.

Title III of the ADA formally recognizes the important role of building code officials in the design of accessible buildings by authorizing the

Attorney General to certify that State laws, local building codes, or similar ordinances meet or exceed the title III standards for new construction and alterations. In ADA enforcement litigation, compliance with a certified code may Be offered as evidence of compliance with title III.

Although certification facilitates consistency between The ADA Standards and the building process at the State and local level, it does not change the authority of State or local code officials with respect to the ADA. Code officials implementing a certified code are authorized to enforce only the building regulations in force in their jurisdiction; they are not authorized to enforce title III.

Mr. Sealy states that private sector entities involved in the design and construction industry have prepared a model code document, which has been submitted to this Department for review, but has not yet been certified. He asserts that, through this submission, the code community has "complied with the provisions of the law that apply to equivalency certification," but that the Department "seems to be stalling" this effort to comply.

Mr. Sealy apparently misunderstands the certification process. Model codes or standards prepared by private sector organizations are not eligible for certification. The ADA permits the Department to certify only codes that have been adopted and submitted for certification by State or local governments; it does not permit the certification of model codes or standards. However, because the Department recognizes that many State and local codes rely on models, the title III regulation provides that the Department may review submitted model codes or standards and provide guidance as to whether the submitted document is consistent with the title II requirements. The Department is not required to review models, and review does not constitute certification of a model.

We believe that the document that Mr. Sealy referred to is the American National Standards institute's (ANSI) consensus accessibility standard, which was published in January 1993 by the Council of American Building Officials (CABO) as the CABO/ANSI A117.1-1992: American National Standard for Accessible and Usable Buildings and Facilities. At the request of CABO, this Division's Public Access Section is reviewing the CABO/ANSI A117.1-1992 standard to determine if it is equivalent to the ADA Standards. The Section intends to complete its review as soon as possible. However, the Section's current workload is heavy and its staff resources are limited. These

resource constraints necessarily limit the extent to which the Section is able to undertake discretionary activities such as the review of model codes.

I hope that this information is helpful to you in responding to Mr. Sealy.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

JWS
9 March, 1993
Senator Phil Gramm
2323 Bryan Street
Suite 1500
Dallas, Texas 75201

Dear Senator Gramm:

Something must be done about the Americans With Disabilities Act: It is not working. I am not complaining about the act itself. The problem is a lack of activity in the progression of implementation of the act. When the act was put into place, enforcement was assumed by the Department of Justice and interpretation was left to the design professional. When ADA was in the public comment phase, many architects questioned the wisdom of removing the local Building Official from the process of implementing the act. Our worst fears have come true. Most design professionals cannot deal with the interpretation process and the local governing authorities are prohibited from helping. Something is drastically wrong with that premise, and it must be changed.

When the design, construction and code related industries realized what the law included for enforcement and interpretation, they set about to write a corresponding document that could be submitted to the Department of Justice for compliance certification. That document was completed and submitted to DOJ in June of 1992. In subsequent meetings and conversations with representatives of DOJ, we were told that their review of our submission would be completed by 31 October, 1992. We are still waiting for

the results of their review. Why? We can't find out why and we need help.

As most of us feared, the bulk of the ADA activity is taking place in The legal arena and not in implementation. Physically disabled citizens are not realizing the benefits that the act was designed to provide, because of this delay and inactivity. On the surface, it would appear that ADA is working, but it is not. Too many members of our business world are waiting for the results of litigation before they make their decisions about compliance. That is wrong.

Had enforcement of the law been relegated to the local code jurisdictions, we would be very close to implementation, at this point. I know Congress had reasons for drafting the bill in the way that it was enacted, but it has not helped those for whom it was intended. We in the design profession recognized that flaw and set about to assist in the general scheme of complying with the intent of the law. We have completed our part and have compiled with the provisions of the law that pertain to equivalency certification. The U.S. Department of Justice seems to be stalling our efforts to comply. Why?

JIM W. SEALY, AIA
ARCHITECT / CONSULTANT
1340 Prudential Drive Dallas, Texas 75235 - 214/637-3047
01-02502

I am copying Senators Kennedy and Dole, the cosponsors of the original bill. Both were very supportive and I am sure they will want to know their hard work has met with very little success. Besides being a design professional, I work with the formulation of national building codes and standards and, as a Board Director of the Dallas mayor's Committee for the Employment of People with Disabilities, I am an advocate for the rights of the disabled. Because of those varied activities, I can view ADA from several perspectives and I can tell you with certainty, that it is not working. Will you gentlemen please help?

Sincerely,

Jim. W. Sealy, FAIA

AUG 9, 1993

The Honorable Tom Harkin
United States Senator
210 Walnut Street
733 Federal Building
Des Moines, Iowa 50309

Dear Senator Harkin:

This letter is in response to your inquiry on behalf of your constituent, XX regarding the inability of spectators using wheelchairs to see over other spectators standing in front of them at a concert in the Veterans Memorial Auditorium in Des Moines, Iowa.

The Americans with Disabilities Act of 1990 ("ADA") authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal

guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation and it is not binding on the Department.

As a facility owned by the city of Des Moines, the Veterans Memorial Coliseum is covered by title II of the ADA. That title requires State and local governments to operate each of their programs, services, and activities so that those programs services, and activities, when viewed in their entirety, are readily accessible to and usable by individuals with disabilities, unless doing so would either fundamentally alter the nature of program, service, or activity, or would constitute an undue financial or administrative burden on the public entity. If, as XX claims, individuals with disabilities who attend a concert are unable to see what other spectators can see, it is unlikely that the Memorial Auditorium has met the requirement of providing program access. In addition, requiring all persons in wheelchairs to sit in the balcony, rather than in the front row or in another accessible row on the main floor,

cc: Records; Chrono; Wadatch; McDowney; Bowen; contois; FOIA
MAF. \udd\contois\cgl\harkin2

01-02508

might also violate the ADA. Thus, unless it would be an undue burden on the city, or a fundamental alteration of the program or service, the city would be required by title II to provide spectators using wheelchairs with seating locations and lines of sight comparable to those for other spectators.

For your information, I am enclosing a copy of this Department's regulations implementing title II of the ADA and the Technical Assistance Manual that was developed to assist individuals and entities subject to the ADA to understand the requirements of title II. I hope this information is useful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

John Wodatch, Director
Office of the Americans with Disabilities
Civil Rights Division
U.S. Department of Justice
P.C. Box 66788
Washington, DC 20035-2227

Dear Mr. Wodatch:

An employee of a residential group home for persons with disabilities in Des Moines, Iowa, contacted my office regarding problems residents encountered while attending concert at the Veterans Memorial Auditorium. The employee, XX , was concerned because the residents, who all used wheelchairs, were given seating on the first floor of the auditorium, in the fifteen row, and could not see the performer when people in front of them were standing.

Enclosed is a copy of the correspondence XX received in response to a complaint he made with the Veterans Auditorium. XX does not feel that the managers of the auditorium provided reasonable accommodations. I would appreciate your assistance by reviewing the correspondence and informing me of your impression if reasonable accommodations were provided.

Please direct your response to the attention of Denita Swenson in my Des Moines office.
The address and telephone number are listed below.

Thank you for your help.

Sincerely,

Tom Harkin

VETERANS MEMORIAL
AUDITORIUM

April 26, 1993

XX
XX
XX
Des Moines, IA 50310

Dear XX,

I would first like to thank you for taking the time to call us concerning the problems you encountered during our Michael W. Smith concert. Handicapped seating is a problem we are constantly dealing with and trying to find a better solution.

The wheelchair seating was located in row 15 on the main floor due to our fire code restrictions. Row 14 was held for anyone else in the party so everyone would be able to sit together. Unfortunately, the cashier sold tickets to your group in the wrong row.

We have examined the possibility of putting the handicapped seating in the first row. However, in other buildings who have tried this there has been a dramatic increase in the handicapped. People have even gone so far as to rent a wheelchair for the show, so they can have the first row. Unfortunately, we believe this has left people who are truly disabled, unable to get a seat.

The use of platforms has also been looked at but brings up another set of problems and concerns. The ramp to get to the platforms must be a certain length depending on the height of the platform which the location for this-must be placed as not to hinder a quick exit in case of emergency for all patrons. This also creates a problem because all people seated behind the platform can not see the entertainer.

Our ushers have been instructed to move any wheelchair patrons to a different location, if possible, where they would be able to see better. They could have suggested your party move up to our wheelchair seating in the balcony. This section has only been in use approximately three months, but so far has been very successful

and has been well received by our handicapped patrons.

01-02511

I want to extend my sincere apologies on behalf of myself and Veteran's Auditorium. As your patronage means a lot to us, we are sending you a gift certificate in the amount of $213.75, which is equal to your purchase, to be used at any event in our facility.

Sincerely,

Jacki Embrey
Box Office Manager

01-02512

T. 8-4-93
Control No. 3063013622

AUG 9,1993

The Honorable Mike Kopetski
U.S. House of Representatives
218 Cannon House Office Building
Washington, D.C. 20515-3705

Dear Congressman Kopetski:

This letter is in response to your inquiry on behalf of xx regarding accessibility for persons with disabilities to older buildings. He is particularly concerned that realistic standards be created for providing accessibility in older buildings.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights and obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation and it is not binding on the Department.

Under the ADA, accessibility modifications to some older buildings are required under standards that are realistic. Title III of the ADA applies to privately owned places of public accommodation, like stores and restaurants, which are required to remove architectural barriers and communication barriers that are structural in nature if it is readily achievable to do so. Readily achievable means easy to accomplish without much difficulty or expense. The cost of removing barriers and the resources of the particular business involved are taken into account in determining whether a particular action is readily

achievable. The title III regulation promulgated by this Department lists examples of barrier removal that are likely to be readily achievable in many instances and suggests priorities for removing barriers if it is not readily achievable to remove all barriers at once.

When barriers are removed, the modifications must meet the technical requirements set forth in the ADA Standards for Accessible Design that were promulgated as part of the title III regulation. If it is not readily achievable to meet the

cc: Records, Chrono, Wodatch, Johansen, McDowney, FOIA, Friedlander
n:\udd\johansen\kopetski.ltr

01-02513

Standards, it is permissible to make non-complying modifications as long as they do not create a safety risk to persons with disabilities or others. If it is not readily achievable to remove barriers, other readily achievable measures to provide goods or service must be taken.

The Standards for Accessible Design have specific requirements for all elements of a building, including most of the items suggested in XX letter -- door opening force, door hardware, curb ramps, and bathroom sizes. See Standards Sections 4.13.9, 4.13.11, 4.7. 4.8, and 4.22. A copy of the title III regulation, which includes the Standards, is enclosed for your reference.

Nothing in the ADA prevents States and local governments from enforcing codes that provide for even greater accessibility than that required under the ADA.

We hope this information is helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Enclosure

01-02514
HOUSE OF REPRESENTATIVES MICHAEL J. KOPETSKI
216 Cannon House
Washington, DC 20515-3705
202-225-5711
Dear Michael;

I am a Physically Handicapped person aged 46 years. I have been diagnosed to have Limb-Girdle Muscular Dystrophy at age 34. This type of dystrophy affects the skeletal muscles of the arms legs and chest, a condition that steadily worsens. This causes me to be wheelchair bound, and have limited use of my arms and hands. I cannot reach out and raise my arms (as if to shake hands with someone for example).

I have traveled extensively in California and the North West and a few times to the East Coast. It is appalling to see the variety of non-accessible bath rooms in Restaurants and Motels that claim Handicap Accessibility by merely displaying a sign and marking a parking space. One such space was right on a steep incline that would make it impossible for a person in a wheelchair to get in or out of their car. The same Restaurant did not even have a way to get over the curb from the parking lot. Many even have several steps!

Most people have the illusion that those in wheelchairs can get up and walk a few steps when necessary. These are usually some elderly who are too weak to walk long distances, but most people in wheelchairs can't even stand! People who became paraplegic from accidents have normal upper body strength and usually have no trouble with doors. But those of us that have MS or MD are weak all over.

Some Restaurants have large enough bathrooms, but stalls that are too narrow, or stall doorways that are too narrow for a wheelchair. NONE (even those that were built to today's standards) have a way to CLOSE the stall door from the inside! I suggest another door handle inside the door. Some have spring-loaded stall doors that sometimes fight to keep you inside. In nearly ALL bathrooms, the entry doors are spring-loaded so stiffly that it is difficult to get in and nearly impossible to get out, without help!

When I worked for Hewlett-Packard, we ordered and installed a special door closer (made for the handicapped) and Louvers at the bottom of the door to equalize air pressure, yet not allow anyone to see in. This worked well for me as did the door handle inside the stall door.

It should be IMPERATIVE that the inspector that inspects a building for compliance, do so in a wheelchair! Only then would he see how impossible it is to enter and leave a bathroom, or the parking lot. Probably less than half the buildings would be considered Handicapped Accessible! Only then would the handicapped not be fooled by the Blue Wheelchair sign.

I don't know what the "New Building" code requirements are for the State of Oregon, but they seem to be pretty good. The NEW Kmart in Corvallis has all the suggestions I mention later, except the door handle inside the stall door. They have a coat
01-02515
hanger that works just as well.

Below are my suggestions for compliance requirements for older buildings to make them accessible for wheelchair bound people.

1. Softer springs on doors
2. Air vents in Bath doors
3. Handles inside the stall doors
4. Ramps at curbs
5. Bathrooms large enough to accommodate a wheelchair
6. Low light switches

It doesn't seem like I'm asking for a whole lot does it? I don't think that anyone should display the Wheelchair symbol if a wheelchair does not fit in their bathroom! I drive a 4 wheel electric scooter that has the footprint of a narrow wheelchair. There are some bathrooms that I manage to get into that someone in a regular wheelchair could not, because you can't hold a door open AND maneuver a regular wheelchair with only 2 hands.

We need to establish realistic standards for older buildings. I realize that older establishments are probably being forced to make their businesses handicapped accessible, so they paint a blue sign in a parking spot or two and figure that's

that.

I'm not militant about handicapped accessibility. I won't go to war with an establishment because I can't get into their bathroom. I'll just go some place else. There are too many places for me to fret over the ones that are not totally accessible. What I'm proposing is, that only places with TOTAL accessibility get to display the BLUE WHEELCHAIR! Businesses that do not have room to enlarge their bathrooms, should not be forced to do so. They could display maybe a RED WHEELCHAIR, or some other sign indicating no bathroom facilities, or a slash through the BLUE WHEELCHAIR sign in the parking lot.

It's no fun to be eating at a restaurant that displays the Blue Wheelchair sign, and then find out you can't get into the bathroom, especially if you wait to the last minute!

This letter is not meant to be a gripe session, but only a conveyance of my thoughts on this accessibility matter. Please feel free to respond.

Sincerely,

XX
Corvallis, OR

01-02516

AUG 11, 1993

The Honorable F. James Sensenbrenner, Jr.
Member, U.S. House of Representatives
120 Bishops Way, Room 154
Brookfield, Wisconsin 53005

Dear Congressman Sensenbrenner:

This letter is in response to your inquiry on behalf of your constituent, xx . According to your inquiry, xx contacted you regarding the inaccessibility of the second floor of the Sheboygan-area Menards store to persons with disabilities.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not

constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

Retail stores are places of public accommodation under title III of the ADA. The ADA requires public accommodations to remove architectural barriers in existing facilities where such removal is "readily achievable," i.e., easily accomplishable and able to be carried out without much difficulty or expense. Your constituent states that he is unable to gain access to the second floor of the Sheboygan-area Menards store. It is quite possible, however, that the store is not obligated to install an elevator. Under the ADA Standards for Accessible Design, elevators are not required in facilities that are less than three stories or that have less than 3000 square feet per story, unless the building is a shopping center, a shopping mall, or the professional office of a health care provider. See page 35613 of the enclosed Title III regulation.

Even if the Sheboygan-area Menards store is located in a building that qualifies as a shopping center or mall under the technical standards, or otherwise does not qualify for the elevator exemption, the store may not have to install an elevator. Determining if barrier removal in a public

cc: Records, Chrono, Wodatch, McDowney, Bowen, Foran, FOIA, MAF
Udd: Foran:Sensenbr.Con

01-02517

accommodation is readily achievable is necessarily a case-by-case judgment. Whether rendering the second floor of a particular retail store accessible is readily achievable would be determined according to the following factors:

(1) the nature and cost of the action needed;

(2) the overall financial resources of the site or sites involved in the action; the number of persons employed at the site, the effect on expenses and resources; legitimate safety requirements necessary for safe operation, including crime prevention measures; or any other impact of the action on the operation of the site;

(3) the geographic separateness, and the

administrative or fiscal relationship of the site or sites in question to any parent corporation or entity with respect to the number of employees; the number, type, and location of its facilities;

(4) if applicable, the overall financial resources of any parent corporation or entity; the overall size of the parent corporation or entity with respect to the number of its employees; the number, type, and location of its facilities; and

(5) if applicable, the type of operation or operations of any parent corporation or entity, including the composition, structure, and functions of the workforce of the parent corporation or entity.

Generally, a public accommodation would not be required to remove a barrier to physical access posed by a flight of steps if removal would require very extensive ramping or an elevator. In contrast, ramping a single step will likely be readily achievable, and ramping several steps will in many circumstances also be readily achievable. See preamble to enclosed title III regulation at page 35568.

As is clear from the foregoing, it is possible that rendering the second floor of the Sheboygan-area Menards store accessible may not be readily achievable under the law. Even if Menards can demonstrate that removal of barriers is not readily achievable, however, it still must make its goods and services available through alternative methods, if such methods are readily achievable. Thus, for example, the store might be obligated to ensure that a clerk is available to retrieve items from the second floor for persons with mobility impairments. See preamble to enclosed title III regulation at page 35570.

01-02518

If xx wishes to pursue his complaint against Menards, he may file a complaint with this office at the following address:

Public Access Section
Civil Rights Division
P.O. Box 66738
Washington, D.C. 20035-9998

The letter should include a full address for the particular Menards store which is the subject of his complaint.

Please make XX aware that, due to the volume of complaints received and limited resources of this office, not every complaint is investigated. It is not likely that we would open this complaint for investigation. In light of this, you may want to inform XX that the ADA provides a private right of action and that he is free to obtain private counsel.

In addition to contacting a private attorney, there are a number of avenues that XX may wish to pursue in order to resolve his complaint, including consulting State or local authorities, disability rights organizations, or organizations that provide alternative dispute resolution services (such as arbitration or negotiation). For your convenience, we have enclosed a list of organizations serving your constituent's area. These listings come from various sources, and our office cannot guarantee that the listings are current and accurate. These groups may be able to refer XX to national or regional groups with a focus on a particular type of disability. Your constituent's local or State bar association may be able to give him names of private attorneys or mediation services. Some Better Business Bureaus are also prepared to help settle ADA complaints.

Enclosed also please find a copy of the Department's Title III Technical Assistance Manual.

I hope this information will assist you in responding to your constituent.

Sincerely,

Brian K. Landsberg
Acting Assistant Attorney General
Civil Rights Division

(Handwritten)
Dear Congressman,

I was in touch with your office a couple days ago and presented them with a problem I have with Menards. Menards is a building materials place & several other items I'm sure you are familiar with. My concern is this, I believe they are supposed to be handicap accessible. They are to a point but the have a second floor with items displayed up there, lights, ceiling fans, telephones etc, etc. I'm in a wheel chair and

cannot get up there to pick out light and ceiling fans as I am remodeling my house. I talked to the manager of the Sheboygon store and asked him if they were going to do something about making that portion handicap accessible. And, if so when he told me we're not going to do anything about it. So, I got the presidents name & address at their corporate headquarters in Eau Claire, WI and wrote him a letter asking him if & when they were going to make their upstairs handicap accessible and he did not even have the decency to answer my letters. I don't know where else to go but you. Can you help get this problem resolved?

Thank You

Sheboygon, WI 53081
Telephone
xx

01-02520

AUG 12 1993

The Honorable Thomas H. Andrews
Member, U.S. House of Representatives

136 Commercial Street
Portland, Maine 04101

Dear Congressman Andrews:

This letter is in response to your inquiry on behalf of your constituent, XX , concerning the applicability of the Americans with Disabilities Act ("ADA") to the costs of interpreters at meetings and other events.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

Your constituent inquires as to whether deaf Individuals must pay the additional costs associated with the provision of interpreters for meetings where both deaf and hearing individuals are present. Specifically, XX expresses concern that the "continuance of this expense (for the provision of interpreters] remains a drag on the on-going efforts to encourage deaf/hearing get-togethers."

The ADA requires that places of public accommodation provide auxiliary aids and services, including qualified interpreters, where such provision is necessary to ensure effective communication with people with disabilities. The cost of such services may not be financed by surcharges placed on particular individuals, or groups of individuals, with disabilities. Charges may, however, be spread out among all of the clients of a place of public accommodation.

For example, while a doctor may not raise his fee exclusively for an individual who requires an interpreter, the doctor may raise his fee generally for all his patients, so that the additional expense of providing an interpreter is covered.

cc: Records; Chrono; Wodatch; McDowney; Magagna; Perley; FOIA MAF. \udd\perley\congress\andrews

01-02521

Similarly, while a place of public accommodation may neither impose a surcharge solely on meeting participants who are deaf nor charge a fee solely for those meetings where there will be deaf attendees, the place of public accommodation could charge an entrance fee for all its meetings, regardless of whether or not there would be deaf participants, so that the expense of providing interpreters for particular meetings would be covered. For information concerning the provision of auxiliary aids and services under the ADA, see S 36.303 of the enclosed title III regulation at pages 35597 and 35565-68. For information concerning the prohibition on the imposition of surcharges, see S 36.301 of the regulation at pages 35596 and 35564.

Some of the meetings your constituent refers to may be related to the employment of a person with a disability and, therefore, would be covered under title I of the ADA. Title I requires employers to make reasonable accommodations for the known disability of an employee so that the employee may function effectively in the work place. Such an accommodation may include the provision of interpreter services at employment-related meetings and similar events. For further information on title I of the ADA, you may contact the Equal Employment Opportunity Commission.

Although there is no provision in the ADA for government reimbursement of the costs of providing interpreter services, there are a number of tax credits and deductions available for expenses related to the provision of accessibility services. These include the Targeted Jobs Tax Credit (Title 26, Internal Revenue Code, Section 51) and the Disabled Access Tax Credit (Title 26, Internal Revenue Code, Section 44). For further information on these provisions, your constituent may contact the Internal Revenue Service, Office of the Chief Counsel, P.O. Box 7604, Ben Franklin Station, Washington D.C. 20044 (202) 566-3292 (voice only).

I hope this information is helpful to you in responding to your constituent. You may wish to inform your constituent that further information is available through our Americans with Disabilities Act Information Line at (202) 514-0301 (voice), (202) 514-0383 (TDD).

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

May 7, l993

Malory Otteson
Tom Andrews District Office
136 Commercial Street
Portland, Maine 04101

Dear Ms. Otteson:

Thank you for the opportunity to talk with you on the telephone on Friday. You have been most helpful in the past, and I am wondering now if you would be willing to check out one more thing for me.

As an advocate for the deaf I am trying, among other things, to test the adequacy of the Americans With Disabilities Act (ADA) in covering various needs of the deaf. In particular, at this time I am concerned about the cost of interpreters. It is true that in various settings, under the ADA, interpreters must be provided and paid for by people needing to communicate with the deaf. However, there are also situations where the deaf, in their meetings, need to hire and pay for interpreters themselves. This seems to conflict with what I interpret to be the true intent of the ADA.

Please let me give an example: I am a volunteer for the Maine Center on Deafness in Portland, Maine. As such, I have observed that at meetings and gatherings attended by both bearing and deaf, there is always an extra charge for the cost of interpreters. (A cost that is non-existent in meetings of the hearing only.) Similarly, interpreters are needed at regular board meetings as both hearing and deaf are board members.

Unless there is some way that interpreter costs can be recovered, the continuance of this expense remains a drag on the on-going efforts to encourage deaf/hearing get-togethers, and the spread of deaf awareness in today's world. I would be grateful if your office would explore this matter with the appropriate officials who are responsible for the mandates of the ADA and let me know their advice and decisions. Thank you for your

help.

Sincerely,

XX

01-02523

AUGUST 12, 1993

The Honorable Don Nickles
United States Senator
409 South Boston
Suite 3310
Tulsa, Oklahoma 74103

Dear Senator Nickles:

This letter is written in response to your correspondence on behalf of your constituent, xx who alleges that she was discriminated against on the basis of her disability by Sinco Gas Station in Elgin, Oklahoma. XX also requests information concerning her rights under the Americans with Disabilities Act of 1990 (ADA).

Title III of ADA prohibits sales establishments from discriminating against persons with disabilities by excluding such persons from their facilities or from the benefits of their services. All new construction and alterations to existing facilities, such as the gas station described by xx , must be readily accessible to and usable by persons with disabilities and should be designed and built according to the ADA Standards for Accessible Design, 36 C.F.R. pt. 36, Appendix A. By contrast, public accommodations in existing facilities must remove architectural barriers to access only where such removal is readily achievable, that is, where it can be accomplished easily and without much difficulty or expense. These requirements appear in sections 36.401 and 36.304 of the enclosed ADA title III regulation, at pages 35599-35600 and 35597- 35598, respectively. Also enclosed is the Department's Title III Technical Assistance Manual, which may provide further assistance to your constituent. Pertinent discussion may be found at pages 43-53 (new construction and alterations) and 28-36 (existing facilities).

Persons who believe that they have been discriminated against on the basis of disability have two enforcement options under the ADA: (1) they may secure private legal representation and bring an action in federal district court,

or (2) they may file a complaint with the U.S. Department of Justice.

Community Actions Agency, 1904 SW Washington, Lawton, OK 73501
Comanche County Court House, 5th and D St., Lawton, OK 73501

I was in Elgin, Ok on 14 Apr 93. I stopped by the Sinco Gas Station to buy a coke and to go to the bathroom. To my surprise this station does NOT have handicapped bathrooms. I was born with Spinal Bifida and am confined to a wheelchair and require the special bathroom facilities.

I asked the young snotty girl who was working at the counter, when was the building constructed. She asked why I wanted to know. I told her I was sure that the building was constructed without following the rules of the ADA. She said she didn't care, she wasn't the owner. So I told her she had Better tell the owner I was turning him in for not following Federal laws. She replied I could call the owner, Rodney Ryder. So I said ok--well guess what the telephone is up a step behind the counter which I could not get up to either. And the young snotty girl took great pleasure in making a point of that.

I told her I was going to contact an attorney, John Zelbst from Lawton. She said she didn't care Rodney probably knew John personally. So she wasn't the least bit concerned.

I left and went to the Bank of Elgin and used the phone. I called John's office but he is out of town until 26 Apr. And I

did leave him a message to call me. At the bank I did ask a couple of questions and found out the station was constructed in the 1990 timeframe.

My question is--why was this building allowed to pass inspection when ADA requires all public buildings to be handicapped accessible? Who approved this? And what can be done to correct this? And Is there a FINE for the owner?

I would personally like this station restructured to meet the required laws. The soap container is too high. The hand drying machine wasn't working.

Please let me know what you do about this matter.

Thanks,
XX

Ms. Brenda K. Jacobs
Clark County Election Department
1860 E. Sahara Avenue
Las Vegas, Nevada 89104-3760

RE: Complaint Number XX

Dear Ms. Jacobs:

This letter constitutes our Letter of Findings with respect to a complaint filed with the Department of Justice, Civil Rights Division, Coordination and Review Section, against the Clark County Election Department. As you are aware, a complaint was filed with this office alleging that the Election Department failed to provide access to the polling site at the Las Vegas High School Auditorium, in violation of title II of

the Americans with Disabilities Act of 1990 (ADA) . As a result, an individual with a mobility impairment had to vote in the hallway.

The coordination and Review Section of the United States Department of Justice is responsible for investigating complaints of discrimination under title II for which it is the designated agency.

Following our notification to you of our receipt of this complaint, you provided a copy of your curbside voting policy for Clark County. We have reviewed this policy and concluded that it does not violate title II of the ADA. Section 35.149 of the enclosed title II regulation requires accessibility to programs services, and activities in facilities existing on the effective date of the statute, January 26, 1992. The principal focus of the program accessibility standard is access to programs, services, and activities, as opposed to access to physical structures. Therefore, existing polling places are not required to be accessible, provided that alternative

methods are effective in enabling individuals with disabilities to cast a ballot an the day of the election. The Clark County policy of taking the ballot outside to a voter who is unable to enter the polling place is an acceptable method of providing program access.

Because Clark County has a curbside voting policy in place that meets the requirements of title II of the ADA, we are closing our file in this case as of the date of this letter.

We are obligated to inform you that if any individual is harassed or intimidated because of the filing of a complaint or the participation in the investigation of a complaint, such an individual may file a complaint alleging such harassment or intimidation. The allegation of harassment or intimidation would be investigated as a separate complaint.

Under the Freedom of Information Act, it may be necessary to release this document and related correspondence and records upon request. In the event that we receive such a request, we will seek to protect, to the extent provided by law, personal information which, if released, could constitute an unwarranted invasion of privacy.

We appreciate your cooperation with the Department of Justice in this matter. If you have any questions concerning this letter, please contact Ms. Linda King, the investigator assigned to your case, who can be reached at (202) 307-2231 (Voice) or (202) 307-267S (TDD) (these are not toll-free numbers).

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

01-02528

AUG 19 1993

The Honorable Jim Saxton
U. S. House of Representatives
438 Cannon House Office Building
Washington, D.C. 20515-3003

Dear Congressman Saxton:

This letter is in response to your inquiry on behalf of your constituent, XX , who states that her son-in-law was not provided a sign language interpreter to convey information about his impending major heart surgery. I have also received the documents attached to your letter --XX letter to Governor Florio and the governor's response to it. This letter responds to your request for information about the duty of a medical institution under the Americans with Disabilities Act ("ADA") to provide the services of an interpreter under these circumstances.

Both public and private institutions that provide health care are subject to the provisions of the ADA. As such, they are required to take steps to provide auxiliary aids and services that will ensure that an individual with a disability is not excluded, denied services, segregated or otherwise treated differently from other individuals. Health care institutions will only be excused from providing these auxiliary aids and services if doing so would either fundamentally alter the nature of the services provided, or would result in an undue burden in terms of difficulty or cost.

The Justice Department's implementing regulations detail this requirement of non-discrimination, 28 C.F.R. SS 35.160, 36.303(a), and define auxiliary aids and services to include qualified interpreters. 28 C.F.R. S 36.303(b)(1). Therefore, a medical institution would need to provide a deaf patient with an interpreter to convey information about medical procedures, if necessary for effective communication, unless doing so would be

cc: Records; Chrono; Wodatch; McDowney; Magagna; Kuczynski;
FOIA; MAF. \udd\kuccynsk\saxton.cng

01-02529

too difficult or too costly. A similar obligation to provide an interpreter might also arise under 504 of the Rehabilitation Act and its implementing regulations, which prohibit discrimination on the basis of disability by activities and programs receiving federal financial assistance.

Since determinations of what is necessary for effective communication and what constitutes an undue burden are very fact-specific inquiries, it is impossible to know, without more information concerning the particular hospital involved, whether a violation of the ADA has actually occurred. Your constituent may wish to file a complaint to have the matter investigated. If the hospital involved is operated by a State or local government, she should write to:

Department of Health and Human Services
Region II
26 Federal Plaza
New York, N.Y. 10278.

If it is a private hospital, she should write to:

Public Access Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66738
Washington, D.C. 20035-6738.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

Brian K. Landsberg
Acting Assistant Attorney General
Civil Rights Division

Main Justice Building, ROOM 1603

Pennsylvania & Constitution Aves. NW
Washington, D.C. 20530

Dear Ms. Reno:

I was appalled after reading the enclosed letter from a constituent who outlined a situation which confronted a deaf family member. I believe that you, too, will find the letter shocking.

A deaf individual was faced with major heart surgery without an interpreter. An operation such as that is frightening enough without even the knowledge of what is occurring.

Consequently, I would like for you to provide information on the responsibility of a medical institution under the Americans with Disabilities Act in this situation.

Thank you for your attention to this matter.

Sincerely,

JIM SAXTON
MEMBER OF CONGRESS

HJS/brg

(HANDWRITTEN)

DEAR GOVERNOR FLORIO,

THE PASSAGE AND IMPLEMENTATION OF THE AMERICANS WITH DISABILITIES ACT IS A MUCH NEED STEP TO ENSURE ALL AMERICANS RECEIVE THE CARE IN HOSPITALS THEY ARE ENTITLED TO.

HOWEVER THIS DOES NOT APPEAR TO BE THE CASE WHEN SOMEONE IS DEAF. MY SON-IN-LAW WAS RECENTLY HOSPITALIZED. HE REQUIRED MAJOR HEART SURGERY A QUADRUPLE BY-PASS. ALL THIS WITHOUT BENEFIT OF AN INTERPRETER

THE HOSPITALS INVOLVED MADE A HALF-HEARTED EFFORT TO PROVIDE THIS SERVICE. THE END RESULT WAS HE FACED THE SURGERY WITHOUT THE EXPLANATION YOU OR I, OR EVEN A SPANISH-SPEAKING PERSON, WOULD RECEIVE. THIS IS A DISGRACE AND INEXCUSABLE. THIS DISCRIMINATION MUST BE STOPPED.

MOST OFTEN THE HOSPITAL'S REPLY IS THE FAMILY USUALLY PROVIDES THE INTERPRETER. "WHY SHOULD I HAVE TO DO THIS WHEN THE LAW REQUIRES THE THE HOSPITAL TO PROVIDE THESE SERVICES.

I WOULD APPRECIATE IT IF YOU WOULD INVESTIGATE THIS ISSUE. HOW MANY OTHERS ARE DENIED AN UNDERSTANDABLE EXPLANATION OF MEDICAL PROCEDURES BECAUSE THE HOSPITAL STAFF CAN NOT COMMUNICATE WITH THE PATIENT?

THANK YOU FOR YOUR SUPPORT,
xx

VINCETOWN, NJ 08088

01-02532

AUG 20 1993

The Honorable Bill Paxon
U.S. House of Representatives
1314 Longworth
House Office Building
Washington, D.C. 20515

Dear Congressman Paxon:

This letter is in response to your inquiry on behalf of your constituent, xxxxxxxx who has requested some guidance concerning the Americans with Disabilities Act ("ADA"). Xx xxxxxxxxx request concerns statements found in the ADA Handbook regarding comments received by the Department of Justice during the rulemaking period for titles II and III of the ADA.

The ADA authorizes this Department to provide technical assistance to individuals and entities that have rights or responsibilities under the ADA. Therefore, this letter provides informal guidance to assist you in responding to xxxxxxxxxxx. However, this technical assistance does not constitute a legal interpretation, and it is not binding on the Department of Justice.

Xxxxxxxxxx first question refers to a statement in the ADA Handbook, at page II - 3, that an organization representing persons with hearing impairments "presented the Department with 479 individual comments, each providing in chart form a detailed representation of what type of auxiliary aid or service would be useful in the various categories of places of public accommodation."

Xxxxxxxxxxxx asked what specific recommendations were made. Given the number of comments received by the Department, it is not possible to summarize the recommendations that were made by those individuals. However, xxxxxxxxxxxx attention is directed to the preamble of the title III regulation that discusses the obligation of a place of public accommodation to provide auxiliary aids and services and many of the recommendations that the Department received regarding that

cc: Records, Chrono, Wodatch, Breen, Delaney, McDowney, MAF, FOIA
udd\delaney\congress\paxon

01-02533

obligation. For a fuller discussion of auxiliary aids and services, please refer to 28 C.F.R. S 36.303 of the title III regulation (copy enclosed) and the discussion in the preamble that can be found at 56 Fed. Reg. 35,565-35,568.

Xxxxxxxxxxxx second question refers to a statement in the ADA Handbook, at page II - 21, concerning the comments received by the Department urging that environmental illness (also known as multiple chemical sensitivity) be recognized as a disability under the ADA. As the ADA Handbook explains, the Department declined to make such a categorical determination.

Xxxxxxxxxxxxxx has asked whether multiple chemical sensitivity can be substantiated. As promulgated, the title II and III regulations require that a case-by-case determination be made as to whether a particular allergy, illness, or chemical sensitivity constitutes a disability within the meaning of the ADA. This analysis is the same as that applied for all other physical or mental impairments. For a fuller discussion of the issue of what constitutes a disability under the ADA, please refer to 28 C.F.R. S 36.104 of the title III regulation and the discussion in the preamble that can be found at 56 Fed. Reg. 35,548-35,550.

I hope this information is helpful in responding to your constituent.

Sincerely,

Brian K. Landsberg
Acting Assistant Attorney General
Civil Rights Division

Enclosure:

Congress of the United States
House of Representatives
Bill Paxon
27th District, New York

June 29, 1993

Mr. Thomas Reinehardt
Director of Congressional Relations
U.S. Department of Justice
Pennsylvania and Constitution Avenues, NW
Washington, D.C. 20535

Dear Mr. Reinehardt:

I am writing on the behalf of one of my constituents, xxxxx Xxxxxxxxxx, and in reference to his questions regarding the Americans with Disabilities Act Handbook. I am hopeful that you and your staff can assist me in answering his questions.

Xxxxxxxxx contacted my office with the two following specific questions about Title II - Nondiscrimination on the Basis of Disability in Public Facilities:

1.) ADA Handbook, page II - 3, paragraph 3 (enclosure). Hearing impaired individuals provided comments on which auxiliary aid or service would be useful in various public accommodations. What specific recommendations were made?

2.) ADA Handbook, page II - 21, paragraph 3 (enclosure). In reference to multiple chemical sensitivity - under Department of Justice guidelines, can multiple chemical sensitivity be substantiated?

I would appreciate any assistance or information that you may be able to provide to me that would assist me in this matter and ask that you consider this request within the rules and regulations governing the Department of Justice. I look forward to your response.

Best wishes.

Sincerely,

Bill Paxon
Representative

BP: mk
01-02535

senting businesses in the private sector, and 67 from government units, such as mayors' offices, public school districts, and various State agencies working with individuals with disabilities.

The Department received one comment from a consortium of 540 organizations representing a broad spectrum of persons with disabilities. In addition, at least another 25 commenters endorsed the position expressed by this consortium, or submitted identical comments on one or both proposed regulations.

An organization representing persons with hearing impairments submitted a large number of comments. This organization presented the Department with 479 individual comments, each providing in chart form a detailed representation of what type of auxiliary aid or service would be useful in the various categories of places of public accommodation.

The Department received a number of comments based on almost ten different form letters. For example, individuals who have a heightened sensitivity to a variety of chemical substances submitted 266 post cards detailing how exposure to various environmental conditions restricts their access to public and commercial buildings. Another large group of form letters came from groups affiliated with independent living centers.

The vast majority of the comments addressed the Department's proposal implementing title III. Slightly more than 100 comments addressed only issues presented in the proposed title II regulation.

The Department read and analyzed each comment that was submitted in a timely fashion. Transcripts of the four hearings were analyzed along with the written comments. The decisions that the Department has made in response to these comments, however, were not made on the basis of the number of commenters addressing any one point but on a thorough consideration of the merits of the points of view expressed in the comments. Copies of the written comments, including transcripts of the four hearings, will remain available for public inspection in Room 854 of the HOLC Building, 320 First Street, N.W., Washington, D.C. from 10:00 am. to 5:00 p.m., Monday through Friday, except for legal holidays, until August 30, 1991.

4. Overview of the Rule

The rule is organized into seven subparts. Subpart A, "General," includes the purpose and application sections, describes the relationship of the Act to other laws, and defines key terms used in the regulation. It also includes administrative requirements adapted from section 504 regulations for self-evaluations, notices, designation of responsible employees, and adoption of

grievance procedures by public entities.

Subpart B, "General Requirements," contains the general prohibitions of discrimination based on the Act and the section 504 regulations. It also contains certain "miscellaneous" provisions derived from title V of the Act that involve issues such as retaliation and coercion against those asserting ADA
rights, illegal use of drugs, and restrictions on smoking. These provisions are also included in the Department's proposed title III regulation, as is the general provision on maintenance of accessible features.

The question of whether a temporary impairment is a disability must be resolved on a case-by-case basis, taking into consideration both the duration (or expected duration) of the impairment and the extent to which it actually limits a major life activity of the affected individual.

The question of whether a person has a disability should be assessed without regard to the availability of mitigating measures, such as reasonable modifications or auxiliary aids and services. For example, a person with hearing loss is substantially limited in the major life activity of hearing, even though the loss may be improved through the use of a hearing aid. Likewise, persons with impairments, such as epilepsy or diabetes, that substantially limit a major life activity, are covered under the first prong of the definition of disability, even if the effects of the impairment are controlled by medication.

Many commenters asked that environmental illness (also known as multiple chemical sensitivity) as well as allergy to cigarette smoke be recognized as disabilities. The Department, however, declines to state categorically that these type Of allergies or sensitivities are disabilities, because the determination as to whether an impairment is a disability depends on whether, given the particular circumstances at issue, the impairment substantially limits one or more major life activities (or has a history of, or is regarded as having such an effect.

Sometimes respiratory or neurological functioning is so severely affected that an individual will satisfy the requirements to be considered disabled under the regulation. Such

an individual would be entitled to all of the protections afforded by the Act and this part. In other cases, individuals may be sensitive to environmental elements or to smoke but their sensitivity will not rise to the level needed to constitute a disability. For example, their major life activity of breathing may be somewhat, but not substantially, impaired. In such circumstances, the individuals are not disabled and are not entitled to the protections of the statute despite their sensitivity to environmental agents.

In sum, the determination as to whether allergies to cigarette smoke, or allergies or sensitivities by the commenters as environmental illness are disabilities covered by the regulation must be made using the same case

DJ 202-PL-565

Mr. James C. Bagley
Goodwyn, Mills & Cawood, Inc.
125 Interstate Park Drive
P.O. Box 3605
Montgomery, Alabama 36109-0605

Dear Mr. Bagley:

I am responding to your letter inquiring about the certification of State and local accessibility codes pursuant to the Americans with Disabilities Act (ADA). Specifically, your letter asks if the adoption of a model code by a State or local government requires the approval of the Department of Justice.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you to understand the ADA. However, this technical assistance does not constitute a determination by the Department of your rights or responsibilities under the ADA, and it is not binding on the Department.

The ADA does not preempt all State regulation in the area of accessible design. States may continue to enact and enforce State accessibility codes. These codes do not require Department of Justice approval. However, if the State code provisions differ from the ADA requirements in a way that may result in less

accessibility, then a covered entity is required to comply with the ADA standards in addition to the State code.

The ADA requirements that govern the new construction or alteration of facilities subject to the ADA are contained in the Department of Justice regulations implementing titles II and III of the ADA. Title II of the ADA prohibits discrimination on the basis of disability by public entities, including all State and local governments. Title III of the ADA prohibits discrimination on the basis of disability by places of public accommodation, and it requires all new construction of, or alterations to, places of public accommodation and commercial facilities to be readily accessible to people with disabilities.

cc: Records, Chrono, Wodatch, Breen, Blizard, FOIA, Friedlander
n:\udd\blizard\cert\alabama.ta

The Department of Justice regulation implementing title II (28 C.F.R. pt. 35) requires all new construction of, or alterations to, public buildings after January 26, 1992, to comply with either the Uniform Federal Accessibility Standards or the Standards for Accessible Design published as Appendix A to the Department's regulation implementing title III (28 C.F.R. pt. 36). The Department's title III regulation requires all places of public accommodation and commercial facilities designed and constructed for first occupancy after January 26, 1993, or altered after January 26, 1992, to be designed in compliance with the requirements of Subpart D of the regulation and the Standards for Accessible Design.

The ADA recognizes that individuals involved in the design and construction of facilities subject to title III of the Act may want to be able to rely on compliance with State or local codes as a means of complying with the ADA. Therefore, title III permits the Department of Justice, in response to a request from a State or local government, to certify that the accessibility provisions of a State or local building code that apply to places of public accommodation or commercial facilities meet or exceed the requirements of the ADA. Certification of a code by the Department does not ensure that a facility constructed in compliance with the code will comply with the ADA, but it does enable a party in litigation that alleges a violation of title III to point to compliance with a certified code as rebuttable

evidence of compliance with the ADA. The ADA does not authorize the Department to certify State or local code requirements that apply only to the construction of public buildings or facilities.

For your information, I am enclosing copies of the Department's regulations implementing titles II and III of the ADA, and the Department's technical assistance manuals. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief

REFERENCE: CERTIFICATION OF LOCAL CODES - Request for Written Response

TO WHOM IT MAY CONCERN:

The State of Alabama Fire Marshall, who has the legal authority to promulgate and enforce regulations regarding accessibility, adopted UFAS-88 as Alabama's ADA Standard, in conjunction with or at least with endorsement of the State Building Commission. This has been in place for over a year, and is now relied upon across the state.

My understanding from numerous ADA meetings, seminars, convention activities, research, etc., and discussion with several lawyers where this has come up, is that the Department of Justice must endorse our State Fire Marshal's action before it is acceptable, 'official," later admissible as factual evidence, etc.

QUESTION: Does the adoption of a "Model Code" by a State or municipality require the endorsement, acceptance, or similar action by the

Department of Justice and/or other authority?

Thank you for your time in attention to this request. We will be looking forward to your response very soon.

Sincerely yours,

GOODWYN, MILLS & CAWOOD, INC.

James Bagley, AIA, CDT, CSI

DJ 202-PL-259

AUG 23 1993

Mr. Lowell C. Horton
Horton Products Company
601 East Burgess Road
Building H-4
Pensacola, Florida 32504

Dear Mr. Horton:

I am writing in response to your letter inquiring as to whether the standards issued under the Americans with Disabilities Act of 1990 (ADA) apply to swimming pools in places of public accommodations and whether swimming pool operators are required to remove architectural barriers.

The ADA authorizes the Department of Justice to provide

technical assistance and information to individuals and entities who have questions about the Act or the Standards for Accessible Design adopted under the Department's ADA regulations. This letter provides informal guidance to assist you in understanding and complying with the ADA's requirements. However, this technical assistance should not be viewed as legal advice or a legal opinion about your rights or responsibilities under the ADA.

The Access Board developed the ADA Accessibility Guidelines for Buildings and Facilities which were subsequently adopted as the Standards for Accessible Design (Standards) under the Departments regulations issued under title III of the ADA. A copy of the Department's regulations are enclosed for your use.

The Standards currently do not contain specific design criteria for providing access into a swimming pool. However, the Standards' general accessibility provisions would apply to access to the pool deck, dressing rooms, toilet rooms, parking, and other public and common use areas.

The Access Board has announced its intention to develop guidelines for recreational facilities and has convened a Federal Advisory Committee on Recreation to assist in the development of accessibility guidelines for all types of recreational facilities, including swimming pools. As new guidelines are

cc: Records, Chrono, Wodatch, Breen, Lusher, FOIA, Friedlander
n:\udd\mercado\plcrtltr\horton.rhl

01-02541

developed by the Board, the Department will enter into rulemaking to adopt the guidelines as enforceable standards under the ADA.

All public accommodations covered by the ADA must comply with the nondiscrimination and accessibility requirements of title lll. In existing facilities, all barriers to accessibility must be removed if the removal is readily achievable. Readily achievable means easily accomplishable and able to be carried out without much difficulty or expense. Sections 36.304(b) and (c) of the enclosed title III regulations, at pages 35597-98, provide examples and suggest priorities for barrier removal steps. Public accommodations are urged first to provide an accessible route into the facility from public sidewalks, parking or transportation. Next, a public accommodation should provide

access to, in order of priority, areas where goods and services are made available and to restroom facilities. The public accommodation should then provide access to the remainder of its "goods, services, facilities, privileges, advantages, or accommodations." Please consult the enclosed regulation and Technical Assistance Manual for a more complete discussion of barrier removal.

The ADA establishes two avenues for enforcement of the requirements of title III:

1. Private suits by individuals who are being subjected to discrimination or who have reasonable grounds for believing that they are about to be subjected to discrimination.

2. Suits by the Department of Justice, whenever it has reasonable cause to believe that there is a pattern or practice of discrimination, or where discrimination raises an issue of general public importance. The Department will investigate complaints and conduct compliance reviews of covered entities.

I hope this information is useful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Dear Mr. Wodatch:

This is my fourth effort through various members of your staff to obtain simple, written answers to three clear, direct questions concerning certain ADA requirements. To date, I have received only stacks of regulations - but not one single word from any staff member addressing my spefific questions.

In total frustration I am asking for your assistance. Will you please see that I am provided simple, black and white answers to my questions?

My questions are: (1) do ADA standards of equal access apply to swimming pools in those places of public accommodations listed on Page 30.7 of the House of Representatives Report 101-596; (2) are those pool operators listed therein required to remove architectural barriers prohibiting equal pool access provided such removal does not cause undue burden, and (3) is the Government actually going to enforce ADA standards or "look the other way" on enforcement?

Please respond to me in simple, understandable language and I will be most grateful.

Yours very truly,

RE: Complaint Number XXX

Dear xxxxxxxxxxx

This constitutes our Letter of Findings with regard to your complaint against the Supervisor of Elections, Pinellas County, Florida, under title II of the Americans with Disabilities Act (ADA), which prohibits discrimination against qualified individuals with disabilities on the basis of disability by State and local governments. Specifically, you allege that the Supervisor of Elections of Pinellas County does not provide Braille ballots or an electronic system of voting, such as voting by telephone, to blind voters. You further allege that the present system of providing assistance at the polling place does not allow a blind voter to cast a secret ballot.

The Civil Rights Division has completed its investigation of your complaint. Our investigation revealed that the Supervisor of Elections of Pinellas County follows the Florida statute (Chapter 97.061, F.S.), which requires the following provisions for voters with visual impairments: 1) the assistance of any two election officials at the polling place; or 2) the assistance of any one person of the individual's choice. Pinellas County also provides a magnifying lens at polling places. In a telephone conversation with our office, Ms. Dorothy Ruggles, Supervisor of Elections, stated that when a blind person comes to the polling place to vote, the poll workers offer a choice of allowing someone the person knows or two poll officials to assist in casting the ballot.

01-02544

Legal Requirement

The Department of Justice's regulation implementing title II provides that a public entity must ensure that its communications with individuals with disabilities are as effective as communications with others and must furnish appropriate auxiliary aids and services where necessary to afford an individual with a disability an equal opportunity to participate in, and enjoy the benefits of, a service, program, or activity conducted by a public entity. 28 C.P.R. 35.160. A public entity is not required to take any steps that would result in a fundamental alteration in the service, program, or activity or in undue financial and administrative burdens. 28 C.F.R. S 35.164

In determining what type of auxiliary aid or service is necessary, a public entity must give primary consideration to the requests of the individual with a disability, that is, the public entity must provide an opportunity for individuals with disabilities to request the auxiliary aids and services of their choice and must honor that choice unless it can demonstrate that another effective means of communication exists or that provision of the aid or service requested would result in a fundamental alteration or in undue financial and administrative burdens. 28 C.F.R. SS 35.160(b) (2); 35.164.

Discussion

The Pinellas County Supervisor of Elections provides magnifying lenses and readers for individuals with vision impairments seeking to vote. The election procedures specify that an individual who requests assistance will be assisted by two poll workers, or by one person selected by the voter. Your complaint alleged that the provision of assistance to an individual who is unable to fill out a printed ballot is inadequate because it does not allow a blind voter to cast a secret ballot. A Braille ballot, however, would not meet your objective of keeping your vote secret, because it would have to be counted separately and would be readily identifiable. Also, electronic systems of voting by telephone that meet the security requirements necessary for casting ballots are not currently available.

Although providing assistance to blind voters does not allow the individual to vote without assistance, it is an effective means of enabling an individual with a vision impairment to cast a ballot. Title II requires a public entity to provide equally effective communications to individuals with disabilities, but

"equally effective" encompasses the concept of equivalent, as opposed to identical, services.1 Poll workers who provide assistance to voters are required to respect the confidentiality of the voter's ballot, and the voter has the option of selecting an individual of his or her choice to provide assistance in place of poll workers. The Supervisor of Elections is not, therefore, required to provide Braille ballots or electronic voting in order to enable individuals with vision impairments to vote without assistance.

Based upon the facts and legal requirements discussed above, we have determined that the Pinellas County Supervisor of Elections is not in violation of title II with respect to the issues you have raised. If you are dissatisfied with our determination, you may file a private complaint in the appropriate United States District Court under title II of the ADA.

You should be aware that no one may intimidate, threaten, coerce, or engage in other discriminatory conduct against anyone who has either taken action or participated in an action to secure rights protected by the ADA. Any individual alleging such harassment or intimidation may file a complaint with the Department of Justice. We would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, 5 U.S.C. S 522, we may be required to release this letter and other correspondence and records related to this complaint in response to a request from a third party. Should we receive such a request, we will safe-guard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information which could constitute an unwarranted invasion of privacy.

AUG 25 1993

Ms. Dorothy Walker Ruggles
Supervisor of Elections
315 Court Street
Clearwater, Florida 34616-5190

RE: Complaint Number xxxxxxxxxxxxx

Dear Ms. Ruggles:

This letter constitutes our Letter of Findings with regard to a complaint filed with our office on July 8, 1992, against the Supervisor of Elections, Pinellas County, Florida, under title II of the Americans with Disabilities Act (ADA), which prohibits discrimination against qualified individuals with disabilities on the basis of disability by State and local governments.

As Ms. Linda King of my staff explained to you, the complainant alleges that the Supervisor of Elections of Pinellas County does not provide Braille ballots or an electronic system of voting, such as voting by telephone, to blind voters. The complainant further alleges that the present system of providing assistance at the polling place does not allow a blind voter to cast a secret ballot.

The Civil Rights Division has completed its investigation of the complaint. Our investigation revealed that the Supervisor of Elections of Pinellas County follows the Florida statute (chapter 97.061, F.S.), which requires the following provisions for voters with visual impairments: 1) the assistance of any two election officials at the polling place; or 2) the assistance of any one person of the individual's choice. Pinellas County also provides a magnifying lens at polling places. In a telephone conversation with Ms. King, you stated that when a blind person comes to the polling place to vote, the poll workers offer a choice of

udd\Kinglllld\LOF.FL

allowing someone the person knows or two poll officials to assist in casting the ballot.

Legal requirements

The Department of Justice's regulation implementing title II provides that a public entity must ensure that its communications with individuals with disabilities are as effective as communications with others and must furnish appropriate auxiliary aids and services where necessary to afford an individual with a disability an equal opportunity to participate in, and enjoy the benefits of, a service, program, or activity conducted by a public entity. 28 C.F.R. S 35.160. A public entity is not required to take any steps that would result in a fundamental alteration in the service, program, or activity or in undue financial and administrative burdens. 28 C.F.R. S 35.164

In determining what type of auxiliary aid or service is necessary, a public entity must give primary consideration to the requests of the individual with a disability, that is, the public entity must provide an opportunity for individuals with disabilities to request the auxiliary aids and services of their choice and must honor that choice unless it can demonstrate that another effective means of communication exists or that provision of the aid or in service requested would result in a fundamental alteration or undue financial and administrative burdens. 28 C.F.R. SS 35.160 (b) (2) ; 35.164.

Discussion

The Pinellas County Supervisor of Elections provides magnifying lenses and readers for individuals with vision impairments seeking to vote. The election procedures specify that an individual who requests assistance will be assisted by

two poll workers, or by one person selected by the voter. Ms. Sonja D. Kerr
Attorney at Law
3421 Kent Street
Shoreview, Minnesota 55126

Dear Ms. Kerr:

This letter responds to your letter requesting a copy of the "new school board accessibility standards under the ADA when they are published." In addition, you seek our assistance on the application of title II of the Americans with Disabilities Act (ADA), 42 U.S.C. 55 SS 12131-12134, to a public school district's responsibilities to provide program access. In particular, you seek advice on whether title II expanded a public school district's obligations to provide for program accessibility to its different school facilities beyond the requirements of Section 504 of the Rehabilitation Act of 1973, as amended, 29 U.S.C. S 794.

The ADA authorizes the Department of Justice to provide technical assistance to individuals who have rights under the Act. This letter provides informal guidance to assist you in understanding how the ADA applies to the question you present. This technical assistance, however, does not constitute a determination by the Department of Justice of your or other's rights under the ADA and is not a binding determination by the Department of Justice.

We are not aware of any document that specifically covers school board accessibility standards. However, the Architectural and Transportation Barriers Compliance Board (Access Board) has issued proposed accessibility guidelines under title II of the ADA relating to the construction of new State and local government facilities, including schools. We are providing you with a copy of the proposed guidelines for your review. You can obtain a copy of the final guidelines from the Access Board when they are published, probably in the late fall.

cc: Records CRS Chrono Friedlander Stewart.kerr.ltr
FOIA Breen

01-02552

With respect to your second inquiry, title II protects qualified individuals with disabilities from discrimination on the basis of disabilities in the services, programs, or activities of all State and local governments. It extends the prohibition against discrimination on the basis of disability established by section 504 of the Rehabilitation Act of 1973, as amended, to all activities of State and local governments, including those that do not receive Federal financial assistance.

The Department of Justice's title II regulation adopts the general prohibitions against discrimination established under section 504, and includes specific prohibitions of discrimination from ADA. See 42 U.S.C. S 12134; 28 C.F.R. S 103(a). The preamble to the title II regulation explains the import of these statutory and regulatory provisions:

> The standards of title V of the Rehabilitation Act apply for purposes of the ADA to the extent that the

> ADA has not explicitly adopted a different standard than title V. Because title II of the ADA essentially extends the antidiscrimination prohibition embodied in section 504 to all actions of State and local governments, the standards adopted in [the Department of Justice's title II regulation] are generally the same as required under Section 504 for federally assisted programs.

56 F.R. 35694, 35696 (July 26, 1991). In the area of program accessibility to the public school sites, the Department's regulation does not expand upon the requirements of section 504.

It has been the policy under section 504 of the Department of Education and its predecessor department, the Department of Health Education (ED) and Welfare, not to require a school district to make each and every one of its school sites accessible to students with disabilities. With respect to existing facilities, HEW's section 504 regulation did not mandate that each and every facility operated by a recipient be accessible. 45 C.F.R. S 84.21 (a).

HEW's approach was continued in ED's section 504 regulation, 34 C.F.R. S 104.21 (a), is restated in the Department of Justice, title II regulation. 28 C.F.R. S 35.150 (a)(1). Consequently, similar standards for determining a school district's obligation to provide program accessibility exist under title II and section 504. As stated in the Department of Justice's Title II Technical Assistance Manual:

> A school system should provide for wheelchair access at schools dispersed throughout its service area so that children who use wheelchairs can attend school at locations comparable in convenience to those available to other children. Also, where "magnet" schools, or schools offering different curricula or instruction techniques are available, the range if choice provided to students with disabilities must be comparable to that offered to other students.

See Technical Assistance Manual at page 10, S II-3.4200. For your convenience we have enclosed a copy of this manual. Thus, a school district normally is not required under section 504 or title II of the ADA to make each and every one of its schools serving the same grade levels accessible. The determination whether a school district has complied with this standard would

be based on a review to ensure that the educational opportunities provided to students with disabilities are comparable to the opportunities afforded to others.

It is important to note, however, that any school receiving federal financial assistance that was constructed after May 4, 1977, the effective date of ED's section 504 regulation for federally assisted programs, would be considered "new" under that regulation. Accordingly, section 504 requires any such school to have been built in accordance with the American National Standards Institute guidelines, the standard cited in the ED regulations for construction occurring between May 4, 1977 and January 19, 1991, or the Uniform Federal Accessibility Standards for construction after January 19, 1991.

I hope this information is helpful to you.

Sincerely,

Stewart B. Oneglia

John R. Dunne
Assistant Attorney General
Civil Rights Division
United States Department of

Justice
Office on the Americans with Disabilities Act
P.O. Box 66118
Washington, DC 20035-6118

Re: Access regulations

Dear Mr. Dunne:

I would appreciate receiving a copy of the new school board accessibility standards under the ADA when they are published.

I would also like to provide the following general comment and request an answer to an inquiry.

In 1991, in Schuldt v. Mankato. 937 F.2d 1357 (8th Cir. 1991), cert denied, the Eighth Circuit ruled that a school district could legally bus Erika Schuldt a child who uses a wheelchair, from her neighborhood to a school four miles away because her neighborhood school was not accessible. I have a very simple question: could the school district do the same today even under the ADA?

It seems to me that the legislative history of the ADA is clear that simply providing one accessible school in a district or a part of a district is insufficient. Title II of the ADA makes the enactment applicable to school districts. According to the Report of the House Judiciary Committee, Title II was intended to improve the effects of Section 504, which has been in place since 1973. H.Rep. No. 485, 101st Cong., 2d Sess. 49 (May 15, 1990). The ADA was designed to be more than Section 504 and was to be the "end of exclusion and segregation." H. Rep. No. 485, at 26. The intent was to permit persons with disabilities to enjoy all of the rights that other Americans take for granted. Separate-but-equal services was not considered to be accomplishing this goal and the Congress rejected that approach. H.Rep. No. 485, supra, at 50 and at n. 52. The Report makes crystal clear that the existence of separate programs can never be used as a basis to excluse a person with a disability from program

that is offered to persons with disabilities, or to refuse to provide an

accommodation in a regular setting." Id. at 50

Indeed, the Congress was specifically aware of the issue of schools and stigmatizing practices with respect to children with disabilities. Senator Dodd, a co-sponsor of the ADA, noted that 'The ADA requires that children with disabilities, regardless of the severeity of their disabilities, be permitted to utilize the same public services that others without disabilities utilize as a matter of course. They are to be permitted to utilize the same ... schools.. that they would normally utilize, in their communities, if they were not disabled ... No longer will children be subjected to forced bussing to programs outside of their neighborhoods because that is where the "handicapped" program is located. Such practices severely stigmatize children with disabilities and their families." 135 Cong. Rec. S10721

Thank you for your assistance.

Very truly yours,
Sonja D. Kerr
Attorney at Law

cc: Senator Paul Wellstone

01-02556

(Handwritten) From Title II Manual - Dept of Justice
below, but general principle underlying these obligation is the mandate for an equal opportunity to participate in and benefit from a public entity's services, programs, and activities.

II-3.400 Separate benefit/integrated setting. A primary goal of the ADA is the equal participation of individuals with disabilities in the "mainstream" of American society. The major principles of mainstreaming are-

1) Individuals with disabilities must be integrated to the maximum extent appropriate.
2) Separate programs are permitted where necessary to ensure equal opportunity. A separate program must be appropriate to the particular individual.
3) Individuals with disabilities cannot be excluded from the regular program, or required to accept special services or benefits.

II-3.4100 Separate programs. A public entity may offer separate or special programs when necessary to provide individuals with disabilities an equal opportunity to benefit from the programs. Such programs must, however, be specifically designed to meet the needs of the individuals with disabilities for whom they are provided.

ILLUSTRATION 1: Museums generally do not allow visitors to touch exhibits because handling can cause damage to the objects. A municipal museum may offer a special tour for individuals with vision impairments on which they are permitted to touch and handle specific objects on a limited basis. (It cannot, however, exclude a blind person from the standard museum tour.)

ILLUSTRATION 2: A city recreation department may sponsor a separate league for individuals who use wheelchairs.

II-3.4200 Relationship to "program accessibility" requirement. The integrated setting requirement may conflict with the obligation to provide program accessibility, which may not necessarily mandate physical access to all parts of all facilities (see II-5.0000). Provision of services to individuals with disabilities in a different location, for example, is one method of achieving program accessibility. Public entities should make every effort to ensure that alternative methods of providing program access do not result in unnecessary segregation.

ILLUSTRATION: A school system should provide for wheelchair access at schools dispersed throughout its service area so that children who use wheelchairs can attend school at locations comparable in convenience to those available to other children. Also, where "magnet" schools, or schools offering different curricula or instruction techniques are available, the range of choice provided to students with disabilities must be comparable to that offered to other students.

II-3.4300 Right to participate in the regular program. Even if a separate or special program for individuals with disabilities is offered, a public entity cannot deny a qualified individual with a disability participation in its regular program.

AUG 30 1993

The Honorable Charles S. Robb
United States Senator
Old City Hall
1001 East Broad Street
Richmond, Virginia 23219

Dear Senator Robb:

This is in response to your inquiry on behalf of your constituent, xxxxx concerning the Americans with Disabilities Act (ADA). Your constituent complains of barriers to people who use wheelchairs in entering and maneuvering around the lobby of his apartment building xxxxxxx

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

Title III of the ADA does not apply to strictly residential facilities. Nonetheless, the apartment complex and its lobby are subject to the requirements of the Fair Housing Act, which prohibits discrimination on the basis of disability and is enforced by the Department of Housing and Urban Development. For more information about the requirements of the Fair Housing Act, your constituent may wish to contact the U.S. Department of Housing and Urban Development, specifically its Office of Fair Housing and Equal Opportunity at the following address:

Office of Fair Housing and Equal opportunity
U.S. Department of Housing and Urban Development
451 7th Street, S.W.
Washington, D.C. 20410

or by calling (202) 708-3855
cc: Records; chrono; Wodatch; McDowney; Breen; Novich; FOIA, MAF
\udd\burton\robbpol

In certain circumstances an apartment lobby may be covered by the ADA, if portions of the apartment complex, such as a party room or swimming pool, are made available for use by the general public, i.e., persons other than tenants or their guests. ADA coverage would also result where a facility provides enough social services for it to be considered a social service center establishment.

Once covered by the ADA, the owners or operators of an existing apartment building would be required to remove architectural barriers to accessibility if their removal is readily achievable, that is, if they can be removed without much difficulty or expense. For more information on readily achievable barrier removal, see 36-304 at pages 35,597 - 35,598 of the enclosed title III regulation.

I hope this information is useful to your constituent in understanding the apartment complex's obligations.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

T. 8-19-93
Control No. 3072315807

AUG 30 1993

The Honorable Olympia T. Snowe
U.S. House of Representatives
2268 Rayburn House Office Building
Washington, D.C. 20515-1902

Dear Congresswoman Snowe:

This letter is in response to your inquiry on behalf of your constituent, Mary Lou Fenno, concerning emergency evacuation standards and the Americans With Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

Your constituent states that she is concerned that the ADA does not properly balance safety concerns with individual rights to access. Ms. Fenno is particularly concerned with the application of the ADA to multi-story facilities.

The ADA was not designed as a substitute for local, state, or federal safety regulations and it does not address evacuation procedures specifically. The ADA requires that newly constructed buildings provide the same number of accessible means of egress as is required by local building codes and/or life safety regulations. See section 4.1.3(9) of the Standards for Accessible Design ("the Standards"), in the enclosed title III regulation, at page 35614. New buildings that do not have supervised automatic sprinkler systems also are required to provide areas of rescue assistance on each level that does not have an accessible exit. Such areas of rescue assistance must be provided in a smoke-proof and fire resistant enclosure. For more information on the requirements for areas of rescue assistance, see sections 4.1.3(9) and 4.3.11 of the Standards, at pages 35614 and 35626.

cc: Records, Chrono, Wodatch, Perley, McDowney, FOIA, Friedlander
n:\udd\perley\congress\snowe

Existing facilities are not required to provide areas of rescue assistance. Despite this fact, existing facilities should develop evacuation plans that take into consideration the needs of people with disabilities. Depending on the constraints of the facility, such a plan might utilize trained personnel, evacuation devices, or other means of accommodating those individuals who may need assistance in an emergency situation.

Please note that the ADA does not allow businesses to refuse access to an individual because of a concern for that person's safety in case of an emergency. The ADA only permits a place of public accommodation to consider the direct threat to the health and safety of others. For more information on the ADA's definition of a direct threat, see the discussion of section 36.208 of the title III regulation, at pages 35560 and 35595. A copy of the Department's Title III Technical Assistance Manual is also enclosed.

I hope this information is helpful to you in responding to your constituent. You may wish to inform Ms. Fenno that further information is available through our Americans with Disabilities Act Information Line at (202) 514-0301.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

RE: Complaint Number xxxxxxxxxxxx
New Complaint Number xxxxxxxxxxx

Dear xxxxxxxxxx

This letter constitutes our Letter of Findings with respect to the complaint you filed against the Shelby County xxxxxxxx, alleging discrimination on the basis of disability and retaliation. The Department of Justice is the agency responsible for investigating complaints filed under title II of the Americans With Disabilities Act of 1990 (ADA). Title II prohibits discrimination against qualified individuals with disabilities on the basis of disability by State and local governments.

Your complaint alleges that you were terminated on Xxxxxxxxx, xxxxxxxxxx because of your disabilities (stress and carpal tunnel syndrome) and in retaliation for asserting rights protected by the law, in violation of the ADA. The Department has completed its investigation of your complaint and has determined that the Shelby County xxxxxxxxx is not in violation of title II of the ADA for the reasons explained below. Our investigation included the review of documents and an onsite visit to interview you, and your successor.

01-02566

Issue I. Was the complainant terminated on the basis of disability?

Our investigation revealed that prior to meeting with the County xxxxxxxx (b)(6)in mid-May 1992, you had not previously claimed that you were an individual with a disability. The assertions made and evidence you presented were insufficient to support the claim that you were a disabled individual as defined by S 35.104 of the title II regulation, which states: "Disability means ... a physical or mental impairment that substantially limits one or

more of the major life activities... ; a record of such an impairment; or being regarded as having such an impairment." While "stress" may have been a factor in your work, you did not show that it constituted a mental or physical impairment - substantially limiting one or more major life activities within the meaning of the ADA. You were never diagnosed with a mental or physical condition considered as a disability, nor did you demonstrate that you had a record of any impairment, or that you were regarded as disabled by your employer or coworkers. Contrary to your assertion that you were substantially limited in the major life activity of working, there was no evidence presented to show that the stress-related symptoms you described were not related to your experience in the specific position you occupied-xxxxxx, A person is not considered substantially limited in working if she is limited substantially in performing only a particular job.

You told the Department that the carpal tunnel syndrome (CTS) you developed was the result of inputting computer data for extensive periods. We found that this was a temporary condition that you incurred after being notified of the termination. As the xxxxxxxx, inputting data was not a major duty of your position, but rather one that was normally the responsibility of your subordinates. Despite your decision to input data for extensive periods of time, your employer provided an accommodation at your request, when it supplied a keyboard drawer to compensate for the CTS. This was the only alleged specific disability you brought to your employer's attention.

Based upon the evidence obtained, DOJ concludes that neither condition alleged to be a disability was sufficient to support your claim that you are an individual with a disability. Since you do not meet this definition, you do not come under the protection of the ADA. We conclude, therefore, that the Shelby County XXXXXXX did not discriminate against you on the basis of disability when it terminated you.

Issue II. Was the complainant terminated in retaliation for requesting a reasonable accommodation?

You alleged that at a mid-May 1992 meeting with the xxxx, (b)(6) you requested a restructuring of your duties or a reassignment because of the stress you were under. The xxxxxxxxx characterized

the meeting similarly, but added that you also tendered your resignation because of the work-related problems you were experiencing. Although you dispute the xxxxxxxxx claim that you voluntarily resigned at the meeting, the investigation revealed that you were notified shortly after the meeting that plans were underway to process your termination. It does not appear that the xxxxxx retaliated against you, but rather believed you when you said you resigned. The xxxxxxxxxx asserted that had you not resigned, you would have been fired. The investigation disclosed sufficient evidence to support the contention that your termination was based upon your stated preference to find another job and because of your job performance, and not in retaliation for filing complaints or for asserting rights protected by the law.

The timing of the events in your case also weighed against your claim. You incurred CTS in late May, following the meeting with the xxxxxxxx. Although not related to your primary job duties, the xxxxxxx provided an accommodation for this condition. Subsequently on July 22, you filed complaints with the Department of Justice (DOJ) and the Equal Employment Opportunity Commission (EEOC) . These were the first claims of record alleging discrimination and retaliation. Both were made after receiving notice that you would be terminated. The timing of the complaints, coming as they did after the notice of termination, fails to support the allegation that you were retaliated against for engaging in protected activities. We find no basis, therefore, to conclude that the Shelby County xxxxxxxxx retaliated against you, in violation of S 33.134 of the title II regulation.

During the investigation, the Department learned that the xxxxxxx Office did not maintain separate files for medical and personnel information about its employees. The ADA requires that all information from post-offer medical examinations and inquiries must be collected and maintained on separate forms, in separate medical files and must be treated as a confidential medical record. In response to this concern, the xxxxxxxxxxxx Office and Shelby County changed their record-keeping procedures to create separate medical files for each employee. This action resolves this matter and concludes our investigation.

You should be aware that no one may intimidate, threaten, coerce, or engage in other discriminatory conduct against anyone

who has either taken action or participated in an action to secure rights protected by the ADA. Any individual alleging such harassment or intimidation may file a complaint with the Department of Justice. We would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, it may be necessary to release this document and related correspondence and records upon request. In the event that we receive such a request, we will seek to protect, to the extent provided by law, personal information which, if released, could constitute an unwarranted invasion of privacy.

This letter constitutes our findings with respect to your allegations of discrimination and retaliation in your administrative complaint. If you are dissatisfied with our determination, you may file a private complaint in the appropriate United States District Court.

Sincerely,

RE: Complaint Number xxxxxxxxxxxx
New Complaint Number xxxxxxxxxxxxxx

Dear Mr. Patterson:

The enclosed letter constitutes the Department of Justice's findings in the matter of xxxxxx v. Shelby County xxxxxxxx. The Department has determined that the xxxxxxx Office is not in violation of title II of the Americans with Disabilities Act of 1990 (ADA) with respect to the allegations raised by xxxxxxxx. In the course of the investigation, this office found that the xxxxxx Office did not maintain separate files for the medical and the personnel information that it retained on its employees. The ADA requires that all information from post-employment offer medical examinations and inquiries must be collected and maintained on separate forms, in separate medical files, and must be treated as confidential medical records. In response to this concern, the xxxxxx Office and Shelby County changed its record-keeping procedures to create separate medical files for each employee. This action resolves the issue and concludes our investigation.

The Department would like to thank you for your cooperation throughout this investigation. If you have any questions or need further information about this determination, or would like

technical assistance concerning title II, please let us know. Should you contact this office, please call Mr. Thomas Esbrook of my staff at (202) 307-2940.

Sincerely,

Stewart B. Oneglia

RE: Complaint Number xxxxxxxxxxxxx
New Complaint Number xxxxxxxxx
New Complaint Number xxxxxxxxxx
New Complaint Number xxxxxxxxx

Dear xxxxxxxxxxxxxxxx

Please note the new complaint number assigned to your complaint. Please use the new number in all correspondence and other communications regarding this complaint.

This letter constitutes our letter of findings with respect to your complaint filed with our office alleging discrimination by the City of San Francisco in violation of title II of the Americans with Disabilities Act (ADA) . You alleged that, as an individual with environmental illness, you were denied access to municipal buildings because of the perfume used by municipal employees.

Title II of the ADA, prohibits discrimination on the basis of disability in the services, programs, and activities of public entities (State and local governments). This office is responsible for investigating alleged violations of title II by public entities for which it is the designated enforcement agency, including State and local government support services and other government functions not assigned to other designated

agencies.

Your complaints against the Museum of Modern Art and the San Francisco Municipal Railway have been referred to the Departments of the Interior and Transportation, respectively. These are the designated agencies for enforcement of title II with respect to the subjects of those complaints. Copies of our referral letters are enclosed for your information.

Your complaint alleges generally that the City and County of San Francisco has not adopted a public access policy for individuals with environmental illness. Although formal adoption of nondiscrimination policies may be helpful in ensuring that a public entity meets its obligations under the statute and regulation, the regulation does not require public entities to adopt such policies with respect to individuals with disabilities or any particular class of individuals with disabilities. Also, since your complaint was filed, the City has adopted an accessible meeting policy that includes a requirement that all public meeting notices and agendas must include a notice asking individuals attending the meeting to refrain from wearing perfume or other scented products in order to allow individuals with environmental illness or multiple chemical sensitivity to attend the meeting.

We have reviewed your allegation that you are denied access to public buildings because of the use of scented products by employees in those buildings. Section 35.130 (b) (7) of the Department's regulation implementing title II provides that

> A public entity shall make reasonable modifications in policies, practices, or procedures when the modifications are necessary to avoid discrimination on the basis of disability, unless the public entity can demonstrate that making the modifications would fundamentally alter the nature of the service, program, or activity.

Assuming, for purposes of this letter, that you are an individual with a "disability," as that term is defined in our regulation at 28 C.F.R. S 35.104, we have determined that a public entity is not required to prohibit use of perfume or other scented products by employees who come into contact with the public because such a requirement would not be a "reasonable" modification to its personnel policies. Furthermore, nothing in the ADA or its legislative history indicates that Congress intended to require

public entities to regulate use of such products by its employees. The failure of a public entity to adopt such a policy, therefore, does not violate title II of the ADA.

We have therefore determined that the allegations in your complaint do not state a violation of title II of the ADA. If you are dissatisfied with this Letter of Findings, you may file a private complaint presenting your allegations of discrimination in the United States District Court under title II of the ADA.

Please be advised that your right to file a complaint is protected by Federal law. A State or local government may not intimidate, threaten, coerce, or engage in other discriminatory conduct against anyone who has either taken action or

participated in an action to secure rights protected by the ADA. If at any time you feel you are being harassed or intimidated because of your dealings with the Department of Justice, please let us know immediately. This office would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, 5 U.S.C. S 522, we may be required to release this letter and other correspondence and records related to your complaint in response to a request from a third party. Should we receive such a request, we will safeguard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information which could constitute an unwarranted invasion of your or other's privacy.

Sincerely,

Stewart B. Oneglia

Washington, D.C. 20547

Re: Correspondence of XX
California

Date Received by DOJ: August 14, 1993
DOJ Number: XX
DOJ Contact Person: Ms. Flora Brown

Dear Ms. Maymi:

I am referring this correspondence to your agency for investigation to determine whether the allegations of discrimination by the San Francisco Museum of Modern Art, if true, violate section 504 of the Rehabilitation Act or title II of the Americans with Disabilities Act. We believe that your agency is designated to investigate this matter by subpart G of the title II regulation found at 28 C.F.R. Part 35. This Department has referred the complaint against the San Francisco Municipal Railway to the Department of Transportation. The attached letter of findings, which resolves the complaint with respect to other City agencies, reflects our policy, and we urge you to follow our direction.

If you have section 504 jurisdiction, please investigate the allegations for compliance with both your agency's section 504 regulation and the Department of Justice's (DOJ) title II regulation. Even if you do not have section 504 jurisdiction, we believe your agency is designated under subpart G of the title II regulation to investigate this matter. If so, please investigate

the allegations under the procedures in subpart F of that regulation. Within 30 days of the date of this letter, please tell us what statute you are using. If you have no jurisdiction over this complaint, please return it promptly to DOJ.

Because we are responsible for coordinating enforcement of title II, please send any final written disposition of the matter to the Coordination and Review Section, P.O. Box 66118, Washington, D.C. 20035-6118. In all correspondence please reference the correspondent's name, name of the alleged discriminating entity, and the DOJ number. If you have any questions, please contact Flora Brown, of my staff, at (202) 628-1168.

Sincerely,

Stewart B. Oneglia

SEPT 10 1993

Mr. Farley Lozowick
FML Design Group, Ltd.
999 18th Street, Suite 1800
Denver, Colorado 80202

Dear Mr. Lozowick:

I am writing in response to your letter requesting clarification of issues under the Americans with Disabilities Act of 1990 (ADA) in regard to the design of a Montessori school in Ft. Worth, Texas.

The ADA authorizes the Department of Justice to provide technical assistance and information to individuals and entities who have questions about the Act or the Standards for Accessible Design adopted under the Department's ADA regulations. This letter provides informal guidance to assist you in understanding and complying with the ADA's requirements. However, this technical assistance should not be viewed as legal advice or a

legal opinion about your rights or responsibilities under the ADA.

The ADA requires generally that all toilet rooms meet the technical standards in S 4.22 of the ADA's Standard for Accessible Design (enclosed). However, restrooms in classrooms for use exclusively by small children may have drinking fountains, lavatories, and toilets that are designed specifically for use by small children. The ADA standards are indeed based on adult dimensions and anthropometrics and there are no accessibility standards at this time for small children.

The Americans with Disabilities Act is a Federal law and does not require any state regulations for its enforcement.

We hope this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Ms. Lucille Johansen
Assistant to Mr. John Wodatch
American Disabilities Act
1111 18th Street, N.W.
Suite 501
Washington, D.C. 20036

Dear Ms. Johansen:

Our senior designer, Ms. LaDonna Holmes had a discussion with you yesterday regarding a clarification on an A.D.A. issue. We are an interior architectural firm that is currently designing a Montessori school in Ft. Worth, Texas. The school will consist of children ages from infant to 6 years old with classrooms as follows:

Infant - 0-12 months
Toddler - 12-24 months
Mini - 2-3 years
3-4 years old
5-6 years old

In the common areas, we have provided a restroom facility that contains a toilet, a lavatory and a urinal; all that meet the ADA regulations in full. However, in each of the classrooms, we have provided a myriad of drinking fountains, lavatories and toilets for small children's usage. The facilities offered for these children do not comply with the ADA regulations. As we understand it, the ADA regulations are for adults only. It is also our understanding, that there are no ADA regulations in the states of Colorado and Texas.

If you are in agreement with the preceding, please indicate by signing on the line below and faxing this back to our office, along with a copy of your business card for our files.

Thank you for your time.

Sincerely,

Farley Lozowick

A. Laurence Field
A. Laurence Field & Associates
1322 Bayview Road
Middletown, Delaware 19709

Dear Mr. Field:

This letter is in response to your inquiry about the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You ask whether the ADA permits public or private entities to provide medical or dental treatment to persons with AIDS in segregated settings.

The ADA prohibits discrimination against an individual on the basis of that individual's HIV or AIDS condition. This is true regardless of whether the discriminating entity is publicly or privately owned. State or local government entities or instrumentalities that provide medical or dental care are covered by title II of the ADA as public entities. Private entities that offer medical or dental care are public accommodations, which are covered by title III of the ADA. Under both titles II and III, the ADA generally prohibits the provision of separate or different services to individuals with disabilities, unless it is necessary to make the services as effective for people with disabilities as they are to others. In addition, both public entities and public accommodations are required to provide their services in the most integrated settings appropriate to the needs of the individuals with disabilities.

cc: Records, Chrono, Wodatch, Magagna, Novich, FOIA, MAF
Udd:Novich:Policy:227

01-02581

However, both titles II and III contain an exception to the general non-exclusion and integration requirements when an individual with a disability poses a direct threat to the health or safety of others. A direct threat is defined as a significant risk to the health or safety of others that cannot be eliminated or satisfactorily mitigated by reasonable modifications to the covered entity's procedures. Under section 35.104 of the title

II regulation, an individual who poses a such a direct threat is not considered a "qualified" individual for the services or programs being offered. Similarly, section 302(b)(3) of the Act states that public accommodations are not required to permit participation of individuals who pose a direct threat to the health or safety of others. However, the titles II and III regulations specify that the determination of whether an individual poses a direct threat be

> an individualized assessment, based on reasonable judgment that relies on current medical knowledge or on the best available objective evidence, to ascertain: the nature, duration, and severity of the risk; the probability that the potential injury will actually occur; and whether reasonable modifications of policies, practices, or procedures will mitigate the risk.

See section 35.104 of the enclosed title II regulation, at pages 35717 and 35701, and section 36.208 of the title III regulation, at pages 35595-35596 and 35560-35561, for discussions of the direct threat exception.

Therefore, under titles II and III of the ADA, individuals with HIV or AIDS may not be treated in segregated setting unless necessary to provide those individuals with treatment as effective as is provided to individuals without HIV or AIDS, or unless the providers can demonstrate that a specific individual poses a direct threat to the health or safety of others. Individuals with HIV or AIDS do not pose a direct threat to health professionals or other medical patients as long as reasonable sanitation methods can satisfactorily mitigate the risk of spreading the disease. The Centers for Disease Control and Prevention (CDCP) have issued recommended precautionary measures to mitigate the risk of transmission of HIV, and other communicable diseases, in health care settings. For more information on these measures, known as the "Universal Precautions," contact the CDCP National HIV/AIDS Hotline at (800) 342-2437.

In addition, The American Dental Association has issued an opinion stating that patients with HIV may be safely treated when recommended precautions are used. You may contact the American Dental Association at (312) 440-2500.

I hope this information is useful to you.

Sincerely,

John L. Wodatch

re: Request for ADA Technical Assistance/
Segregated Dental Facilities for Persons with AIDS

Dear Ms. Miller:

As we discussed by phone today, I am requesting assistance from your office in understanding the extent to which persons with AIDS may be offered medical treatment in a segregated setting.

The specific issue is the delivery of dental services by an instrumentality of the state. Comments on this specific issue would be most appreciated. If information on the broader question posed in the first paragraph is readily available, I would appreciate that as well.

Thank you very much, Ms. Miller, for your assistance.

Very truly yours,

A. Laurence Field

01-02584

DJ 202-PL-367

SEP 10 1993

Mr. Kent Lee Woodman
ADAAG Compliance Services
12920 Hillside Drive
Anchorage, Alaska 99516-3260

Dear Mr. Woodman:

This letter responds to your inquiry about the obligations of public accommodations to remove architectural barriers to access or to provide alternatives to barrier removal. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

Your letter asks about the obligations of landlords who own facilities with inaccessible levels, and whether a landlord may rent space to a public accommodation on an upper or lower level not served by an elevator. You correctly point out that elevators are not required in buildings that are less than three stories or less than 3,000 square feet per story if they do not house shopping centers, offices of a health care provider, or transportation depots.

There is nothing in the title III regulation that prohibits the owner of a building from renting a second floor space to a place of public accommodation, even if the building has no elevator. Public accommodations located on the second floor of an existing building are subject to the same barrier removal requirements as are entities located on ground floors -- that is, they must remove architectural barriers to access where it is readily achievable to do so. This requirement may mean that a second floor establishment must install grab bars in its restrooms, rearrange its furniture to provide maneuvering room,

cc: Records, Chrono, Wodatch, Magagna, Contois, FOIA, MAF

01-02585

install accessible door hardware, or otherwise remove barriers to access to its facility if such modifications are readily achievable -- that is, able to be accomplished without much difficulty or expense. However, neither the business nor the landlord would be required to provide an elevator or other means of vertical access to the second floor of a building that qualifies for the elevator exemption. For more information on the removal of architectural barriers, see section 36.304 of the enclosed title III regulation at pages 35597-98 and the discussion of that section at pages 35568-69.

I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

John L. Wodatch

Gentlepersons, 07 October 1992

I write to communicate a concern about ADA that has surfaced locally, and to request if you folks have been party to any discussions or have any knowledge of the principals noted below. Let me begin by telling you that I have no position. I am an independent consulting engineer who specializes in helping landlords and owners perform facility Surveys and to write PLANS to help them comply with the provisions of Title III of the ADA with minimum disruption and maximum efficiency.

As I work with owners, I frequently find that they were much more worried and concerned about what the impact was going to be on them fiscally before I do my work, than after. This is in part simply because there is so much misinformation out there. However, Alaska has been in a financial bust for about 6 years, and most building owners have lost many, many dollars in lowered rents and empty facilities. There have been thousands of foreclosures on buildings where they could not rent due to the economy. I tell you this to set the stage.

Several months ago there was a Supreme Court case that involved a couple in California. (Sorry I do not have the cite) It seems they had been paying for a lovely piece of Pacific Ocean beach front property for years and finally got it paid off and put enough away to build their retirement dream home. In the interim, their local jurisdiction, which controls architectural details, determined that there was too much construction out that way and that their pristine ocean views were disappearing, and they refused them a building permit.

The couple complained that that constituted a "taking" without compensation, for they now owned the most expensive piece of private park property on the

Coast. The Supreme Court agreed and it was a landmark case for realtors and local jurisdictions.

Now let us apply the principal as it is being discussed locally with the ADA: Let us imagine that someone owns a 2 story building of say 10,000 SF/floor. It is composed of general office spaces and would variously rent out to as few as 2 or as many as a dozen renters, depending on their space requirements. Let us go further and stipulate that the building has NO health care providers. Accordingly, EXEMPTION I of ADA Guide 4.1.3(5) applies, and there is an exemption which tells the landlord that he/she need NOT spend $100,000 to retrofit the aging and fiscally losing facility with a 2 story elevator. (notwithstanding the test of "readily achievable")

*Americans with Disabilities Act Guidelines

Now let us assume that the second floor of the building has been empty for 2 years; a circumstance not the least bit unusual locally, but the owner has somehow managed to hang on, perhaps using up all his/her savings. In good faith, the owner has been trying hard to rent the upper floor; has listed it continuously and has showed it frequently. He/she finds the market very soft, as competitors all over town offer their space for less just to fill it and get some cash flow.

Enter ADA. EXCEPTION I to ADA Guide 4.1.3(5) indicates that even with the Exception in place, that there is NO reduction of the duty to offer services to the public on the part of the 2nd floor occupancies. Specifically:

> The elevator exemption set forth in this paragraph does not obviate or limit in any way the obligation to comply with the other accessibility requirements established in section 4.1.3....

In our hypothetical building, let us assume that there is minimum common area, so setting up a desk in the lobby to offer "Alternate service", is not practical.

And so the landlord goes searching for tenants. Because of publicity surrounding the ADA implementation, tenants are now a little better educated and they ask specifically how the landlord will facilitate the alternate service if they rent upstairs. The landlord has no answer.

The landlord then meets with a consultant like me and his Realtor and we brainstorm. Obvious answer is to rent the upper floor only to those type of rentals which do not constitute a PUBLIC ACCOMMODATION; i.e. an office for a consultant like me who never sees the public in the office, or storage, or an employee-only area for someone renting on the first floor.

It does not take the gathered brainstormers long to recognize that they have

thus limited their potential renting clientele to about ten percent (10%) of the public. The building owner is disturbed, because when he built the place he completely complied, and now he perceives A GREATLY REDUCED VALUE due to the inability to successfully market the 2nd floor to the same public as in the past. (not to mention problems when trying to sell it) Though he/she is protected by the elevator exemption, his/her lessees are NOT exempted from providing the accesses required for a Public Accommodation, and they do not see how they can comply if they rent the sample building.

BOTTOM LINE: How is this not a "public taking" without compensation? What do you tell this building owner as he/she laments and torments, all the while not renting his/her facility, and ultimately going into a chapter proceeding to attempt to buy time?
I find this an intriguing scenario, and I would be very pleased to read anything you may already have, or to share your thoughts and observations. Thank you in advance!

XX
XX
Las Cruces, New Mexico XX

Dear XX :

This is in response to your correspondence requesting information about the Americans with Disabilities Act (ADA). We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the requirements of the ADA. However, it does not constitute a formal legal interpretation or opinion and it is not binding on the Department.

Your inquire about the ADA obligations imposed on manufacturers to respond to consumer complaints from individuals with hearing impairments. The ADA lists twelve categories of entities as places of public accommodations. Manufacturing activities do not fall within these categories. However, it is our view that an extensive customer services operation of a large manufacturer is separately covered as a public accommodation if

it is providing a service in connection with the retail sales of its products. Accordingly, such a customer service office is required to ensure effective communication with its customers having disabilities by providing auxiliary aids and services unless providing them would constitute an undue administrative or financial burden.

There are a variety of aids and services that can be provided to ensure effective communication with persons having hearing or speech impairments. For telephone communications, the ADA has required the establishment of telecommunications relay services which are now available on phone systems throughout the country. The relay system allows persons with hearing impairments to use TDDs to contact specially trained operators

cc: Records, Chrono, Wodatch, Magagna, MAF
udd\Magagna, pl.74

01-02589

who then relay the calls by voice to the parties to whom the TDD users wish to speak. Your local phone company should be able to provide you with more information about its relay system.

We hope this information is useful to you in evaluating your rights under the ADA.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Ass't. Attorney General for Civil Rights
Department of Justice
Washington, D.C. 20530

Re: Americans with Disabilities Act

Hello:

I suffer from severe hearing impairment and must rely on lip reading to carry on a conversation. With an amplified telephone, I can "make out" some of what a person is saying but I have no confidence whatsoever that I am hearing correctly on the telephone. Consequently, I have a policy of not doing business over the phone.

I am presently involved in a dispute with the Chrysler Corporation regarding a Plymouth mini-van that experienced total crankshaft failure at 14,000 miles. Twice, Chrysler corporation representatives have called me on the phone to discuss the matter. In both instances, I asked the caller to send me a letter. To date, I have heard from neither of them.

Does the Act require businesses firms to recognize hearing impairment and use written correspondence instead of the telephone? I understand that the Corporation has a computer answering system(blah, blah, blah, push 1; blah, blah, blah, blah, push 2; etc.) but there is no way in the world that I can get through such a system.

I hope you can help me, or, at least, tell me how I should proceed. Any help you can offer will be greatly appreciated.

Yours very truly,

XX

(b)(6)
Big spring, Texas XX

Dear XX (b)(6)

This is in response to your letter to this office regarding the banning of smoking in public buildings.

The ADA authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA nay apply to you. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Under the Americans with Disabilities Act of 1990 (ADA), the Department of Justice declined to state categorically that allergy or sensitivity to cigarette smoke should be recognized as a disability under the ADA, because in order to be viewed as a disability under the ADA an impairment must substantially limit one or more major life activities. An individuals respiratory or neurological functioning may be so severely affected by allergies or sensitivity to cigarette smoke that he or she will satisfy the requirements to be considered disabled under the ADA. Such an individual would be entitled to all of the protections afforded by the ADA. In other cases, however, individuals' sensitivities to smoke or other environmental elements will not rise to the level needed to constitute a disability. If, for instance, an individuals major life activity of breathing is somewhat, but not substantially, impaired, the individual is not disabled and is not entitled to the protections of the statute. Thus, the determination as to whether allergies or sensitivity to smoke are disabilities covered by the regulation must be made using the same case-by-case analysis that is applied to all other physical or mental impairments. (See the enclosed title III regulation at page 35549.)

cc: Records Chrono CRS Friedlander Milton ca, FOIA, Breen,

udd:Milton.Letters.Smoking.Spe

01-02592

Because of the case-by-case nature of the determination, the Department of Justice ADA regulations do not mandate restrictions an smoking. It is important to note that section 501(b) of the statute merely states that the prohibition of, or the imposition of restrictions on, smoking in places of public accommodation is not precluded by the ADA. The statute does not mandate imposition of any restrictions. Furthermore, there is currently no Federal statute that absolutely bans smoking in public buildings.

If you believe that you satisfy the requirements to be considered disabled under the ADA and wish to take advantage of its protections, you may either file a private suit in Federal court or send a complaint to the Department of Justice for investigation. Complaints against State and local government buildings should be filed with this office. Complaints against privately owned facilities should be mailed to: Public Access Section, Civil Rights Division, Department of Justice, P.O. Box 66738, Washington, D.C. 20035-6738.

I hope this information has been helpful to you.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

To Whom It May Concern:

As a disabled person I'd like to know why smoking can't be banned inside any building - with my breathing problem, I've found this to be a real problem. You see, I have Myasthenia Gravis and can only use the upper part of my chest to get air. My shoulders raise with each breath I take - also I have asthma and few allergies.

It's hard to get out on good days

01-02594

but the smokers make my life miserable. If we can get into a building we have to be able

to breathe in order to do anything there.
Our Wal-Mart store has no
smoking - but people sit in the
enclosure were we have to enter
the area fields with smoke.
I've been in grocery stores and
people in line right behind me
blowing smoke all around me.
I get a Kleenex out and put over
my mouth and nose, but some people
just won't take the hint. I guess
I need to speak-up but I've never
been one to make a scene.

My point, why can't the Act of 1990
help us to carry this extra
step? Has it been considered?
Is there another legislation needed?

Think of all the other people who
have asthma - allergies
and emphysema - not only the disabled.
If people have to smoke why let
them ruin the air we need
- and I might add not only
air we need, but air harder
to get because our muscles have
to work harder to get what air
we can get.

I haven't even been in my own
father and mother's home in years
because my father is a pipe
smoker and he says he can't stop.
This has been very hard emotionally
for me as I love them so much, but
it is his home - when they come to see me
he does go outside to smoke, no one smokes
in our home.

It's terrible to eat out in restaurants

with poor ventilation or be seated at the edge of a non-smoking area - or the air-intake circulator be near so the smoke just circles all over - then you can't get enough air to eat, as just to eat takes a lot of strength.

Maybe you can let me know if this has been considered or if more is needed to be done in this area. It really is a problem and I'm sure I'm not alone.

Thank you for taking the time to read this. I'd appreciate some "out-put" or information from you.

Thanks,
(b)(6)

Myron Koplin
Macon Iron & Paper Stock Co., Inc.
P.O. Box 506
Macon, GA 31202

Dear Mr. Koplin:

This letter is in response to your inquiry about the application of the Americans with Disabilities Act of 1990 (ADA) to your residential apartment building.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You ask whether the ADA requires the installation of an entry and exit ramp in your apartment building in order to provide access for the elderly. Strictly residential facilities are not covered by title III of the ADA. However, there is one possible application to your apartment building. Common areas within residential buildings that are used by persons other than building tenants and their guests, are covered by the ADA if they fall into at least one of the 12 categories of places of public accommodation. A rental office, for example, would be a place of public accommodation within the meaning of the ADA. A swimming pool for which memberships are sold to the general public would also be a place of public accommodation. Areas that serve these places of public accommodation, such as parking lots, entrances, and paths of travel, are required under the ADA to be accessible. In your case, for example, a ramp may be required if necessary to provide access to a place of public accommodation within the apartment building.

Dear Mr. Koplin:

The Civil Rights Division of the Department of Justice has received your request for an interpretation of the Americans with Disabilities Act (ADA). The ADA authorizes the Department of Justice to provide technical assistance to entities that have rights or responsibilities under the Act. The Civil Rights Division will treat your inquiry as a request for technical assistance and will provide informal guidance to you. However, because of the large volume of requests for interpretations of the ADA, we are unable to answer your letter at this time.

Please be assured that the Division will respond to your letter as soon as we can, although we cannot guarantee a response by a certain date. We regret any inconvenience caused by our delay in responding and have enclosed for your information two

documents on the ADA: "Title II Highlights" and "Title III Highlights."

Sincerely,

Philip L. Breen
Special Legal Counsel

Ms. Barbara M. Japha
Counsel -- Real Estate
U.S. West Business Resources, Inc.
168 Inverness Drive West, Suite 500
Englewood, Colorado 80112

Dear Ms. Japha:

I am writing in response to your June 30, 1992, letter requesting information about the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements; however, it does not constitute a legal interpretation and it is not binding on the Department.

Your letter raises the question of whether "non-work

equipment reporting facilities" are commercial facilities subject to the new construction requirements under the ADA Accessibility Guidelines. The term "commercial facilities" includes non-residential facilities affecting commerce. Because the facilities under consideration fall into this category, Construction or alteration of the facilities must be carried out in compliance with this Department's accessibility standards.

In your conversations with Ken Nakata from this office, you indicated that these "non-work equipment reporting facilities" were telephone "switching stations." We understand these stations comprise either small unstaffed work areas that are infrequently visited by service personnel for repair, service, and maintenance or larger specially constructed metropolitan stations with accessible control rooms and separate equipment work areas housing large racks of equipment accessible only by ladders. We also understand that the smaller, unstaffed

cc: Records; Chrono; Wodatch; Bowen; Nakata; FOIA; MAF.
\udd\nakata\PL229

01-02602

switching stations are arranged in various configurations, including units located below ground and accessible only by manholes, ladders, and narrow stairwells or units located above ground and accessible by several small stairs.

Under the Department's regulations, accessibility is not required for non-occupiable spaces accessed only by ladders, catwalks, crawl spaces, very narrow passageways, or freight (non-passenger) elevators, and frequented only by service personnel for repair purposes. See Section 4.1.1 of the standards for accessible design, found at Appendix A to the Department's regulation implementing title III. Therefore, the smaller switching stations that you described would be exempt from the ADA's accessibility requirements if they constitute a non-occupiable space and to the extent that they are entered or approached through one of these very limited means. Furthermore, to the extent that smaller switching stations are not located on a "site" (as where a switching station is located beneath a

public street and accessible only by manhole), they cannot be deemed "facilities" under the accessibility standards and would again be exempt from the ADA's accessibility requirements. See Section 3.5 (definition of "facility"). Other smaller switching facilities and equipment rooms in larger metropolitan facilities would be deemed "work areas" and should be designed and, constructed so that individuals with disabilities can approach, enter, and exit the areas. See Section 4.1.1(3). They would also be subject to the ADA's accessibility requirements to the extent that they are altered.

I have enclosed a copy of the Department's Title III Technical Assistance Manual, which may further assist you in understanding your obligations under the ADA. I hope this information is useful to you.

Sincerely,

John Wodatch

RE: Complaint Number XX (Please note new complaint (b)(6) number.)

Dear (b)(6)

This letter constitutes our Letter of Findings in response to your complaint filed with our office against the Alleghany County Department of Social Services (Department) under title II of the Americans with Disabilities Act of 1990 (ADA). Title II of the ADA protects qualified individuals with disabilities from discrimination on the basis of disability in the services, programs, and activities of a State or local government. Your complaint alleges that the Department made recommendations to the District Court for Alleghany County, North Carolina (Court), that were based on eligibility criteria that were in violation of the ADA.

You have stated that you petitioned the Court for custody of your two minor grandchildren and that, in proceedings before the Court, the Department introduced evidence of your prior hospitalization in a psychiatric hospital as the basis for its recommendation that custody be denied to you. You further stated that this hospitalization occurred in 1984 and 1986 and has no bearing on your current ability to parent your grandchildren.

Section 35.130(b)(8) of the Department of Justice's title II regulation prohibits the use by a public entity of any eligibility criteria that would screen out or tend to screen out persons with disabilities from the full enjoyment of the benefits of any program, service, or activity of the entity, unless the criteria can be shown to be necessary for the provision of the service, program, or activity. The program operated by the Department for the placement of children after a court ordered termination of parental rights falls within this prohibition.

Prior to the custody hearing, this office contacted the Department. The Department agreed verbally that it would take steps to protect your rights under the ADA. Specifically, the

Department agreed that, with respect to your history of mental illness, it would agree to base any arguments against your petition for custody entirely on evidence that was related to your current ability to parent and care for your minor grandchildren, and that particular care would be taken where that evidence was more than five years old.

After reviewing the Department's written final argument to the court and relevant portions of the trial transcript, we find that, while the eligibility criteria that were used would tend to

screen out individuals with disabilities, they were, in this case, necessary to the operation of the placement program of the Alleghany County Department of Social Services. Therefore, we have determined that no violation of title II occurred.

This letter contains our determination with respect to your allegations of discrimination in your administrative complaint. If you are dissatisfied with our determination, you may file a complaint presenting your allegations of discrimination in an appropriate United States District Court under title II of the ADA.

Under the Freedom of Information Act, 5 U.S.C. S 522, we may be required to release this letter and other correspondence and records related to the complaint in response to a request from a third party. Should we receive such a request, we will safeguard, to the extent permitted by law, release of information that could constitute an unwarranted invasion of your or other's privacy.

If you have any questions regarding this letter, please contact Merle Morrow at (202) 514-3571.

Sincerely,

Stewart B. Oneglia

Ms. Arlys Ward
Executive Director
City and County of Denver
Election Commission
303 West Colfax Avenue, Suite 101
Denver, Colorado 80204-2617

RE: Complaint Number XX

Dear Ms. Ward:

This letter constitutes our Letter of Findings with respect to the complaint filed with our office against the City and County of Denver Election Commission (Commission) under title II of the Americans with Disabilities Act (ADA). Title II prohibits discrimination against qualified individuals with disabilities on the basis of disability by state and local governments.

The Civil Rights Division has completed its investigation of the complaint. Our investigation revealed that the State of Colorado requires that when a voter with a mobility impairment is not able to use a voting machine, election judges shall assist the voter outside the polling place within 100 feet of the polling place. The Commission has advised us that it follows these procedures in all of its elections. Two elections judges assist the voter by taking a sample ballot and pen to the voter and observing while the voter marks the ballot. One of the judges will record the vote on a voting machine and, then, destroy the sample ballot.

Title II of the ADA, which applies to public entities (State and local governments), requires "program access," rather than "facility access," for buildings and facilities existing on the effective date. A public entity must operate each program, service, or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities, but is not necessarily required to make each of its existing facilities accessible to and usable by individuals with disabilities. 28 C.F.R. S 35.150 (the Department of Justice's regulation implementing title II, 28 C.F.R. pt. 35 (copy enclosed)). Removal of architectural

barriers is one method of providing access to programs and activities in existing facilities, but other methods are also

permitted if they provide program access. The "curbside" voting procedure followed by the commission meets the requirement for program accessibility because it provides an equal opportunity for voters with disabilities to cast their ballots on the day of the election.

You should be aware, however, that your curbside voting procedure is a permissible alternative only if it is an effective method of providing access to the program or activity. Thus, if the Commission failed to follow its procedures for curbside voting, or otherwise denied an individual with a disability the opportunity to vote, it would be in violation of title II and an individual could file a complaint concerning that particular incident with our office.

You should be aware that no one may intimidate, threaten, coerce, or engage in other discriminatory conduct against anyone because she or he has either taken action or participated in an action to secure rights protected by the ADA. Any individual alleging such harassment or intimidation may file a complaint with the Department of Justice. We would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, 5 U.S.C. S 522, we may be required to release this letter and other correspondence and records related to this complaint in response to a request from a third party. Should we receive such a request, we will safe-guard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information which could constitute an unwarranted invasion of privacy.

Based upon our determination that the Commission's procedures for curbside voting meet the requirements of title II, we are closing our files in this matter as of the date of this letter. Thank you for your cooperation in this matter. If you have any questions, please contact Linda King at (202) 307-2231.

Sincerely,

Stewart B. Oneglia

RE: Complaint Number XX

Dear XX

This letter constitutes our Letter of Findings with respect to your complaint filed with our office on January 11, 1993, against the City and County of Denver Election Commission (Commission), under title II of the Americans with Disabilities Act (ADA). Title II prohibits discrimination against qualified individuals with disabilities on the basis of disability by State and local governments. Specifically, you allege that the voting machines used by the Commission are not accessible to persons with mobility impairments.

The Civil Rights Division has completed its investigation of your complaint. our investigation revealed that the State of Colorado requires that when a voter with a mobility impairment is not able to use a voting machine, election judges shall assist the voter outside the polling place within 100 feet of the polling place. The Commission has advised us that it follows these procedures in all of its elections. Two elections judges assist the voter by taking a sample ballot and pen to the voter and observing while the voter marks the ballot. One of the judges will record the vote on a voting machine and, then, destroy the sample ballot.

Title II of the ADA, which applies to public entities (State and local governments), requires "program access," rather than "facility access," for buildings and facilities existing on the effective date. A public entity must operate each program, service, or activity so-that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable

by individuals with disabilities, but is not necessarily required to make each of its existing facilities accessible to and usable by individuals with disabilities. 28 C.F.R. S 35.150 (the Department of Justice's regulation implementing title II, 28 C.F.R. pt. 35, a copy of which is enclosed). Removal of architectural barriers is one method of providing access to programs and activities in existing facilities, but other methods are also permitted if they provide program access. The "curbside" voting procedure followed by the Commission meets the requirement for program accessibility because it provides an equal opportunity for voters with disabilities to cast their ballots on the day of the election.

If you are aware of instances when the commission has failed to follow its procedures for curbside voting, or otherwise has denied you or another individual with a disability the opportunity to vote, you may file a complaint concerning that particular incident with our office.

Based upon our determination that the Commission's procedures for curbside voting meet the requirements of title II, we are closing your complaint as of the date of this letter. If you are dissatisfied with our determination, you may file a private complaint in the appropriate United States District Court under title II of the ADA.

You should be aware that no one may intimidate, threaten, coerce, or engage in other discriminatory conduct against anyone because she or he has either taken action or participated in an action to secure rights protected by the ADA. Any individual alleging such harassment or intimidation may file a complaint with the Department of Justice. We would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, 5 U.S.C. S 522, we may be required to release this letter and other correspondence and records related to this complaint in response to a request from a third party. Should we receive such a request, we will safe-guard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information which could constitute an unwarranted invasion of privacy.

Please use the Department of Justice complaint number in all correspondence and other communications regarding this complaint. If you have any questions, please contact Linda King at (202) 307-2231.

Control No. 3082519126

SEP 30 1993

The Honorable Amo Houghton
Member, House of Representatives
P.O. Box 908
Jamestown, New York 14702-0908

Dear Congressman Houghton:

(b)(6)
This letter responds to your inquiry on behalf of your constituent, XX concerning the regulatory requirements of the Americans with Disabilities Act (ADA)for toilet rooms.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities with rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the statute and it is not binding on the Department.

(b)(6) has questioned whether he is required to provide accessible toilet facilities in his small business with only two employees. A local building code or plumbing code, not the ADA, should be consulted to determine the number of toilet rooms and plumbing fixtures required in a particular building or facility. The ADA Standards for Accessible Design, in turn, impose requirements for accessibility of all toilet rooms provided in new and altered buildings and facilities. The Standards may be found in Appendix A of the enclosed regulation implementing title III of the ADA. Section 4.1.3(11) of the Standards clearly

specifies that if toilet rooms are provided, then each public and common use toilet room shall comply with 4.22.

Please encourage your constituents to contact the Public Access Section directly anytime they have questions or need information. The Department maintains a telephone information line to provide technical assistance regarding the rights and obligations of individuals, businesses, agencies, and others covered or protected by the ADA. This technical assistance is available by calling 202-514-0301 (voice) or 202-514-0383 (TDD) between 1:00 p.m. and 5:00 p.m., Monday through Friday.

DEPARTMENT OF JUSTICE

FOR IMMEDIATE RELEASE CR
TUESDAY, OCTOBER 6, 1993 (202) 616-2765
TDD (202) 514-1888

JUSTICE DEPARTMENT SETTLES WITH UTAH COURT TO ENSURE DEAF INDIVIDUALS MAY SERVE AS JURORS

WASHINGTON, D.C. -- A Utah court has agreed to no longer exclude deaf individuals from jury service, under a settlement agreement announced today by the Department of Justice. Today's agreement resolves a complaint filed with the Justice Department alleging that the Salt Lake City district court required individuals who are deaf to provide their own interpreters in order to serve on jury duty.

The agreement with the Utah Administrative Office of the Courts is the first settlement agreement with a State court agency under title II of the Americans with Disabilities Act (ADA). Title II of the ADA prohibits discrimination against qualified individuals with disabilities on the basis of disability by State and local governments.

"Through their cooperation with the Department in resolving

this complaint, the Utah Administrative Office of the Courts avoided costly litigation," said Acting Assistant Attorney General for the Civil Rights Division, James P. Turner. "It is

(MORE)

in the spirit of the ADA for local agencies to use scarce resources to comply with the law rather than to combat it."

The agreement, which affects all courts throughout Utah, incorporates the requirements of title II which obligate courts to provide appropriate auxiliary aids and services, including qualified interpreters, whenever necessary to give an individual with a disability an equal opportunity to participate in the court's programs.

The settlement agreement requires the Utah court agency to:

- Establish a written policy on the provision of interpreters for jurors who are deaf or hard of hearing.
- Secure, at the court's expense, the services of a qualified interpreter whenever necessary to ensure effective communication.
- Publicize the policy through public notices in local newspapers.
- Inform and instruct all appropriate district court officials responsible for conducting proceedings to comply with the policy.
- Conduct at least four regional training seminars an how the Americans with Disabilities Act applies to jury trials and other court proceedings.

The agreement also permits the Justice Department to petition the U.S. District Court to seek specific performance of the agreement's terms if the court fails to comply.

SETTLEMENT AGREEMENT BETWEEN

THE UNITED STATES OF AMERICA

AND

THE UTAH STATE ADMINISTRATIVE OFFICE Or THE COURTS

Department of Justice Complaint Number XX

This matter was initiated by a complaint filed under title 11 of the Americans with Disabilities Act (ADA), 42 U.S.C. 12131 -12134, with the United States Department of Justice (Department of Justice) against The Third Judicial District Court, Salt Lake County, Utah. The complaint was investigated by the coordination and Review Section of the Civil Rights Division of the Department of Justice, under the authority of 28 C.F.R. pt. 35, subpt F. The complaint alleges that The Third Judicial District court disqualified or otherwise excused individuals who are deaf or hard of hearing from jury duty unless they provide their own interpreting services.

The Department of Justice is authorized under 28 C.F.R. pt. 35, subpt. F, to investigate fully the allegations of the complaint in this matter to determine the compliance of The Third Judicial District Court with title II of the ADA and the Department's implementing regulation, issue findings, and, where appropriate, negotiate and secure voluntary compliance agreements. Furthermore, the Attorney General is authorized under 42 U.S.C. 12133, to bring civil action enforcing title II of the ADA should the Department fail to secure voluntary compliance pursuant to subpart F. In consideration of the terms of this Agreement as set forth below, the Attorney General agrees to refrain from undertaking further investigation or from filing civil suit in this matter.

The parties to this Agreement are the United States of America and the Utah State Administrative Office of the Courts, a public entity as defined by title II of the ADA. Pursuant to the provision of the ADA entitled "Alternative Means of Dispute Resolution," 42 U.S.C. 12212, the parties have entered into this Agreement. In order to avoid the burdens and expenses of possible litigation, the parties hereby agree as follows:

1. Title II of the ADA and its implementing regulation prohibit discrimination against qualified individuals with disabilities on the basis of disability in the services, programs, or activities of the district courts, such as Jury service.

2. The district court must, upon notice, provide appropriate auxiliary aids and services when necessary to afford an individual with a disability an equal opportunity to participate in, and enjoy the benefits of, the district court's services, programs, or activities. Auxiliary aids and services include qualified interpreters.

3. An individual who is deaf or hard of hearing may not be excluded from jury service or otherwise treated differently because of the disability or because of the requirement for interpreting services.

4. The subject of this Settlement Agreement is the development of a policy to ensure that no otherwise qualified individual who is deaf or hard of hearing will be excluded from jury service because of the disability or because of the requirement for interpreting services.

5. The Utah State Administrative office of the Courts has developed a written policy (attached), which requires that district courts provide qualified interpreters in those proceedings involving a prospective juror who is deaf or hard of hearing when necessary to ensure an equal opportunity to serve as a juror.

6. Beginning on the effective date of this Agreement, the Utah State Administrative office of the courts will inform and instruct all appropriate district court officials responsible for conducting proceedings to adhere to and comply with the provisions of this Agreement.

7. The Administrative Office of the Courts will, no later than January 31, 1994, conduct at least four regional training seminars addressing the practical application of the ADA and this Agreement in jury trials and other court proceedings.

6. Within thirty (30) days of the effective date of this Agreement, the Utah State Administrative Office of the Courts will publish the following notice or an equivalent on two separate occasions in a newspaper of general circulation serving

Salt Lake County:

01-02617

In accordance with the requirements of title II of the Americans with Disabilities Act, district courts of the State of Utah will not discriminate against qualified individuals with disabilities on the basis of disability in jury service. In order to ensure that a prospective juror who is deaf or hard or hearing is not denied an equal opportunity to serve as a juror because of the requirement for interpreting services, the district court will, upon notice, ensure such an equal opportunity by providing, at the court's expense, the services of qualified interpreters.

9. The Department of Justice may review compliance with this Agreement at any time. If it determines that this Agreement or any requirement thereof has been violated, it may institute civil action seeking specific performance of the provisions of this Agreement in an appropriate Federal court.

10. Failure by the Department of Justice to enforce this entire Agreement or any provision thereof with respect to any deadline or any other provision herein will not be construed as a waiver of the Department's right to enforce other deadlines and provisions of this Agreement.

11. This Agreement is a public document. A copy of this document or any information contained in it may be made available to any person. The Utah State Administrative Office of the Courts will provide a copy of this Agreement to any person upon request.

12. In the event that the Utah State Administrative Office of the Courts or the district court fails to comply in a timely manner with any requirement of this Agreement without obtaining sufficient advance written agreement with the Department as a temporary modification of the relevant terms of this Agreement, all terms of this Agreement will become enforceable in an appropriate Federal court.

13. The effective date of this Agreement is the date of the last signature below.

14. This Agreement constitutes the entire agreement between the parties on the matters raised herein, and no other statement, promise, or agreement, either written or oral, made by either party or agents of either party, that is not contained in this written agreement, will be enforceable. This Agreement does not

purport to remedy any other potential violations of the ADA or

any other Federal law. This Agreement does not affect the Utah State Administrative Office of the Courts' or the district courts' continuing responsibility to comply with all aspects of the ADA.

Mr. Donald E. Keister OCT 12 1993
President
IRMA, Inc.
527 Chesapeake Avenue
Baltimore, Maryland 21225

Dear Mr. Keister:

This responds to your letter to President Clinton concerning small Business Administration (SBA) loans for individuals with disabilities. Your letter concerns a $150,000 "cap" on SBA loans under the Handicapped Assistance Loan Program and the exclusion of business owners with disabilities from Minority Business "set aside" programs. The SBA is not covered by the Americans with Disabilities Act (ADA). It is, however, covered by section 504 of the Rehabilitation Act, 29 U.S.C. S 794, which prohibits discrimination against qualified individuals with disabilities in programs and activities conducted by Federal Executive agencies. We have therefore referred your letter to the office of the SBA responsible for enforcing section 504.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This response provides informal guidance to assist you in understanding the ADA's requirements. It does not, however, constitute a legal interpretation and is not binding on the Department.

The exclusion of individuals with disabilities from the classes of individuals eligible for minority set aside programs would not necessarily constitute a violation of the ADA or section 504 of the Rehabilitation Act of 1973, as amended, which applies to federally assisted as well as federally conducted programs and activities.

Title II of the ADA and the Department of Justice implementing regulation, 28 C.F.R. pt. 35 (copy enclosed),

prohibit a public entity from discriminating on the basis of disability against a qualified individual with a disability in the benefits and services it provides. 28 C.F.R. S 35.130 (a). A "qualified individual with a disability" is one who meets the essential eligibility requirements for the receipt of services or

participation in the program or activity provided by the public entity. The ADA does not limit the authority of a public entity to establish eligibility requirements that are unrelated to disability, so long as those requirements do not exclude qualified individuals with disabilities. The exclusion of individuals with disabilities from a "set aside" established for particular classes of individuals, such as racial, ethnic, or other minority groups, would not be discriminatory, unless individuals with disabilities who are also members of the particular classes covered by the set aside are excluded because of their disabilities. (Such an exclusion of an individual who is "qualified" because he or she meets the eligibility requirement of membership in a covered group could violate the ADA.)

We understand your position to be that the failure to include business owners with disabilities is discriminatory because those business owners are "disadvantaged" by their disabilities in the same way as others are disadvantaged by their membership in the covered groups. This argument is premised on the assumption that, in establishing a preference for particular classes of "disadvantaged" business owners, the State is obligated to include all categories of business owners that are similarly "disadvantaged." The ADA does not establish such an obligation. It does not prohibit State and local governments from establishing eligibility criteria that target specific groups as intended beneficiaries, based on the goals and purpose of authorizing legislation, so long as the program does not exclude or discriminate against persons with disabilities because of their disability.

Of course, if you seek to have the programs in question amended or revised to include the specific groups you represent as eligible for services or benefits, you should contact the State agencies administering these programs and the appropriate legislative bodies that authorize them.

I hope this information is helpful.

Sincerely,

Stewart B. Oneglia
Chief

Re: Correspondence of Mr. Donald E. Keister, Baltimore, Maryland

Date Received by DOJ: August 22, 1993
DOJ Number: 204-35-0
DOJ Contact Person: Mr. Bruce Pruvis

Dear Mr. Feldman:

I am referring this correspondence to your agency for response because it concerns compliance with section 504 of the Rehabilitation Act of 1973 as it applies to programs and activities conducted by your agency. See 13 C.F.R. pt. 136. You may also have section 504 jurisdiction with respect to the State agencies mentioned because your agency provides financial assistance to the subject of the correspondence.

You should process the complaint according to the procedures established in S 136.170 of your regulation implementing section 504 for your federally conducted programs. 13 C.F.R. S 136.170. Please be aware, however, that a cap on loans under a special program limited to individuals with disabilities would not necessarily be a violation of section 504, so long as individuals with disabilities are not excluded from programs that are not subject to the cap. See 13 C.F.R. SS 136.130 (c); (h).

Because we are responsible for coordinating enforcement of section 504, please send any final written disposition of the matter to us at the above address. In all correspondence, please

give the correspondent's name, the name of the alleged discriminating entity, and the DOJ number.

Sincerely,

Stewart B. Oneglia

July 10, 1993

President Bill Clinton
White House
1600 N. W. Pennsylvania Avenue
Washington, D. C. 20500

Dear Mr. President:

Please allow me to introduce myself. I am Donald E. Keister, President of IRMA, Inc. located in Baltimore City Maryland and Certified as a Minority Business Enterprise by the Maryland Department of Transportation and many other Government agencies for both Federal and State projects.

My certification was a result of the cold hard fact that I am a Disabled American and although I am entitled to receive Social Security Disability Benefits, it was my decision fifteen years ago to try to do what no one in my class had done before and that was to successfully run my own company and to employ others to help me to run my firm.

I am proud to say that for fifteen years I have not had to draw one dime of Social Security Disability Benefits and that I am a self dependent tax paying handicapped person.

Recently my firm received a loan from the Small Business Administration in the amount of $ 150,000.00 under the guidelines of the (HAL) Handicapped Assistance Loan Program, although my firm required and requested $ 500,000.00 for the total implementation of our well designed business plan there was a $ 150,000.00 cap on this program to assist Handicapped Persons with their business and our business plan had to be down-sized. Yet other Minorities and Non-Minorities are allowed to borrow up to $ 750,000.00. I might also note that the local office was not aware of the HAL program as no loans had ever been made to a Handicapped business owner under this program.

Inasmuch as my firm is a small business with just a little over $ 800,000.00 in gross receipts for 1992 and legal expenses of around eight percent of gross it is very hard to show a good profit.

Why are my legal fee's so high you may ask? Well it's because I have had to fight for my rights as a Disabled American every step of the way.

Finally when your predecessor signed the American with Disabilities Act of 1990 and upon my review of same I noticed that among other things it said that Disabled Americans are a discreet and insular class of Minorities who have faced discrimination, without the power to fight for their rights and who are to be accorded the same civil rights as those accorded the civil rights act of 1964.

That the purpose of this act was to help Disabled Americans enter into the Mainstream of American Life, and so on.

The bottom line is that The Maryland Department of Transportation and many other Government agencies has included my firm as owned and controlled by a Disabled American as a Minority Business Enterprise. As I understand it, they have in fact reviewed and determined the Code of Federal Regulations (CFR) 49 23.53 basically includes and protects my new class as a protected class under the general guidelines.

Inasmuchas CFR 49 23.53 was (I think) written after the civil rights act of 1964 and has not been revised since then to include the words Disabled American or Handicapped Person or to have someone in the Government issue an addendum to the code. I have found that each agency who receives Federal funds can decide if they want to protect my class.

As a result of negative decisions I have had to employ an attorney to fight these remaining barriers at my cost in my attempts to clear the way so that other members in my class can secure the same dream that I feel that I have almost accomplished of being a well respected, self supporting, tax paying, instead of tax receiving Disabled American.

I am proud to say that next month I am due to receive the "Know I care award" to be presented by the Police Commissioner of Baltimore City, Maryland and several years ago I received the "Baltimore's Best Award", at the same time I am also ashamed to say that the Baltimore City Government will not voluntary open it's eyes and recognize my firm as a Minority Business Enterprise as they cite their program to protect only Racial and Women Minorities.

Yet I can not find any evidence that the City of Baltimore has in the last twenty years discriminated against racial Minorities or Women, however; I can find that in the last twenty years that the City of Baltimore has in fact discriminated against Disabled Americans.

It seems so unfair that they have or think they have the right to protect one class of people without protecting all of the classes of people within the same class and they know that just one person of a protected class, currently one like me can not afford (because of economic disadvantages) to bear the costs to force them to protect all of the classes.

It is also a part of my dream and after my fight is over or perhaps even before that one day I be appointed to serve on one of our Governors committees for the encouragement of economic growth of and self sufficiency of Disabled - Handicapped Americans.

I do not mind telling you that I have written several letters to you predecessor and that I have even paid an attorney to professionally write with regard to this matter and I have only received "form" letter replies and false promises to no avail.

I some how feel that you are a real person and you will address this problem as a real problem and please remember that it was not long ago and sometimes even today that families of Disabled children put those family member's away or even dispose of them in horrible ways.

Thank you for your consideration.

Very truly yours,

Donald E. Keister, DA.
President

OCT 13 1993

Mr. J. Larry Poole
Architect
116 East Market Street
Kingsport, Tennessee 37660

Dear Mr. Poole:

This letter responds to your inquiry regarding the Americans With Disabilities Act (ADA). Specifically, you asked for guidance regarding ADA requirements for rescue and ambulance stations in Sullivan County, Tennessee. We regret the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation and it is not binding on the Department.

In your letter, you asked several questions regarding ADA requirements for rescue and ambulance stations operated by your County. First, you inquired as to whether title IV of the ADA (addressing telecommunications relay services for individuals with hearing or speech impairments) requires each such station to have a TDD (telecommunications device for the deaf). As your letter recognizes, title IV addresses only the duty of common carriers to establish relay systems (services that enable two-way communication between an individual who uses a TDD or other nonvoice terminal device and an individual who does not use such a device.) Title IV does not address the legal duties of state and local government entities under the ADA. These obligations are covered by title II of the Act.

The Department of Justice regulation implementing title II

contains several provisions addressing the duty of state and local government entities to communicate effectively with members of the public, including requiring such entities to be equipped with TDD's in certain circumstances. These requirements differ depending on whether emergency or non-emergency services are at issue.

01-02628

Emergency Telephone Services

The regulation applicable to telephone requirements for emergency services provided by state or local government entities states:

> Telephone emergency services, including 911 services, shall provide direct access to individuals who use TDD's and computer modems.

28 C.F.R. S 35.162; see enclosed title II regulation at pages 35721 and 35712-35713. "Direct access" means that emergency telephone services can directly receive calls from TDD and computer modem users without relying on outside relay services or third party services. This means that where 911 service is available, the state or local government entities operating the 911 service must be equipped with TDD's and thus provide direct access to individuals who use TDD's and computer modems. The logic behind the "direct access" requirement is obvious, since the speed with which a person can reach emergency services may have life or death consequences.

The question posed in your letter is not whether state or local government entities operating 911 emergency services must be equipped with TDD'S, but whether an individual rescue or ambulance station must be so equipped. The answer depends in part, however, upon the comprehensiveness of your locality's 911 system. Your letter of inquiry does not contain facts sufficient to determine the comprehensiveness of Sullivan County's 911 system. To answer your question, it is therefore necessary to consider several different scenarios.

Under the first scenario, let us assume that Sullivan County, Tennessee, has 911 telephone emergency services which comply with the ADA (i.e., that the entities operating such services are equipped with TDD's and are compatible with computer modems, thus providing direct access to non-voice callers). Let us further assume that the emergency services provided by Sullivan County rescue and ambulance stations can be accessed via 911, meaning that a citizen who needs emergency services from the rescue or ambulance stations typically dials 911 to obtain such services. Under this scenario, the ADA would not require individual rescue or ambulance stations to obtain TDD'S.

Quite a different result is obtained if we assume that Sullivan County's 911 service does not cover the rescue or ambulance stations at issue, and members of the public could obtain emergency services only by dialing the stations direct. Under this scenario, the rescue or ambulance station would have

to be equipped with TDD's to provide direct access to nonvoice callers. The station could provide two separate lines to reach this service -- one for voice calls, and another for nonvoice
01-02629

calls -- but it would have to ensure that the service for nonvoice calls was as effective as that offered for voice calls in terms of response time and availability in hours. Also, the nonvoice number would have to be publicized as effectively as the voice number, and displayed as prominently as the voice number wherever such emergency numbers are listed. See Title II Technical Assistance Manual at pages 38 and 39.

A third possibility is that the emergency services of the rescue or ambulance stations at issue here can be obtained by either dialing 911 or a seven-digit (voice) number. Such an arrangement would comply with the ADA so long as nonvoice callers whose calls were directed through 911 received emergency attention as quickly as voice callers who dialed local seven-digit numbers for emergency assistance instead of 911. See generally preamble to enclosed title II regulation at 35713.

Non-Emergency Telephone Services

Where a public entity communicates with applicants and beneficiaries by telephone in non-emergency situations, the public entity does not have to provide "direct access.,, Instead, public entities have the option of using TDD's or "equally effective telecommunication systems" to communicate with individuals with impaired speech or hearing. See 28 C.F.R. S 35.161. Under the regulation, relay services such as those required by title IV (involving a relay operator who uses both a standard telephone and a TDD to type the voice messages to the TDD user and read the TDD messages to the standard telephone user) constitute equally effective telecommunication systems.

Title IV of the ADA requires all common carriers (i.e., the telephone companies) to provide telephone relay services by July 26, 1993. Thus, most County government entities in Tennessee could choose to rely on relay services provided by the phone companies for non-emergency communications with individuals with impaired speech or hearing. Entities which have extensive telephone contact with the public such as city halls, public libraries and public aid offices, however, are strongly encouraged to have TDD's to ensure more immediate access. See preamble to title II regulation at 35712 ("The Department encourages those entities that have extensive telephone contact with the public. . . to have TDD's to insure more immediate access. Where the provision of telephone service is a major function of the entity, TDD's should be available.")

Physical Accessibility of Rescue and Ambulance Stations

Your letter also asks about the ADA's requirements for

physical accessibility of rescue and ambulance stations. As you know, title II of the ADA prohibits discrimination against persons with disabilities in all services, programs and

activities provided or made available by state or local governments. This obligation does not require extensive retrofitting of existing facilities utilized by state and local government entities. Instead, the operative concept is "program accessibility." The "program" at issue here -- i.e., emergency rescue and ambulance service -- must be accessible to persons with disabilities. Members of the public are not typically invited into rescue and ambulance stations: instead, station personnel go to the site of an emergency. Under these circumstances, it may not be necessary to render accessible the physical facility housing the rescue or ambulance station. Of course, if stations offer programs or services requiring members of the public to enter and use the facilities (such as educational tours, for example), the County would need to ensure that the portions of the stations open to the public were accessible, unless the County could demonstrate that this obligation caused a fundamental alteration in its program or resulted in undue financial and administrative burdens. See S 35.150 at page 35719 of the enclosed title II regulation, and interpretive commentary at pages 35708-9 and 35720-1. See also Title II Technical Assistance Manual at pages 19-23.

Standards Applicable to Separate Titles of the ADA

In your letter, you observe that the terms "reasonable accommodations," "undue hardship," and "readily achievable" are "scattered throughout" the public law. Your letter goes on to state the following with respect to Sullivan County's rescue and ambulance stations:

> My understanding of the law is that the accommodations must be accomplished as soon as is reasonably possible "without much difficulty or expense."

This conclusion is incorrect. Each of the legal standards cited above apply to separate titles of the ADA. For example, the term "reasonable accommodation" applies only to employment situations. It has no relevance to analysis of any other part of the ADA. Similarly, the term "readily achievable" is not applicable to ADA obligations of state or local government entities such as Sullivan County. "Readily achievable" is the title III legal standard applicable to barrier removal in existing facilities of private entities which own, operate, or lease places of public accommodations. As discussed above, the standard applicable to programs and services offered by Sullivan

County is that of "program access." Defenses to non-provision of such access are "fundamental alteration" or "undue financial and administrative burdens." As discussed above, these terms are found in the title II regulation, as are deadlines for providing program access, accomplishing structural modifications, and completing self-evaluations and transition plans. See discussion 01-02631

of time periods at pages 35720 and 35709-10 of the enclosed title II regulation.

Finally, in your letter, you express concern with the multitude of so-called "experts" on the ADA attempting to market their consultant services to covered entities. You should be aware that the Department of Justice has not certified any outside persons or organizations as authorities on the ADA. A number of entities have received grants from the Department to develop materials to educate the public regarding rights and responsibilities under the ADA, however, and a list of these grantees is attached for your information.

I hope that this information has been helpful to you. If you have any questions, you may wish to call our information line at (202) 514-0301 (voice) or (202) 514-0383 (TDD).

Sincerely,

John L. Wodatch

RE: TITLE IV - TELECOMMUNICATIONS, PUBLIC LAW 101-336 - JULY 26, 1990 (THE AMERICANS WITH DISABILITIES ACT OF 1991)

Dear Sir:

I have been asked to assist the County Attorney of Sullivan County, Tennessee in assessing certain County properties for compliance with the Americans with Disabilities Act. One type of property in question are the Rescue/Ambulance stations. The County Attorney attended a seminar at which one of the instructors indicated that all such stations must have Telecommunications Devices. I do not interpret the amendment to Section 401 as written in the ADA manual as requiring these devices in every emergency station. As I understand this Section, it is the Common Carrier who must be equipped with the TTD equipment.

I do not remember any regulation which has produced the quantity of "Certified Experts" as this new law. We have them coming out of the woodwork, especially from the University of Tennessee. One of the instructors at the above mentioned seminar indicated that all public owned facilities must be treated as open to the general public. I am having a hard time defining a Rescue/Ambulance Station or Fire Station as "open to the public". I can understand providing this type of facility with the amenities required for handicapped employees but I would not classify them as open to the general public.

Scattered through out Public Law 101-336 are such terms as "reasonable accommodations, undue hardship, and readily achievable." My understanding of the law is that the

accommodations must be accomplished as soon as is reasonably possible "without much difficulty or expense". In the case of the Rescue/Ambulance stations, the County has been told that they are not allowed to contribute finances until these stations are in compliance.

Please let me have your opinions and suggestions in this matter. These stations cannot operate for long with out the support of the County.

Sincerely,

J. Larry Poole

DJ 202-PL-670 OCT 15 1993

Ms. Catherine E. Chambless
Executive Director
Utah Governor's Council for
People with Disabilities
350 E. 500 So.
Suite 201
Salt Lake City, Utah 84111

Dear Ms. Chambless:

This letter is in response to an inquiry from your office about whether, under the Americans with Disabilities Act of 1990 (the "ADA"), the Department of Justice certifies or endorses particular individuals as ADA consultants.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

Your letter indicates that certain individuals or businesses in Utah are claiming that the United States Department of Justice has provided them with an "ADA Consultant Certification" or some similar endorsement. The Department of Justice has not done so. The Department of Justice does not certify or endorse any individual or organization as ADA consultants, and does not approve or endorse any products or designs as being in compliance with the ADA. Any individual or business claiming to have such a certification or endorsement may be violating various state and federal laws prohibiting fraud and misrepresentation.

Some confusion may arise because, through its technical assistance program, the Department has provided funding to organizations that conduct ADA training. Individuals completing such training may receive certificates indicating they have done so. However, this is not an endorsement by the Department that such individuals are certified or approved ADA consultants.

Mr. John Wodatch, Director
Office on the Americans with Disabilities Act,
Civil Rights Division
US Dept. of Justice
Washington, D.C. 20530

Dear Mr. Wodatch:

Several concerned citizens have contacted our office regarding the validity of an apparent 'ADA Consultant Certification' provided by the U.S. Dept. of Justice. It is our understanding that DOJ neither certifies nor endorses such individuals or businesses.

If such certification or endorsement does exist, it would be helpful for other interested parties to be informed of the appropriate procedures to follow
to secure same. Otherwise, we would appreciate a written response to this concern before September 30, 1993.

It is our goal to provide timely and accurate information for our citizens. Your clarification of this matter is greatly appreciated. Thank you in advance for your assistance.

Sincerely,
Tamara Wharton
ADA Ombudsman

The Utah Council is a planning and advisory body mandated by federal and state

legislation and appointed by executive order of the Governor.

01-02638

ACCESSABILITY IS. . .

o A national consulting firm specializing in disability-related issues.

o An established authority on the Americans with Disabilities Act (ADA), delivering dramatic savings and decreased liability to its Clients.

o Skilled in the evaluation of existing structures and architectural plans for compliance with the ADA

o A resourceful company that examines ADA requirements from both disabled and non-disabled view points, delivering common-sense, low-cost solutions.

WHAT CLIENTS SAY. . .

"ACCESSABILITY was not only very knowledgeable and efficient in performing ADA audits at our various divisions, they made some excellent suggestions on ways we could meet some of the ADA requirements without incurring a lot of expense."

Talmadge Ball
Vice President, Engineering
Bonneville International Corporation

"After hearing ACCESSABILITY'S presentation at the CEO Roundtable, it was immediately apparent that Rick Rambo knew what he was talking about. We contracted for services, and promptly received accurate information, helpful analysis, and follow-up assistance which fully met our expectations."

-Richard Fetzer
Fetzer's Inc.

"ACCESSABILITY provides an appropriate mechanism for ADA implementation which will significantly reduce the risk and liability when demonstrating good faith effort compliance."

-The United States Department of Justice

ACCESSABILITY CAN. . .

. Plan appropriate access to buildings, restrooms, work spaces, etc. for the disabled.

. Access the practicality of change to buildings and structures, complete with cost estimates.

. Provide education and training in order to increase sensitivity and awareness toward disability concern.

. Deliver interpreter services to the deaf at public hearings and business meetings.

OCT 16 1993

The Honorable Tom Lewis
Member, U.S. House of Representatives
440 PGA Boulevard
Suite 406
Palm Beach Gardens, Florida 33410

Dear Congressman Lewis:

This letter is in response to your inquiry on behalf of your constituent, Dr. Steven Rosenberg, regarding a physician's obligation to provide auxiliary aids or services for persons with disabilities.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. It does not, however, constitute a legal interpretation and it is not binding on the Department.

The ADA requires public accommodations, including physicians, to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities. In determining what constitutes an effective auxiliary aid or service, a physician must consider, among other things, the length and complexity of the communication involved. For instance, a notepad and written materials may be sufficient to permit effective communication when a physician is explaining possible symptoms resulting from a simple laceration. Where, however, the information to be conveyed is lengthy or complex, the use of handwritten notes may be extremely slow or cumbersome and the use of an interpreter may be the only effective form of communication.

Use of interpreter services is not necessarily limited to the most extreme situations---for example, a discussion of whether to undergo surgery or to decide on treatment options for

cancer. Further discussion of this point may be found on page 35567 of the preamble to the enclosed regulation. While the

cc: Records, Chrono, Wodatch, McDowney, Breen, Nakata FOIA, MAF
Udd:Nakata:Congress.let:Lewis.1

01-02641

nature of medical services is considered one factor in determining what auxiliary aid is necessary for effective communication, the focus should be not only on the nature of the services, but also on the type of communication between the physician and the patient. Generally, interpreters are not needed for routine office visits. However, the fact that an office visit is characterized as routine does not necessarily negate the need for interpreting services. For instance, an interpreter may be required if a note pad does not facilitate effective communication between the physician and an individual who is undergoing a complete physical examination and related testing procedures.

Under section 36.301(c) of the regulation, when an interpreter or other auxiliary aid or service is necessary to ensure effective communication, the physician must absorb the cost for this aid or service. As provided in section 36.303(f), however, the physician is not required to provide any auxiliary aid that would result in an undue burden. The term "undue burden" means "significant difficulty or expense." Undue burden must be determined on a case-by-case basis in light of factors such as the nature and cost of the aid or service, and the overall financial resources of the practice. Further discussion of the meaning and application of the term undue burden may be found in the preamble discussion of section 36.303, on pages 35567-35568.

In determining whether the provision of an interpreter would result in an undue burden, the physician should consider not only the fees paid for providing the medical service or procedure, but also the overall financial resources of the practice. The physician should consider other factors that would minimize the degree of burden on the practice, such as the ability to spread costs throughout the general clientele and the provision of tax credits for costs of providing auxiliary aids (which is available for eligible small businesses).

The Department's Technical Assistance Manual for title III (copy enclosed) at page 26, and the ADA's legislative history, as described in the regulations preamble, at pages 35566-35567, strongly encourage consultation with persons with disabilities in order to determine which particular auxiliary aid or service will ensure effective communication. Not only will consultation ensure that equal services are provided to individuals with disabilities, it may also significantly reduce the costs of providing such auxiliary aids or services.

Dr. Rosenberg's letter also raises the issue of whether a public accommodation may charge patients requesting an

interpreter a cancellation fee when the patient cancels an appointment after the physician becomes financially liable for the interpreter service. A public accommodation is not permitted
01-02642

to impose surcharges for auxiliary aids or services necessary for effective communication, regardless of whether those aids or services are used or not. While we appreciate Dr. Rosenberg's desire to avoid unnecessary expense, events may arise in an individual's life that are beyond his or her control, such as illness or business emergencies. Imposing the costs of interpreter services in the event of cancellation under such circumstances places the person in need of an auxiliary aid or service at a distinct disadvantage relative to others in similar situations. Of course, the ADA would not prohibit Dr. Rosenberg from charging a standard cancellation fee for missed appointments provided that the policy of charging cancellation fees is applied uniformly to all patients.

Dr. Rosenberg's letter raises a specific question involving use of interpreters concerning a deaf patient who made an appointment and then demanded that Dr. Rosenberg's office provide an interpreter. Clearly, the auxiliary aid provisions of the ADA (cited above) do not contemplate that a person with a disability can unilaterally decide on the appropriate type of auxiliary aid. Further discussion on this point can be found in the enclosed January 1993 update to the Department's Title III Technical Assistance Manual (copy enclosed) at page 5.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General

DIPLOMATES OF THE AMERICAN BOARD OF DERMATOLOGY
FELLOWS OF THE AMERICAN ACADEMY OF DERMATOLOGY

August 2, 1993
Congressman Clay Shaw
1512 East Broward Boulevard
Ft. Lauderdale, FL 333Ol

Dear Congressman Shaw:

I would appreciate your helping to clarify a matter that developed today in reference to our compliance with the Americans with Disabilities Act. I have supported the principles and concepts of the ADA, but as a result of some confusion today I realize that this is a complicated issue.

Specifically, a patient was provided an appointment who is hearing impaired and she demanded that we provide an interpreter. The legal advice that I was able to receive from the Florida Medical Association indicates that we are required to "ensure effective communication." I have been practicing for approximately fifteen years and have taken care of numerous patients with various disabilities. In the past we have never had difficulty by communicating with written notes in those individuals who are hearing impaired. The nature of the dermatology practice is such that the majority of issues are relatively straightforward and can be handled efficiently in this fashion. As there appears to be some confusion between the patient's demands and the legal advice that I had received which indicates that such notes should be acceptable unless the physician feels otherwise, I would appreciate clarification.

I would also like to point out that the cost for obtaining an interpreter have minimum charges of between $60.00-$75.00. An initial office visit is $50.00 and, as you are aware, many third party payers including Medicare reimburse office visits in the $22.00 - $40.00 range. This would result in a net loss per patient visit in a situation where our overhead costs are already astronomical. I am curious whether this places an "undue burden" according to the definitions of the act.

In addition, I would like to know whether we can bill the patient for the cancellation fee that the interpreter charges should the patient fail to keep their appointment. The interpreter services indicated that if the services are not cancelled with twenty four hour notices that there is a charge and that we would be responsible for the full amount even if the patient does not show. I understand my financial responsibility to provide this service for the hearing impaired but I am also concerned that there may be opportunities where patients cancel at the last minute or do not show and therefore these costs would not be associated with my actually providing an office visit.

470 COLUMBIA DRIVE, SUITE 102A WEST PALM BEACH, FLORIDA 33409-1968 TELEPHONE
(407) 640-4400
01-02644

Finally, I would like to know whether third party payers including Medicare will reimburse for interpreter services and if so, more specifically how should we go about obtaining such payment from Medicare.

Your prompt help and cooperation would be appreciated. Please do not hesitate to contact me by phone should that be necessary. You may also fax information to me at 407/640-8098.

Sincerely,

Steven P. Rosenberg, M.D.

Washington, DC 20035-6118

OCT 18 1993

Mr. William F. Carroll
Executive Director
Portable Sanitation Association
International
7800 Metro Parkway, Suite 104
Bloomington, Minnesota 55425

Dear Mr. Carroll:

This is in response to your letter to the Civil Rights Division concerning portable restroom facilities and the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA may apply to you. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Under section 4.1.2(6) of the Americans with Disabilities Act Accessibility Guidelines (ADAAG), at least five percent of single user portable toilets clustered at a single location must be accessible. In order to be accessible under the ADA, these toilets must comply with either section 4.22 (Toilet Rooms) or 4.23 (Bathrooms, Bathing Facilities, and Shower Rooms) of ADAAG. If you feel that the portable toilets that you manufacture are accessible although they do not comply with either section 4.22 or 4.23 of ADAAG and you believe the standards should be modified to permit your design, then you should contact the Architectural and Transportation Barriers Compliance Board, as that is the

Federal agency responsible for drafting and amending ADAAG.

You should also be aware that section 2.2 of ADAAG (Equivalent Facilitation) states that: "Departures from particular technical and scoping requirements of this guideline

01-02646

by the use of other designs and technologies are permitted where the alternative designs and technologies used will provide substantially equivalent or greater access to and usability of the facility." Thus, if your design provides equivalent facilitation, use of your portable toilets as accessible facilities may be permitted under the ADA.

The Department of Justice does not grant grace periods for enforcement of the ADA, and accessible portable toilets should have been made available where portable toilets were provided as of the effective date of the Act. However, you should note that it would be the public accommodation, commercial facility, or public entity utilizing a noncomplying toilet that would be liable for violating the ADA (rather than the manufacturer of the toilet).

I hope this information has been helpful to you.

Sincerely,

Stewart B. Oneglia

Mr. John Wodatch
Chief, Public Access Division
Civil Rights Division
U.S. Department of Justice
PO Box 66738
Washington, DC 20035-6738

Dear Sir,

The mission of the Portable Sanitation Association International (PSAI) is "To expand and improve portable sanitation services and facilities worldwide and to be recognized as the preeminent authority within our industry."

In the spirit of our mission statement, members of our industry have been providing the disabled with accessible portable restroom facilities prior to the enactment of the Americans with Disabilities Act of July 26, 1990.

On May 21, 1993 a delegation of members from our industry, including manufacturers of portable restrooms and portable sanitation service company operators, met with representatives of the Access Board in Washington. DC.

Based on the outcome of this meeting there are no portable restrooms currently being utilized by the disabled community that are in compliance with Title III of the ADA. This is not to say that, in the opinion of the Portable Sanitation Association International, portable sanitation facilities currently in use by the disabled are not adequate to meet their needs.

Portability, clear floor/ground space, transportation and set-up are the reasons existing accessible portable restroom facilities were designed and why they have been used for twenty years without objection. However, based on the ADA requirements and recommendations from the Access Board, the manufacturers are in the process of reviewing the ADA standards to develop portable sanitation facilities that will meet the requirements of the ADA.

The problem in existence now is when the portable sanitation service companies are asked to provide a portable accessible restroom that meets the ADA requirements they are unable to do so, because they do not exist.

The Portable Sanitation Association International requests that the manufacturers of portable restroom facilities be granted a 24 month research and development period to provide the disabled accessible portable restrooms that meet the requirements of the ADA.

In addition we request that the portable restroom service companies receive grandfathering to allow continued use of the accessible portable restrooms currently being utilized in their rental fleet. This period of time should be long enough to allow these companies to change their existing equipment to the new equipment through normal attrition of their current fleet.

As you can understand, this issue is time sensitive and needs to be resolved as quickly as possible. Please do not hesitate to contact me regarding this matter.

Sincerely,

William F. Carroll
Executive Director

OCT 18 1993

The Honorable John M. McHugh
U.S. House of Representatives
Washington, D.C. 20515-3224

Dear Congressman McHugh:

This letter is in response to your correspondence on behalf of your constituent, William J. Morrow, concerning Federal closed captioning requirements.

At least four Federal requirements deal with the provision of closed captioning: titles II, III, and IV of the Americans with Disabilities Act (ADA), and section 504 of the Rehabilitation Act of 1973, as amended.

The information reflected in Mr. Morrow's letter is essentially correct. Title II of the ADA prohibits discrimination on the basis of disability in all programs, activities, and services provided or made available by State and local governments, instrumentalities, or agencies, regardless of the receipt of Federal funds. Title III of the ADA covers public accommodations such as shopping centers, doctors' offices, museums, zoos, private schools, and other private establishments. Copies of the title II and III regulations and manuals explaining the regulations are enclosed.

Regulations implementing titles II and III require the provision of auxiliary aids and services by public and private entities where necessary to ensure effective communication with an individual who is deaf or hard of hearing (section 35.160, p. 35721, of the title II rule; and section 36.303, p. 35597, of the title III rule, respectively). For individuals with hearing impairments, auxiliary aids and services include, but are not limited to, qualified interpreters, closed captioning, and transcription services such as computer aided real-time transcription (section 35.l04, p. 35717, of the title II regulation; and section 36.303(b)(1), p. 35597, of the title III

regulation).

cc: Records, CRS, Chrono, FOIA, Friedlander (3),
Mather.ltr.mcHugh, Breen, McDowney

01-02650

As Mr. Morrow also noted, the title II regulation covers television and videotape programming produced by public entities. Access to audio portions of such programming may be provided by closed captioning. Page 35712 of the title II regulation explains this concept.

With regard to commercial operations, the title III regulation, section 36.307, p. 35598, does not require that video-tape rental establishments stock closed-captioned video tapes, although the most recent offerings in those establishments are, in fact, closed-captioned. Further discussion of this point can be found on p. 35571 of the title III regulation.

Movie theaters are not required by title III to present open-captioned films. However, other public accommodations that impart verbal information through soundtracks on films, video tapes, or slide shows are required to make such information accessible to persons with hearing impairments. Captioning is one means to make information accessible to individuals with disabilities. This concept is explained on page 35567 of the title III regulation.

Title IV of the ADA requires that any televised public service announcements that are wholly or partially funded by the Federal government include closed captioning of the verbal content of the announcement. However, individual television stations are not required to supply the closed captioning for any announcements that do not include closed captioning. For more information on this requirement, please contact the Federal Communications Commission, the agency responsible for implementing and enforcing title IV.

Section 504 of the Rehabilitation Act of 1973, as amended, prohibits discrimination on the basis of disability in federally conducted and assisted programs. Like the title II regulation, regulations implementing section 504 require that Federal agencies and recipients provide auxiliary aids and services whenever necessary to ensure effective communications with members of the public. Services include the provision of closed captioning.

I hope this information is helpful to you.

Sincerely,

James P. Turner
Acting Assistant Attorney General

JMM/jmb
Enclosure

01-02652

NORTH COUNTRY ASSOCIATION OF THE DEAF
ORGANIZED ESTABLISHED 1973

Senator James W. Wright
RM 814, LOB
Albany, N.Y. 12247

AUG 12 1993

Dear Senator Wright:

we are writing this letter to you in hopes that you can help change the way most local and state government agencies and non profit agencies (such as the hospitals, schools, retirement homes, libraries, museums ect.) feel about closed captions. We have written many letters requesting that these agencies please close caption their public videos as well as their Public Service Announcements, training videos, and archived videos. However, we have received little or no response to our pleas to be included in their messages and public information. The few responses that we have received either were unacceptable or nothing happened at all.

The reason that we have chosen to write to you is because of the July 29th meeting at the State Office building in Watertown. We were very happy to inform our organization that you are "A BIG SUPPORTER" of the ADA laws. We were a little disappointed that we did not get a chance to speak to you personally about this issue but we understand that you are a very busy person.

We received a letter from the U.S. Department of Justice claiming that Title II of the ADA prohibits discrimination on the basis of disability in all programs, activities, and services provided or made available by State and local governments, instrumentalities, or agencies, regardless of the receipt of Federal funds. Title III of the ADA covers public accommodations such as shopping centers, doctors' offices, museums, zoos, private schools, and other private establishments.

We were also informed that regulations implementing titles II and III require the provision of auxiliary aids and services by public and private entities where necessary to ensure effective communication with an individual who is deaf or hard of hearing (section 35.160, p. 35721, of the title II rule; and section 36.303, p. 35597, of the title III rule, respectively).
For individuals with hearing impairments, auxiliary aids and services include, but are not limited to, qualified interpreters, closed captioning, and transcription services such as computer aided real-time transcription (section 35.104, P. 35717, of the title II regulation; and section 36.303 (b) (1), p. 35597, of the title III regulation).

The titles II regulation covers television and videotape programming produced by public entities. Access to audio portions of such programming may be provided by closed captioning.

We do not presume that you are unaware of the ADA laws and how they pertain to the deaf and hearing impaired. We know that you were an advocate for these laws. We only wish that you could
01-02653

confirm to us that we have been given good information regarding these laws and that the agencies in the State of New York in which these laws pertain, will adhere to these laws promptly.

Once again, we thank you for taking the time to speak at the State Office building and supporting our cause. We will be awaiting patiently to hear from you regarding this letter and watching for the changes in the way these agencies deal with the hearing impaired.

Sincerely,

North Country Association
of the Deaf

OCT 18 1993

The Honorable Howard L. Berman
Member, U.S. House of Representatives
14600 Roscoe Boulevard, Suite 506
Panorama City, California 91402

Dear Congressman Berman:

This letter is in response to your inquiry on behalf of your constituent, Mr. David Bidna, Director of the Summer Academic Enrichment Program ("SAEP"), who wants to know the extent to which the Americans with Disabilities Act ("ADA") requires a private school to provide sign language interpreters to deaf students.

The ADA authorizes the Department to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA may apply to the question raised by your constituent. This technical assistance, however, does not constitute a determination by the Department of Justice of your constituent's rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Private schools are places of public accommodation subject to the provisions of the ADA. As such, they are required to provide auxiliary aids and services that will ensure that individuals with disabilities are not excluded, denied services, segregated or otherwise treated differently from other individuals. A private school will only be excused from providing these auxiliary aids and services if doing so would either fundamentally alter the nature of the services it provides, or would result in an undue burden in terms of difficulty or cost.

cc: Records; Chrono; Wodatch; McDowney; Magagna; Kuczynski;
FOIA, MAF. X udd\kuccynsk\magagna\congress\berman.let

The Justice Department's implementing regulations detail this requirement of non-discrimination, 28 C.F.R. 36.303(a), and define auxiliary aids and services as including qualified sign language interpreters. 28 C.F.R. 36.303(b)(1). Therefore, SAEP would be required to provide a deaf student with an interpreter, if necessary for effective communication, and if doing so would not be too difficult or too costly.

The regulations set out some guidelines for determining whether the provision of an auxiliary aid or service would result in an undue burden. They include: the nature and cost of the aid or service needed; the overall financial resources of the public accommodation; the effect on expenses and resources of providing a certain auxiliary aid or service; the size, financial resources, and type of operation of any parent corporation that might exist; and the fiscal and administrative relationship of the accommodation in question to a parent corporation. 28 C.F.R. 36.104.

It is important to bear in mind, however, that determining what is necessary for effective communication and what constitutes an undue burden requires a highly fact-specific inquiry. The ADA might require that a place of public accommodation, like SAEP, provide sign language interpreters for two students, but might not require a different interpreter for each of fifty students. However, the fact that this particular accommodation might constitute an undue burden would not alone justify denying admission to deaf applicants. The program would need to investigate less expensive means of providing effective communication. For example, although the program might not be able to provide each student with an interpreter, perhaps several deaf students in a classroom could benefit from the use of a single interpreter. Forms of effective communication other than interpreters might also be available, such as transcripts or notes of class materials.

Some alternatives might involve the modification of program policies, practices, and procedures. The ADA requires places of public accommodation to make such modifications where necessary to afford persons with disabilities the opportunity to participate in their goods, services, facilities, privileges,

advantages, and accommodations.

You should, therefore, advise your constituent that the inability to provide interpreters for each deaf student in his program does not relieve the program of the obligation to find less burdensome means of providing effective communication. Nor are auxiliary aids and services and the modifications mentioned in this letter necessarily the only alternatives available or the most appropriate ones for every circumstance. The information concerning auxiliary aids found in the enclosed copies of the Justice Department's title III implementing regulation and the 01-02657

Title III Technical Assistance Manual may help your constituent formulate a plan for effective communication with students with hearing impairments that will satisfy SAEP's obligations under the ADA.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Congressman Howard Berman
14600 Roscoe Blvd., Suite 506
Panorama City, California 91402

Dear Howard:
I talked to Margaret Mott about a problem we had in our Summer Academic Enrichment Program involving the Disabilities Act. For the first time in 15 years of our operation, we were asked to enroll two deaf high school students. Although we were very pleased to have them in our program, we were also asked to furnish and pay for their interpreter(s). SAEP is a private school sponsored by the Department of Secondary Education run through the CSUN Foundation.

As you know, CSUN has an outstanding Deaf Studies program for college-age deaf students, but the Secondary Education Department does not pay for the interpreters for these students. I have had these students in my classes. There is a National Center on Deafness at CSUN, headed by Dr. Herb Larson.

We checked with the CSUN attorney on campus, Earl Weiss, who said we are legally obligated to pay for their interpreter, who could cost from $12.50 to $40.00 per hour. The going rate at CSUN is $25.00 per hour.

Our SAEP students attend class for four hours per day for four weeks. Parents pay $300. Potentially, we could be paying the interpreter $2000 and receiving only $300 less expenses (about 20%). Carrying these figures out, if we had 10, 20, or 50 deaf high school students (which is a possibility next year), SAEP could not survive.

We're sure the supporters and writers of the Disability Act did not have this in mind when they promoted the bill. I was a strong advocate for the legislation, with petitions and letters being sent to Washington.

Whatever you can do to help clarify this problem as quickly as possible would be appreciated. We're going to make it this year, but just recently we received a call from a parent whose child goes to the Riverside School for the Deaf and wants to attend our summer school next year. When word gets out that we had deaf students in our program this summer, we could be inundated next summer, running at a financial loss.
01-02659

I missed you in Washington, D.C. on June 26, but I did invite your staff to the reception in the Canon Caucus Room hosted by the Center for civic Education in Calabassas (I spoke with Max, who happens to have the same name as my newest grandchild).

With best wishes,

Bidna, Ed.D.

Dean Carolyn Ellner, School of Education

01-02660

OCT 18 1993

The Honorable E. Clay Shaw, Jr.
U.S. House of Representatives
2267 Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Shaw:

This letter is in response to your inquiry on behalf of your constituent, Dr. Steven Rosenberg, regarding a physician's obligation to provide auxiliary aids or services for persons with disabilities.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. It does not, however, constitute a legal interpretation and it is not binding on the Department.

The ADA requires public accommodations, including physicians, to furnish appropriate auxiliary aids and services

where necessary to ensure effective communication with individuals with disabilities. In determining what constitutes an effective auxiliary aid or service, a physician must consider, among other things, the length and complexity of the communication involved. For instance, a notepad and written materials may be sufficient to permit effective communication when a physician is explaining possible symptoms resulting from a simple laceration. Where, however, the information to be conveyed is lengthy or complex, the use of handwritten notes may be extremely slow or cumbersome and the use of an interpreter may be the only effective form of communication.

Use of interpreter services is not necessarily limited to the most extreme situations--- for example, a discussion of whether to undergo surgery or to decide on treatment options for cancer. Further discussion of this point may be found on page 35567 of the preamble to the enclosed regulation. While the nature of medical services is considered one factor in determining what auxiliary aid is necessary for effective

cc: Records, Chrono, Wodatch, McDowney, Breen, Nakata, FOIA, MAF
Udd:Nakata:Congress.let:Shaw.1

01-02661

communication, the focus should be not only an the nature of the services, but also on the type of communication between the physician and the patient. Generally, interpreters are not needed for routine office visits. However, the fact that an office visit is characterized as routine does not necessarily negate the need for interpreting services. For instance, an interpreter may be required if a note pad does not facilitate effective communication between the physician and an individual who is undergoing a complete physical examination and related testing procedures.

Under section 36.301(c) of the regulation, when an interpreter or other auxiliary aid or service is necessary to ensure effective communication, the physician must absorb the cost for this aid or service. As provided in section 36.303(f), however, the physician is not required to provide any auxiliary aid that would result in an undue burden. The term "undue burden" means "significant difficulty or expense." Undue burden must be determined on a case-by-case basis in light of factors such as the nature and cost of the aid or service, and the

overall financial resources of the practice. Further discussion of the meaning and application of the term undue burden may be found in the preamble discussion of section 36.303, on pages 35567-35568.

In determining whether the provision of an interpreter would result in an undue burden, the physician should consider not only the fees paid for providing the medical service or procedure, but also the overall financial resources of the practice. The physician should consider other factors that would minimize the degree of burden on the practice, such as the ability to spread costs throughout the general clientele and the provision of tax credits for costs of providing auxiliary aids (which is available for eligible small businesses).

The Department's Technical Assistance Manual for title III (copy enclosed) at page 26, and the ADA's legislative history, as described in the regulation's preamble, at pages 35566-35567, strongly encourage consultation with persons with disabilities in order to determine which particular auxiliary aid or service will ensure effective communication. Not only will consultation ensure that equal services are provided to individuals with disabilities, it may also significantly reduce the costs of providing such auxiliary aids or services.

Dr. Rosenberg's letter also raises the issue of whether a public accommodation may charge patients requesting an interpreter a cancellation fee when the patient cancels an appointment after the physician becomes financially liable for the interpreter service. A public accommodation is not permitted to impose surcharges for auxiliary aids or services necessary for effective communication, regardless of whether those aids or

services are used or not. While we appreciate Dr. Rosenberg's desire to avoid unnecessary expense, events may arise in an individuals life that are beyond his or her control, such as illness or business emergencies. Imposing the costs of interpreter services in the event of cancellation under such circumstances places the person in need of an auxiliary aid or service at a distinct disadvantage relative to others in similar situations. Of course, the ADA would not prohibit Dr. Rosenberg from charging a standard cancellation fee for missed appointments provided that the policy of charging cancellation fees is applied uniformly to all patients.

Dr. Rosenberg's letter raises a specific question involving use of interpreters concerning a deaf patient who made an appointment and then demanded that Dr. Rosenberg's office provide

an interpreter. Clearly, the auxiliary aid provisions of the ADA (cited above) do not contemplate that a person with a disability can unilaterally decide on the appropriate type of auxiliary aid. Further discussion on this point can be found in the enclosed January 1993 update to the Department's Title III Technical Assistance Manual (copy enclosed) at page 5.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Attention: Pamela

Dear Pamela:

I am enclosing a copy of the letter that I had previously sent to you, that has been forwarded to Congressman Lewis. As I indicated to you, I do live in Representative Shaw's district and, therefore, contacted your office. I tried to follow through with your recommendation, but unfortunately, did receive somewhat of a run around as the numbers provided for the Equal Opportunity Department and from what I could ultimately determine, the responsibility for interpreting the ADA falls with the Justice Department I would, therefore, respectfully request that you pursue the three item of concern. I was also informed by a representative in the Justice Department that they would not be capable of answering the question in reference to reimbursement by Medicare or Medicaid for charges associated with hiring an interpreter. I had spoken briefly with an attorney at the Department of Justice (Bee Bee Ellen Novich) who informed me that the intent of the law was that these costs be passed on to other clients or patients. Ms. Novich seemed somewhat surprised that we could not pass these costs on to Medicare beneficiaries or individuals insured by HMO's or PPO's where these reimbursements had previously been fixed. Certainly if that was the intent of the law then it seems reasonable that Medicare should either pay, for these services or increase their reimbursements to physicians if these costs were to be absorbed by a larger group than the physicians themselves.

Thank you again your prompt reply of August 4, 1993, and I look forward to hearing from you promptly.

Sincerely,

Steve P. Rosenberg, M.D.

August 2, 1993

Congressman Clay Shaw
1512 East Broward Boulevard

Ft. Lauderdale, FL 33301

Dear Congressman Shaw:
I would appreciate your helping to clarify a matter that developed today in reference to our compliance with the Americans with Disabilities Act. I have supported the principles and concepts of the ADA, but as a result of some confusion today I realize that this is a complicated issue.

Specifically, a patient was provided an appointment who is hearing impaired and she demanded that we provide an interpreter. The legal advice that I was able to receive from the Florida Medical Association indicates that we are required to "ensure effective communication". I have been practicing for approximately fifteen years and have taken care of numerous patients with various disabilities. In the past we have never had difficulty by communicating with written notes in those individuals who are hearing impaired. The nature of the dermatology practice is such that the majority of issues are relatively straightforward and can be handled efficiently in this fashion. As there appears to be some confusion between the patient's demands and the legal advice that I had received which indicates that such notes should be acceptable unless the physician feels otherwise, I would appreciate clarification.
I would also like to point out that the cost for obtaining an interpreter have minimum charges of between $60.00-$75.00. An initial office visit is $50.00 and as you are aware, many third party payers including Medicare reimburse office visits in the $22.000-$40.00 range. This would result in a net loss per patient visit in a situation where our overhead costs are already astronomical.

I am curious whether this places an "undue burden" according to the definitions of the act.

In addition, I would like to know whether we can bill the patient for the cancellation fee that the interpreter charges should the patient fail to keep their appointment. The interpreter services indicated that if the services are not cancelled with twenty four hour notices that there is a charge and that we would be responsible for the full amount even if the patient does not show. I understand my financial responsibility to provide this service for the hearing impaired but I am also concerned that there may opportunities where patients cancel at the last minute or do not show and therefore these costs would not be associated with my actually providing an office visit.
01-02665

Page 2

Finally, I would like to know whether third party payers including

Medicare will reimburse for interpreter services and if so, more specifically how should we go about obtaining such payment from Medicare.

Your prompt help and cooperation would be appreciated. Please do not hesitate to contact me by phone should that be necessary. You may also fax information to me at 407/640-8098.

Sincerely,

Steven P. Rosenberg, M.D.

T. 10/12/93
SBO:LMS:ca
DJ XX
(b)(6)

XX (b)(6)
XX
Hutchinson correctional Facility
Hutchinson, Kansas

Dear XXX (b)(6)

This letter responds to your letter requesting our assistance on the application of title II of the Americans with Disabilities Act (ADA), 42 U.S.C. 12131-12134, to a State correctional facility's responsibilities to provide program access. In particular, you seek advice on whether title II requires that a State correctional facility provide wheelchairs to inmates with mobility impairments.

The ADA authorizes the Department of Justice to provide technical assistance to individuals who have rights under the Act. This letter provides informal guidance to assist you in understanding how the ADA applies to the questions you present. This technical assistance, however, does not constitute a determination by the Department of Justice of your or other's rights under the ADA and is not a binding determination by the Department of Justice.

A correctional facility may not deny the benefits of its programs, activities, and services to inmates with disabilities because its facilities are inaccessible. A correctional facility's services, programs, or activities, when viewed in their entirety, must be readily accessible to and usable by individuals with disabilities. This standard, known as "program accessibility," applies to all existing facilities of a correctional facility. See section 35.150 of the enclosed title II regulation issued by the Department.

A correctional facility, however, does not have to take any action that it demonstrates would result in a fundamental alteration in the nature of its program or activity or in undue financial and administrative burdens. Such considerations may.

cc: Records CRS Chrono Friedlander Stewart. XX (b)(6)3. ltr, FOIA

01-02667

include the particular needs for security and safety in the prison setting. This determination must be made by the head of the correctional facility or his or her designee and must be accompanied by a written statement of the reasons for reaching that conclusion. The determination that undue burdens would result must be based on all resources available for use in the correctional program. If an action would result in such an alteration or such burdens, the correctional facility must take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits and services of the program or activity.

With reference to your specific questions concerning the provision of wheelchairs and attendants, 35.135 of the title II regulation states the general principle that personal devices and services are not required. The preamble to the regulation, however, notes:

> A public entity is not ... required to provide attendant care, or assistance in toileting, eating, or dressing to individuals with disabilities, except in special circumstances, such as where the individual is an inmate of a custodial or correctional institution.

See enclosed preamble to title II regulation at page 35705 (emphasis added). Thus, in appropriate circumstances, it may be necessary to provide a wheelchair and/or attendant to allow an inmate to use a wheelchair. This would be based on an individualized assessment of the individual's need for such services.

I hope this information is helpful to you.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

July 6, 1993

Greetings Mr Oneglia;

I am writnig you concerning some questions about the A.D.A. I noticed in the Federal Register/ Vol. 56 No. 144 Friday, July 26, 1991/ Rules and Regulations 35705 Paragraph (b)(8) that in special circumstances, such as an individual is an inmate of a correctional institution that attendant care or assistance in toileting, eating or dressing, but it says nothing about helping a inmate with a disability in a wheel chair in going to outside recretation (yard). I would like to know the answer to this question as well as some others that I will be asking through out this letter. In this in the same Federal Register on page 35707 Section 35.135 Personal Devices and Services. I would like to know if wheelchairs for individuals with disabilities in correctional facilities fall within this section, if not then where dose it fall and what rules governs correctional facilities as far as providing wheelchairs to the disabled whom they incarcerate. Now I would like to talk alittle about the maintenance of those wheelchairs if provided to disabled inmates, what rules and regulations governs maintenance of wheelchair provided by

correctional facilities. In the same Federal Register on page

35719 Section 35.195 talks about personal devices, it states.

01-02669

that this part dose not require a pubity entity to provide to

individuals with disabilities personal devices such as wheel-

chairs. Dose this also apply to indivuals who are in custody

of a correctional instutitionals? Is there a duty owed to disabled

individuals who are incarcerated in correctioal institutionals

to be provided with adequate personal devices (wheelchairs).

I would like your help in obtaining answers to these questions,

and I also would like to have copies of any rules and regulations

concerning the questions ask. May I also request a copy of the

UNIFORM DUTIES TO DISABLED PERSONS ACT.

I would like to receive this information if possible within the

time guidelines setforth in THE FREEDOM OF INFORMATION ACT.

These question are very important to me as I am a disabled person

within the guidelines of the American With Disabilities Act.

Hutchinson, KS. XX

01-02670

T. 10/7/93

XXXX(b)(6)
Falmouth, Maine XXXX

RE: Complaint Number XX (formerly) XXX (B)(6)

Dear XX

This letter constitutes our Letter of Findings in response to your complaint filed with our office against the Town of Falmouth, Maine (Town) under title II of the Americans with Disabilities Act of 1990 (ADA). Title II of the ADA protects qualified individuals with disabilities from discrimination on the basis of disability in the services, programs, and activities of a State or local government. In your complaint you allege that the programs, services, and activities provided by the Town in the Falmouth Town Hall (Town Hall) are not accessible to individuals with mobility impairments. Specifically, you allege that the hearing rooms in which programs, such as hearings, on general assistance and tax matters, are held are located on the second floor of the Town Hall and that the second floor is not accessible to individuals with disabilities. You further allege that the Town has not taken steps to appropriately relocate the programs or to otherwise make them accessible to individuals with disabilities. In addition, you allege that the accessible parking that is provided at the Town Hall by the Town fails to meet the requirements of the ADA because there are not enough accessible spaces provided and the accessible spaces are incorrectly marked. In conducting our investigation we relied on information that you provided to us, as well as information provided to us by the Town and by the Maine Human Rights Commission, with whom you have filed a similar complaint.

Section 35.150(a) of the Department of Justice's title II

implementing regulation requires that a public entity operate each of its programs so that, when viewed in its entirety, the program is readily accessible to and usable by individuals with

cc: Records CRS Chrono Friedlander Morrow.XX closure. Lof (b)(6)

01-02671

disabilities. Section 35.150(b) lists a number of the methods that a public entity may use to make its programs accessible. These methods include reassignment of services to accessible buildings, assignment of aides to beneficiaries, home visits, and alteration of existing facilities. Structural changes in existing facilities generally are required only when there is no other feasible way to make the program accessible.

The Town acknowledges that the second floor of the Town Hall can be reached only by ascending a flight of stairs and that the second floor is inaccessible to some people with disabilities. In July of 1992 the Town received a final report from an architectural firm entitled "Accessibility and Expansion Study for the Falmouth Town Hall." The Town has since made the changes to the first floor and building entrance that were recommended for accessibility to those areas, and our information shows that the first floor is now fully accessible. Other recommendations for providing access to the second floor will be implemented and are scheduled to be completed in 1994.

Until there is an accessible route to the second floor, when people with disabilities need to access a program, service, or activity on the second floor, the Town will relocate it to the first floor. This has been done in the past when you have requested it, specifically with respect to tax abatement hearings, and when other citizens have requested it. Our information shows that this accommodation was made in an appropriate manner. Although the Town Council Chamber, the area to which hearings usually are relocated, was not available for one of your hearings, alternative space on the first floor was used. That space did not provide the amenities of the Council

Chamber, but you were provided with access to a hearing, nonetheless.

You submitted photographs of parking spaces that were designated as accessible spaces at the Town Hall. The access aisle in those pictures was located at the wrong end of the ramp. Since you submitted those photographs to us, the Town has repainted the striping at the accessible spaces to provide the correct route of access.

You also wrote that the Town did not provide enough accessible parking spaces at the Town Hall. The information that we received from the Maine Human Rights Commission shows that the number of accessible parking spaces at the Town Hall complies with the requirements of title II of the ADA.

We find that the Town has taken appropriate steps to provide access to its programs, services, and activities, including relocating them to space that it has made accessible and

providing appropriate parking. Therefore, we have determined that no violation of title II occurred.

This letter contains our determination with respect to your allegations of discrimination in your administrative complaint. If you are dissatisfied with our determination, you may file a complaint presenting your allegations of discrimination in an appropriate United States District court under title II of the ADA.

You should be aware that no one may intimidate, threaten, or coerce anyone or engage in other discriminatory conduct against anyone because he or she either has taken action or participated in an action to secure rights protected by the ADA. Any individual alleging such harassment or intimidation may file a complaint with the Department of Justice. We would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, 5 U.S.C. 522, we may be required to release this letter and other correspondence and records related to the complaint in response to a request from a third party. Should we receive such a request, we will safeguard, to the extent permitted by law, release of information that could constitute an unwarranted invasion of your or other's privacy.

If you have any questions regarding this letter, please

contact Merle Morrow at (202) 514-3571.

Sincerely,

Stewart B. Oneglia

2T. 10/21/93 OCT 27 1993

DJ 204-013-00050

James S. Curry, Esquire
McLeod, McLeod & McLeod, P.A.
Post Office Drawer 950
Apopka, Florida 32704

Dear Mr. Curry:

This responds to your letter of September 1, 1993. In your letter, you seek information on the obligations of the Circuit Court of Florida, Ninth Circuit, a public entity, to issue a notice of nondiscrimination on the basis of disability under title II of the Americans with Disabilities Act (title II).

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. It does not constitute, however, a legal interpretation and it is not binding on the Department.

The Department of Justice issued a regulation implementing the requirements of title II at 28 C.F.R. Part 35. With respect to a public entity's obligation to issue a notice of its title II obligations, the regulation states:

> A public entity shall make available to applicants, participants, beneficiaries, and other interested persons information regarding the provisions of this part and its applicability to the services, programs, or activities of the public entity, and make such information available to them in such manner as the head of the entity finds necessary to apprise such persons of the protections against discrimination assured them by the Act and this part.

cc: Records, CRS Chrono Friedlander Stewart.curry.ltr
FOIA

01-02674

28 C.F.R. 35.106. The information you enclosed with your letter reflects that the Chief Judge of the Circuit Court of Florida, Ninth Circuit, issued on April 15, 1993, a notice by court order of the obligations under title II of the ADA of that court and those who practice before that court. Thus, as required by section 35.106, the head of the public entity, the Chief Judge of the Circuit Court of Florida, Ninth Circuit, has determined through court order the manner and procedures for apprising individuals of the protections provided by the ADA.

The questions you raise concerning whether the court should "enter" its order of notice of title II's nondiscrimination requirements and the penalties that may be imposed upon individuals who fail to follow the court's order, should be addressed to the court.

We hope this information is responsive to your request.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

Honorable Janet Reno
Attorney General of the United States
Department of Justice
10th & Constitution Avenue, N.W.
Washington, D.C. 20530

Re: Americans With Disabilities Act of 1990

Dear Ms. Attorney General:

This letter comes to you in request of information concerning the notice requirements of the Americans With Disabilities Act ("ADA').

As you are aware, part of the requirements of the ADA is the inclusion of certain language within all notices of court related proceedings informing the individual who may be disabled that accommodations can be made for their attendance. Said notice is also to provide a telephone number of the court administrator through whom such accommodations are to be made.

On April 15, 1993, in the Ninth Judicial Circuit, in and for Orange County, Florida, then Chief Judge Frederick Pfeiffer entered his Administrative Order implementing said notice requirement. A copy of said order is enclosed.

We feel the notice requirement is appropriate and have complied since that date. My question to your office is two-fold. One, is there a separate requirement within the ADA mandating that Orders such as the one enclosed be entered to implement the notice requirement; and Two, what are the penalties/sanctions to be posed against a party who fails to include the notice requirement.

We have contacted the Court Administrator for the Ninth Judicial Circuit who informed us that she knew of no mandate to enter the subject Order nor penalty or sanction to be imposed for failure to include the notice requirement. We have conducted additional research into the area of penalties/sanctions for non-compliance but have not been successful in identifying those areas within the ADA. We find it difficult to believe that a mandated requirement of an act such as the ADA would not have any teeth.

01-02676

I would ask that your office direct us to the appropriate document(s) which might contain the information we seek, or, if they are readily available, to please send us copies of same. As noted above, we have reviewed those portions of the ADA available to us and do not find the mandate or any provision for

penalties/sanctions.

Should your office require any further information in responding to this request please contact us. Your valuable time and consideration in this request is greatly appreciated. Awaiting your reply, I remain,

Very Truly Yours,

James S. Curry

204-012-0049

NOV 1 1993

Mr. Lu Hoover
Planner
Borough of State College
118 South Fraser Street
State College, Pennsylvania 16801

Dear Mr. Hoover:

This is in response to your letter to the Civil Rights Division concerning compliance with the Uniform Federal Accessibility Standards (UFAS) and the Americans with Disabilities Act Accessibility Guidelines (ADAAG) under title II of the Americans with Disabilities Act of 1990 (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA may apply to you. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Currently, the Department of Justice's title II regulation gives State and local government facilities the choice of complying with either UFAS or ADAAG in new construction and alterations. The Department of Justice, along with the Architectural and Transportation Barriers compliance Board, is in the process of amending ADAAG, after which time the choice of following UFAS may be removed from the title II regulation. You are concerned that if State College modifies its facilities to comply with UFAS, as allowed under the current regulation, you may later be required to make further modifications to comply with ADAAG. You are also concerned that you may even be required to change your choice of accessibility standards in "midstream" if the title II regulation is amended while your construction project is underway.

cc: Record CRS Chrono Friedlander Milton.ufasadaa.hoo

01-02680

Under the existing title II regulation, as mentioned above, any new construction or alterations project may be undertaken using UFAS as the accessibility standard. If the title II regulation is amended to allow only ADAAG as the accessibility standard, the amendment would specify that ADAAG is the sole standard for construction and alteration commenced after the effective date of the regulation. Facilities under design on that date would be governed by that provision only if the date that bids were invited fell after the effective date of the amendment. Furthermore, the amendment would not be applied retroactively. Facilities designed, constructed, or altered in conformance with the requirements of the title II regulation prior to the effective date of the amendment would not be required to be retrofitted to conform to the new standard.

I hope this information has been helpful to you.

Sincerely,

Stewart B. Oneglia

August 4, 1993

Mr. Dan Vanchulis
Architecture and Transportation Barriers Compliance Board
1331 F Street NW., Suite 1000
Washington, D.C. 20004-1111

Dear Mr. Vanchulis:

State College Borough has completed an ADA assessment of its facilities using Uniform Federal Accessibility Standards (UFAS). We chose these guidelines because State College receives Community Development Block Grant funds from the U.S. Department of Housing and Urban Development, and we are required to comply with UFAS.

Proposed regulations for State and Local Government Facilities were issued on Monday, December 21, 1992. In those proposed regulations it was noted that the Department of Justice anticipated it would be amending its Title II regulations to adopt ADAAG as the accessibility standards for State and local government facilities after the Board supplements ADAAG.

I am concerned that if State College modifies its facilities to comply with UFAS standards, at a later date, we may be required to make changes again to comply with ADAAG. In addition, if we make modifications to comply with UFAS and during the construction the Department of Justice issues a Final Rule adopting ADAAG as the accessibility standard, we may be required to modify the plans in "midstream' to comply with ADAAG.

I would appreciate any guidance you could give in this matter. If you have any questions, please call me at (814) 234-7109.

Sincerely,

Lu Hoover

NOV 9 1993

The Honorable James L. Oberstar
Member, U.S. House of Representatives
231 Federal Building
Duluth, Minnesota 55802

Dear Congressman Oberstar:

This letter is in response to your inquiry on behalf of your constituent, XXXX(b)(7)(C) who has requested some guidance concerning the Americans with Disabilities Act ("ADA")

The ADA authorizes this Department to provide technical assistance to individuals and entities that have rights or responsibilities under the ADA. Therefore, this letter provides informal guidance to assist you in responding to XXXXXX(b)(7)(c) However, this technical assistance does not constitute a legal interpretation, and it is not binding an the Department of Justice.

XXXXX(B)(7)(C) has e pressed concern about a Federal regulation that requires persons with boats to lower appurtenances unessential to navigation when transiting drawbridges. This regulation, which was issued by the U.S. Coast Guard, prescribes general requirements relating to the use and operation of drawbridges across the navigable waters of the United States. 33 C.F.R. 117.11. XXXXXXX(b)(7)(C) believes that this regulation violates the ADA or other Federal statutes that prohibit discrimination on the basis of disability.

The ADA is not applicable to the Federal Government. However, as part of the U.S. Department of Transportation, a Federal Executive agency, the Coast Guard is subject to section 504 of the Rehabilitation Act of 1973, as amended, which prohibits discrimination on the basis of disability in the programs and activities of Executive agencies.

cc: Records; Chrono; Wodatch; McDowney; Blizard; Delaney; FOIA; MAF. \udd\blizard\control\oberstar

01-02683

In this regard, I note that XXX(b)(7)(C) letter already has been brought to the attention of the Coast Guard which has provided a response. If, as appears, he remains dissatisfied with the Coast Guard's response, he may file a complaint pursuant to the provisions of section 504 by sending a letter to the Department of Transportation at the following address: Assistant General Counsel for Regulation and Enforcement, U.S. Department of Transportation, 400 Seventh Street, S.W., Room 10424, Washington, D.C. 20590.

I hope this information is helpful in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

01-02684

Duluth, MN XXXXX

Re: 33 CFR # 117.11

June 7, 1993

Dear Congressman Oberstar:

If I may Sir, I would like to bring to your attention the above federal regulation, having to do with the Aerial Lift Bridge here in Duluth and I'm sure other bridges in the United States also.

My basic understanding of this reg. is that all non-essential navigational equipment must be lowered if at all possible to avoid unnecessary raising of the bridge(s).

What I find void in this regulation is consideration for disabled and elderly people. I personally was instructed to lower my antennas on my radar arch on May 16, 1993 in 4/5 foot swells at lakeside of the lift bridge. I am 100% disabled. I feel this request was nothing less than reckless endangerment of my craft and crew. If I may add, my radio was out and I could not inform the bridge of my

personal problem. However, radios are not required.

If I may, could I suggest that provisions be afforded in these reg. for disabled and elderly people. Our Twin Ports here have many, many disabled and elderly boaters!

To prompt honesty for identification purposes for elderly and disabled people, might I also suggest a flag, or a sticker visible, identifiable for bridge operators ..... such as I have for my car for parking purposes.

Sir, I thank you for your time and consideration in the above matter and await your response.

Sincerely,
XXXXX(b)(7)(c)

The Honorable James Oberstar
Member, United States House of Representatives
231 Federal Building
Duluth, Minnesota 55802

Dear Mr. Oberstar:

This is in reply to your letter of June 14, 1993, on behalf of XXXXXXXXXXXXXXXXXXXXXX(b)(7)(C) equested that the Coast Guard consider regulations which would exempt handicapped and elderly people from the requirement to lower appurtenances unessential to navigation when transiting drawbridges.

The Coast Guard shares X(b)(7)(C) concerns and endeavors to issue regulations which provide every citizen with the opportunity to enjoy the nation's waterways as conveniently and as safely as possible. At the same time we also must provide for the efficient and safe passage of vehicular traffic that use drawbridges. Present regulations allow for the opening of drawbridges during emergency conditions.

XXXX(b)(7)(C) suggestion, although understandable, is not practical as it would be difficult to enforce. Bridge tenders are located at such a distance that it would be difficult, if not impossible, to identify vessels with handicap designations. Additionally, the possibility of widespread abuse exists due to the drawtenders' inability to verify legitimate handicapped vessel operators when a signal for a drawbridge opening is given. The resultant unnecessary bridge openings would adversely affect highway traffic.

XXXX(b)(7)(C) suggestion is appreciated and will be kept in our files for possible use should circumstances in the future render feasible. At present XXXX(b)(7)(C) may wish to pursue appropriate modification of his vessel to enable him to lower and raise appurtenances unessential to navigation more easily.

Sincerely,

JOHN W. WHITEHOUSE
Commander, U.S. Coast Guard
Deputy Chief, Congressional Affairs Staff

01-02686

The Honorable James Oberstar XX
231 Federal Building XX
Duluth, MN 55802 Duluth, MN XX

July, 26, 1993

Re: Letter of 7-11-93
John W. Whitehouse

Dear Mr. Oberstar,

Thank you for responding to my concern, and affording copy of the letter you received from Commander Whitehouse.

However Sir, with all due respect to all parties concerned, I am of the supported position that the response from Commander Whitehouse is, as with the Federal reg. in question, lacking reasonable research and

concern for the elderly and handicapped.

In response to the letter from Commander Whitehouse, paragraph three, and I quote: "XXXX suggestion, although understandable, is not practical as it would be difficult to enforce. Bridge tenders are located at such a distance that it would be difficult, if not impossible, to identify vessels with handicap designations".....

Sir, again with all due respect ..... I checked with Supervisor Mr. Steve Douville of the Duluth Aerial Bridge, and with Mr. Dick Maron of the Grassy Point Bridge here in Duluth. Both, as suspected, carry as required equipment, binoculars. I fail to understand where "distance" could create a problem for "verifying legitimate handicapped vessel operators".

I still further fail to understand why this federal reg. failed to incorporate considerations for the handicapped and elderly? Sir, I may stand corrected, but isn't it federal law that considerations for the handicapped be of concern?

Sir, I am of the supported position that a void of handicap designation for concerned vessels will indeed create, in itself, wide spread abuse among vessel owners. With this present "void", a bridge owner must error on the side of caution, and except the word of the vessel operator that he/she is handicapped, without any means of varification.

I thank you again Mr. Oberstar, for your continued concern over this issue. Also Sir, might someone review the Americans With Disabilities Act of 1990?

Sincerely,
XX

01-02687

November 12, 1993

The Honorable Lane Evans
Member, U.S. House of Representatives
1535 47th Avenue, #5
Moline, Illinois 61265

Dear Congressman Evans:

This letter is in response to your inquiry to the Equal Employment opportunity Commission (EEOC) on behalf of your constituent, Mr. Larry Plachno, concerning his rights under the

Americans with Disabilities Act of 1990 ("ADA"). The EEOC referred your letter to us because the issues raised by Mr. Plachno are not within the jurisdiction of that agency.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation, and it is not binding on the Department.

Mr. Plachno first expresses a concern that the ADA and its implementing regulations may offer protection only for individuals who use wheelchairs, but not for other individuals with disabilities. In particular, Mr. Plachno is concerned about individuals who, like himself, have disabilities which necessitate frequent access to restroom facilities.

The ADA and the implementing regulations developed by the Department of Justice in no way limit their application to individuals who use wheelchairs. Both the statute and the regulations define the term "disability" to mean any physical or mental condition that substantially limits one or more major life activities, like walking, seeing, hearing, working, caring for oneself, or performing manual tasks. Indeed, the Department of Justice's regulation implementing title III of the ADA, the title of the ADA that prohibits discrimination on the basis of

cc: Records, Chrono, Wodatch, McDowney, Blizard, Contois, FOIA, MAF
Udd:Contois:CGL:Evans.JLB

01-02688

disability by privately owned and operated places of public accommodation, lists several examples of physical impairments, other than mobility impairments, that may be considered disabilities under the ADA, including impairments of the sense organs, or impairments of the respiratory, cardiovascular, reproductive, digestive, and genitourinary systems. In sum, the individuals Mr. Plachno is concerned about are quite probably individuals who come within the protections of the ADA, and the Department's implementing regulations.

At the same time, however, it must be noted that the ADA generally does not require either privately owned places of public accommodation, or publicly owned buildings or facilities, to provide a particular number of restroom facilities, or even to provide restrooms at all. Typically, the question of whether and how many restrooms a particular type of facility must provide for the public is an issue that is addressed by state and local building codes. The approach of the ADA is simply to require that if they are provided, restroom facilities must be accessible to all of our citizens, including all of our citizens with disabilities. Thus, if Mr. Plachno has concerns that not enough restrooms are provided by certain types of facilities, he should address those concerns to the officials or organizations responsible for the state and local building codes which govern whether particular types of facilities must provide restrooms, and how many.

Mr. Plachno next expresses his concern about the accessibility of restrooms in municipal buses and intra-city rail facilities. Under the ADA, the Department of Transportation has jurisdiction over public transit systems; accordingly, we are not able to provide guidance or assistance on this issue. Rather, Mr. Plachno should address his questions and comments to the Assistant General Counsel for Regulation and Enforcement, U.S. Department of Transportation, 400 Seventh Street, S.W., Room 10424, Washington, D.C. 20590.

Similarly, the Department of Transportation sets the passenger safety rules which prohibit use of restroom facilities on aircraft during takeoff and landing, another of Mr. Plachno's concerns. If Mr. Plachno wishes to petition the Department of Transportation for changes in those rules, he may write to them at the address in the preceding paragraph.

Finally, Mr. Plachno suggests that places of public accommodation be required to provide parking spaces for recreational vehicles, so that individuals with disabilities who

use such vehicles for mobility will have better access to places of public accommodation. Title III does not currently require places of public accommodation to provide parking for

recreational vehicles, and there are many places of public accommodation, particularly in urban or other heavily developed areas, which might have great difficulty in providing sufficient space for parking recreational vehicles.

Nonetheless, we contacted the Architectural and transportation Barriers compliance Board, the federal agency which has responsibility for drafting the ADA Accessibility Guidelines, the architectural standards governing the design and construction of new places of public accommodation and commercial facilities. Representatives of the Board indicated that they had also received a letter from Mr. Plachno, and were considering his comments. Indeed, they may have already responded to him directly.

I have enclosed for your information copies of the Department of Justice's title III implementing regulation, and the Department's Title III Technical Assistance Manual. The regulation defines the term disability and gives examples of the kinds of conditions that are covered in section 36.104 (page 35593), and the definition of the term disability is discussed at length in the preamble to the regulation (pages 35548-35550). In addition, the Technical Assistance Manual explains the coverage of the ADA on pages 8-12.

I hope this information is useful to you in responding to your constituent.

Sincerely,

Brian K. Landsberg
Acting Assistant Attorney General
Civil Rights Division

Representative Lane Evans Date: 09/10/93
1535 47th Avenue, No. 5 Page: 1
Moline, Illinois 61265

Dear Representative Evans,

I am writing to request information on when implementation procedures will be issued under the Americans with Disabilities Act (ADA) for handicapped Americans other than wheelchair users.

It is my understanding that the basic intent of the Americans with Disabilities Act was to end discrimination and to provide both access and mobility that had been denied to Americans with physical handicaps. However, all of the implementation guidelines I have seen to date appear to be directed solely towards Americans in wheelchairs. This may well be the discrimination the ADA was expected to eliminate since it ignores other Americans who are denied both access and mobility because of other physical handicaps. In particular, I refer to those Americans who have been denied both access and mobility because of a physical handicap that requires frequent access to restroom facilities.

Many Americans suffer from a physical disability that requires frequent access to restroom facilities. These physical disabilities include ulcers, a nervous stomach, enlarged prostate, plus various other kidney, bladder and internal disorders. In addition, most Americans will temporarily have a similar need from time to time because of flu, diarrhea or a stressful situation. Some of the major problem areas are as follows:

1. Public Buildings and Shopping

While most major public buildings, shopping centers and larger department stores provide public toilets, there are other areas that do not, or have inadequate signage pointing to such facilities. In particular, supermarkets are notoriously bad about providing public

toilets. One of the worst situations is a tourist or shopping area consisting primarily of smaller shops, stores or restaurants which feel that each is too small to provide public restroom facilities. For example, it is very difficult to find public restrooms in San Francisco's Chinatown and in the French Quarter in New Orleans. The downtown area in smaller communities frequently provides similar problems.

2. Public Transportation and Interstate Highways

Most rail transportation and interstate buses are equipped with adequate restroom facilities. Commercial aviation is borderline at best. Most airports provide adequate restroom facilities. However, once on board the aircraft, passengers are excluded from the restrooms for prolonged periods during takeoff and landing. In addition, there are many smaller commercial airplanes with no restrooms at all.One of the major problems in regard to access and mobility is city transit since most city buses and rapid transit cars do not have restroom facilities. While interstate buses and railroad trains have provided restroom facilities for years, the city transit people have discriminated against people who require these facilities.

01-02691

Like many people with a similar disability, I have long since given up counting the number of times I have been unable to use public municipal transportation because of the lack of restroom facilities. It should be mentioned that providing restroom facilities at rapid transit stations does not solve the problem. I once had a serious problem on the rapid transit in Miami when I was unable to locate a transit employee with a key to unlock the facilities at a station.

People with this type of disability find it difficult to use our federal interstate highway system because of inadequate restroom facilities.

The single biggest problem area I have found is a section of interstate highway that I use regularly. I enter Interstate 39 just east of Mendota, Illinois at U.S. 34. From here I drive south to Bloomington, Illinois And then east on Interstate 74 to the Indiana state line. There is no rest area located south and east-bound on this route - a driving distance of over three hours. West and northbound on this route there is one rest area just west of Danville, which still leaves a driving distance of approximately three hours without a rest area.

The next worst area I am aware of is on Interstate 30 on the east side of Dallas, Texas. Any route through Dallas (such as from or to Fort Worth or San Antonio) involving this segment of Interstate 30 may stretch out to two hours of driving without a rest area. And, the situation gets worse if you are caught in rush hour traffic getting through Dallas.

A similar situation to Dallas exists on interstate routes through many major cities because rest areas are almost never located within major cities or on city bypass routes. One location that comes particularly to mind is Interstate 75 through Atlanta since rest areas in both directions are located quite some distance from the city.

The similarity in access and mobility between the wheelchair handicapped and those who require restroom facilities should be obvious. The wheelchair people have a physical handicap that requires ramps, lifts, and elevators for access and mobility. The restroom people have a physical handicap that requires toilet facilities for access and mobility.

3. Vehicle Discrimination

One of the major problems with this type of handicap is vehicle discrimination. Because my occupation requires extensive travel, I have taken to using a converted motorcoach. In addition to having its own

toilet, it also provides me with hot liquids and a shower. It effectively serves the same purpose as a wheelchair does to a non-ambulatory person. But, like a wheelchair, it encounters problems in access and mobility.

Noteworthy is the fact that Illinois and Ohio allow automobiles to travel at 65 miles per hour on the interstates but Illinois restricts RV's to 55 miles per hour and Ohio restricts non-commercial buses to 55 miles per hour. Clearly a discrimination against private vehicles equipped with toilets.

In many places, our converted coaches and RV's have parking problems. Where wheelchairs have problems because buildings are designed for the ambulatory, we have problems because parking lots are designed for automobiles.
We need larger parking spaces plus curves and turns designed for larger vehicles
that have a larger turning radius. Unlike the wheelchair people, we do not require premium space in the front and will settle for space along the far edges of the parking lot.

Although I have not had a serious problem, there are complaints about weight restrictions and residential parking restrictions that permit automobiles but discriminate against RVs and converted coaches.

There are times when I feel that we need special license plates, just like the wheelchair people. Admittedly, it might be a little tacky to use a toilet symbol in place of the wheelchair symbol on the license
01-02692

plate, but I presume that another appropriate symbol or letter could be found.

Incidentally, I might mention that there are some organizations and companies that have already made some effort to improve this situation. For example, the Cracker Barrel restaurant chain has several locations with specific parking allocated to RV's and similar larger vehicles. Most of the Flying J service stations have special fueling islands for RV-type vehicles and even offer dump stations for our toilets.

Going back to my original request, I am very much afraid that we have been left out of the ADA. I would appreciate information on time schedules for implementation procedures for handicapped Americans other than wheelchair users.

Thank you.

Yours sincerely,

Larry Plachno

RE: Complaint Number XXXXX(b)(6) Formerly XXXXX(b)(6)

Dear Mr. XXXXXX(b)(6):

This letter is in reference to the complaint you filed with the Department of Justice, Civil Rights Division, Coordination and Review Section, alleging that the programs at the Norwood City Hall are not readily accessible to and usable by persons with mobility impairments because they are housed in an inaccessible facility.

Enclosed is a copy of the fully-executed Settlement Agreement between the Department of Justice and the City of Norwood, Ohio. The Settlement Agreement states that the City will make the programs and services provided in the City Hall accessible to persons with mobility impairments, and they will submit the architectural plans to us if structural changes are needed.

Based on the assurances in this voluntary Settlement Agreement, we have determined that the City is in compliance with title II and we are closing this case as of the date of this letter. Continued compliance is contingent upon the City's completion of the actions required by the Settlement Agreement. The coordination and Review Section will monitor the City's progress in implementing the requirements of the Settlement Agreement. If you are dissatisfied with the terms of the Settlement Agreement, you may file a private complaint in the appropriate United States District Court under title II of the

ADA. Our determination of the City's compliance is not intended, nor should it be construed, to cover any other issues regarding compliance with title II that may exist and that are not specifically addressed in the Settlement Agreement.

01-02694

You should be aware that no one may intimidate, threaten, or coerce, or engage in other discriminatory conduct against anyone because he or she has either taken action or participated in an action to secure rights protected by the ADA. Any individual alleging such harassment or intimidation may file a complaint with the Department of Justice. We would investigate such a complaint if the situation warrants.

Under the Freedom of Information Act, it may be necessary to release this document and records related to these complaints in response to a request from a third party. Should we receive such a request, we will safeguard, to the extent permitted by the Freedom of Information Act and the Privacy Act, the release of information which could constitute an unwarranted invasion of privacy.

If you have any questions concerning this letter, please feel free to call Richard Waters at (202) 307-2211.

Sincerely,

Stewart B. Oneglia

SETTLEMENT AGREEMENT BETWEEN
THE UNITED STATES OF AMERICA

AND

THE CITY OF NORWOOD, OHIO
Department of Justice Complaint Number X(b)(6)
(formerly X(b)(6))

This matter was initiated by a complaint filed under title II of the Americans with Disabilities Act (ADA), 42 U.S.C 12131-12134, with the United States Department of Justice, Civil Rights Division, Coordination and Review Section, against the City of Norwood, Ohio. The complaint alleges that the Norwood City Hall is inaccessible to individuals with mobility impairments. Pursuant to the provision of the ADA entitled "Alternative Means of Dispute Resolution," 42 U.S.C. 12212, the parties have entered into this Agreement.

The Department of Justice (Department) is authorized under 28 C.F.R. Part 35, Subpart F, to investigate fully the allegations of the complainant in this matter to determine the compliance of the city of Norwood with title II of the ADA and the Department's implementing regulation, issue findings, and, where appropriate, negotiate and secure voluntary compliance agreements. Furthermore, the Attorney General is authorized under 42 U.S.C. 12133, to bring civil action enforcing title II of the ADA should the Department fail to secure voluntary compliance pursuant to Subpart F. In consideration of the terms of this Agreement as set forth below, the Attorney General agrees to refrain from undertaking further investigation or from filing a civil suit in this matter.

The parties to the Agreement are the United States of America and the City of Norwood. The parties agree that this Agreement is not an admission of liability and should not be

construed as an admission by the City of Norwood of any liability. In the interests of securing compliance by voluntary means, the parties hereby agree as follows:

1. The City of Norwood owns and operates the City Hall located in Norwood, Ohio.

2. The ADA applies to the City of Norwood because it is a public entity as defined in 42 U.S.C. 12131.

3. Because of architectural barriers, the programs offered in the Norwood City Hall are not readily accessible to and usable by persons with mobility impairments.

4. Title II of the ADA and its implementing regulation prohibit discrimination against qualified individuals with disabilities on the basis of disability in the services, programs, or activities provided by the City of Norwood in the City Hall.

5. An individual who is mobility impaired may not be denied an equal opportunity to participate in or benefit from the Norwood City services, programs, or activities or otherwise be treated differently because of a disability that makes the City Hall inaccessible.

6. Under title II of the ADA, the services, programs, or activities provided by the City, when viewed in their entirety, must be accessible to and usable by persons with disabilities.

7. The subject of this Settlement Agreement is the development of a Compliance Plan which will provide access to the services, programs, and activities provided by the City of Norwood in the Norwood City Hall.

8. The City will develop a written Compliance Plan, including a timetable to provide access to the services, programs, and activities in the City Hall and submit the Plan for approval to the Department of Justice.

The Plan will include the following:

a. A statement as to how each program or activity conducted in the Norwood City Hall will be made accessible, including identification of structural changes, if any, that will be made;

b. If structural changes are needed:

1. An architectural drawing, or detailed description with specifications, of any proposed modifications;

2. A detailed description, including a schedule, setting out steps that the City will take, on an interim basis, to provide access to the services, programs, and activities in the City Fall for persons who are mobility impaired until corrective action has been completed; and

3. A schedule for obtaining architectural specifications, estimates, and completion of each phase of the proposed modifications, if any, to existing structures to provide access to the City Hall.

9. Alteration and construction of buildings and sites in conformance with either the Uniform Federal Accessibility Standards (UFAS) or the Americans with Disabilities Act Accessibility Guidelines (ADAAG) will be deemed to comply with the requirements of the ADA, except that where ADAAG is used, the elevator exemption in section 4.1.3 is not available to entities covered by title II.

10.xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx As of Feb. 1, 1994 xxxxxxxxxxxx, the City shall submit a copy of the final written Compliance Plan to the Department for review and approval.

11. At the end of the 90 day period following Departmental approval of the Plan, and at the end of each 90 day period thereafter, the City will submit written progress reports on its implementation of this Agreement, and the Compliance Plan developed pursuant to this Agreement, to the Department.

12. At the completion of the steps set out in the Compliance Plan approved by the Department, the City will submit a final report to the Department.

13. If at any time the City desires to modify any portion of this Agreement or the Compliance Plan because of changed conditions making performance impossible or impractical or for any other reason, it shall promptly notify the Department in

writing, setting forth the facts and circumstances thought to justify modification and the substance of the proposed modification. Until there is written agreement by the Department to the proposed modification, the proposed modification shall not take effect.

14. In the event that the city fails to comply in a timely manner with any requirement of this Agreement without obtaining sufficient advance written agreement from the Department as to a modification of the relevant terms of this Agreement or the Compliance Plan, all terms of this Agreement and the Compliance Plan shall become enforceable in an appropriate Federal court.

15. The Department may review compliance with this Agreement and the compliance Plan developed pursuant to this Agreement at any time. if it determines that this Agreement or the Compliance Plan or any requirement thereof has been violated, it may institute a civil action seeking specific performance of the provisions of this Agreement in an appropriate Federal court.

16. Failure by the Department to enforce this entire agreement, the Compliance Plan, or any provision thereof with respect to any deadline or any other provision herein shall not be construed as a waiver of the Department of Justice's right to enforce other deadlines and provisions of this Agreement or the Compliance Plan.

17. This document is a public agreement. A copy of this document or any information contained in it may be made available to any person by the city or the Department on request.

18. The effective date of this Agreement is the date of the last signature below.

19. This Agreement constitutes the entire agreement between the parties on the matters raised herein, and no other statement, promise, or agreement, either written or oral, made by either party or agents of either party, that is not contained in this written agreement, shall be enforceable. This Agreement does not purport to remedy any other potential violations of the ADA or any other Federal law. This Agreement does not affect the City's continuing responsibility to comply with all aspects of

the ADA.

For the City: For the United States:

FOR IMMEDIATE RELEASE CR
FRIDAY, NOVEMBER 19, 1993 (202) 516-2765

NORWOOD, OHIO AGREES TO MAKE CITY HALL ACCESSIBLE
UNDER DEPARTMENT OF JUSTICE SETTLEMENT

WASHINGTON, D.C. -- An Ohio community has agreed to make it easier for persons using wheelchairs to enter its city hall. The action settles a complaint filed with the Department of Justice under the Americans with Disabilities Act (ADA).

The complaint alleged that persons with mobility impairments could not enter or use the building in Norwood, Ohio. The

settlement, signed on Tuesday, requires Norwood to submit to the Department by February 1994 plans to correct the problem.

The settlement was negotiated under Title II of the ADA, which prohibits discrimination against individuals with disabilities on the basis of their disability by state and local governments.

The city of Norwood has cooperated with the Department in reaching an agreement to provide equal access to its programs for all its citizens, which is the essence of the ADA, said Acting Assistant Attorney General James P. Turner of the Civil Rights Division.

The agreement requires Norwood to:

(MORE)

01-02700

--Develop a written compliance plan that includes a timetable for providing access to the services, programs, and activities in the city hall.

--Submit architectural plans, if appropriate, to the Department for review.

--Make the agreement available to the public.

The settlement also permits the Department to petition U.S. District Court to seek specific performance if the city falls to comply with its terms.

NOV 19 1993

Mr. Thomas Mohr
President
Mohr Transit, Inc.
3311 South Harrison Street
Fort Wayne, Indiana 46807

Dear Mr. Mohr:

I am responding to your letter asking for clarification of the requirements of title III of the Americans with Disabilities Act (ADA), 42 U.S.C. 12101 et seq., and this Department's regulation implementing title III, 28 C.F.R. pt. 36. You have asked whether the ADA would require Mohr Transit, Inc. to use lift-equipped vehicles for a combined mobile restaurant and local tour vehicle.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA, and it is not binding on the Department.

Title III of the ADA prohibits discrimination on the basis of disability in any place of public accommodation that is subject to the Act. Places that serve food or drink, places of public gathering, and places of entertainment are public accommodations that are subject to title III; therefore, the mobile restaurant and sight-seeing tour that Mohr Transit plans to operate will be required to make its services accessible to people with disabilities in accordance with the full range of title III requirements, such as nondiscriminatory eligibility criteria; reasonable modifications in policies, practices, and procedures; provision of auxiliary aids; and removal of barriers in existing facilities. The ADA requires places of public accommodation to remove architectural, transportation, and communication barriers to the extent that it is readily achievable to do so; however, the Act specifies that retrofitting an existing vehicle with a hydraulic lift is not required.

cc: Records, Chrono, Wodatch, Blizard, FOIA, Friedlander
n:\udd\blizard\adaltrs\mohr

01-02704

In addition, Mohr Transit is required to comply with the applicable ADA standards for accessible design. This Department's current Standards contain no requirements that apply to the construction of an accessible vehicle; however, Mohr Transit is also subject to ADA regulations issued by the U.S. Department of Transportation, 49 C.F.R. Parts 37 and 38. These regulations establish the requirements for the purchase of accessible vehicles by private entities that provide transportation services, and they establish design and Construction standards for accessible vehicles. For further information about these regulations, you should write to:

The Office of the General Counsel
U.S. Department of Transportation
400 7th Street, S.W.
Washington, D.C. 20590

For your information, I am enclosing a copy of the Department's regulation implementing title III of the ADA and the Title III Technical Assistance Manual, which was developed to assist individuals and entities subject to the ADA to understand the requirements of title III. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief

Greetings
Initial plans are underway to offer a combination mobile restaurant and sight-seeing tour whereby participants can enjoy a three course meal while taking a 2 or 3 hour bus trip of Fort Wayne and the immediate area.

Before progressing any further I need to know what the governments' ruling (both State and Federal) would be regarding my business and the handicap.

If a chairlift is mandatory, these. consequences will follow:

1. The ridership will be reduced by one-sixth, thus losing $180 to $200 of income per trip unless there is handicap ridership, which would not be the case most of the time.

2. The chairlift itself would be an added expense.

3. The chairlift itself can never be made "noise proof" or invisible. Thus, distracting the view for other tourists and disturbing the presentation by the "rattles" a chairlift creates.

4. Another vehicle mast be purchased, since my buses do not have chairlift access doors.

Therefore, if chairlifts must be demanded for this enterprise, this business, related ministry, etc. will be forced to dissolve.

I am not opposed to serving the handicap, but prefer to provide a separate vehicle for such individuals at a later time after determining the success of the adventure.

Would appreciate a written, legal, documental ruling regarding

this request as soon as possible, since any further action is contingent upon this factor.

Yours truly,

Thomas Mohr, President/owner

NOV 19 1993

Mr. Jim Bethea
President
Slip-Free Surfaces
P.O. Box 15344
Myrtle Beach, South Carolina 29587

Dear Mr. Bethea:

This letter responds to your correspondence regarding the application of the Americans with Disabilities Act (ADA) to flooring surfaces.

The ADA authorizes the Department of Justice to provide technical assistance and information to individuals and entities who have questions about the Act or the Department's Standards for Accessible Design (Standards). This letter provides informal guidance to assist you in understanding and complying with the ADA accessibility standards. However, this technical assistance should not be viewed as legal advice or a legal opinion about your rights or responsibilities under the ADA.

The Standards, published as Appendix A to the title III rule (enclosed), require that floor surfaces be stable, firm, and slip-resistant (see section 4.5). Recommendations regarding appropriate coefficients of friction are presented in the appendix to the Standards (see section A4.5.1). The information in appendix section A4.5.1 is advisory, rather than mandatory, and is intended to give the designer/specifier an understanding of the requirements of accessible design and to allow flexibility in choosing appropriate products.

Please contact the Public Access Section any time you have questions or need information. The Department maintains a

telephone information line to provide technical assistance regarding the rights and obligations of individuals, businesses, agencies, and others covered or protected by the ADA. This technical assistance is available by calling 202-514-0301 (voice)

Jim Bethea
Slip-Free Surfaces
P.O. Box 15344
Myrtle Beach, SC 29587

Department Of Justice
Office Of The Americans With Disabilities Act
Civil Rights Division
Washington, DC 20530

Dear Sirs:

I am writing in hopes of getting some answers for some very puzzling questions concerning the ADA Title III Act. My company is in the business of applying non-skid flooring surfaces. We were under the impression that the new ADA laws were requiring all public accommodations to provide a firm, stable, and non-skid surfacing on the path of travel areas of their flooring. We also were under the impression that there were fines of up to $50,000 for persons or businesses that failed to comply with these laws.

(b)(7)(c)

I contacted XX at the University of West Virginia back in January and she confirmed that businesses must comply with this law and provide a coefficient of friction of at least .6 for level and .8 for ramp surfaces.

I was just reading a copy of "ACCESS AMERICA" (ref. pg. 9 - question #10) stating that there is no specification for a min= imum of slip-resistance. That the .6 is just a recommendation, like all others in the 4.5.1 appendix.

This is very confusing to our company. Are the businesses

required to have any certain level of coefficient of friction? Are they subject to any fines for not providing this level? If these businesses are not required to maintain the .6 level how would you know if they are in violation of not providing a stable, firm, and slip-resistant floor surface? Can you suggest any type of notification that we might use to help prompt businesses to take any of these actions?

We have been telling businesses that they should (under the ADA TITLE III ACT) provide a non-skid surface for their customers. Have we been doing wrong by suggesting this information?

The majority of the persons or businesses that we have made personal contact with, indicate that they are not interested in doing anything in regards to providing a slip-resistant flooring. We have heard comments such as (e.g. "we are not going to do anything about our floors until they make me" ---- We are going to wait and see if anything comes from these laws" ---- We are going to wait and see if they are going to enforce these laws")
01-02709

And one nursing home administrator stated ("if the ADA doesn't come around any more often than the O.S.H.A. does we probably won't ever need to anyway'). So you can see were it is very frustrating to try to get people to take or make any precautionary actions in regards to the ADA laws without some more clarifying laws or rules.

Any help that you could give us would be greatly appreciated. Look forward to hearing from you soon.

Thanks,

Jim Bethea/pres

Ms. Charlotte Halsema
Patient Representative
Indiana University Medical Center
Hospital Administration
University Hospital 1305
550 North University Boulevard
Indianapolis, Indiana 46202-5262

Dear Ms. Halsema:

This letter is in response to your letter in which you ask if there is any regulation that prevents you from metering accessible parking spaces. I apologize for the delay in our response.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This

letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the application of the statute and it is not binding on the Department.

Section 36.202(c) of the regulation issued by the Department under title III provides that, "A public accommodation shall not provide an individual or class of individuals, on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing, or other arrangements, with a good, service, facility, privilege, advantage, or accommodation that is different or separate from that provided to other individuals, unless such action is necessary to provide the individual or class of individuals with a good, service, facility, privilege, advantage, or accommodation, or other opportunity that is as effective as that provided to others." As long as the accessible parking spaces comply in number and size with the ADA requirements, there is no need to provide a separate and additional benefit of free parking for people using these spaces. You are therefore free to meter accessible parking spaces as long as nonaccessible spaces in the same area are metered as well.

NOV 19 1993

Ms. Camille Jones
Culver City Human Services Department
4153 Overland Avenue
Culver City, California 90230

Dear Ms. Jones:

This letter is in response to your inquiry regarding the

City's responsibilities under the ADA for providing accessible telephones. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights and obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal opinion or legal advice and it is not binding on the Department.

You inquire whether the ADA requires the City of Culver to replace payphones on City property with amplified models, whether coin-operated TDD's are also required, and finally, whether the City or the phone company bears the financial burden of altering or replacing equipment. You indicate that the payphones in question are either leased from the phone company by the City or placed on City property at the request of the telephone company (we presume there is no cost to the City for the latter).

Where pay phones are installed on City property, this constitutes a service provided by the City that is subject to the accessibility obligations of the ADA. In our view, it is of no significance whether the phones are placed at the City's request or the telephone company's. The City is thus responsible for any required accessibility changes. The telephone company does not have any legal obligations under title II. However, the City could require the company to install accessible phones as the condition for granting permission to locate the phones on public property and negotiate with the company as to which party shall bear this cost.

cc: Records, Chrono, Wodatch, Magagna, Breen
udd\maganga\pl\438

01-02714

You indicate that the City has selected UFAS for purposes of its transition plan. You are correct that UFAS does not require the installation of coin-operated TDD'S. However, as noted in regard to the amplification equipment, the City could, in its

Negotiations with the telephone company, require TDD installations.

I hope this information is useful to you.

Sincerely,

John L. Wodatch

CERTIFIED MAIL RETURN RECEIPT REQUESTED

The Honorable Dale Lynch
County Judge
Van Buren County Courthouse
Clinton, Arkansas 72031

Re: Van Buren County, Arkansas - Department of Justice
Number XX

Dear Judge Lynch:

This letter constitutes our Letter of Findings under title II of the Americans with Disabilities Act (ADA) in the above-referenced matter. Title II prohibits discrimination against qualified individuals with disabilities on the basis of their disabilities in the services, programs, or activities of a local government, such as Van Buren County. Our office enforces title II's requirements, as applied to the county's services and programs, through investigation, negotiation, issuance of Letters of Findings, and, if necessary, referral for possible litigation.

Summary of Facts

In a letter dated October 13, 1992, we advised you that we had received a complaint alleging that the courtroom facilities located in the Van Buren County Courthouse are inaccessible to individuals with disabilities -- particularly those with mobility impairments. We requested that you provide us specific information to resolve the merits of the complaint by November 13, 1992.

After repeated delays, Ralph J. Blagg, counsel for the county, provided the requested information by a letter dated June 7, 1993. Subsequently, we obtained additional information during a telephone conversation between Louis M. Stewart of this office and Mr. Ron Bennett, the county's ADA Coordinator, on June 21, 1993. Based on our inquiry, we find as follows.

01-02716

The Van Buren County Courthouse is inaccessible to individuals with mobility impairments. To enter the first floor of the courthouse, an individual must climb a flight of stairs. The courtroom facilities are located on the second floor of the courthouse which also is reached by climbing a flight of stairs.

With respect to the inaccessible courtroom facilities located in the courthouse, we were advised by Mr. Blagg that:

> The Van Buren County Law Library is available for use as a courtroom when an individual with physical disabilities desires to attend a proceeding. A sign identifying the library as the 'Van Buren County Auxiliary Courtroom' has been painted on the window in 5" gold letters .... Court proceedings are relocated to this site less than one city block away anytime the need arises.

According to information provided by Mr. Blagg and Mr. Bennett, however, there is no written policy for relocating court proceedings to the "auxiliary" courtroom, and such policy as exists has never been published by the county or disseminated to the public. Rather, we understand that information on the availability of the Van Buren County Law Library as an auxiliary courtroom is simply conveyed by the Court and lawyers for parties who are mobility impaired.

In addition to the courtroom facilities, the offices of the county judge, county clerk, and county treasurer are also located on the first floor of the county courthouse. Thus, the services and activities of these offices are also inaccessible. Moreover, no information was forthcoming that would indicate that consideration has been given to or policies developed for providing alternative access to the services and benefits provided by these offices to individuals with mobility impairments.

Finally, with regard to the county's overall title II compliance efforts, we note that even though Mr. Bennett was appointed the ADA Coordinator approximately 1 1/2 years ago, that information was never disseminated to the public. Nor does it appear that the county has ever conducted a self-evaluation of its policies to determine whether they comport with the requirements of title II as contained in the title II regulation. In addition, the county has never issued a notification of its obligation to comply with title II. Moreover, the county has never adopted a grievance procedure for title II complaints or

developed a transition plan, even though it employs more than fifty employees.

Applicable Legal Standards
and Legal Conclusions of Compliance Status

Coverage by Title II

Van Buren County is a public entity. As such, it is required to comply with title II of the ADA and the Department of Justice's title II regulation. 42 U.S.C. 12131; 28 C.F.R. Part 35.

Program Access to Courtroom Facilities and other Services Located in the Courthouse

The county may not deny the benefits of or participation in its courtroom facilities or other programs to individuals with disabilities because the courthouse is inaccessible. Each of Van Buren County's services, programs, or activities, when viewed in its entirety, must be readily accessible to and usable by individuals with disabilities. This standard, known as "program accessibility," applies to all programs, services, and activities offered by Van Buren County as of January 26, 1992, the effective date of title II. See 28 C.F.R. 35.150(a) & (b).

The county does not have to take an action that it can demonstrate would result in a fundamental alteration in the nature of its program or activity or in undue financial and administrative burdens. 28 C.F.R. 150(a)(3). However, a specific determination to that effect must be made by the head of the county government or his or her designee and must include a written statement of the reasons for reaching the conclusion. The determination that undue burdens would result must be based on all resources available for use in a particular program or activity. If an action would result in such an alteration or such burdens, the county must take other alternative actions that would not result in such an alteration or such burdens but would nevertheless guarantee that individuals with disabilities receive the benefits of its programs and activities.

The county may achieve program accessibility by a number of methods and need not necessarily make each of its existing facilities accessible. In many situations, providing access to facilities through structural methods, such as alteration of existing facilities and acquisition or construction of additional

facilities may be the most efficient method of providing program accessibility. As alternatives to structural changes, however, the county may achieve program accessibility by such nonstructural methods as acquisition or redesign of equipment, assignment of aides to beneficiaries, and provision of services at alternative accessible sites.

For example, if the courtroom facilities in the courthouse are inaccessible as a result of physical barriers that prevent access to qualified individuals with disabilities (e.g., visitors, witnesses, jurors, attorneys, parties to litigation, etc.), the county could develop a written policy that provides for the relocation to a site that is accessible, when an individual with a mobility impairment desires to attend a proceeding.

Although the county appears to have taken some steps in that direction here by designating its Law Library as an auxiliary courtroom facility, it has never notified the public of this fact or published procedures so that individuals may request that court proceedings be relocated. In addition, it appears that the unpublished policy is limited to actual participants in a court hearing. Title II, however, is applicable to other individuals including visitors and potential jurors. In addition, the county has not addressed the other services and activities located in the courthouse to insure that procedures are implemented that provide for access to them.

While we are mindful of Mr. Bennett's representation during his conversation on June 21, 1993, that the county was unable to make the structural changes necessary to comply with title II of the ADA due to its limited budget, this statement alone is not sufficient to demonstrate undue financial burdens. Moreover, the county has provided no indication that it has considered other less costly alternatives.

For these reasons, we determine that the county has failed to provide program access to the programs and services located in its courthouse and is in noncompliance with title II as implemented by 28 C.F.R. 35.150(a) & (b).

Self-Evaluation

With respect to the completion of a self-evaluation, 28 C.F.R. 35.105(a) states that "(a) public entity shall ...

(by January 26, 1993] evaluate its current services, policies, and practices, and the effects thereof, that do not or may not meet the requirements of this part and, to the extent modification of any such services, policies, and practices is required, the public entity shall proceed to make the necessary modifications." In performing the self-evaluation, the county " ... shall provide an opportunity to interested persons, including individuals with disabilities or organizations representing individuals with disabilities, to participate in the self-evaluation process by submitting comments." 28 C.F.R. 35.105(b)

The county has failed to do a self-evaluation and, therefore, is in noncompliance with title II as implemented by 28 C.F.R. 35.105.

Notification to the Public

The county must give information on title II's requirements to applicants, participants, beneficiaries, and other interested persons. The notice should explain title II's applicability to the county's services, programs, or activities. The county shall provide such information as the head of the county determines to be necessary to apprise individuals of title II's prohibitions against discrimination. See 28 C.F.R. 35.106.

The county has failed to provide the required notification and, therefore, is in noncompliance with title II as implemented by 28 C.F.R. 35.106.

Designation of Responsible Employee and Grievance Procedure

Because the county employs 50 or more persons, it is required to designate at least one employee to coordinate its efforts to comply with and fulfill its responsibilities under title II, including the investigation of complaints. The county should publish the name, office address, and telephone number of the designated employee. In addition, the county must adopt and publish grievance procedures providing for prompt and equitable resolution of complaints alleging any action that would be prohibited by title II. See 28 C.F.R. l07.

Although the county did appoint an ADA Coordinator, it has never published the fact of this appointment so that interested individuals might avail themselves of the services of the coordinator with regard to the ADA. Moreover, the county has failed to adopt grievance procedures and, therefore, is in noncompliance with title II as implemented by 28 C.F.R. 35.107.

Transition Plan

Where structural modifications are required to achieve program accessibility, a public entity with 50 or more employees must have done a transition plan by July 26, 1992, that provides for the removal of these barriers. Any structural modifications must be completed as expeditiously as possible, but, in any event, by July 26, 1995. See 35.150(d).

The county has not made the necessary determinations or :devised the transition plan required to make any or all of its programs accessible. Therefore, it is in noncompliance with title II as implemented by 28 C.F.R. 35.150(d).

01-02720

Conclusion

In view of the foregoing, we conclude that the county is not in compliance with title II in the areas reviewed above and that the informal attempts already made by the county have been ineffective in correcting these violations.

Because we find the county in noncompliance, we must "[i]nitiate negotiations with ... [the county] to secure compliance by voluntary means." 28 C.F.R. 35.173(a)(2). To remedy these violations, please submit to this office, within 10 days of your receipt of this letter, a plan of action addressing each area identified. If we are unable to obtain voluntary compliance, this matter may be referred for litigation. 28 C.F.R. 35.174.

If you have any questions concerning this letter, please contact Louis M. Stewart at (202) 616-7779.

Sincerely,

Stewart B. Oneglia

Coordination and Review Section
Civil Rights Division

The Honorable Nick Smith NOV 23
Member, U.S. House of Representatives
121 S. Cochran Avenue
Charlotte, Michigan 48813

Dear Congressman Smith:

This letter is in response to your inquiry on behalf of your constituent, XX (b)(7)(c) alleging that an airline policy regarding the use of oxygen on commercial airline flights discriminates against individuals with disabilities in violation of the Americans with Disabilities Act (ADA).

Airlines are not subject to the ADA; however, they are subject to the Air Carrier Access Act of 1986, which prohibits discriminatory treatment of people with disabilities when travelling by air. The Air Carrier Access Act is enforced by the U.S. Department of Transportation.

(b)(7)(c) XX complaint also concerns the requirements of a regulation published by the Federal Aviation Administration. Therefore, it may be subject to section 504 of the Rehabilitation Act of 1973 and the Department of Transportation regulation implementing section 504.

(b)(7)(c)

Because the issues raised by XX complaint are not within the jurisdiction of the Department of Justice, we have

referred his complaint to the Department of Transportation for appropriate action. I have enclosed a copy of the referral.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

RE: XX (b)(7)(c)

Lansing, Michigan XX

Dear Mr. Reinehardt:

Enclosed please find a copy of a letter from XX (b)(7)(c) to your Civil Rights Division regarding the use of oxygen on commercial flights.

As you can see, XX (b)(7)(c) feels that his wife as well as thousands of other people dependent on oxygen, are being discriminated

against. He feels the airline's actions are in violation of the American Disability Act ("ADA") .

I would appreciate it if you or a member of your staff could review XX (b)(7)(c) concerns and advise him as well as my office as to the Department of Justice's position in the matter and what recourse XX (b)(7)(c) might have available.

Thank you for your attention to this matter. If you have any questions or need any additional information, please feel free to contact my Charlotte district office at (517) 543-0055.

01-02723
(handwritten)

Aug 28, 1993

Mr. Donald Walker
U.S. Dept. of Justice
Civil Rights Division
10th + Pennsylvania, N.W.
Washington, D.C. 20530

It has been suggested to us (by U.S. Senator Carl Levin) that we contact your office regarding the use of oxygen on commercial flights and while in terminals awaiting connecting flights. Oxygen provided by airlines adds a cost of $50 - $75 per flight segment, and does not permit use while in terminals or when flying on air link (commuter lines.

We feel that as handicapped persons that our rights to travel are being severely curtailed. We are aware that F.A.A. (D.O.J.) Regulations 121.574 states "A certificate holder" may allow a passenger to carry and operate equipment etc.

Part 7 (b) is no longer relevant, smoking on domestic flights is banned. As for sec. a, our suppliers are certificate holders and maintain equipment under regulations and can supply us with the type of equipment to fit under a seat in even the Air Ling (Commuter) air craft.

As the regulation now stands, those of us who need or have spouses that need oxygen are definitely being discriminated against for being handicapped.

Public Law 101-336, July 26, 1990. Sec 2 (b) purpose
1. to provide a clear and comprehensive mandate for the elimination of discrimination against individuals with disabilities.

We request correction of this discriminatory action by the F.A.A.

c.c. Sen. Carl Levin

01-02724

Further Public Law 101-336 July 26, 1990, Section 2. Findings Purposes

a. Findings
(3) discrimination against individuals with disabilities persists in such critical areas as employment housing, public accommodations, education, trans portation, communications, recreation, institutional ization, health services, voting and access to public services.

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discrimination effects of architectural, transportation, and communication

barriers, overprotective rules and policies, failures, to make modifications to existing facilities and practice exclusionary qualification standards and criteria, segregation and relegation to lesser services, program activities, benefits, jobs, or other opportunities.

b. Purpose - it is the clear purpose of this act-

(1) to provide a clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities

(3) to ensure that the Federal Government play a central role in enforcing the standards established in this act on behalf of individuals with disabilities and

(4) to involve the sweep of congressional authority, indic ing the power to enforce the fourteenth amendment and to regulate commerce in order to address the major areas of discrimination faced day to day by people with disabilities.

It is also discriminatory to charge $50 - $75 per segment and not allow the patient to return the oxygen during a layover. How are we to get to a destination where commuter lines are the final segment?

c.c. Senator Carl Levin

01-02725

We have been denied the ability to fly to visit our children. This is due to F.A.A. regulation 121.574 which allows airlines to establish rules by which persons needing oxygen may use this form of transportation.

First, we are denied access to any commuter flights. The claim by these lines are that oxygen tanks will not fit under the seat. This means we must find other means of travel to complete a Trip.

Secondly, we will be charged $50 - $75 by the
on the airline) per segment; the (ILLEGIBLE)
the cost of the ticket. When awaiting a connection
flight we would not retain the oxygen at the
terminal and have to pay again to h(ILLEGIBLE)
brought to us. These costs could add $300 - $500 to the
cost of our trip.

Third, the airlines under F.A.A. regulations
will not allow us to use the oxygen we (ILLEGIBLE)
day as route to survive. Tests of buoyancy can be
conducted as security. Smoking on domestic (ILLEGIBLE)
that as possible
hazard.

We therefore are being discriminated against
And as a . The ADA
The discrimination of handicapped

We are looking to our government for a redress
Of grievance by forulation of a (ILLEGIBLE)
The handicapped (ILLEGIBLE)

c.c. Sen. Carl Levin
XX (b)(7)(c)
01-02726

NOV 23 1993

The Honorable Dennis DeConcini
United States Senate
328 Hart Senate Office Building
Washington, D.C. 20510

Dear Senator DeConcini:

This letter is in response to your inquiry an behalf of your constituent, John McGuire, regarding interior signage in buildings under the Americans with Disabilities Act (ADA).

Title III of the ADA applies to public accommodations and commercial facilities. Title III has different technical requirements for various types of building signs. These requirements are set forth in the ADA Standards for Accessible Design at 4.30. These Standards were adopted as Appendix A to the title III implementing regulation. A copy of the regulation and Appendix are enclosed. The technical requirements for signage are also discussed in the enclosed Title III Technical Assistance Manual, p. 59.

Signage meeting the technical requirements set forth in the Standards is required in all newly constructed buildings, if first occupancy is after January 26, 1993. See 36.401 of the regulation and 4.1.3(16) of the Standards. In addition, each element of a building that is altered must conform to the standards where technically feasible if the alteration was commenced after January 26, 1992. See 36.402 of the regulation and 4.1.6 of the Standards.

For existing buildings not undergoing alterations, public accommodations (but not commercial facilities) have an obligation to remove architectural barriers to access and communication barriers that are structural in nature where it is readily achievable to do so. See 36.304 of the regulation. Replacing non-conforming signage with new signage that complies with the ADA technical standards may be readily achievable in some circumstances.

cc: Records; Chrono; Wodatch; McDowney; Magagna; Johansen; FOIA;
MAF. \udd\johansen\deconcin.ltr

01-02727

The ADA authorizes private individuals and the Attorney General to file lawsuits to enforce title III. In private suits,

if the court finds a violation it may order injunctive relief to make the necessary architectural changes to bring a building into compliance and may award the prevailing plaintiff costs and attorney's fees. In suits brought by the Attorney General, if the court finds a violation it may order similar injunctive relief and may also award compensatory damages to individuals aggrieved by the violation and civil penalties of up to $50,000 for the first violation and $100,000 for subsequent violations.

We hope this information will assist you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

NOV 23 1993

The Honorable Daniel P. Moynihan
United States Senate
464 Russell Senate Office Building
Washington, D.C. 20510

Dear Senator Moynihan:

This letter responds to your inquiry on behalf of your constituent, Edward M. McNally, concerning the regulatory requirements of the Americans with Disabilities Act (ADA) for soap dispensers for use in public washrooms.

Mr. McNally is concerned because he has been told by one of his distributors that the soap dispenser he manufactures does not comply with ADA requirements. The Standards for Accessible Design establish requirements for elements and features required to be accessible in new and altered buildings and facilities. The standards are included as Appendix A to the title III rule, a copy of which is enclosed. Section 4.22.7 (page 35653) requires that one dispenser, if dispensers are provided, in an accessible toilet room must comply with 4.27. Section 4.27.4 (page 35658) stipulates that controls and operating mechanisms shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. Looking at the illustrations of the soap dispenser provided by Mr. McNally, it appears that the operation of the crank or button may indeed require pinching and, perhaps, turning of the wrist. If such is the case, this soap dispenser would not be considered suitable for use as the required accessible dispenser in a toilet room. However, in no way would this limit the use of the soap dispenser at lavatories other than the one required to be accessible.

Please encourage your constituents to contact the Public Access Section any time they have questions or need information. The Department maintains a telephone information line to provide technical assistance regarding the rights and obligations of

cc: Records; Chrono; Wodatch; McDowney; Harland; FOIA; MAF.

July 22, 1993

Senator Patrick Moynihan
Room 464
Russell Senate office Bldg.
Washington, D. C. 20510

Dear Senator Moynihan:

As the owner of a small business consisting of the assembly and sale of a soap dispenser for use in public washrooms, I wish to call to your attention the disastrous effect of the Americans With Disability Act (ADA) on my company, which, incidentally, has been in business for sixty-one years in New York State.

Recently one of my distributors informed me that our soap dispensers, described in the enclosed brochure, does not meet the requirements set forth in Title III of the ADA, according to the purchasing officials of several school districts in his state.

Evidently the bureaucrats who drew up these specifications in Title III of the ADA were unfamiliar with our soap dispenser or simply preferred the products of our competitors. In that approximately 75% of our installations are in public school systems throughout the U.S., our inability to meet the specifications of the ADA will mean the termination of our business.

Ironically, over the years our soap dispenser has been preferred by schools because it has proven superior to other soap dispensing systems when it comes to performance and economy--two extremely important factors in these critical times.

It is hard for me to understand how a regulation like this was passed by Congress and signed by the President of the United States. Obviously the resulting hardships to small businesses like mine were not given a great deal of consideration.

Certainly the handicapped deserve our compassion and cooperation. However, in order to improve their way of life is it necessary or advisable to bring about the demise of a small company like mine?

Respectfully,
VOORHIS TIEBOUT CO., INC.

The Honorable Jon Lindgren
Mayor
City of Fargo
City Hall, 200 North 3rd Street
Fargo, North Dakota 58102

Re: Department of Justice Complaint Number XX (b)(6)

Dear Mayor Lindgren:

Enclosed is a copy of the executed settlement agreement between the government of the City of Fargo, North Dakota, the FARGODOME, and the Department of Justice. As you know, this settlement resolves a complaint with our office alleging that the City of Fargo and the FARGODOME. are in noncompliance with the requirements of title II of the Americans with Disabilities Act (ADA).

The complainant alleged that the FARGODOME, a sports stadium and general entertainment facility, owned and operated by the City of Fargo, North Dakota, had failed to adopt a ticket pricing policy providing for equivalent prices for tickets to events for individuals with disabilities requiring special seating as

compared to others who attend such events. In addition, the complainant asserted that the city had failed to appoint an ADA coordinator for its sports facility, did not have a grievance procedure, and had not conducted a self-evaluation of the facility's policies and practices to determine whether they comport with the requirements of the ADA. Under paragraph 21 of the agreement, the agreement is effective on the date of my signature.

Reporting Requirements Under the Settlement

Under the paragraph 16 of the settlement, the following actions (as set forth in paragraphs 8 to 15 of the agreement) shall be taken by city of Fargo and the FARGODOME:

Within 30 days of the execution of this agreement, the City shall provide the Coordination and Review Section, Civil Rights Division, the following documentation:

A. A copy of its self-evaluation that addresses the policies and practices of the FARGODOME as required by 28 C.F.R. 35.l05;

B. A copy of its published grievance procedures for resolving ADA grievances involving the FARGODOME which comply with the requirements of 28 C.F.R. 107(b);

C. The name, address, and telephone number of its ADA Coordinator responsible for the programs, services, and activities of the FARGODOME as required by 28 C.F.R. 107(a); and,

D. A copy of the final written ticketing policy.

Within 30 days of our receipt of this documentation, we shall evaluate these documents for compliance with the agreement and the Department's title II regulation. We shall report our

determination to you. Thereafter, if we find that the actions taken by the city comply with the agreement, the city is required to provide the notices contained in paragraph 18.

Please address any future correspondence to me at P.O. Box 66118, Washington, D.C. 20035-6118. In future correspondence to the Coordination and Review section, please reference the Department of Justice Complaint Number stated above. Should you have any questions concerning this letter, call Louis M. Stewart at (202) 616-7779.

Sincerely

Stewart B. Oneglia

Re: Department of Justice Complaint Number XX

Dear Mr. XX

Enclosed is a copy of the executed settlement agreement between the government of the City of Fargo, North Dakota, the FARGODOME, and the Department of Justice. This settlement resolves your complaint with our office alleging that the City of Fargo and the FARGODOME are in noncompliance with title II of the Americans with Disabilities Act (ADA).

Specifically, you alleged that the FARGODGME, a sports

stadium and general entertainment facility, owned and operated by the City of Fargo, North Dakota, had failed to adopt a ticket pricing policy providing for equivalent prices for tickets to events for individuals with disabilities requiring special seating as compared to others who attend such events. In addition, you asserted that the city had failed to appoint an ADA coordinator for its sports facility, did not have a grievance procedure, and had not conducted a self-evaluation of the facility's policies and practices to determine whether they comported with the requirements of the ADA.

Under the terms of the settlement, city and FARGODOME officials agreed to adopt a formal ticket pricing policy that provides for equivalent tickets prices for individuals with disabilities needing special seating to attend events in the facility as compared to the prices charged to others. The city agreed to publicize its new policy through dissemination of notices to the public and local newspapers. The city also agreed to appoint an ADA coordinator for the FARGODOME, develop grievance procedures, and conduct a self-evaluation.

By this letter, we are closing the investigation of your complaint. We will be monitoring, however, the compliance by the city and the FARGODOME with this agreement. We appreciate your cooperation in the course of our investigation,

If you have any questions, please contact Louis M. Stewart of this office at (202) 616-7779. Please reference the complaint number cited above in all future correspondence or contact with this office.

Sincerely

Stewart B. Oneglia
Chief

DEPARTMENT OF JUSTICE

FOR IMMEDIATE RELEASE CR
WEDNESDAY, NOVEMBER 24, 1993 (202) 616-2765

FARGODOME WILL END DISCRIMINATORY TICKET PRICING FOR PERSONS WITH DISABILITIES UNDER DEPARTMENT OF JUSTICE SETTLEMENT

WASHINGTON, D.C. -- The Fargodome in Fargo, North Dakota, agreed today to charge persons with disabilities ticket prices equivalent to those it charges others attending sport and

entertainment events in the stadium. The settlement resolves a complaint filed with the Department of Justice under the Americans with Disabilities Act (ADA), a 1990 law prohibiting discrimination against individuals with disabilities.

The complaint alleged that the Fargodome, the city's sports stadium and general entertainment facility, had a ticket pricing policy that resulted in persons with disabilities who required special seating paying more for seats than others who attend such events. Today's agreement, reached through informal negotiations, establishes a formal policy providing for equivalent pricing.

"The Department of Justice remains committed to the enforcement of the ADA," said Acting Assistant Attorney General for the Civil Rights Division James P. Turner. We encourage

(MORE)

other sport and entertainment complexes to review their pricing policies to ensure compliance with the law."

In addition to adopting a new price policy for tickets, the Fargodome will appoint an ADA coordinator, develop a grievance procedure, conduct a self-evaluation of its practices, and

publicize its new policy in local papers.

The agreement also permits the Department to petition U.S. District Court to seek specific performance if the city fails to comply with the terms of today's agreement.

93-369

01-02738

SETTLEMENT AGREEMENT

between

THE UNITED STATES OF AMERICA

and

THE CITY OF FARGO, NORTH DAKOTA

and

FARGO DOME AUTHORITY

DEPARTMENT OF JUSTICE COMPLAINT NUMBER XX

This matter was initiated by a complaint filed in March, 1993, under Title II of the Americans with Disabilities Act (ADA) , 42 U.S.C. 12131-12134, with the United States Department of Justice, Civil Rights Division, Coordination and Review section, against the city of Fargo, North Dakota (the City) . The complaint alleged that the ticketing pricing policies of the City's FARGODOME discriminate against individuals with disabilities who require special seating to attend events in the FARGODOME. In addition, the complaint asserted that no self-evaluation had been done on the FARGODOME. Pursuant to the provision of the ADA entitled "Alternative Means of Dispute Resolution," 42 U.S.C. 12212, the parties have entered into this agreement.

The parties to this agreement are the United States of America, the City of Fargo, North Dakota, a municipal corporation, (hereinafter referred to as "City") and the Fargo Dome Authority, a body created pursuant to Article III(P) of the Fargo Home Rule Charter (hereinafter referred to as "Authority" or "FARGODOME").

01-02739

In order to avoid the burdens and expenses of an investigation and possible litigation, the parties hereby agree as follows:

1. The ADA applies to the City and the Authority because

they are public entities as defined in 42 U.S.C. 12131.

2. The City owns and the Authority operates a general use facility named the FARGODOME.

3. Title II of the ADA prohibits discrimination against qualified individuals with disabilities on the basis of disability, in the services, programs, or activities of a public entity such as the City and Authority including the ticketing pricing policies for events at the FARGODOME.

4. The City and Authority may not deny or limit the benefits of or participation of individuals with disabilities in the events held at FARGODOME based on the FARGODOME's ticket pricing policies.

5. At the time the complaint in this matter was filed, the FARGODOME had not formally adopted and publicly published any policies relating to special ticket pricing for seats at events designated for individuals needing special seating because of their mobility or other impairments.

6. At the time the complaint in this matter was filed, the City and Authority had not done a self-evaluation plan addressing the services, policies, and practices as required by the Department's Title II regulation at 28 C.F.R. 35.105; written and published a grievance procedure applicable to the programs, services, and activities of the FARGODOME as required by 28 C.F.R. 35.107(b); or, designated an employee with responsibility to

coordinate its compliance with the requirements of the ADA at the FARGODOME as required by 28 C.F.R. 35.107(a).

7. The subjects of this settlement agreement include the development of a plan which will provide equivalent ticket prices to those individuals with disabilities needing special seating who wish to attend particular programs and activities held in the FARGODOME. In addition, this settlement agreement requires the completion of a self-evaluation of the policies and practices of the FARGODOME to ensure non-discriminatory treatment of individuals with disabilities, the development of a grievance procedure for the FARGODOME, and the selection of an ADA coordinator for the FARGODOME.

8. The City and Authority shall issue to the public a formal written policy on the ticket pricing policy at the FARGODOME for special seating for individuals with mobility impairments or others who have limited mobility.

9. This policy shall ensure that an equivalent range of ticket prices is offered to individuals with disabilities requiring special seating as the prices for those not requiring such seating.

10. The policy shall state that where the only seating available to individuals with disabilities needing special seating is located in the areas with higher priced tickets, the FARGODOME shall adjust the ticket prices for the event to ensure that individuals with disabilities who need special seating are not

required to pay higher prices for tickets.

01-02741

11. copies of the written policy shall be provided to members of the public upon request and shall be prominently displayed on all bulletin boards in the FARGODOME.

12. The City and Authority shall issue instructions concerning this policy to employees of the FARGODOME or other individuals responsible for selling tickets to the public.

13. The City and Authority shall adopt reasonable methods to ensure that this policy is disseminated to the general public on a continuing basis.

14. The city and Authority shall ensure that a copy of this policy is included in all the informational packages or promotional materials provided to prospective and actual lessees of Dome facilities.

15. The City and Authority shall incorporate into the contracts of all lessees using the FARGODOME for public events a clause containing the requirements of its ticket pricing policies.

16. Within 30 days of the execution of this agreement, the City and Authority shall provide the Coordination and Review Section, Civil Rights Division, the following documentation:

A. A copy of its self-evaluation that addresses the policies and practices of the FARGODOME as required by 28 C.F.R. 35.105;

B. A copy of its published grievance procedures for resolving ADA grievances involving the FARGODOME that comply with the requirements of 28 C.F.R 107 (b) ;

c . The name, address, and telephone number of its ADA

Coordinator responsible for the programs, services, and activities of the FARGODOME as required by 28 C.F.R. 107(a); and,

D. A copy of the final written ticketing policy.

17. The Department shall review these documents for compliance with this agreement and the Department's Title II regulation within 30 days of its receipt of the documentation.

18. within thirty (30) days of Departmental approval of the written policy and other written submissions required by this agreement, the written policy shall be published on two separate occasions in a newspaper of general circulation serving Fargo, North Dakota. In addition to including the written policy, the notice shall state that "Pursuant to the requirements of Title II of the Americans with Disabilities Act, the FARGCDOME will not discriminate against qualified individuals with disabilities on the basis of disability, in the FARGODOME's services, programs, or activities."

19. The Department may review compliance with this agreement at any time.

20. This document is a public agreement. A copy of this document or any information contained in it may be made available to any person by the city, Authority or the Department on request.

21. The effective date of this agreement is the date of the last signature below.

22. The Department of Justice is authorized under 28 C.F.R.

Part 35, Subpart F, to investigate fully the allegations of the complaint in this matter to determine the compliance of the City with Title II of the ADA and the Department's implementing Title II regulation, issue findings, and, where appropriate, negotiate and secure voluntary compliance agreements. Furthermore, the Attorney

General is authorized under 42 U.S.C. 12133, to bring a civil Action enforcing Title II of the ADA should the Department of Justice fail to secure voluntary compliance pursuant to Subpart F. In consideration of the term of this agreement as set forth above, the Attorney General agrees to refrain from undertaking further investigation or from filing civil suit in this matter.

23. The Department of Justice may review compliance with this agreement at any time. If it determines that this agreement or any requirement thereof has been violated, it may institute a civil action seeking specific performance of the provisions of this agreement in an appropriate federal court.

24. The Department of Justice's failure to enforce this entire agreement or any provision of thereof with respect to any deadline of any other provision herein shall not be construed as a waiver of the Department of Justice's right to enforce other deadlines and provisions of this agreement.

25. In the event that the City or Authority fails to comply in a timely manner with any requirement of this agreement without obtaining sufficient advance written agreement with the Department

of Justice as a temporary modification of the relevant terms of this agreement, all terms of this agreement shall become enforceable in an appropriate federal court.

26. This agreement constitutes the entire agreement between the parties on the matters raised herein, and no other statement, promise, or agreement, either written or oral, made by either party or agents of either party, that is not contained in this written

agreement, shall be enforceable. This agreement does not purport to remedy any other potential violations of the Americans with Disabilities Act or any other federal law. This agreement does not affect the City's and Authority's continuing responsibility to comply with all aspects of the Americans with Disabilities Act.

DATED this 8th day of November, 1993.

NOV 24 1993

Elaine B. Feingold, Co-director
Clinical Legal Education Program
Disability Rights Education and Defense
Fund, Inc.
2212 Sixth Street
Berkeley, California 94710

Dear Ms. Feingold:

This letter is in response to your November 22, 1993, inquiry regarding the scope of the "association" provision of title III of the Americans with Disabilities Act.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to you in understanding the ADA's requirements.

However, it does not constitute a legal interpretation, and it is not binding on the Department.

You describe a situation in which an individual with a disability, A, attempts to rent a car to take a vacation with her two friends, B and C. A intends for one of her two friends, B, to drive because she cannot. However, B has a disability that requires the use of hand controls. The rental car company refuses to make available a vehicle with hand controls. It also refuses to rent to A, because it will only rent a vehicle when the intended driver has a valid credit card, which B does not.

Your question is whether C, who does not have a disability, has an ADA cause of action under 42 U.S. C. 12182 (b) (1) (E) and 28 C.F.R. 36.205, because he was deprived of the opportunity to participate in the planned trip, because of his association with A and B. The statute provides:

> It shall be discriminatory to exclude or otherwise deny equal goods, services, facilities, privileges, advantages, accommodations, or other opportunities to an individual or entity because of the known disability of an individual with whom the individual or entity is known to have a relationship or association.

42 U.S.C. 12182(b)(1)(E). The Department's regulation provides:

> A public accommodation shall not exclude or otherwise deny equal goods, services, facilities, privileges, advantages, accommodations, or other opportunities to an individual or entity because of the known disability of an individual with whom the individual or entity is known to have a relationship or association.

28 C.F.R. 36.205.

We believe that the situation that you have presented to us is analogous to an illustration provided both in the analysis to

36.205 of the Department's ADA title III regulation and III-3.5000 of the Department's ADA Title III Technical Assistance Manual. Both the regulation and the Manual make clear that, if a party of individuals is refused entry to a theater because one of the individuals has cerebral palsy, the other individuals in the party have an independent cause of action under the association provision. Likewise, in the situation that you present, C would have an independent cause of action because he has been denied the "advantages" that car rental would provide for the planned vacation experience. This conclusion assumes that the rental car company acted with knowledge of C's "relationship or association" with the individuals with disabilities.

We hope that this discussion is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

01-02747

T. 11-22-93

DJ 202-PL-554

NOV 29 1993

Mr. Mike Warren
Storage Systems Company
130 East Chestnut Street
Columbus, Ohio 43215

Dear Mr. Warren:

I am responding to your letter concerning the requirements of the Americans with Disabilities Act (ADA), in which you asked:

1) When a covered entity would be required to purchase and install the type of office systems equipment that your company sells;

2) What the consequences of failure to comply with the ADA would be; and

3) What liability you may incur if you fail to inform your customers of their ADA obligations.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the ADA, and it is not binding on the Department.
The ADA prohibits discrimination on the basis of disability in employment, in the provision of public services, in transportation, and in the operation of places of public accommodation. In addition, the ADA requires newly constructed or altered public buildings, places of public accommodation, and commercial facilities to be accessible to people with disabilities.

Enforcement of these ADA requirements is divided among the Equal Employment Opportunity Commission, the Department of Transportation, and the Department of Justice. Each of these enforcement agencies has issued regulations to implement the ADA provisions within its jurisdiction. The determination of any

cc: Records, Chrono, Wodatch, Blizard, Friedlander
n:\udd\blizard\adaltrs\warren

01-02748

entity's specific responsibility under the ADA requires a case-by-case analysis.

The Department of Justice has issued regulations to implement the ADA requirements that apply to public entities, public accommodations, and commercial facilities. The Department has also published two technical assistance manuals to assist individuals and entities affected by the ADA to understand the Act. Copies of these documents are enclosed for your information. These documents should enable you to determine how title II and title III of the ADA apply to your customers and to determine what enforcement measures may be taken against covered entities that fail to meet their obligations.

To obtain information about the employment requirements that may apply to your customers, you may write to the Equal Employment Opportunity Commission (1801 L Street, N.W., Washington, D.C. 20507). Information about the transportation requirements of the ADA may be obtained from the U.S. Department of Transportation (400 Seventh Street, S.W., Washington, D.C. 20590).

With respect to your potential liability, please note that the ADA imposes no obligation on vendors to advise their customers about their legal obligations. However, the ADA does not alter any other State or Federal law that may govern your responsibilities to your customers; therefore, you may have liability arising from a statutory or common law obligation unrelated to the ADA. To determine your specific obligations, you should consult with your own attorney.

I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Public Access Section
P.O. Box 66738
Washington, DC 20035-6738

Dear Mr. Wodatch:

We are having a very difficult time during our selling process of convincing our clients that they need to comply to ADA standards when designing filing systems like those enclosed. The purpose of this letter is to solicit your help.

These clients typically respond with "that doesn't effect us" or "we will never have a handicap person work in the file room". This response has come from both the private and government sectors.

Our request: Can you address specifically those areas which should be complied to with our equipment, and the consequences of knowingly not doing so.

Besides wanting to improve the quality of life for these disadvantaged workers, we are also concerned about our own liability if we fail to inform our clients of these responsibilities. If we sell ourselves as "the professional", this may hold us accountable. Any clarification you can provide on this issue would also be beneficial.

Thank you in advance for your prompt attention to this matter. Please contact me upon receiving this letter so that we may discuss in further detail.

Sincerely,

Mike Warren

NOV 29 1993

Mr. Anthony H. Vergona
1653 Dogwood Drive
Harvey, Louisiana 70058-3534

Dear Mr. Vergona:

This letter is in response to your inquiry about the application of the Americans with Disabilities Act (ADA) to cruise ships and casino boats that operate on the Mississippi River.

The ADA authorizes the Department to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Cruise ships and casino boats may be subject to the requirements of both the Department of Justice and the Department of Transportation regulations implementing title III of the ADA. This Department's regulation implementing title III applies to private entities that own, operate, lease, or lease to a private entity whose operations fall within one or more of twelve specified categories. Among those categories are places of lodging, places that serve food or drink, places of public gathering, and places of recreation or entertainment. If the activities conducted on a ship fall within one or more of these categories, the ship would be considered a place of public accommodation that is subject to the Department of Justice title III regulation.

A ship that is a place of public accommodation must comply with the full range of title III requirements, which include nondiscriminatory eligibility criteria; reasonable modifications in policies, practices, and procedures; provision of auxiliary aids; and readily achievable removal of barriers in existing facilities. However, a ship is not required to comply with a specific accessibility standard for new construction or alterations because no Federal standard for the construction of accessible ships has been developed.

cc: Records, Chrono, Wodatch, Blizard FOIA Friedlander
n:\Udd\blizard\adaltrs\vergona

01-02751

Coverage of cruise ships is discussed in the preamble to section 36.104 of this Department's title III regulation (at page

35550) and in section III-5.3000 of the Title III Technical Assistance Manual. Copies of the regulation and the Technical Assistance Manual are enclosed for your information.

Under the regulation issued by the Department of Transportation, cruise ships are classified as "specified public transportation," because they are operated by a private entity that is primarily engaged in the business of providing transportation. Entities operating forms of specified public transportation may not discriminate on the basis of disability in providing transportation services. Additional information about the regulation issued by the Department of Transportation may be obtained from the Office of the General Counsel, U.S. Department of Transportation, 400 7th Street, S.W., Washington, D.C. 20590.

I hope that this information is helpful to you.

Sincerely,

John L. Wodatch

Mr. Danny Ledford
Division Manager
Brown Sprinkler Corporation
4705 Pinewood Road
Louisville, Kentucky 40218

Dear Mr. Ledford:

This is in response to your letter requesting information on alarm systems under the Americans with Disabilities Act (ADA). I apologize for our delay in responding to you.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the application of the statute and it is not binding on the Department.

Section 4.1.3(14) of the ADA Standards for Accessible Design (standards) states, in part, that, "If emergency warning systems are provided, then they shall include both audible alarms and visual alarms complying with 4.28 . . . . " Therefore, if the local fire code officials do not require an alarm system in a facility, the ADA does not require that one be installed. However, whether or not local fire codes require installation of a fire alarm, if a fire alarm is installed, it must comply with the ADA Standards.

We are enclosing for your reference the title III regulation (including the Standards) and the Title III Technical Assistance Manual. We hope this information is helpful to you.

Sincerely,

John L. Wodatch

RE: Americas with Disabilities Act
Fire Alarm System
Rules and regulations

Dear Sir,

This letter is to request an interpretation on the requirements of the American with Disabilities Act.

The project in questions is a retail facility located in the State Kentucky. The local building code does not require a fire alarm system In this type of facility. The automatic sprinkler system is supervised by an alarm panel connected to one (1) interior and one (1) exterior electric bell and one (1) alarm horn located an the wall of sales. floor. The alarm panel will also be monitored by a central station With this system fall within the requirement of the Americans with Disabilities Act, requiring audio and visual alarms throughout the facility.

Please respond to the above ASAP. Any questions, please feel free to contact me in our Lexington Office.

Very truly yours,
Brown Sprinkler Corporation

Danny Ledford
Division Manager

Ms. April E. Poland
Leech Architects, Inc.
7785 East 126th Street
Fishers, Indiana 46038

Dear Ms. Poland:

I am responding to your letter asking for clarification of the requirements of title III of the Americans with Disabilities Act (ADA) and the Department of Justice regulation implementing title III. I apologize for our delay in responding to you.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a determination by the Department of your rights or responsibilities under the ADA, and it is not binding on the Department.

You have asked whether a retail business located in a strip shopping mail is required to install an elevator if it alters the facility to add a mezzanine level that will contain only office space. To determine if elevator access to a mezzanine in a specific building is required, you must look to the requirement that applies to the building in which the mezzanine is located.

In new construction and alterations, title III generally requires that at least one accessible passenger elevator serve each level of a multistory building. However, there is an exception to this general rule. Elevators are not required in facilities that are less than three stories or have fewer than

3000 square feet per story, unless the building is a shopping center or mall; the professional office of a health care provider; a public transit station; or an airport passenger terminal.

Section 3.5 of the ADA Standards for Accessible Design (Appendix A to the enclosed regulation) defines a "story" as:

> That portion of a building included between the upper surface of a floor and upper surface of the floor or roof next above. If such portion of a building does not include occupiable space, it is not considered a

cc: Records, Chrono, Wodatch, Blizard, FOIA, Friedlander
n:\Udd\blizard\adaltrs\poland

01-02756

> story for purposes of these guidelines. There may be more than one floor level within a story as in the case of a mezzanine or mezzanines.

A mezzanine, defined as "that portion of a story which is an intermediate floor level placed within the story and having occupiable space above and below its floor," is not considered a "story" for the purpose of determining if an elevator is required.

Section 36.404(a)(2) of the title III rule defines a "shopping center or mall" for the purpose of applying the elevator exemption to an existing facility, as

> A series of buildings on a common site, connected by a common pedestrian route above or below the ground floor, that is under common ownership or common control or developed either as one project or as a series of related projects, housing five or more sales or rental establishments. . . .

(Emphasis added.) If there is no common pedestrian route connecting the buildings above or below the ground floor on the site that is being altered, then the facility is not a shopping center or mall and the elevator exemption would apply. If no elevator is required in a building, then no accessible means of vertical access to mezzanines within that building is required.

If the elevator exemption does not apply, then, under sections 4.1.3(5) and 4.1.6(l)(f) of the ADA Standards, a

multistory facility that undertakes an alteration that includes the addition of an escalator or stairs (where none existed previously) that requires major structural modifications for installation, is required to install an elevator unless it is technically infeasible to do so. When a multistory building does not qualify for the elevator exemption, all floors must be served by elevators, even if the floors are used only by employees.

For your information, I am enclosing a copy of this Department's regulation implementing title III of the ADA and the Title III Technical Assistance Manual.

I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

June 23, 1992

Attn: Mr. Joe Beard
Office on the Americans with Disabilities Act
Civil Rights Division
P.O. Box 66118
Washington, DC 20035-6118

Mr. Beard,

I am writing to reconfirm my conversation with you during the week of April 6, 1992. My previous letter dated April 13, 1992 must not have reached you. I am requesting written verification and clarification of the following question.

My question to you was regarding elevator/lift requirements for existing construction to be altered in a retail store, within a strip shopping mall. You indicated that the ADA requirements will not allow the elevator exemption for shopping centers or malls. You then identified to me the definitions for shopping centers and malls, and you also indicated that once there are more than (5)retail stores with a common pathway; that an elevator would be required.

But you then indicated that floors that do not house retail or rental

establishments are not defined as "shopping center or mall"; therefore you indicated that an elevator to an office area of less than 3,000 square feet for a retail store probably would not be required.

Thus, in this scenario, a retail store that is to be remodeled in such a way as to add a mezzanine area for offices; even though the main level -is considered a shopping mall or center - the mezzanine level (if it is under 3,000 s.f. or less than (3) stories, and houses no sales or rental establishments) should be exempt from the elevator requirement. This, then, implies that we are within compliance for the Title III portion of the ADA as you indicated during our conversation.

As per our conversation and this review I am proceeding, but you stated that you cannot confirm in writing our conversation unless specifically requested. Thus, this is my request for your confirmation. I would appreciate it if you could document your confirmation of this interpretation to me as soon as possible, thus verifying all questions regarding elevator/1 if t requirements for the project this inquiry has been undertaken.

Thank-you again for your time, I look forward to receiving your verification promptly after your review of this letter.

Sincerely,

April E. Polland

NOV 29 1993

Professor Bonnie Tucker
Arizona State University
College of Law
Tempe, Arizona 85287

Dear Professor Tucker:

This letter is in response to your letter of May 6, 1993,

requesting clarification of the transportation provisions of the Americans with Disabilities Act of 1990 ("ADA"). I apologize for not responding to your letter earlier.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

In your letter, you request clarification regarding the apparent conflict between the regulations promulgated by the Department of Justice ("DOJ"), and the regulations promulgated by the Department of Transportation ("DOT") . Although the DOT's regulations may be narrower than those of the DOJ, we do not believe that they conflict with each other.

I. Private Universities

Private universities are considered "public accommodations" under the ADA, and, therefore, have ongoing obligations under title III of the statute. As you note, title III requires private entities, including private universities, to provide people with disabilities "full and equal enjoyment" of their programs and services, 28 C.F.R. S 36.201, and may require a private entity to modify its policies, practices or procedures, 28 C.F.R. S 36.302; provide necessary auxiliary aids and services, 28 C.F.R. S 36.303; and remove barriers to access in existing facilities when such removal is readily achievable, 28 C.F.R. S 36.304.

cc: Records, Chrono, Wodatch, Magagna, Perley
udd\perley\policy\tucker

01-02762

Title III also contains specific provisions regarding the operation of fixed route and demand responsive systems by private entities. 28 U.S.C. S 12182 (B) and (C); see also 28 C.F.R. S 36.310. Specifically, the statute requires private entities that operate fixed route systems, when acquiring vehicles, to either (a) purchase or lease vehicles that are readily accessible to and usable by individuals with disabilities (if the vehicle

has a seating capacity in excess of 16 passengers), or (b) ensure, upon the purchasing or leasing of a vehicle that has a seating capacity of 16 or fewer passengers, that the system provides a level of service to individuals with disabilities, including individuals who use wheelchairs, equivalent to the level of service provided to individuals without disabilities. 28 U.S. C. S 12182 (B) . The statute is silent as to a private entity's responsibilities regarding the operation of a fixed route system absent the purchase or lease of a vehicle.

With respect to demand responsive systems, the statute requires a private entity to operate its demand responsive system so that, when viewed in its entirety, the system ensures a level of service to individuals with disabilities, including individuals who use wheelchairs, equivalent to the level of service provided to individuals without disabilities. 28 U.S.C. S 12182(C). This requirement exists whether or not the private entity has purchased or leased a new vehicle.

In interpreting these provisions, the DOJ regulations specifically defer to those promulgated by the DOT. see 28 C.F.R. S 36.310 (c) ("a public accommodation ... shall comply with the requirements pertaining to vehicles and transportation systems in the regulations issued by the Secretary of Transportation"). Under the DOT regulations, transportation services operated by private universities are subject to the provisions governing private entities not primarily engaged in the business of transporting people, 49 C.F.R. SS 37.25(a), 37.101. These regulations track the statutory requirements for fixed route systems presented above.

The issue remains, therefore, as to what obligations, if any, other than those relating to vehicle acquisition, apply to private universities that operate fixed route systems. As both the statute and the DOT regulations are silent on this issue, the DOJ regulations are controlling. Section 36.310(b) of the DOJ regulation provides that a private entity shall remove transportation barriers in existing vehicles used for transporting passengers where such removal is readily achievable. The regulation specifically provides, however, that such barrier removal does not include the installation of lifts. Accordingly, a private university must remove architectural barriers in its existing vehicles so long as such removal does not require the installation of lifts.

A private university must also make reasonable modifications in its policies, practices, and procedures. Such modifications may include the provision of transportation services to

individuals with disabilities who are unable to use the existing system. See 28 C.F.R. S 36.302 (modifications in policies, practices, or procedures). For example, a university might be required to provide shuttle car or van service on demand. Alternatively, a university might be required to reimburse a student for any costs incurred in arranging her own transportation. The modifications required would depend upon the service provided by the university, the particular needs of the individual, and the nature and cost of the modifications.

In your letter, you ask whether a university must either (a) purchase or lease accessible vehicles now or (b) provide some form of "paratransit" service. in light of the above analysis, a private university is not necessarily required to purchase or lease accessible vehicles now. Private universities that operate demand responsive systems must now provide some sort of equivalent service to persons with disabilities. Although this need not specifically be "paratransit" service (i.e., it need not comply with the DOT regulations governing the provision of paratransit services by public entities), the service must satisfy the standards delineated in S 37.105 of the DOT's regulations ("equivalent service standard. ") Likewise, private universities that operate fixed route systems must engage in readily achievable barrier removal and make reasonable modifications in their policies, practices, and procedures. Such modifications may result in the provision of paratransit-like services, although these services need not comply with the DOT's regulations governing public-sector paratransit systems.

II. Public Universities

The analysis regarding public universities is similar. Public universities are operated by State or local governments, and, therefore, are governed by title II of the ADA. See 42 U.S.C. S 12 115 (I)(B) (definition of public entity).

Like title III, title II contains specific provisions regarding the operation of fixed route and demand responsive systems by public entities. See 28 U.S.C. SS 12142-45. With respect to public universities that operate fixed route systems, DOT has determined that such systems should be treated like commuter bus services. 49 C.F.R. S 37.25 (b) .

Under title II, a public entity that operates a fixed route system must purchase or lease new vehicles so that they are readily accessible to and usable by individuals with disabilities. 42 U.S.C. S 12142(a). Most public entities, but not commuter bus services, must also provide supplementary paratransit services that strictly comply with regulations

promulgated by the DOT. 42 U.S.C. S 12143 (a). Because public university operated fixed route systems are treated like commuter bus services under the DOT regulations, a public university must only purchase or lease new vehicles that are accessible, but is not required to offer paratransit services.

With respect to demand responsive systems, a public university that operates such a system and purchases or leases a new vehicle must either (a) ensure that the vehicle is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, or (b) ensure that the system, when viewed in its entirety, provides a level of service to such individuals equivalent to the level of service such system provides to individuals without disabilities. 42 U.S.C. S 12144. The statute and the DOT regulations are silent as to a public university's obligations regarding the operation of an existing system independent of vehicle acquisition.

Under the general provisions of title II, however, the public university must, to the maximum extent possible, ensure that the services, programs, and activities operated by the private university are, when viewed in its entirety, readily accessible to persons with disabilities. 28 C.F.R. 35.150. The above discussion demonstrates that a public university need not install lifts in its existing vehicles, nor need it provide "paratransit" services as described in the DOT regulations. Nevertheless, the university has the ongoing obligation to ensure that its services -- here, the operation of fixed route or demand responsive transportation systems -- are readily accessible to persons with disabilities. Accordingly, the public university has the obligation to provide transportation services that will enable a person with a disability to have an equal opportunity to participate in the programs offered by the university. Again, this could result in a "paratransit-like" system.

I hope that this information answers your questions, and clarifies any apparent contradictions between the DOJ regulations and the DOT regulations. Thank you for your concern.

Sincerely,

John L. Wodatch
Chief

DEC 3

Mr. Scott R. Edwards
Director of Marketing
Fire Protection Products
Gentex Corporation
10985 Chicago Drive
Zeeland, Michigan 49464

Dear Mr. Edwards:

This letter responds to your correspondence regarding the application of the Americans with Disabilities Act (ADA) to the placement of visual alarms. I apologize for our delay in responding to you.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities with rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the statute and it is not binding on the Department.

Section 4.28.3(6) of the ADA standards for Accessible Design, 28 C.F.R. pt. 36, Appendix A, requires that visual alarm signal appliances in new construction be placed 80 inches above the highest floor level or 6 inches below the ceiling whichever is lower. This location is required because smoke can collect near the ceiling and thereby obscure a signal if the alarm is mounted on the ceiling. The regulation was-developed based on consideration of established data and is supported by the advisory guidance issued by the National Fire Protection Association. In certain situations a stem-pendant ceiling mounted signal appliance might satisfy this requirement appropriately. However, we have not made a determination that. any particular alternative to strict compliance with this section of the Standards would be equivalent facilitation.

Determinations of equivalent facilitation must be made on a case-by-case basis taking into consideration whether the building element in question, as installed in a specific site, actually

provides equal or greater accessibility. Neither the Department of Justice nor any other entity will certify that a specific

cc: Records, Chrono, Wodatch, Blizard, FOIA, Friedlander
n:\udd\blizard\gentex.eh

01-02766

product or design alternative that varies from the technical requirements of the ADA regulation will be "equivalent" in all circumstances.

You have also asked if any summary exists of the comment sent to the Department by an organization representing people with hearing impairments. That comment consisted of 479 responses to a two page survey. No tabulation of that survey exists. Because the-responses to the survey were submitted to the Department as a comment on the then-proposed regulation, they are available for public inspection at the office of the Public Access Section. A copy of the survey responses (approximately 1000 pages) may also be requested from the Civil Rights Division's Freedom of Information/Privacy Acts Branch..

For your information, I have enclosed a copy of this Department's Title III Technical Assistance Manual and a technical assistance bulletin on visual alarms issued by the Architectural and Transportation Barriers compliance Board. I hope this information is helpful to you in understanding and complying with the ADA.

Sincerely,

Janet L. Blizard
Supervisory Attorney

March 13, 1992

Mr. John Wodtash, Director, Americans with Disabilities Act
Office on the Americans with Disabilities Act
Civil Rights Division
U.S. Department of Justice
P.O. Box 66118
Washington, DC 20035-6118

Dear Mr. Wodtash:

In reviewing the supplementary information contained in 28CFR Part 36, "Non-Discrimination on the Basis of Disability by Public Accommodations and In Commercial Facilities", reference is made on page 3, 5th paragraph that an organization representing persons with hearing impairments submitted 479 individual comments. These comments were in chart form and detailed what type of auxiliary and/or service would be helpful. Sir, I am requesting from your office if available, a summary of these 479 comments.

Another question in regards to the placement of visual signals (4.28.3 (6)). This section says you must place the visual signal 80" above the highest floor level. Is there any provisions of mounting the visual signal on the ceiling? We understand that your department has allowed placement of visual signals on the ceiling with justification being section 2.2 Equivalent Facilitation. We agree with this as the visual signal's light intensity will not be lessened when placed on the ceiling. Also, in the industry, many visual signals are already on the ceiling. Please advise if, indeed, visual signals may be placed an the ceiling under equivalent facilitation.

Thank you for your assistance.

Best Regards,

GENTEX CORPORATION

DJ XX DEC 3 1993

(b)(7)(c)
XX
XX
Crowley, Texas XX

Dear XX

I am responding to your letter requesting information about the obligations of municipal governments under the Americans with Disabilities Act (ADA). I apologize for our delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance is not a legal interpretation of the statute, and it is not binding on the Department.

You have asked about the construction standards that apply to public buildings, and the ADA enforcement process that applies to public entities. Title II of the ADA prohibits discrimination on the basis of disability by public entities. To implement this requirement, the Department of Justice has issued a regulation that sets forth the specific obligations of public entities. The regulation also establishes the procedures through which the regulation may be enforced. The title II regulation and the Department's Title II Technical Assistance Manual are enclosed for your information.

Section 35.151 of the Department's regulation requires all facilities designed, constructed, or altered by, on behalf of, or for the use of a public entity to be readily accessible to and usable by individuals with disabilities, if the construction or alteration began after January 26, 1992. This means that each facility must be designed, constructed, or altered in strict compliance with either the ADA Standards for Accessible Design or the Uniform Federal Accessibility Standards. This requirement applies both to buildings that are open to the public and to those that are not. This requirement is discussed further in the preamble to the enclosed regulation at pages 35710-35711, and in section II-6.0000 of the Technical Assistance Manual.
(b)(7)(c)

cc: Records, Chrono, William, Blizard, Johansen, FOIA, Friedlander
n:\udd\blizard\adaltrs\ XX

01-02769

If a public entity is offering a program, service, or activity in an existing building, it is subject to section 35.150 of the regulation, which provides that a public entity may not deny the benefits of its programs, activities, and services to individuals with disabilities because its facilities are inaccessible. A public entity's services, programs, or activities, when viewed in their entirety, must be readily accessible to and usable by individuals with disabilities. This standard, known as program accessibility, applies to all existing facilities of a public entity. This requirement is discussed further in the preamble to the enclosed regulation at pages 35708-35710, and in section II-5.0000 of the Technical Assistance Manual.

If a public entity fails to comply with title II, a person, a specific class of individuals, or their representative may file an administrative complaint alleging discrimination on the basis of disability with an appropriate Federal agency, or may file a lawsuit in Federal district court. It is not necessary to exhaust administrative remedies before filing a lawsuit. The title II enforcement procedures are established in subparts F & G of the regulation; they are discussed at pages 35713-35716 of the preamble to the regulation, and in section II-9.0000 of the Technical Assistance Manual.

I hope that this information is helpful to you.

Sincerely,

Janet L. Blizard
Supervisory Attorney

Crowley, Texas XX

Civil Rights Division
Office on Americans With Disabilities Act
U.S. Department of Justice
P.O. Box 66118
Washington, D.C. 20035-6118

Dear sirs;

Pursuant to regulations as regards the ADA construction standards for public buildings, I would appreciate some information as regards public entities.

1. Are municipal governments required to follow the standards for new construction of facilities which are used for public meetings (i.e. standards for construction under rules pursuant to Title V of the ADA)? or is the exemption from such standards under Title III enforceable under Title II which seems to require the same construction standards as for privately-owned facilities under Title III?

2. Are all publicly-owned buildings required to follow the

same construction standards, or is this limited only to those which the public would be reasonably expected to use or have need to enter in a normal business sense (i.e. access to a police department facility or city hall vs. access to a public works work facility or water department work shop/office area)?

3. What is the liability in the event such a facility does not follow the standards for construction when the facility is owned and operated by a municipality even though construction of the facility began after publication of the standards for construction were published and made available?

4. Can a private citizen, not necessarily a disabled person as defined under current laws, have standing to file a complaint as regards accessibility standards and force compliance through the Department of Justice Civil Rights Division?

I am not a lawyer but am very interested in learning about these particular aspects of the Americans with Disabilities Act of 1990 as I am very active in the community and have been unable to get answers to these questions just by reading the Act itself, and because the rules themselves are not in our local library. I would appreciate your assistance in getting these questions answered.

Sincerely,

T. 10/29/93
SBO:AMP:ca
XX
(b)(6) DEC 3 1993

The Honorable Dennis DeConcini
United States Senator
40 North Center, Suite 110
Mesa, Arizona 85201

Dear Senator DeConcini:

This is in response to your recent letter on behalf of your constituent, XX , who inquires whether there are any Federal laws that make it illegal for his neighbors to bloc sidewalks with their trash or cars. While the activities of XX neighbors may violate State or local laws, there are no Federal laws that directly outlaw such behavior by private individuals. However, allowing public sidewalks to remain blocked may constitute a violation of title 11 of the Americans

with Disabilities Act of 1990 (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities with rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. It does not, however, constitute a legal interpretation and is not binding on the Department.

Title II of the ADA prohibits discrimination against qualified individuals with disabilities in all programs, activities, and services provided by or on behalf of State and local governments. With respect to your constituent's problem, if a public entity has responsibility for, or authority over, sidewalks or other public walkways, section 35.133 of the enclosed title II regulation requires that public entities must maintain them in operable working condition. Such maintenance may include the removal of cars, trash, or other objects blocking the passage of persons using wheelchairs or other devices to assist mobility.

cc: Records CRS Chrono Friedlander Pecht.cong.93.deconcin.b
McDowney FOIA

01-02772

The title II rule also requires that a public entity make reasonable modifications to its programs, practices, or procedures when " ... necessary to avoid discrimination an the basis of disability.,, See section 35.130(b)(7) of the title II rule. Under this provision, title II may also require the public entity to modify its policies, practices, or procedures to ensure that, aside from temporary and unavoidable situations, public sidewalks are not blocked by cars, trash, or other impediments to travel by wheelchair.

Although, as noted above, there are no Federal laws that directly prohibit individuals from blocking public sidewalks, you may wish to suggest to your constituent that he contact the appropriate local authorities to determine whether any State or local laws directly prohibit such behavior. If such laws exist,

your constituent may wish to draw the situation to the attention of the local enforcement agency.

I hope this information will be useful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Dear Mr. Quatman:

I am responding to your letter asking for clarification of the alterations requirements of title III of the Americans with Disabilities Act (ADA) and this Department's regulation implementing title III.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter asks about the application of the alterations requirements of the ADA to an addition to a commercial facility. In the specific situation that you describe, the plan for an addition was initially developed by an architect before July 1991. Pursuant to the plan, an existing portion of the building that was altered was detached and relocated on the same site in August 1991. Construction of an addition to the existing building was begun after January 26, 1992, the effective date of the ADA. You have asked if the alterations requirements of the ADA apply to the construction commenced after January 26, 1992, or if the addition to the building is exempt from coverage because the project began before the effective date.

Section 36.402(a) (2) of the Department's regulation implementing title III provides that an alteration to a commercial facility is subject to the requirements of the ADA if "the physical alteration of the property begins after that date." Construction undertaken pursuant to a single plan, or under the authority of a single building permit, is a single action for purposes of determining ADA coverage. Therefore, if your client

cc: Records, Chrono, Wodatch, Blizard, FOIA, Friedlander
n:\Udd\blizard\adaltrs\quatman

01-02777

was acting to implement a single building plan, pursuant to a permit issued prior to the effective date, ADA coverage would not be triggered because the physical alteration of the facility began when the prefabricated building was detached from the existing building in August 1991. If, however, the project was undertaken in discrete segments, and a building permit was issued for the construction of the addition that did not include the relocation of the prefabricated building in the scope of the project, then the construction of the addition would be considered a separate project, subject to the ADA requirements because the physical alteration of the addition to the existing building began after the effective date of the Act.

For your information, I am enclosing a copy of the Department's regulation implementing title III of the ADA and the Department's Title III Technical Assistance Manual, which was developed to assist individuals and entities subject to the ADA to understand the requirements of title III. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch

Re: DJ 202-PL-436

Dear Ms. Blizzard:

On January 13, 1993, I wrote to your office requesting a written interpretation of Title III of the Americans with Disabilities Act. L. Irene Bowen, of your office, confirmed receipt of my request in her letter dated February 18, 1993. As of this date, I have not yet received a written response to this inquiry.

As you might understand, our client is extremely anxious to get a written clarification from your office, confirming the oral interpretation we received back in January. I would appreciate your efforts to expedite your review of this matter. If you have any questions, or if I can be of any assistance in clarifying the issues, please contact me at (816) 421-3355.

Very truly yours,

G. WILLIAM QUATMAN

GWQ/pjo

John Wodatch, Esq.
Section Chief
U.S. Department of Justice
Public Access Section
Civil Rights Division
P.O. Box 66738
Washington, D.C. 20035-6738

Dear Mr. Wodatch:

It has been suggested by an attorney in your department that we write to you for a written interpretation of the Title III Regulations of the Americans with Disabilities Act. We posed the following facts and question verbally to your department on January 4, 1993:

Fact Situation. owner desires to expand its existing commercial facility by the addition of two stories of new construction to be built on top of the existing one-story building, and with other additions on the first level. The architect was retained in May of 1991 and began discussing plans for the

alteration with the owner. In June and July, 1991, preliminary plans were transmitted to the owner by the architect showing the proposed new construction.

Due to the location of new columns for the two-story addition, an existing portion of the building (an attached prefabricated building) was detached and relocated on the site in August, 1991. Architectural plans are completed in January, 1992. New construction begins in February, 1992.

191199 VI
01-02780

Question. Does the relocation of the attached prefabricated building constitute the beginning of "physical alteration of the property" within the meaning of 28 C.F.R. S 36.402?

We understand that additions are deemed "alterations" under ADAAG S 4.1.5 and are therefore governed by S 36.402. Although new construction of the addition to the building did not begin until after the January 26, 1992 effective date for Title III alterations, site preparation included the relocation of this building on the property. We have received a preliminary verbal interpretation from the Deputy Section Chief that as long as there were plans in existence at the time the building was relocated showing the intended new construction, and that the relocation was part of the contemplated plan for the new construction, then the building relocation in August, 1991 constitutes the first "physical alteration" to the property. As a result, the remaining new construction performed in February, 1992 and thereafter on this project is not required to be accessible under 28 C.F.R. S 36.402.

We look forward to receiving your written interpretation. If you have any questions regarding the above fact scenario, or need more information, please do not hesitate to call.

Very truly yours,

G. William Quatman

Dear Mr. Quatman:

The Civil Rights Division of the Department of Justice has received your request for an interpretation of the Americans with Disabilities Act (ADA). The ADA authorizes the Department of Justice to provide technical assistance to entities that have rights or responsibilities under the Act. The Civil Rights Division will treat your inquiry as a request for technical assistance and will provide informal guidance to you. However, because of the large volume of requests for interpretations of the ADA, we are unable to answer your letter at this time.

Please be assured that the Division will respond to your letter expeditiously. We regret any inconvenience caused by our delay in responding and have enclosed for your information two documents on the ADA: "Title II Highlights" and "Title III Highlights."

Sincerely,

L. Irene Bowen
Deputy Chief

DEC 6 1993

James M. Gran
Associate Counsel
Maytag Corporation
403 West Fourth Street North
Newton, Iowa 50208

Dear Mr. Gran:

This letter is in response to the questions we discussed at our October 29, 1993, meeting in Washington, D.C.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation, and it is not binding on the Department.

At that meeting, representatives from Maytag asked: (1) how to distinguish fixed from free-standing washing machines under the Americans with Disabilities Act ("ADA"); (2) whether washing machine drums are operating mechanisms subject to ADA reach range requirements; and (3) the number of accessible washing machines required in new construction under title III of the ADA and the Uniform Federal Accessibility Standards ("UFAS").

The ADA Standards for Accessible Design ("Standards") prescribe specific accessibility requirements for new construction and alteration of facilities covered by title III of the ADA. As our previous letter indicated, those requirements apply only to equipment that is fixed or built into the structure of the building, not to machines that are free-standing. Some examples of fixed equipment are: machines that are bolted to floors or walls, machines connected to building plumbing systems with rigid pipe (rather than flexible tubing), and machines that require connection by professional installation.

cc: Records, Chrono, Wodatch, Bowen, Breen, Blizard, Novich,
FOIA, MAF
Udd:Novich:Congress:Gran

01-02783

According to the Standards, fixed equipment must meet ADA requirements for controls and operating mechanisms. Section 4.27 of the Standards requires that "the highest operable part of controls, dispensers, receptacles and other operable equipment" meet reach range requirements specified in section 4.2 of the Standards. "Operable part" is defined in section 3.5 of the Standards as:

> A part of a piece of equipment or appliance used to insert or withdraw objects or to activate, deactivate, or adjust the equipment or appliance (for example, coin slot, pushbutton, handle).

Operable parts of washing machines, which must meet ADA reach range requirements, are, for example, coin slots, machine on/off buttons, and cycle control buttons. The lids or doors into washing machine drums are also operable parts which must meet ADA reach range requirements, although the drums themselves, which do not fall squarely within the above definition of "operable part," should not be required to meet ADA reach ranges. Thus, a washing machine in which the bottom or back of the drum exceeds ADA reach range requirements does not appear to violate the Standards, as long as the lid, door, or other opening of the drum meets the reach range requirements.

Front-loading machines may be preferable for persons who use wheelchairs, because, even if a person cannot reach the back of the drum, he or she can at least see whether any articles of clothing have lodged there and need to be retrieved by alternative means. Most top-loading machines, including those that meet ADA reach range requirements, do not allow a person in a wheelchair to see the bottom of the drum.

The ADA Standards specify the number of accessible washing machines required in new construction and alteration of transient lodging in homeless shelters, halfway houses, transient group homes, and other social service establishments (see Standards

9.5.2), but the Standards provide no similar scoping requirement for washing machines in other places of public accommodation. If the Standards provide no applicable scoping requirements, then a reasonable number, but at least one, in each common use laundry area, must be accessible. In determining what a reasonable number is, consideration should be given to the type of facility that will house the machines and the likely demand for accessible machines.

As mentioned in our previous letter, the proposed ADA guidelines for residential units covered by title II specify that at least one washing machine in any accessible dwelling unit or in a common use laundry facility serving one or more accessible dwelling units must be front-loading, and must meet other requirements from the Standards for controls. In contrast, under

UFAS, all washing machines provided within individual accessible dwelling units, or within common use laundry rooms that serve accessible dwelling units, must be front-loading. See proposed title II guidelines and preamble, S 13.3.5, at pages 60663 and 60639, and UFAS SS 4.34.7, 4.34.7.2, both of which were sent with our previous letter.

Please keep in mind the discussion in our previous letter describing the additional accessibility requirements that apply to the use of washing machines in places of public accommodation under sections 36.201 and 36.202 of the regulation promulgated under title III.

I hope this information is helpful to your company.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Ms. Maria Olsen VIA FAX TO: 202-514-0452

Re: Meeting With Representatives of Maytag Company
Friday, October 29, 1993
10:00 a.m. E.D.T. to Noon E.D.T.
Department of Justice Room 4039

Dear Ms. Olsen:

Thank you for agreeing to meet with representatives of Maytag Company. Attending on behalf of Maytag in addition to Mr. Horstman and myself will be Doug Ringger, Director, Product Planning; Dave Ellingson, Director, Advance Engineering; Randy Karn, Commercial Regional Sales Manager; and Steve Holdsworth, Product Information Specialist. I understand that attendees from your offices will include at least yourself and Mr. Wodatch. I also understand that a member of Senator Grassley's staff will also be attending.

Enclosed find copies of the following:

1. My September 1, 1992 letter to Mr. Wodatch (3 pages).

2. Various portions of ADA Accessibility Guidelines reference in enclosure #1 (4 pages).

2. The Department of Justice's July 21, 1993 letter (8 pages).

As you may be aware, the Department of Energy's May 14, 1991 (56 Federal Register 22250) final rules on energy standards caused the entire laundry manufacturing industry to investigate the possibility of manufacturing horizontal axis washing machines. Historically, these types of washing machines were described as "front-loading". In general, horizontal axis washing machines use less water (including less hot water) and therefore use less energy than top-loading washing machines with which you are familiar (and may have in your residence). Several European manufacturers are currently producing top-loading horizontal axis machines.

Maytag has requested this meeting because it is rapidly approaching some critical decisions concerning potential applicability of horizontal axis technology. Those decisions will take into account the additional information you will provide.

Maytag needs additional information concerning the following regulations: ADA Title III, Uniform Federal Accessibility Standards, and Housing and Urban Development. Specifically, Maytag would like to discuss and resolve the following issues:

What ADA/UFAS/HUD/ANSI "requirements" apply to the "reach to load and unload clothes" from top-load clothes washers and clothes dryers (please refer to page 5, 91 of the DOJ's July 21, 1993 letter)?

01-02786

2. Do you consider the Thomson & Miele machines (pictures of which will be provided to you during our meeting) to be ADA accessible? If so, do you consider them as meeting UFAS requirements?
   HUD requirements?

3. Under UFAS and HUD (both based on ANSI 117.1-1986), front-load washers appear to be conclusively presumed to be accessible. Why? For example:

   a. Many of their containers for detergent, fabric softener, and other laundry aids (as well as coin slides) are placed over obstructions higher than 34".

   b. Isn't it as easy for a disabled individual to load and unload clothing from a top-loading washer as it is from a front-loading washer (for example, the Miele product)?

4. How many (number/percentage) ADA-accessible machines must be installed in the following circumstances:

   a. New laundry facilities (coin store, common use laundry facilities in multi-family housing/dormitories).

   b. "Altered" laundry facilities.

c. To replace existing equipment in otherwise unaltered pre-ADA laundry facilities? At what point does replacing only equipment make the facility become "altered", thereby possibly triggering path of travel alterations? (Two machines? Three?

d. Same questions concerning "front-loading" equipment

5. In addition to universities that receive Federal funds, what other types of federal involvement would constitute the "receipt of Federal funds" thereby requiring laundry areas to comply with UFAS?

6. Which, if any, of the ADA/UFAS/HUD regulations affect privately-owned multiple family dwellings?

Sincerely,

James M. Gran
Associate Counsel

Re: American With Disabilities Act of 1990
Interpretations of Title III Department of Justice Regulations

Dear Mr. Wodatch:

I am writing on behalf of Maytag Company and Dixie-Narco, Inc. concerning different, but related, issues which are being raised by their customers. Maytag Company is a division of Maytag Corporation. Dixie-Narco, Inc. is a wholly-owned subsidiary of Maytag Corporation. The issues are:

1. Commercial washer compliance with A.D.A.; and

2. The extent to which A.D.A requires Braille lettering on commercial laundry and vending equipment.

Both issues directly affect customers' demands for products sold by those two parts of the corporation.

1. COMMERCIAL WASHERS

1. Product Background

Commercial washers used in coin laundries and multiple dwelling situations (apartments, dormitories, etc.) are either top-loading (and operate much like your washer at home) or front-loading (place clothing through a door In the front of the machine).

Front-loading washers cost their ultimate purchaser from two-to-four times as much as top loaders. Each wash load in a front-loading washer costs the laundry customer between 50% and 75% more than does each load in a top-loading washer. Front-loading washers are typically installed by bolting them to a raised concrete platform, with the exception of a Wascomat Model P-12 (manufactured for Wascomat in Italy) and a Miele product (manufactured by Miele in Germany). Front-loading washers, with the exception of the Wascomat Model P-12 and the Miele product are typically designed for detergent, fabric softener, and other laundry aids to be used by placing them in compartments on top of the washer.

Industry sales figures for front-loading washers are somewhat sketchy. However, in 1991 269,000 commercial top-load washers were sold in the U.S. This figure was down approximately 15% from 1990 unit sales. Of these units, approximately 80% were placed in multiple housing locations. Maytag Company enjoys are significant share of the multiple housing top-load washer market.

In normal installations, the tops of Maytag Company's top-load washers are approximately 36" above floor level. Maytag Company has anecdotal evidence that wheelchair-bound customers prefer to use top-loading washers over front-loading washers. Also, Maytag Company conducted unscientific experiments which indicate that wheelchair-bound customers can completely operate a normally-installed Maytag top-load washer.

2. ADA Regulation

The only specific ADA Accessibility Guidelines that affect laundry equipment are those concerning controls and operating mechanisms, ADAAG 4.27; 4.2.5; and 4.2.6.

According to ADAAG Figures 6(b) and 6(c), there are two different methods of determining whether controls and operating mechanisms are accessible. The first method applies to equipment which can be operated without reaching over an obstruction. If the operator is not reaching over an obstruction, the controls and operating mechanisms can be as high as 54" off the ground and can be as low as 9" above the ground.

The second method applies to equipment which can be operated while reaching over an obstruction. If the operator is reaching over an obstruction, the height of the obstruction can only be 34" off the floor. Also, the control or operating mechanism which you are trying to reach over that 34" obstruction can be no more than 24" from the front of that obstruction.

Thus, the Department of Justice's ADA Title III regulations suggest that both top-loading washers and front-loading washers (which normally operate by placing detergent, fabric softener, and other laundry aids in compartments on top of the front-load washer) comply with ADA Title III if the tops of both types of equipment are no higher than 34" from the floor.

3. ADA Compliance

If necessary, the ADA Title III Department of Justice standard can be met for Maytag top-load washers by Installing 2" false floors or lowering the washer 2" below the customer's floor level. The only way it can be met for front-loading washers is by forcing the use of the foreign-produced machines or by ignoring the fact that users of domestic-produced front-load washers (as designed for normal operation) need to reach over an obstruction higher than 34" in order to place detergent, fabric softener, and other laundry aids necessary to launder clothing.

Other practical concerns include the following. Must 100% of the washers (whether front-loading or top-loading) be accessible? If not, how many wash-ers must be accessible?

4. Contradictory Federal Regulations?

a. U.F.A.S.

The Uniform Federal Accessibility Standards, adopt ANSI A117.1-1986, a later version of the same standard which was the basis of the Department of Justice's ADA Title III regulations. ANSI A117.1-1986 contains the same reach require-

ments as the ADA Tittle III regulations. However, L.F.A.S. adopts ANSI A117.1-1986 In its entirety and states that washing machines and clothes dryers in common-use laundry rooms "shall be front loading." Are front loaders required without regard to the reach requirements In ANSI A117.1-19867 Are top loads" really Intended to be banned?

b. H. U. D.

The regulations of the Department of Housing and Urban Development are also based on ANSI A117.1-1986. The HUD regulations apply, in general, to dwell-

lings which house four or more families.

The H.U.D. regulations, contrary to ANSI A117.1-1986, permit top-loading laundry equipment to be placed in common laundry areas when the management of that facility, "provides assistive devices on request if necessary to permit a resident to use a top-loading washer." Must top loading laundry equipment also meet the reach requirements or are the reach requirements waived so long as assistive devices are provided upon request?

c. State and Local Government Choice of Regulation

Regulations adopted under Title II of ADA give state and local governmental entities, such as universities and public colleges, the opportunity to pick and choose between the ADA regulations and the UFAS standards. What products can be sold for use in university/college laundry facilities ---the foreign produced front-loading equipment only, any type of front-loading equipment, or a mix of front-loading and top-loading equipment?

II. BRAILLED INFORMATION ON EQUIPMENT

Another Issue that we are seeking to have clarified is the extent to which places of public accommodation are required to put brailled lettering on equipment. The regulations and Department of Justice commentary (excerpts attached) suggest that places of public accommodation may need to place brailled lettering on vending machines. However, there are no specific guidelines.

Do "vending machines" mean just pop can dispensers or do they include coin changers, soap dispensing equipment, and commercial laundry equipment? What types of information do you place in Braille?

I would be pleased to discuss these issues in more detail with you and(if necessary) appropriate personnel from Maytag Company and Dixie-Narco, Inc.

Feel free to call me if you have any questions.

Sincerely,
James M. Gran
Associate Counsel

Enclosures

Direct Line. 515-791-8505
Law Department FAX: 515-791-8102

01-02790
The Honorable Charles E. Grassley
united states Senate
135 Hart Senate office building
Washington, D.C. 20510-1501

Dear Senator Grassley:

This letter is in response to our inquiry on behalf of your constituent, the Maytag Company, which inquired about the application of the Americans with Disabilities Act (ADA) to washing machines. We apologize for any inconvenience caused by the delay in answering your constituents request for a policy interpretation.

Your constituent's letter asked several questions about the applicability of the ADA to washing machines. It asked whether washing machines must comply with reach range requirements found in the Standards for Accessible Design (the "Standards"), and, if so, how many washing machines must meet those requirements. It also asked whether requirements found in the Standards may be waived if assistive devices are provided on request. Third, it asked whether the Standards require Braille lettering on laundry and vending equipment. Finally, it asked which accessibility standards may be used by university dormitories. These questions raise complex issues under the ADA and necessitate this unusually long and detailed response.

I have enclosed five documents that are referred to in the discussion below: the Americans with Disabilities act Accessibility Guidelines (ADAAG) and its preamble, issued by the Architectural and Transportation Barriers Compliance Board (ATBCB) (these guidelines were adopted by the Department of Justice as the Standards); the regulation promulgated by the Department of Justice under title III of the ADA, which includes the Standards; the regulation promulgated by the Department of Justice under title II of the ADA; the Uniform Federal

Accessibility Standards (URAS) and proposed accessibility guidelines under title II of the ADA, issued by the ATBCB. After a period of notice and comment, final accessibility guidelines for title II facilities will be issued. Until the Department of Justice adopts final standards under title II, the current title 11 rule provides that either the Standards or the requirements found in UFAS may be used for title II facilities.

The extent to which the ADA requires washing machines to adhere to the Standards' reach range requirements depends on several factors: whether the facility in which they are located is covered by title III or title II of the ADA, whether such washing machines are necessary to the full and equal enjoyment of a facility's services by persons who use wheelchairs, whether a facility is being newly constructed or altered.

Title III of the ADA applies to places of public accommodation and commercial facilities. The Standards, which were developed as the accessibility requirements for new construction and alteration of title III facilities, contain requirements for the accessibility of washing machines, including the reach range requirements noted in your constituent's letter. Title II of the ADA applies to facilities owned or operated by state or local government entities. As noted above, entities covered by title II may apply either the Standards or UFAS to their facilities until final standards are adopted under title

For your convenience, Part I of this letter summarizes the way in which the ADA requirements apply to washing machines in covered facilities and programs. Parts II through V address in detail the requirements with respect to title III, title II, Braille controls, and university dormitories.

I. SUMMARY

The ADA does not impose an obligation on manufacturers of washing machines to produce machines of a particular design. However, the law may require that facilities and programs covered by the ADA ensure accessibility of washing machines, depending on several factors. First, in facilities covered by title III, sections 36.201 and 36.202 of the title III regulation require a place of public accommodation to make its services accessible to persons with disabilities. To do this, the public accommodation must either provide a sufficient number of accessible washing machines, or it may provide assistive devices, so that persons with disabilities may fully and equally enjoy the services offered. Second, also in facilities covered by title III, places of public accommodation and commercial facilities must follow the

requirements of the Standards, including reach range requirements, when installing fixed or built-in machines in-a newly constructed or an altered facility. In new construction and

alteration, the Standards must be followed, and assistive devices are not acceptable. In existing places of public accommodation that are not otherwise being altered, built-in or free-standing machines must be made accessible, using the Standards and its reach range requirements, if to do so would be readily achievable. If it would not be readily achievable, alternatives that are readily achievable, such as assistive devices, may be used.

In facilities covered by title III the Standards, which prescribe maximum reach ranges, or UFAs, which requires front-loading machines, must be followed in new construction or alterations, and assistive devices are insufficient for ADA compliance. In existing facilities, covered entities must provide access to washing machines that are part of an offered program, but they may do this by using assistive devices.

Braille controls are not required for equipment under the new construction or alteration Standards. However, Braille controls are required in places of public accommodation covered by title III, if necessary to provide effective communication with persons with disabilities, unless it would be an undue burden to provide them. They may also be required under sections 36.201 or 36.202. Under title II, Braille controls are required if necessary to provide communication to those with disabilities that is equally as effective as the communication provided to others, unless to do so would pose an undue burden.

Finally, privately owned university dormitories are covered by title III, which uses the Standards; State or locally owned university dormitories are covered by title II, which currently uses the Standards as adopted by title II or UFAS; and universities that receive Federal funds, which can fall into either of the other two categories, are covered by the Rehabilitation Act, and must follow UFAS.

III. Entities Covered By Title III

Title III of the ADA covered laundry facilities in two ways, First, sections 36.201 and 36.202 of the title III regulation obligate places of public accommodation to make their services fully and equally enjoyable by persons with disabilities. Second, the title III provisions for new construction and alteration, which are applicable to fixed machines only, and for

barrier removal, which are applicable to washing machines regardless of whether they are fixed or free-standing, require machines to be accessible to persons who use wheelchairs. This requirement is not related to the inquiry concerning whether accessible washing machines are necessary to the full and equal enjoyment of services.

A. Coverage Under Sections 36.201 and 36.202

Sections 36.201 and 36.202 of the title III regulation prohibit public accommodations from denying persons with disabilities "the full and equal enjoyment" of the services and facilities offered. "See title III regulation and preamble, SS 36.20l and 36.202, at pages 35595 and 35555-56. For example, a laundromat or hotel guest laundry room may need to provide some washing machines with lower controls in order to afford persons who use wheelchairs an equal opportunity to benefit from its services and facilities, if the lack of accessible washing machines effectively denies such persons a full and equal opportunity to benefit from the facilities services. See preamble to title III regulation, at page 35572. These sections do not require a specific number of accessible machines, only that enough machines be accessible for persons with disabilities to have a full and equal opportunity to enjoy a facility's services.

Sections 36.201 and 36.202 apply to all places of public accommodation, such as laundromats or homeless shelters, whether newly constructed, altered, or neither; but they do not apply to commercial facilities, such as corporate office buildings. Although these sections require that the service be made accessible, they do not require that washing machines meet the Standards. Therefore, a place of public accommodation may satisfy these sections' requirements through alternative means, such as assistance provided on request. Any alternative means, however, must afford persons with disabilities a full and equal opportunity to enjoy the service. Thus, if personal assistance is offered, it must be available at all times, and it must be as effective for persons with disabilities as the service is for other persons.

B. Coverage under new construction, alteration, and barrier removal provisions

In addition to any obligations under sections 36.201 and 36.202, all places of public accommodation and commercial

facilities must comply with ADA requirements for new construction of facilities and alterations to existing facilities. Places of public accommodation must also comply with ADA requirements for barrier removal from existing facilities not otherwise being altered. The Standards are the accessibility requirements applicable to this area of coverage, but they apply only to .equipment that is built into the structure of a building -- attached to a wall or floor -- not equipment that is free-standing. See preamble to ADAAG, at page 35415.

01-02797

The Standards include maximum allowable reach ranges in accessible areas and requirements for controls and operating mechanisms. Section 4.2 provides that an object over which a person must reach, such au a washing machine, may be no higher than 34" from the floor to be accessible. Section 4.27 addresses clear floor space, reach, and operation of controls. The Standards do not restrict the types of machines that can be used. However, ANSI A117.1-1980 and 1986, UFAS, and other accessibility standards require the use of front-loading machines; research has demonstrated that they can be used more readily by some people with disabilities, because the opening for loading and unloading clothes is visible and reachable from a wheelchair. Under the Standards, top-loading machines are permitted, as long as they can be operated within the requirements for reach and controls. This would include reach to load and unload clothes, as well as reach to the controls and/or coin mechanism.

The extent to which a covered entity may deviate from the Standards depends on whether the covered facility is being newly constructed, altered, or neither. In new construction of all facilities covered by title III, the Standards must be adhered to strictly, unless to do so would be structurally impracticable or equivalent facilitation is provided. See section 36-401(c) of the regulation (pages 35599 and 35600) and the preamble (pages 35557 and 35589); sections 2.2, A2.2, and 4.1.1(5)(a) of the Standards and title III regulation preamble, at pages 35607, 35611, 35674, and 35577. See also preamble to ADAAG at pages 35413 and 35415. The "structurally impracticable" exception is a narrow exception that would not apply to washing machines. When alterations are performed in covered facilities, the Standards must be followed, unless to do so would be technically infeasible. Compliance is technically infeasible only if it would require the removal of a load-bearing member of the essential structural frame of a building, or if other existing physical or site constraints prohibit compliance. See Standards

S 4.1.6(j) and title III regulation preamble, at pages 35617, 35600, and 35581; see also preamble to ADAAG at page 35428. Thus, in new construction and alteration of facilities, in most cases,. the accessibility requirements must be followed for built-in washing machines. While assistive devices may also be offered, they do not relieve the covered entity from compliance with these requirements.

In existing places of public accommodation covered by title III that are not otherwise being altered, the ADA requires that architectural barriers to access be removed where the removal is readily achievable. "See title III regulation and preamble S 36.304, at pages 35597 and 35568-70. This requirement does not apply to commercial facilities. Readily achievable means capable of being done without much difficulty or expense. See title Ill regulation and preamble, S 36.104, at pages 35594 and 35553-54. Thus, under barrier removal, washing machines must be modified if

it is readily achievable to do so. Even free-standing machines may need to be made accessible to persons who use wheelchairs because barrier removal obligations are not limited to built-in equipment.

If removing barriers from existing facilities is not readily achievable, the ADA requires that alternatives to removing barriers be undertaken, as long as those alternatives are readily achievable. See title III regulation and preamble, S 36.305, at pages 35596 and 35570-71. In such existing facilities then, controls on washing machines must be modified to be within an accessible reach range for persons who use wheelchairs, if such modification is readily achievable. Assistive devices that are provided on request may be sufficient for ADA compliance in this context only if modifying the machines is not readily achievable.

In new construction and alteration of facilities covered by title III, the number of fixed or built-in washing machines that must meet the reach range and other requirements of the Standards depends on the type of facility in which the machines are located. For transient lodging in hotels, motels, or dormitories, sections 9.1 and 9.2.2 of the Standards require all fixed or built-in facilities located in public and common use areas, and fixed or built-in facilities located within sleeping units that are required to be accessible, to comply with accessibility standards. In social service center establishments, such as shelters or group homes, section 9.5.1 requires at least one of each type or fixed or built-in machine in common areas to be accessible. As noted above, these standards apply strictly to new construction and alteration of covered facilities. In existing places of public accommodation

not covered by sections 36.201 and 36.202, these standards must be met if to do so would be readily achievable.

III. Entities covered by title II

Title II of the ADA applies to programs and facilities owned or operated by State or local government entities or instrumentalities. New construction and alteration of title II facilities must follow either the Standards or UFAS, until final standards are adopted Tender title II. In existing title 11 facilities, responsible entities must ensure that each program, when viewed as a whole, is accessible to persons with disabilities. Structural changes are not necessarily required under this standard, if programs can be made accessible in other ways. See title II regulation and preamble, S 35.150, at pages 35719-20 and 35708-09. Therefore, under the "program access" standard, use of assistive devices may result in compliance with the ADA as long as the assistive devices function to make that aspect of the program accessible to persons with disabilities.

IV. Braille controls

Under title III, the extent to which washing machines are required to have Braille controls depends on whether the facility in which they are located is a place of public accommodation or a commercial facility. Public accommodations are required by "Section 35.303 of the title III regulation to furnish auxiliary aids and services where necessary to ensure effective communication with persons with disabilities, unless doing so would pose an undue burden or would fundamentally alter the service offered. See title III regulation and preamble, S 36.303, at pages 35597 and 35565-68. Therefore, a place of public accommodation that offers washing machines with words on them must provide an effective way of communicating any words on the machine to persons with vision impairments. Braille lettering is one such method of communication. However, the Braille lettering need not be built into the equipment controls; equipment controls can be Brailled by templates or adhesive labels. Braille lettering may also be required under sections 36.201 or 36.202 of the rule, as discussed above in part II.A. Commercial facilities are not required to modify washing machines to have Braille lettering, because commercial facilities are not covered by the auxiliary aids and services requirements or by sections 36.201 and 36.202.

In facilities covered by title II, auxiliary aids and services must be provided to ensure communication with persons with disabilities that is equally as effective as communication

with others, unless to do so would pose an undue burden or a fundamental alteration to the service. See title II regulation and preamble, S 35.160, at pages 35721 and 35711-12.

V. University Dormitories

University dormitories, if privately owned, are covered by title III of the ADA. They therefore must comply with sections 36.201 and 36.202 of the title III regulation, if applicable and they must apply the Standards in new construction and alterations, and, if readily achievable, in existing facilities not being altered. Universities owned and operated by State or local governments are covered by title II of the ADA, and currently may choose between the Standards, which do not necessarily require front-loading washing machines, and UFAS, which specifically requires front-loading machines. (Whichever standard is chosen must be used throughout the facility.)

In addition, the proposed ADA guidelines for residential units covered by title II specify that at least one washing machine in any laundry facility must be front-loading, and must meet other requirements from the Standards for controls. See proposed title II guidelines and preamble, S 13.3.5, at pages 60663 and 60639 Moreover, any university, Public or private,

that receives Federal funds-is also covered by section 504 of the Rehabilitation Act of 1973; application of UFAS generally satisfies the new construction and alteration requirements of the section 504 regulations.

I hope this information is helpful to you in responding to your constituent. Please do not hesitate to contact me if we can provide additional assistance on this or any other matter.

Sincerely,

Sheila F. Anthony
Assistant Attorney General

Enclosures

4.2 Alarms

4.27.2 Clear Floor Space, clear floor space complying with 4.2.4 that allows a forward or a parallel approach by a person using a wheelchair shall be provided if controls, dispensers, receptacles, and other operable equipment.

4.27.3 Height. The highest operable part of controls, receptacles, and other operable equipment shall be placed within at least one of the reach ranges specified in 4.2.5 and 4.2.6. Electrical and communications system receptacles on walls shall be mounted no less than 15 in (380 mm) above the floor.

Exception: These requirements do not apply where the use of special equipment dictates otherwise or where electrical and communications system receptacles are not normally intended for use by building occupants.

4.27.4 Operation. Controls and operation mechanisms shall be operable with one

hand and shall not require tight grasping, pinching or twisting, of the wrist. The force required to activate controls shall be no greater than 5 lbs(22.2N).

4.28 Alarms

4.28.1 General Alarms systems required to be accessible by 4.1 shall comply with 4.28. At a minimum usual signal appliances shall be provided in buildings and facilities in each of the following area: restrooms and any other general usage areas (e.g. meeting rooms), hallways, lobbies, and any other areas for common use.

4.28.2 Audible Alarms if provided audible emergency alarms shall produce a sound that exceeds equivalent sound level in the room or space by at least 15 dh4 or exceeds any maximum sound level with a duration of 60 seconds by 5 dh4 whichever is louder Sound levels for alarm signals shall not exceed 120 dh4.

4.28.3 Visual Alarms Visual alarm signal appliances shall be integrated into the building or facility alarm system. If single station audible alarms shall be provided then single station visual alarm signals shall be provided. Visual alarm signals shall have the following minimum photometric and location features.

(1) the lamp shall be a xenom strobe type or equivalent.

(2) the color shall be clear or white (Unfiltered or clear filtered white bulb)

(3) The maximum pulse duration shall be five tenths if one second (0.2 sec with a maximum duty cycle of 40 percent. The pulse duration is defined as the time interval between and final points of 10 percent of maximum signal

(4) The intensity shall be a minimum of 75 candela.

(5) The flash rate shall be a minimum of 1 Hz and a maximum of 3 Hz.

(6) The appliance shall be placed 80 in (2030 mm)above the highest floor level within the space or space 6 in (152 mm) below the ceiling, whichever is lower.

(7) In general, no place in any room or space required to have a visual signal appliance shall be more than 50 ft (15m) from the signal (in the horizontal plane) in large rooms and spaces exceeding 100 ft(30m) across, without obstructions 6 ft (2m) above the finish floor such s auditoriums devices may be placed around the perimeter spaced a maximum 100 ft (30m) apart. In view of suspending appliances from the ceiling.

(8) No place in common corridors or hallways in which visual alarm signaling appliances are required shall be more than 50 ft (15m) from the signal.
4.28.4 Auxiliary Alarms Units and sleeping accommodations shall have a visual

alarm connected to the building emergency alarm system r shall have a standard 110-volt electrical receptacle into which such an alarm can be connected and a means by which a signal from the building emergency alarm system can trigger such an auxiliary alarm. When visual alarms are in place the signal shall be visible in all areas of the unit or room Instructions for use of the auxiliary alarm or the receptacle shall be provided.

Federal Register / I Vol.56 No. 144 / Friday, JULY 25,1991/Rules and Regulations

4.26 Handrails, Grab Bars, and Tub and Shower Seats

4.26.4 Illuminating Hazards A handful or grab bar and any wall or other surface adjacent to it shall be free of any sharp or abrasive elements Edges shall have a minimum radius of 1/8 in (3.2 mm)

4.27 Controls and Operating Mechanics.

4.27.1 General Controls and operating mechanics required to be accessible by

4.1 shall comply with 4.27.

01-02791

Federal Register / I Vol.56 No. 144 / Friday, JULY 25,1991/Rules and Regulations

4.3.7 Slope

4.3.7 Slope An accessible route with a running slope greater than 1:20 is a ramp and shall comply with 4.8. Nowhere shall the cross slope of an accessible route exceed 1:50.

4.3.8 Changing in levels. Changes in levels along an accessible route shall comply with 4.5.2 If an accessible route has changes in level greater than 1/2 in (13 mm) then curb ramp, ramp, elevator, or platform lift (as permitted in 4.1.3 and 4.16) shall be provided that complies with 4.7 4.8 4.10 or 4.11 respectively. An accessible route does not include stairs, steps, or escalators. See definition of "egress" means of in 3.5. 4.3.9 Doors along an accessible route shall comply with 4.13.

4.3.9 Doors. Doors along an accessible route shall comply with 4.13.

01-02792

diameter (see Fig. 3(a)) or a T-shaped space (see Fig. 3(b)).

4.2.4 Clear floor or Ground Space for Wheelchairs

4.2.4.1 Size and Approach. The minimum clear floor or ground space required to accommodate a single stationary wheelchair and occupant is 30-in by 48 in (760 mm by 1220 mm) (see Fig 4(a)). The minimum clear floor or ground space for wheelchairs may be positioned for forward or parallel approach to an object (see Fig 4(b)and (c)). Clear floor or ground space for wheelchairs may be part of the knee space required under some objects.

4.2.4.2 Relationship of Maneuvering Clearance to Wheelchair Spaces. One full unobstructed side if the clear floor or ground space for a wheelchair shall adjoin or overlap an accessible route or adjoin another wheelchair clear floor space. If a clear floor space is located in an alcove or otherwise confined on all or part of three sides, additional maneuvering clearances shall be provided as shown in Fig 4(d)and (e).

4.2.5 Surfaces for Wheelchair Spaces clear floor or ground space for a wheelchair shall comply with 4.5.

4.2.5. Forward Reach If the clear floor space only allows forward approach to an object, the maximum high forward reach allowed shall be 48 in (1220 mm) (see Fig 5(a)). The minimum low forward reach is 15 in (580 mm) If the reach and clearances shall be as shown in Fig 5(b).

4.2.6 Slide Reach. If the clear floor space allows parallel approach by a person in a wheelchair, the maximum high side reach allowed shall be 54 in (1370 mm) and the low side reach shall be no less than 9 in (230 mm) above the floor (Fig 6(a) and (b)). If the side reach is over an obstruction, the reach and clearance shall be as shown in Fig 6(c).

4.3 Accessible Route.

4.3.1 General All walks, halls, corridors, aisles, skywalks, tunnels, and other spaces.

DEC 6 1993

Mr. Thomas G. Daly
Corporate Director of Safety
Hilton Hotels Corporation
9336 Civic Center Drive
Beverly Hills, California 90210

Dear Tom:

I am writing in response to your letters regarding the Americans with Disabilities Act (ADA). I apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation and it is not binding on the Department.

Your first letter asked a series of questions regarding the rental of hotel rooms to guests with disabilities. Your second letter inquired about alarm systems.

Regarding hotel obligations under the ADA, you ask first whether a hotel may decline to rent a guestroom that is not accessible to a guest with a mobility impairment if all accessible guestrooms are occupied and, if not, whether the hotel can require the guest to sign a waiver of liability.

Under title III of the ADA, no individual may be discriminated against on the basis of disability in the full and equal enjoyment of the goods, services, and accommodations of any place of public accommodation (28 C.F.R. S 36.202). A place of public accommodation may impose legitimate safety requirements, even if they tend to screen out persons with disabilities. However, these requirements must be based on actual risks and on facts about particular individuals, not on stereotypes or generalizations about individuals with disabilities or on the basis of presumptions as to a class of individuals with

cc: Records, Chrono, Wodatch, Magagna
udd\magagna\pl\ XX

disabilities can or cannot do. A policy that denies persons with mobility or hearing impairments the use of an inaccessible room on the basis of safety concerns may constitute the kind of prohibited generalization or presumption about what a class of individuals with disabilities can or cannot do. Note that any safety standard must be applied to all clients or customers of the place of accommodation, and inquiries about it must be limited to matters necessary to carrying out the specific standard. Hotel guests with disabilities assume the same ordinary safety risks as do guests without disabilities.

It is discriminatory to apply eligibility criteria or standards that screen out or tend to screen out an individual with a disability or a class of individuals with disabilities from the full and equal enjoyment of any goods and services, unless such criteria can be shown to be necessary for the provision of the goods and services (28 CFR S 36.301). Therefore, singling out persons with disabilities to sign waivers of liability as a condition of becoming a hotel guest is likely an example of an eligibility criterion that tends to screen out persons with disabilities.

We presume under your scenario that a person with a disability is being offered a non-accessible room because all accessible guestrooms are occupied by persons with disabilities. If that is not the case, the hotel should move non disabled guests to another room and provide the accessible room to the person with a mobility impairment. This situation can be avoided by reserving the hotels accessible rooms until all the other rooms are booked, by renting accessible rooms to non disabled guests for one night only, or by notifying non disabled persons who rent accessible rooms that they may be asked to move to another room.

Furthermore, an existing hotel that has an insufficient number of accessible rooms, according to the ADA Standards for Accessible Design, Section 9.1.2, is obligated under the ADA to remove architectural barriers to access and make the requisite number of rooms accessible, to the extent it is readily achievable to do so. Please also remember that, in altering guest rooms or when constructing new hotels, a hotel must make a certain number of the guest rooms accessible. For the appropriate numbers of accessible rooms, please refer to Section 9 of the Standards for Accessible Design.

Your second question is whether a hotel must accede to a request to rent a non-accessible room to a guest with a mobility impairment when accessible rooms are available and, if so, whether the hotel can require the guest to sign a waiver of liability. Individuals with disabilities are not required to accept accessible accommodations. Section 501(d) of the ADA specifically provides:

> Nothing in this Act shall be construed to require an individual with a disability to accept an accommodation, aid, service, opportunity, or benefit which such individual chooses not accept.

Because an individual has a statutory right to decline the accessible room in the first instance, a penalty in the form of requiring a waiver of liability cannot be imposed for exercising that right.

Your third question is whether the hotel may deny a room to a guest who is deaf and who desires a room equipped for persons with hearing impairments. Again we presume that only persons with disabilities are occupying such rooms on that evening. If not, non-disabled persons should be moved to allow the person with a disability to occupy the room.

In order to provide equal access, a public accommodation is required to make available appropriate auxiliary aids and services where necessary to ensure effective communication (28 C.F.R. 36.303). The hotel maintains its responsibility to provide effective communication, even though a guest with a hearing impairment is placed in an inaccessible room. Therefore, if all the rooms equipped with visual alarms are occupied, the hotel is still responsible for providing effective communication by alternative methods, such as portable alarms, or other devices if it is not an undue burden. The hotel is strongly encouraged to consult with the individual with a disability to ensure the choice of an auxiliary aid or service that will result in effective communication.

Your second letter deals with the question of installation heights for visual alarm devices as provided in section 4.28.3(6) of the Standards. This provision requires that the visual appliances of the alarm system be located 80 inches above the highest floor level within the space or 6 inches below the ceiling, whichever is lower. This requirement was based on data indicating that 80 inches was the most effective height for a 75-candela lamp. The additional requirement that the lamp of

ceiling mounted devices be below the ceiling, rather than recessed into or flush with ceiling, was included because the reflection of the flash on the ceiling surface is an important factor affecting the visibility of the visual alarm device. This data and reasoning is explained in the enclosed technical bulletin on visual alarms that was developed by the Architectural and Transportation Barriers Compliance Board.

Section 2.2 of the Standards, Equivalent Facilitation, permits departures from particular technical requirements when alternative designs and technologies can be shown to provide equivalent or greater accessibility. The concept of equivalent facilitation allows for deviations from technical provisions of

the standards when it is necessary to meet the requirements of other applicable regulations. However, the Department does not certify or approve individual proposals of equivalent facilitation.

We hope that the information above is of help to you. Please feel free to contact the Public Access Section any time you have other questions or need further information. The Department maintains a telephone information line to provide technical assistance regarding the rights and obligations of individuals, businesses, agencies, and others covered or protected by the ADA. This technical assistance is available by calling 202-514-0301 (voice) or 202-514-0383 (TDD) between 1:00 p.m. and 5:00 p.m., Monday through Friday,

Sincerely,

John L. Wodatch
Chief

DEC 6 1993

Anthony C. Rodriguez
Attorney at Law
1300 Clay Street
Suite 600
Oakland, CA 94612

Dear Mr. Rodriguez:

This letter is in response to your request for information about the provisions of the Americans with Disabilities Act (ADA). We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department.

You have asked whether title III of the ADA applies to common areas of residential properties, including mobilehome parks.

Title III of the ADA applies to privately owned or operated facilities that are either commercial facilities or that fall within one of the twelve categories of "places of public accommodation" listed in that title. Strictly residential facilities are not included in the twelve public accommodation

categories and are expressly exempted from the definition of commercial facilities.

Although title III does not apply to strictly residential facilities, it does cover facilities, or portions of facilities, that have some residential features and that function as one of the twelve categories of places of public accommodations. For instance, common areas that are places of public accommodation located within private residences that are not intended for the exclusive use of tenants and their guests, are covered by title III. This coverage is provided for explicitly

cc: Records, Chrono, Wodatch, Magagna
udd\grant\policy\rodriguz.hsg

01-02806

in the preamble to the title III regulation on page 35552 of the enclosed volume. Additionally, section 36.207(a) of the regulation explains that when a place of public accommodation is located in a private residence, the areas of the home that are used for the operation of the public accommodation are covered by title III, while the other areas which are used exclusively as a residence are not.

In a mobilehome facility, common areas, such as recreational facilities, for example, that are restricted to the exclusive use of residents and their guests would be considered part of the residential facility and not a place of public accommodation even though places of recreation are listed among the categories of public accommodations under title III. However, where such facilities are available for use by persons other than residents and their guests, they are places of public accommodations within the meaning of title III. Thus, a mobilehome park rental office which serves persons other than residents and their guests would be considered a rental establishment or service establishment within the meaning of the ADA.

This interpretation is fully consistent with the excerpt of the Senate Report you rite which provides that "[o]nly nonresidential entities or portions of entities are covered by [title III]." Where "portions of an entity" are used by persons other than residents and guests, they lose their strictly residential character.

I have enclosed the regulation promulgated under title III, and title Technical Assistance Manual for that title. I hope this information is helpful to you.

Sincerely,

John L. Wodatch

DEC 9 1993

XX
XX (b)(6)
ICELAND

Dear XX

This is in response to your letter inquiring whether your daughter would be able to receive health and life insurance at a premium no higher than children who do not have disabilities. We apologize for the delay in responding.

Title III of the Americans with Disabilities Act of 1990 ("ADA"), 42 U.S.C. SS 12181-12189, authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. This technical assistance, however, does not constitute a determination by the Department of Justice of rights or responsibilities under the ADA, and it does not constitute a binding determination by the Justice Department.

Your letter inquires as to whether your daughter, who has a disability, is entitled to health and life insurance, and whether her premiums would be affected by her disability. With respect to the purchase of insurance, the ADA allows insurance companies to charge more for insurance, to deny health insurance to an individual with a pre-existing condition for that condition, or to offer policies that limit coverage for certain procedures or treatments, but only if the higher charges or limitations in coverage are based on sound actuarial data and principles. Thus, while the ADA does provide some protection for individuals with disabilities in their dealings with insurance companies, it does not prohibit the use of legitimate actuarial considerations. The laws of the State in which you reside may provide different or additional protections for your child, and you may want to inquire with the appropriate State officials.

Enclosed for your information is a copy of the Department of Justice's Technical Assistance Manual for title III of the ADA. It discusses the definition of disability on pages 9-13, and the requirements applicable to insurance companies on pages 19-20.

cc: Records, Chrono, Wodatch, Magagna

DJ XX

DEC 9 1993

Mr. James T. Moll, AIA
Assistant Vice President
T. Rogvoy Associates, Inc.
6735 Telegraph Road, Suite 300
Bloomfield Hills, Michigan 48301

Dear Mr. Moll:

I am responding to your letter asking if title III of the Americans with Disabilities Act (ADA) requires a newly constructed sales establishment to provide elevator access to a

mezzanine that houses employee offices and storage space.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance is not a legal interpretation of the statute, and it is not binding on the Department.

To determine if elevator access to a mezzanine in a specific building is required, you must look to the requirement that applies to the building in which the mezzanine is located. In new construction and alterations, title III generally requires that at least one accessible passenger elevator serve each level of a multistory building. However, there is an exception to this general rule. Elevators are not required in facilities that are less than three stories or have fewer than 3000 square feet per story, unless the building is a shopping center or mall; the professional office of a health care provider; a public transit station; or an airport passenger terminal.

Your letter specifies that the sales establishment in question is less than three stories in height but is located in a shopping center. Therefore, to determine if the elevator exemption applies, you must look to Section 3.5 of the ADA Standards for Accessible Design (Appendix A to the enclosed regulation) which defines a "story" as:

cc: Records, Chrono, Wodatch, Blizard, FOIA, Friedlander
n:\udd\blizard\adaltrs moll

> That portion of a building included between the upper surface of a floor and upper surface of the floor or roof next above. If such portion of a building does not include occupiable space, it is not considered a story for purposes of these guidelines. There may be more than one floor level within a story as in the case of a mezzanine or mezzanines.

A mezzanine, defined as "that portion of a story which is an intermediate floor level placed within the story and having

occupiable space above and below its floor," is not considered a "story" for the purpose of determining if an elevator is required.

A single-story building (with or without a mezzanine) is never required to install an elevator. A two-story building that is part of a shopping center or mall is required to install an elevator to provide access to each floor level occupied by a "sales establishment." The term "sales establishment" encompasses all aspects of the business operation, not merely the areas within the facility dedicated to the display or sale of goods. Therefore, the fact that a mezzanine within a sales establishment is not used to sell or display merchandise is not relevant to the application of the elevator requirements. If the sales facility is required to install an elevator, the elevator must connect all levels of the facility, including the mezzanine.

For your reference, I am enclosing a copy of this Department's regulation implementing title III of the ADA and the Title III Technical Assistance Manual. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief

Re: ADA Elevator Requirements

Dear Sir:

Please clarify ADA elevator requirements for a newly constructed Sales establishment less than three (3) stories in height and more than. 3,000 square feet in area, and:

1. contains a partial second floor or mezzanine to be used by employees only as office and/or storage areas,
2. shares a site with five or more other sales establishments with exterior access only from one establishment to another.

We might conclude from Part III, 28 CFR 36, Section 36.401 paragraphs d.1. and d.2., that an elevator is required because, as a shopping center, the elevator exemption would not apply. However, the example contained in paragraph d. 3. indicates an elevator would not be required, per the last four (4) words as paraphrased: "For example, in a facility that houses a shopping center ... the floors that are above or below an accessible ground floor and that do not house sales or rental establishments ...must meet the requirements of this section but for the elevator."

We understand the intent of paragraph d.3., but the example contained therein appears to contradict paragraph d.2. is the use of the mezzanine as a non-sales area a factor in determining if an elevator is required?

We would appreciate a timely response to this matter. If there are any questions, please call me.

Very truly yours,
T. ROGVOY ASSOCIATES, INC.

T. 12-8-93 DEC 9 1993

Mr. John J. Philip

Supervisor of Field Operations
The State Library of Ohio
65 South Front Street
Columbus, Ohio 43266-0334

Dear Mr. Philip:

I am responding to your letter asking for clarification of the requirements of the Americans with Disabilities Act (ADA). You have asked if the ADA requires bookmobiles operated by public libraries to be equipped with wheelchair lifts.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance is not a legal interpretation of the statute, and it is not binding on the Department.

Title II of the ADA prohibits discrimination on the basis of disability in the programs, activities, and services of public entities. A public library is an entity subject to the requirements of title II. Therefore, a public library is required to ensure that each of its programs, including its bookmobile program, is accessible to individuals with disabilities. However, this obligation to provide access to each program does not necessarily require a public entity to make each of its facilities accessible.

Bookmobiles are "facilities" subject to title II; but there is no established design standard, for accessible mobile facilities such as bookmobiles. Therefore, a public library is not required to purchase new bookmobiles that meet specific design criteria or to retrofit existing bookmobiles to meet a specific standard. A library that operates a bookmobile may choose to meet its program accessibility obligations by installing a wheelchair lift on the vehicle, or it may choose to provide access to the program through other methods, such as the use of aides to locate and retrieve books for people with disabilities.

April 30, 1993

Mr. John Woodach, Director,
Office of Americans with Disabilities Act
U.S. Department of Justice
Civil Rights Division
P.O. Box 66738
Washington, DC 20035-9998

Dear Mr. Woodach:

This letter is being written to seek your guidance in the area of bookmobile construction. For eight years the State Library of Ohio has presented annual National Bookmobile Conferences. As a result we receive questions on bookmobile service from libraries throughout the country. Recently, questions regarding whether a wheelchair lift needs to be added to existing and/or new bookmobiles have surfaced. In this context, it would be greatly appreciated if you would clarify the requirements, if any, for a bookmobile wheelchair lift under the regulations for the Americans with Disabilities Act.

By way of background, I was unable to attend the American Library Association program in San Francisco during which you spoke on this issue However, various attendees have indicated to me that your comments seemed to indicate that you saw no requirement to install a wheelchair lift In a library bookmobile.

Although public libraries have embraced ADA as part of their commitment to service, my questions (see below) come from administrators who have tried to make their facilities accessible. Nonetheless, they have concerns about the utility of a wheelchair lift on the bookmobile which, by its nature, is extremely limited in usable space, particularly in busy hours.

Despite this limitation, many libraries (including this State Library) have added a wheelchair lift to bookmobiles. Regrettably, very little use of the wheelchair lift seems to have been recorded.

3. Would a chair lift be acceptable in place of a wheelchair lift if accessibility is required.

4. If new standard-length bookmobiles requiring a wheelchair lift, does this requirement also extend to smaller bookmobiles?

5. Do bookmobiles now in service need to be retrofitted with a wheelchair-lift?

I would appreciate your responses to these questions and permission to quote you in answering bookmobile wheelchair queries, At present, I know of at least five libraries in the process of planning new bookmobiles. Nationally if past experience is a guide, the questions in this letter are undoubtedly being pondered by at least one hundred other American libraries.

Your assistance is greatly appreciated.

Sincerely,

John J. Philip
Supervisor of Field Operations

Encls.

DEC 14 1993

Zita Denkinger
565 N.W. Holly Street
Box 7003
Issaquah School District
Issaquah, WA 98027

Dear Ms. Denkinger:

This letter is response to your letter requesting information regarding the kinds of requirements being made of privately owned museums, parks, and recreational facilities under the Americans with Disabilities Act of 1990 ("ADA"). You also asked whether it is permissible under the ADA for a public school to pay for the use of a private facility that is not accessible to people with disabilities. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal' guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

Generally, title III of the ADA prohibits the owners and operators of places of public accommodation from discriminating against people on the basis of their disabilities. Privately owned museums, parks, and recreational facilities are places of public accommodation. Please see the enclosed title III regulation at section 36.104 (pages 35,594 and 35,551-52) for further discussion.

Public accommodations have many obligations under the ADA. Four of these obligations may be of special concern to you. First, public accommodation must make reasonable modifications

cc: Records, Chrono, Wodatch, Magagna, Mobley
udd\mobley\pletters\denkinge

01-02817

to their policies, practices, and procedures to accommodate persons with disabilities. Second, they must provide appropriate auxiliary aids and services except under certain circumstances. Third, they must remove architectural barriers to access where such removal is readily achievable. Fourth, when it is not readily achievable to engage in barrier removal, they must apply readily achievable alternatives to provide access. Each of these obligations is discussed in the enclosed Technical Assistance Manual.

You also asked whether it is permissible for public schools to pay for the use of private facilities that are not accessible to individuals with disabilities. Title II prohibits public entities from discriminating against individuals with disabilities or from excluding them from participation in or denying them the benefits of governmental services, programs, or activities. Please refer to the discussion in the enclosed title II regulation (pages 35,718-19 and 35,702-06).

Sections 35.149 and 35.150 of title II require government institutions like public schools to operate their programs so that when the program is viewed as a whole it is readily accessible to and usable by individuals with disabilities. Program access must be achieved unless doing so would result in an undue burden. Please see the enclosed title II regulation for a discussion of program access (pages 35,719-20 and 35,708-09).

If a school arranges a field trip to a local museum, for example, the concept of program access requires the field trip to be made accessible to students with disabilities. To satisfy this requirement, the school may, for example, arrange with the

museum to provide an audio tape or slide show description of inaccessible areas of a museum.

I have enclosed this Department's Title II and III Technical Assistance Manuals that were written to guide individuals and entities having rights and obligations under the Act toward a fuller understanding of the law. Pertinent discussion is found in the Title III Technical Assistance Manual at pages 1-2 (definition of place of public accommodation), 22-25 (reasonable modifications of policies), 25-27 (auxiliary aids and services), 28-37 (removal of architectural barriers), and 37-38 (alternatives to barrier removal), and in the Title II Technical Assistance Manual at pages 9-13 (general prohibitions of discrimination), and 19-20 (program access).

01-02818

I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

Joan A. Magagna
Deputy Chief
Public Access Section

202-PL-574

5 1993

Mary Pell, D.O.
INTEPMED
990 44th Street S.W.
Wyoming, Michigan 49509

Dear Dr. Pell:

I am responding to your letter asking for information about the requirements of title III of the Americans with Disabilities Act (ADA), and this Department's regulation implementing title 111. Specifically, you have asked if a health care provider is required to provide a sign language interpreter for a patient who is deaf or hard of hearing if effective communication can be achieved through other means.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This letter provides informal guidance about the obligation of a health care provider to provide auxiliary aids; however, this technical assistance does not constitute a legal

interpretation of the statute, and it is not binding on the Department.

The ADA requires public accommodations, including physicians, to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities. In determining what constitutes an effective auxiliary aid or service, a physician must consider, among other things, the length and complexity of the communication involved. For instance, a notepad and written materials may be sufficient to permit effective communication when a physician is explaining possible symptoms resulting from a simple laceration. Where, however, the information to be conveyed is lengthy or complex, the use of handwritten notes may be extremely slow or cumbersome and the use of an interpreter may be the only effective form of communication.

Use of interpreter services is not necessarily limited to the most extreme situations -- for example, a discussion of whether to undergo surgery or to decide an treatment options for cancer. Further discussion of this point may be found on page

cc: Records, Chrono, Wodatch, Blizard, FOIA Friedlander
n:\udd\blizard\adaltrs\pell

01-02820

35567 of the preamble to the enclosed regulation. While the nature of medical services is considered one factor in determining what auxiliary aid is necessary for effective communication, the focus should be not only on the nature of the services, but also on-the type of communication between the physician and the patient.

Interpreters are not usually needed for routine office visits. However, an interpreter may be required for routine visits, if a note pad does not provide effective communication between the physician and the patient. For example, if your patient's routine care includes regular office visits at which-you record her blood pressure and weight, exchanging notes is likely to provide an effective means of communication. But, if your patient's routine visit involves a thorough examination and a battery of tests which should be discussed, you should be prepared to arrange for the services of a qualified interpreter, as an interpreter is likely to be necessary for effective .

communication with your patient, given the length and complexity of the communication involved.

I am enclosing a copy of this Department's regulation implementing title III and the Title III Technical Assistance Manual. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch

To Whom It May Concern:

My name is Dr. Mary Pell and I am a family practitioner in Grand Rapids, Michigan and I wondered if you could please take some time to clarify a question that our office has. We presently have a patient who is deaf and who is under our care and is able to communicate with us through notes, however she informs us that this is not an acceptable form of communication as far as she is concerned. She is demanding that we hire an interpreter to be available with her during her office appointments.

We have sent for a copy of the Americans Disability Act, and if my understanding is correct, as long as there is some form of communication, then we have met our obligations, according to this Act.

If I misunderstood that interpretation and we do need someone here as an interpreter, could you please either just call our office at (616) 538-3300 or send us a note and let us know what our specific responsibilities are concerning that.

Thank you for your effort.

Sincerely,

Mary Pell, D.O.

XX (b)(6)

15 1996

Mr. Fred Burgess
Local Union No. 916 AFL-CIO
United Brotherhood of Carpenters

and Joiners of America
P.O. Box 1542
Aurora, Illinois 60507

Dear Mr. Burgess:

I am responding to your letter concerning the Americans with Disabilities Act (ADA). I apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute and it is not binding on the Department.

You have asked whether there are any procedures available to you to ensure that specifications and drawings for renovations are in compliance with title III of the ADA, 42 U.S.C. 12101 et seq., before the necessary permits are issued.

The first issue raised in your letter is the relationship between State or local law and Federal law in this area. State and local governments are not authorized to enforce the ADA, to monitor compliance therewith, or to grant waivers of the ADA's requirements. Therefore, as you noted, the City of Aurora Building and Inspection Department is not authorized to certify that your proposed specifications and drawings satisfy the requirements of the ADA. Note, however, that the ADA does not preempt State or local law and, therefore, such laws must be complied with in addition to the ADA.

As your letter implies, this overlap of State and local law and the Federal ADA can complicate the building process. To

cc: Records, Chrono, Wodatch, Hill, FOIA, Friedlander
n:\udd\hille\burgessl

01-02824

address this potential problem, the ADA has provided a process by which State and local governments may submit their building codes to the Department of Justice for certification that the

requirements of those codes meet or exceed the requirements of the ADA. If such certification is granted for a State or local code, an entity whose building is built in compliance with the certified code will be able to rely on the certified code as "rebuttable evidence" of compliance with the ADA. Thus, such certification, although not a guarantee against findings of noncompliance, would allow builders to rely on their State or local codes and on the local systems of preliminary investigation, approval, and enforcement, rather than having to do independent reviews of both the local and Federal laws. The process of certification may be initiated by a State or local official or entity who has principal authority for administration of the submitted code.

In the absence of such certification, however, the ADA does not create a Federal equivalent to the local code enforcement process. Neither the Department of Justice, nor any other Federal agency, functions as a "building department" to review plans, issue permits or certificates, or provide "interpretations" of the applicable standards. Rather, title III is generally enforced through compliance reviews, complaint investigations, and litigation. In short, the ADA is a civil rights law, rather than a building code, and, like other civil rights laws, it requires each covered entity to use its best professional judgment to comply with the statute and the implementing regulations.

There are, however, numerous sources available to assist you in understanding and fulfilling the requirements of the ADA. The primary source of guidance is the Department's title III - regulation, which includes the ADA Standards for Accessible Design. The ADA Standards establish minimum standards for the design and construction of new buildings and for alterations to existing buildings. These standards provide guidance to those in the building industry as to how to provide minimum levels of accessibility.

In addition, this Department has issued a title III Technical Assistance Manual designed to assist entities subject to the ADA to understand and satisfy their obligations. Finally, the Department has established a telephone information line to respond to any specific inquiries you may have during your implementation of the ADA requirements. The information line number is (202) 514-0301 (voice) , (202) 514-0381 (TDD) .

I am enclosing copies of both the regulation implementing title III of the ADA and the Department's Title III Technical

Assistance Manual. I hope that this information is helpful to you and that this letter fully responds to your inquiry.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Dear Sir:

The City of Aurora, Building and Inspection Department 65 S. Water St. Aurora II.60507 under the direction of xx (b)(6) xx claims they do not have enforcement jurisdiction for the American with Disabilities Act.

We have a lot of commercial rehabilitation work coming and underway in the City of Aurora and I believe that the specifications and drawings should be brought up the ADA when they do the renovation work and not wait until the buildings are occupied to find the owners, developers and builders are not in compliance.

Is there any thing that can be done at the preliminary stages before the permits are issued to make sure the buildings meet or exceed the ADA, please let me know.

Sincerely,

Fred Burgess

01-02827

T. 12-13-93

DEC 15 1993

Mr. Fred M. Farmer
R. Douglas Stone & Associates, P.A.
940 North Ferncreek Avenue
Orlando, Florida 32803-3378

Dear Mr. Farmer:

I am responding to your letter concerning the Americans with Disabilities Act (ADA). I apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter raises several issues regarding the relationship between State and Federal law in the area of accessibility to persons with disabilities. First, the ADA is a Federal law and is enforced by Federal agencies, including the Department of Justice. State governments are not authorized to enforce the ADA, to monitor compliance therewith, or to grant waivers of the ADA's requirements.

Second, the ADA does not preempt all State regulation in the area of accessible design. States are free to enact and enforce code provisions that provide equal or greater access than the ADA standards. However, if the State code provisions differ from the ADA requirements in a way that results in less accessibility, then an entity subject to title III of the ADA is required to comply with the Federal standard. To the extent that the Federal standard is irreconcilable with the State standard, a covered entity must comply with the Federal standard.

Finally, your letter raises the specific issue of the

technical requirements that govern the height of accessible toilets. You correctly note that the ADA Standards for Accessible Design, section 4.16.3, requires that water closets be 17 to 19 inches in height, measured to the top of the toilet

Records, Chrono, Wodatch, Hill, FOIA, Friedlander
d\hille\policylt\farmerlt

01-02828

seat. In new construction, or when a water closet is being altered, this requirement must be followed strictly. Therefore, it would be impermissible to install water closets of 20 inches in height, even if permitted or required by State law. However, in your particular situation, as you correctly note, a 19-inch water closet would meet the requirements of both the ADA Standards and the Florida State code as you have described it.

I hope that this information is helpful to you and that this letter fully responds to your inquiry.

Sincerely,

John L. Wodatch

Washington, DC 20530
Attn: Barbara S. Drake,
Deputy Assistant Attorney General

Re: Americans with Disabilities Act of 1990

Dear Ms. Drake:
We welcomed a uniform "handicapped" code as a national standard in lieu of the numerous conflicting local / state / national codes. However, we in Florida are facing a dilemma that needs your attention. On October 1, 1993, we will be faced with a conflicting code that will be issued by the State of Florida Department of Community Affairs, Board of Building Codes and Accessibility Requirements, (904) 487-1824, Ms. Mary Kathern Smith. We have been informed that they will not enforce the A.D.A. Code but will enforce their State of Florida Code. THIS IS NOT A GOOD SITUATION.

For example, the A.D.A. Code requires the top of the toilet seat to be from 17" to 19" while the State of Florida Code requires that height to be 19" to 20"! The water closet manufacturers are changing their standard toilet height from 18" down to 17", so when you add a standard 1-inch-thick seat, the top is perfectly even with the 18" envelope. The State of Florida situation will require

the extra cost of a special 2" thick seat to meet their 19" to 20" envelope.

Just recently, we had a nursing home project turned down because we had only 18" to the top of the seat, which did not meet the State of Florida codes, but did meet A.D.A. Code.

In addition to this problem, the State of Florida is rewriting many of the other requirements currently addressed by the A.D.A. Code which will effect many other items similarly.

Thank you for your time and consideration of this matter. I await your reply.
Sincerely
Fred M. Farmer

St. Louis, Missouri XX
(b)(60
Dear Ms. XX

This is in response to your letter to this office regarding respiratory disabilities and the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA may apply to you. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Under the ADA, the Department of Justice declined to state

categorically that allergy or sensitivity to cigarette smoke should be recognized as a disability because, in order to be viewed as a disability under the ADA, an impairment must substantially limit one or more major life activities. An individuals respiratory or neurological functioning may be so severely affected by allergies or sensitivity to cigarette smoke that he or she will be considered disabled. Such an individual would be entitled to all of the protections afforded by the ADA. In other cases, however, an individuals sensitivity to smoke or other environmental elements will not constitute a disability. If, for instance, an individuals major life activity of breathing is somewhat, but not substantially, impaired, the individual is not disabled and is not entitled to the protections of the statute. Thus, the determination as to whether allergies or sensitivity to smoke are disabilities covered by the regulation must be made using the same case-by-case analysis that is applied to all other physical or mental impairments. (See the enclosed title III regulation at page 35549.)

Because of the case-by-case nature of the determination, the Department of Justice ADA regulations do not mandate restrictions on smoking. It is important to note that section 501(b) of the statute merely states that the prohibition of, or the imposition of restrictions on, smoking in places of public accommodation is not precluded by the ADA. The statute does not mandate imposition of any restrictions. Furthermore, there is currently no Federal statute that absolutely bans smoking in public buildings.

If you believe that you are disabled as defined under the ADA and you can identify a particular facility in which you are denied access because of the presence of smoke, you may either file a private suit in Federal court or send a complaint to the Department of Justice for investigation. Complaints against State or local government facilities should be sent to this ' office. Complaints against privately owned places of public accommodation should be sent to the Public Access Section, Civil Rights Division, U.S. Department of Justice, P.O. Box 66738, Washington, D.C. 20035-6736.

I hope this information has been helpful to you.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

Enclosure

01-02832

October 7, 1993

Department Of Justice
The Honorable Janet Reno
U.S. Attorney General
10th & Constitution Avenue NW, ROOM 5111
Washington, D.C. 20530

Dear Ms. Attorney General,
Please find enclosed a copy of a letter I recently sent to the Mayor of St. Louis. I have a respiratory disability in the fact that I have Asthma and that I have severe reactions to small amounts of cigarette smoke. I have been having a great deal of difficulty trying to get accommodation for my disability.

Why is it that the Americans With Disability Act of 1990 technical manual has absolutely no Federal Agencies and/or Federally Funded ADA Technical Assistance programs that deal specifically with respiratory disabilities? And why is it that Accessibility Guidelines and Uniform Accessibility Standards do not address air quality and/or accessibility

guidelines for respiratory disabilities? Isn't that discrimination?

If it has to do with your mouth, your ears, your eyes, your brain or your limbs you have and can find specific Federal assistance for that disability. Also receiving specific Federal assistance are those with Aids and Alcohol and Substance Abuse. I am not downgrading those disabilities, but it is discrimination against those of us who have a Chronic Lung Disease not to be included. We have essentially been left to fight for our own rights to gain access.

Those individuals who are considered to have a respiratory disability include those with asthma, emphysema, hay fever, sinusitis, allergies, Chronic Obstructive Pulmonary Disease (COPD) and many other conditions which are triggered or exacerbated by exposure to tobacco smoke to the extent that at least one major activity (e.g., breathing and working) are adversely affected.

When I called the Office For The Disabled for the City of St. Louis I asked what that office was supposed to do for disabled people. I was told that they were there to advocate for the disabled. Then I explained that I did not have access to most of St. Louis because of my respiratory disability and that I wanted them to help me. I was told that they were already in compliance with the ADA and that there was nothing that they could do for me.

XX (b)(6)

If you would like to get a real education as to what it is like for those of us with a respiratory disability try calling the St. Louis Housing and Urban Development Office and ask about housing people.

01-02833

with a respiratory disability who are sensitive to Environmental Tobacco Smoke (ETS). If you have any other disability they can accommodate you.

Those of us who have this disability need someone who has this same disability to advocate and help draft access guidelines that will be added to those already in place. When there is tobacco smoke in the lobby of a building or being recirculated from a smoking area that building is not accessible to me. For someone like myself, any amount of tobacco smoke in a lobby is like asking someone in a wheel chair to climb a flight of stairs to get to the elevator.

On August 18, 1993 I attended a media training session sponsored by the American Stop Smoking Intervention Study (ASSIST) a joint project of the Missouri Department of Health and the American Cancer Society. That meeting was held at the St. Louis Chapter of the American Heart Association building. Before attending that meeting I called and

asked if it was a smoke free building. I was told that no one was allowed to smoke in the building or on the premises. I was there for three and a half hours. Soon after I left I could taste cigarette smoke coming out of my lungs. Within about, an hour my lungs began to hurt and became very tired. I was ill for the next three days- This is the kind of situation that I continue to encounter. People do not understand that smoke free should mean just that, no smoke being re-circulated throughout the building. There are no Uniform Accessibility Standards that pertain to Chronic lung Disease and smoke-sensitive individuals.

If there is anything at all that you cart do it would be greatly appreciated by all of us with this disability. I have written letter after letter after letter trying to get access for my disability. if guidelines has been written for this disability then it wouldn't be such a tremendous fight to gain access. Please help us.

Truly Yours,

XX

Mayor Freeman Bosley, Jr.,
City Hall Room 200
St. Louis, MO 63103

Dear Mayor Bosley,

I am writing to you in regards to The Rehabilitation Act of 1973, Section 504, the American With Disabilities Act of I090 and City Ordinance #62710 of 1992. I have a respiratory disability in the fact that I have Asthma and that

I have severe reactions to small amounts of cigarette smoke. The City of St. Louis is discriminating against me, my son and all persons with a respiratory disability by enacting and/or adhering to City Ordinance #62513 and the Missouri Clean Indoor Air Act.

As a member of this community and more importantly as a mother, I respectfully request and demand -- on behalf of myself and my child who have medical conditions (Asthma) making us especially sensitive to tobacco smoke -- that the City of St. Louis provide us with protection from the now-proven hazards of Environmental Tobacco Smoke (ETS) by prohibiting smoking in all public places except in separate (and separately-ventilated) areas.

It has been clear for at least ten years that persons who have conditions which make them especially sensitive to ETS as "handicapped persons," and are entitled to legal protection for their health and physical comfort. See, e.g., Vickers vs. The Veterans Administrations, 549 F,. Supp 85 (WD Wash. 1982); Brinson vs. Dept. of Environmental Regulation, (U.S. Dist Ct., Dist Fls., Tallahassee Div. 1984) Pletten vs. Department of the Army, U.S. Merit Systems Protection Board Nos. CH0752801009999, CH015202901 (1981); White vs. U.S. Postal Service, 2.8 TPLP 8.25, No. 01853426 (EEOC Appeal 1937); see also Parodi vs. Merits Systems Protection Board, 690 F. 2d 731 (CA 9 1982), as amended, 702 F. 2d 743 (1983) (smoke-sensitive employee "environmentally disabled."

Asthma is a respiratory disability and as such my child and I have a Civil right to be accommodated for our disability in all buildings and programs available through the City of St. Louis and with respect to the uses, services and enjoyment of all places of public accommodation.

Persons legally entitled to protection as handicapped include those adults who have asthma, emphysema, bronchitis, cystic fibrosis, sinusitis allergies, and many other conditions which are triggered or exacerbated by exposure to tobacco smoke to the extent that at least one major activity (e.g., breathing and working) area adversely affected. This category also includes those individuals forced to use oxygen and/or respirator.

01-02835

Also included in this category and protected by law, is a much larger number of children, including millions of infants and toddlers. The Environmental Protection Agency (EPA) has reported that very young children will suffer as many as one million asthmatic attacks, 300,000 unnecessary respiratory infections, and tens of thousands of unnecessary hospitalizations and inner ear infections as a result of exposure to ETC.

For all of the following reasons, it seems clear that the City of St.

Louis does not comply with the Federal Rehabilitation Act and Americans With Disabilities Act with regard to protecting me, my son, or any individual with a respiratory disability:

1. I do not have access to City Hall, the Civil Courts Building, the Cervantes Convention Center, the Fox Theatre, Kiel Auditorium, the Arena, the Lambert Airport facility, the Community Colleges, must grocery stores movie theatres and restaurants without a drive through.

2. On January 1, 1993 at least one person apparently suffered an asthma attack at the airport from exposure to ETS serious enough to require police and paramedics to be called.

3. Many young children --including infants and toddlers-- are routinely brought into areas of the airport, the Convention Center, the Arena, etc. where smoking is permitted arid where they subjected to concentration of ETS far higher that those upon which the EPA based its risk estimates. These children are no less entitled to protection under the law simply because the adults or teens who supervise them may have brought them into an area where they came into contact with these toxic chemicals.

4. Should a child suffer an allergic or asthmatic attack, respiratory disease, or middle ear infection while in or shortly after being in the area where smoking is permitted, the City of St. Louis would be liable in tort. In such an action, the negligence or "assumption of risk" by the person bringing the child into that area (e.g., thee "other parent", grandparent, teenager) is obviously not a defense to an action brought on behalf of that child - provided that the City of St. Louis was on notice of the danger. This letter and its attachments place you on notice of precisely these dangers.

5. The law requires, as a minimum, that the City provide a reasonable accommodation to persons especially susceptible to tobacco smoke. Since the EPA and many other agencies (e.g., National Academy of Sciences, U.S. Public Health Service, National Cancer Institute, World Health Organization) have all reported that ETS causes lung cancer and lung cancer deaths in nonsmokers, it is hard to argue that it is reasonable to require St. Louisians exercising their constitutional right to carry on government or other business to be exposed to any level of this toxic mix much less to be directly exposed by being forced to be near a smoker.

01-02836

6. Many of these same agencies have also reported that significant amounts of the toxic chemicals in tobacco smoke drift, and are recirculated even through the most advanced and sophisticated ventilating systems. They have therefore officially recommended that, if indoor smok-

ing is to be permitted at all, it must be restricted to separate rooms which are separately ventilated, and not part of the general ventilating system.

7. The ADA includes, as handicapped, any individual, who because of the negative reaction of others is substantially limited in the major life activity of working and that also qualifies me for protection under the ADA. Which means that the negative reaction that smokers have to banning smoking is displaced upon the individual with the respiratory disability Act contributes to the attitudinal barriers which exist for those of us with a Chronic Lung Disease.

It is within my rights to file a complaint of Civil Rights violation as well as to bring legal action against the City of St. Louis if I am exposed to Environmental Tobacco Smoke (ETS) whether it is in City Hall, the Civil Courts Building, the Cervantes Convention Center, the Arena, Kiel Auditorium, the Lambert Airport facility, etc. I might add that it is also possible to file criminal charges of child abuse and/or child endangerment when an asthmatic child is exposed to cigarette smoke. And cigarette smokers can be criminally charged with assault when they intentionally use that smoke to make someone else ill.

> "Section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794), provides in part that:
> No qualified handicapped person shall, on the basis of handicap, be excluded from participation in, be denied the benefits of, or otherwise be subjected to discrimination under any program or activity which receives or benefits from Federal financial assistance."

The City of St. Louis, the Missouri Botanical Garden, the Community Colleges, Harris Stowe Teachers College, any business, public or private which receives Federal financial assistance in the form of grant, loan, or contracts is obligated to comply with Section 504 and the ADA. Other businesses or organizations not receiving Federal financial assistance are obligated to comply with the Americans With Disabilities Act.

The ADA provides in part:

> "Section 1630.1 (b) and (c) Applicability and Construction.
> Unless expressly stated otherwise, the standards applied in the ADA are not intended to be lesser than the standards applied under the Rehabilitation Act of 1973.
> The ADA does not preempt any Federal law, or any state or local law, that grants to individuals with disabilities protec tion greater than or equivalent to that provided by the ADA. This means that the existence of a lesser standard of protec-

tion to individuals with disabilities under the ADA will not provide a defense to failing to meet a higher standard under another law.... On the other hand, the existence of a lesser standard under another law will not provide a defense to failing to meet a higher standard under the ADA...."

The Missouri Clean Air Act and City Ordinance #62523 which was recently passed and requires a smoking section to be established is unconstitutional and discriminatory and may not be used by organizations, businesses, state or local governments to discriminate against individuals with a respiratory disability. And..."will not provide a defense to failing to meet a higher standard under the ADA.."

Section 50A provides in part:

Inconsistent State Laws. "Section 104.10

(a) The obligation to comply with this part is not obviated or alleviated by the existence of any state or local law or other requirement that, on the basis of handicap, imposes prohibitions or limits upon the eligibility of qualified handicapped persons to receive services or to Practice any occupation or profession.

and

"104.11 (a)(4) A recipient may not participate in a contractual or other relationship that has the effect of subjecting qualified handicapped applicants or employees to discrimination prohibited by this subpart. The relationships referred to in this subparagraph include relationships with employment and referral agencies, with labor unions, with organizations providing or administering fringe benefits to employees of the recipient, and with organizations providing training and apprenticeship programs."

and

"(c) A recipient's obligation to comply with this subpart is not affected by any inconsistent terms of any collective bargaining agreement to which it is a party."

For all these reasons, I respectfully request and demand that the City of St. Louis provide me, my son and others with respiratory disabilities who are sensitive to tobacco smoke with protection from the now-pro,)'en hazards of Environmental Tobacco Smoke (ETS) as we are entitled to under law by prohibiting smoking except in separate (and separately-ventilated areas.

I am enclosing a copy of a report which shows that 861'0 of people with

asthma cite cigarette smoke as a major cause in provoking or aggravating existing asthma conditions. Also enclosed is a recent article from the Post that shows that asthma is a factor in morbidity.
01-02838
Last, but not least, I am enclosing a letter from a mother of child with asthma. I have run into this same problem concerning myself and my son. People seem to think that if you expose someone with asthma enough times to cigarette smoke that eventually they will get used to it. On the contrary, I have found and read that just the opposite is true. Also, my son and I have both experienced asthma attacks which were life threatening. These attacks were provoked by exposure to cigarette smoke (ETS).

I wish to see this issue resolved without having to take legal action but I want you to know that I am more than willing to use legal action, if that is necessary, to ensure the safety. of myself and my child and to achieve the public accommodation to which we are entitled. My tolerance concerning this issue is wearing very thin.

Yours Truly,
XX

Rising Asthma Deaths Puzzle Doctor

Roger Signor

Most Victims Live In Inner City

"Nationwide, there were 5,000 deaths from asthma in 1992 - 5,000 deaths that should have been avoided..."
Dr. H. ALLEN WEDNER, of Washington University

Dispatch Science-Medicine Editor

Five years ago, Scott Cristal of St. Peters noticed that his lungs were working harder than usual.

An asthma sufferer since his teens, Cristal used an inhaler to make breathing easier. "But my breathing came more labored as the day wore on," he said. He was supposed to meet a doctor for dinner, so he decided to wait and ask his advice. He never made his super date.

Just before quitting time at the computer business that he owns, Cristal passed out from lack of oxygen. He survived only because paramedics responded quickly and forced oxygen into his lungs.

Cristal, now 37, never repeated his rush brush with death. Like most people with asthma, he's paying close attention to his symptoms.

Deaths from asthma - a treatable illness that shouldn't kill anyone have been climbing steadily in Missouri, Illinois and nationwide since the early 1980s. About 75 percent of deaths occur in those 55 and older. Here are a few sobering statistics:

* Missouri had confirmed reports 102 asthma deaths last year - since 1984's total.
* Illinois had 257 asthma deaths in 1991 - 32 more than in 1987.
* The number of children in the St. Louis metropolitan area given emergency room treatment for asthma jumped to 4,622 last year - 500 more than in 1984.

"Nationwide, there were 5,000 deaths from asthma in 1992 - 5,000 deaths that should have been avoided - we knew exactly why they occurred," says Dr. H. Allen Wedner, Chief of Washington University Medical School's division of allergy and clinical immunology.

Wedner's group and St. Louis University Medical School are collaborating in a nationwide, $2.5 million study of asthmatic children who live in inner cities.

"All we do know is that most of the deaths are occurring in the inner

cities," Wedner said. Poor residents of inner cities may not go to the doctor frequently as more affluent people, he said. "But asthma isn't an under diagnosed illness - and because its symptoms are so frightening, most people, who get them seek medical help."

The increase in deaths from asthma is puzzling because treatment has improved since the 1980s, said Rita Rooney, nurse and education specialist at the Asthma and Allergy Foundation in Washington. Asthma is caused by a spasm of the bronchial tubes or by swelling of their mucous membranes; sometimes the illness is related to an allergic reaction.

Often, people rely too heavily on inhalers that relax the lining of muscles in their bronchial tubes, Rooney said. "But over time, these broncho-dilators don't help patients who have chronic inflammation of the lungs," she said in a telephone interview Friday. Such inflammation is one root cause of asthma, she said.

"Today, more doctors prescribe differently for asthma treatment," she said. Now, doctors recommend less reliance on broncho-dilators and tend to be more aggressive in prescribing anti-inflammatory inhalants and medicines.

But some poor people may depend on broncho-dilators because they're cheaper than other medicines, said Dr. Ellen Garibaldi, an asthma expert at St. Louis University Medical School. Instead of using broncho-dilators sparingly, some people may use seven or eight puffs to get through an asthma crisis, she said.

"They may limp along fine during the day but then have a really bad attack in the evening when it's hardest to get care," she said.

Robert C. Strunk, professor of pediatrics and asthma specialist at Washington University Medical School, said dependence on broncho-dilators fell short of explaining the growing number of cases nationwide.

"There's no single trigger that accounts for all the intractable cases," he said. "The number of deaths from asthma among blacks is about four times greater than among whites, so inner city residents may have extra asthma factors placing them at higher risk for severe attacks. But no group is immune, young or old, rich or poor."

Strunk and Dr. Edwin B. Fisher of Washington University are studying asthma and the quality of life among young, inner city blacks. Strunk's studies show that stress exacerbates asthma attacks, but Strunk added, "No one has the answer."

Cristal said he is controlling his asthma with fewer medicines - plus exercise.

"I don't know why, but aerobic exercise in the pool helps a lot," he said. "Once, I was on three or four bronchial sprays to control my asthma, but now I'm down to one."

Allergies can shift over several years, he said.

"House dust used to give me asthma, but now it just makes me sneeze," Cristal said. "I can live with that."

AIR CURRENTS

MARCH/APRIL 1983 Improving Communication About Respiratory Disease Vol. 4, No.2

The American Asthma Report II

Four years ago, Allen & Hanburys conducted a national survey on asthma and called it The American Asthma Report. It was the findings of this initial survey that highlighted the need for increased public and patient awareness about asthma and other respiratory conditions. As a result, the Allen & Hanburys Respiratory Institute (AHR) was formed, and The American Asthma Report became the cover story of the first Air Currents published by AHRI.

Last year, a follow-up survey was conducted. The findings are now published in The American Asthma Report II and will be the topic of articles to appear in Air Currents throughout 1993.

The survey was based on random telephone interviews with 1,200 adults in the general public and with 400 adult asthma patients from a geographically weighted sample. The 400 adult asthma patients were drawn from the data base for Air Currents.

Survey Highlights

Knowledge About Asthma

The American Asthma Report II finding confirmed National Center for Health Statistics (NCHS) data revealing that approximately 5% of all American adults have asthma. Although 61% of American adults know someone with asthma, misconceptions about the disease are prevalent.

According to the report, findings from the general public survey included the following:

* 28% believe "asthma is an emotional or psychological illness."
* 19% think "asthma patients need treatment only during an attack."
* 18% feel "people with asthma are usually weak and frail."
* 16% think "asthma is basically a children's disease."
* 57% believe "asthma leads to more serious diseases like emphysema."
* 51% think "people with asthma should avoid strenuous exercise."

Asthma Symptoms and Triggers

Both the general public and asthma patient respondents were asked to rate 15 possible items that provoke or trigger asthma symptoms. Cigarette smoke:" topped the list for both groups with 81% of the public and 88% of the asthma patients citing it as a major cause in provoking or aggravating existing asthma conditions. "Air pollution" was cited as the second overall trigger, followed by "pollen," "respiratory colds," "chemicals," and "animal dander/hair."

The next issue of Air Currents will feature a discussion of The American Asthma
Report II and its findings on the top five warning signs of asthma and attitudes about asthma.

Adapted from The American Asthma Report produced by Allen & Hanburys, Divisions of Glaxo Inc., 1992.

Asthma Symptom Triggers and Aggravating Factors
(Percent Citing as a "Major Cause")

Cigarette smoke 81%/86%
Air Pollution 79%/83%
Pollen 74%/83%
Respiratory Colds 67%/84%
Chemicals 61%/73%
Animal Dander/Hair 60%/76%
Prolonged stress 47%/56%
Emotional Upset 41%/48%
Damp Air 31%/47%
Cold Air 23%/56%
High Attitudes 32%/28%
Food Additives 18%/43%
Exercise 18%/36%
Dry Air 17%/17%
Dairy Products 14%/26% General Public

AIR
Currents

Readers' Forum

Dear Air Currents:

I continually hear from family members that the severity of asthma decreases if the child is left alone to "get used to it." I've been told countless times to let my child perform activities that will cause attacks, and after a while, she'll learn to overcome her asthma. My child is 3 and too young to understand certain activities make her sick.

My response to these people? I ask them if they would give lung cancer patients cigarettes in order to help them "get used to it."

Please help others to understand that this is a life-threatening disease and not something that can be overcome by continuing to expose people with asthma the things that make them sick in order for them to get used to it."

Civil Rights Division
Coordination and Review Section

P.O. Box 66118
Washington, D.C. 20035-4118

DEC 16 1993

Ms. Yvonne Balagna
Michigan Senate Majority Policy
Office
Olds Plaza, 11th Floor
Lansing, Michigan 48909-7536

Dear Ms. Balagna:

This responds to your inquiry about the requirements of the Americans with Disabilities Act (ADA) for wheelchair accessibility in the Michigan Senate gallery.

The ADA authorizes the Department to provide technical assistance to individuals and entities that have rights and responsibilities under the Act. We are not, however, able to provide opinions on specific fact situations. This letter provides informal guidance to assist you in understanding how the ADA may apply to you. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Title II of the ADA, which applies to public entities (State and local governments), prohibits discrimination against qualified individuals with disabilities in a public entity's services, programs, or activities and adopts strict architectural accessibility standards for facilities constructed or altered after the effective date of the statute. Section 35.150 of the Department of Justice's regulation implementing title II, 28 C. F. R. pt. 35 (copy enclosed) , requires "program access," rather than "facility access," for buildings and facilities existing on the effective date. It provides that services, programs, or activities operated by public entities must be readily accessible to and usable by individuals with disabilities (unless providing access would result in a fundamental alteration in the program or activity or in undue financial and administrative burdens), but

does not require that existing facilities be made accessible. Removal of architectural barriers is one method of providing access to programs and activities in existing facilities, but other methods are also permitted if they provide program access.1/

Section 35.150 (b)(1) of the regulation provides that, in making structural alterations to an existing facility, a public entity must meet the requirements of S 35.151 for alterations. Section 35.151 provides that portions of a facility altered by a public entity must be readily accessible to and useable by individuals with disabilities and provides that State and local governments can follow either the Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG)2

or the Uniform Federal Accessibility Standards (UFAS)3 in new construction and alterations.

Thus, title II of the ADA requires that individuals with disabilities, including individuals who use wheelchairs, are able to participate in and benefit from the programs and activities made available in the Senate gallery. If the Senate chooses to make structural alterations to the existing facility in order to provide program access, it should refer to the requirements for accessible routes and accessible assembly areas in ADAAG or UFAS, as well as the specific provisions for historic properties, if applicable.

_____

1 If structural alterations are necessary to provide program access, the regulation requires public entities to develop transition plans for completion of the necessary alterations within three years. Individuals with disabilities who are able to use a facility, however, may not be excluded on the basis of their disabilities merely because the facility is not fully accessible.

2 ADAAG is the standard for private buildings that was issued by the Architectural and Transportation Barriers Compliance Board (the Access Board) under title III of the ADA and was adopted by the Department of Justice as the standard for places of public accommodation and commercial facilities covered by the Department of Justice's regulation implementing title III of the ADA. The ADAAG is published as Appendix A to the Department's title III regulation, 28 CFR Part 36.

3 UFAS is the standard required for new construction and alterations under section 504 of the Rehabilitation Act of 1973, as amended.

01-02844

I am enclosing, for your information, copies of the Department's regulations implementing titles II and III (which includes a copy of ADAAG), our Technical Assistance Manuals for titles II and III, and UFAS. I hope this information is helpful.

Sincerely,

Stewart B. Oneglia

November 24, 1993

Mr. Steven Harris
U.S. Department of Justice

Washington D.C.

Dear Mr. Harris,

As a member of the Michigan Senate American with Disabilities Act Committee, I have been asked to obtain the legal requirements for wheelchair accessibility in the Michigan Senate gallery, under the American with Disabilities Act.

No complaints have been filed against the Michigan Senate regarding access to the gallery. However, the Senate American with Disabilities Act Committee would like to ensure that the Michigan Senate's gallery is accessible to all. Accordingly, I would very much appreciate guidance from the U.S. Department of Justice concerning what the American with Disabilities Act requires for wheelchair accessibility in the Michigan Senate's gallery which is located in our State Capitol.

Please include in your response copies of the pertinent provisions found in the Title 2 regulations, Title 2 Technical Assistance Manual, and the ADAG. If you have any questions regarding this matter, please contact me at (517) 373-3330.

Thank you for your prompt attention to this matter.

Sincerely,

Yvonne Balagna

Ret. 12117/93
SBO:MAF:LMS:ca:rjc
XX (b)(6)

DEC 17 1993

The Honorable Doug Bereuter
Member, U. S. House of Representatives
P. 0. Box 377
Fremont, Nebraska 68025

Dear Congressman Bereuter:

This responds to your recent letter in which you raise a number of questions relating to the applicability of the Americans With Disabilities Act (ADA) to certain activities of religiously-controlled schools in the State of Nebraska and a local government's duty under the ADA to provide program access to its parks and other recreational services.

While title III of the ADA applies to private entities such as private educational institutions, it does not apply " ... to religious organizations or entities controlled by religious organizations .... " 42 U.S.C. S 12187. As you noted in your letter, this exemption includes religiously-controlled schools. Thus, all the activities of a religiously-controlled school are exempt under title III.

More specifically, however, your letter inquired about possible interscholastic events held at religiously-controlled schools in which students from both public schools and religiously-controlled schools may compete in academic, cultural, or athletic activities. In such situations, even though the religiously-controlled school has no obligation under the ADA to ensure that the events held at its facility are accessible to individuals with disabilities, the affected public school district does have such responsibilities.

Records, CRS, Chrono, Friedlander, FOIA, McDowney, Stewart
:UDD:Stewart.Bereuter.MOD

01-02847

Under title II of the ADA, a public school district must ensure that its programs are accessible to individuals with disabilities. As noted in our prior letter to you, the Department of Justice's title II regulation, 28 C.F.R. Part 35, adopts the concept of program accessibility for facilities existing on the effective date of the statute, January 26, 1992. See 28 C.F.R. S 35.149. In existing facilities, "[a] public entity shall operate each service, program, or activity so that the service, program or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities." 28 C.F.R. S 35.150(a).

The regulation provides, however, that a public school district is not required "... to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens." 28 C.F.R. S 35.150(a)(3). The decision that the alterations would result in a fundamental alteration to the nature of a service, program, or activity or in undue financial and administrative burdens must be made by the head of the public school district or his or her designee after considering all the resources available for use in the funding and operation of the service, program, or activity. Id. The decision must be accompanied by a written statement of the reasons for reaching the conclusion that undue burdens would occur. Id.

Thus, absent proof that the limitations stated in section 35.150(a)(3) exist, a public school district that provides interscholastic academic, cultural, or athletic competitive events with other schools, whether public or religiously-controlled, must ensure that each of its interscholastic programs, services, and activities, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities. A public school district may not be meeting this obligation to the extent that these activities are held occasionally at inaccessible sites.

An illustration demonstrates this standard. A public school district's high schools have debate teams. The public high schools are part of a city-wide competitive debate league composed of the public high schools and religiously-controlled high schools in which the debate teams compete. Competitions between the debate teams are held on a rotational basis at all the member schools. some of the facilities at the religiously-controlled schools are inaccessible. Absent evidence that the limitations contained in section 35.150(a)(3) exist, if the debate teams from the public schools are required to compete at the inaccessible facilities of the religiously-controlled member

schools, the public school district may not be meeting its obligation of program access. Although the religious schools are totally exempt from coverage of the ADA, the effect of their
01-02848

inaccessibility on the public schools' obligation to provide program access may, in fact, require the religious schools to use an accessible location or risk the loss of public school participation in the league.

With respect to your inquiry concerning the obligation of a city to make each of its existing parks and recreational sites accessible, the same standard discussed above would apply. The duty under program access is to ensure that, when viewed in its entirety, the city's parks and recreational program is readily accessible to and usable by individuals with disabilities.

This obligation does not necessarily require a city to make each and every park or recreational facility accessible. "When viewed in its entirety" means that the location of the accessible facility (or facilities) is comparable in convenience to those facilities that are inaccessible, and the range of programs and services offered at both is equivalent. For example, in the situation described, if the area to be served is not so large as to make travel to the accessible park and community center very inconvenient for those individuals located on the outskirts of the city, then the program access requirement would be met.

I hope this information is helpful to you in responding to your constituents questions.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

01-02849

Congress of the United States
House of Representatives
Washington, DC 20515-2701

September 28, 1993

John R. Dunne
Assistant Attorney General
Civil Rights Division
U.S. Department of Justice
P.O. Box 66116
20035-6118
Washington, D.C.

Dear Mr. Dunne:

I am writing you today to ask for clarification about private and public school obligations regarding the Americans with Disabilities Act. Your previous correspondence (copy enclosed) was very helpful and I appreciate the telephone clarification that your staff provided to Lorelee Byrd of my Fremont Office regarding question number three of my previous correspondence. Many of my constituents use the terms "religious school" and "private school" interchangeably and your staff indicated that Title III provides a broad exemption from the ADA requirements for religious entities including religious private schools.

I am now requesting additional help in answering a complicated question regarding the activities of religious private schools. In Nebraska, as is the case in other states, our religious private high schools have athletic and academic teams that participate in various competitions. Religious private and public schools participate in activities thru the Nebraska School Activities Association. Schools participate and compete with other schools of the same size and both religious private and public schools compete with each other.

My question is this -- if a religious private school, which is exempted from the ADA, hosts an activity such as a basketball game at their facility with a public school does the religious private school have to meet ADA requirements? For example, I would like to know what

is expected in reference to the ADA in certain situations that are likely to occur when a religious private school hosts an event with a public school. If an individual who is disabled or needs some type of reasonable accommodation attends an event at the religious private school facility, who is responsible, if anyone, for providing reasonable accommodations to the public school patrons attending this event? Additionally, when a religious private school hosts a debate tournament that includes several public schools and the competition is being held on the third floor of the religious private school, who is

responsible, if anyone, for providing reasonable accommodations -- which could include entering the facility, getting to the third floor and/or auxillary aides in order to participate-- to public school participants and/or public school spectators?

Broadly speaking, how does the ADA affect activities that are hosted by an exempted religious private school when such events are attended by public school participants and/or public school spectators? According to the ADA Handbook (Title III, page 37), it seems quite clear that religious private schools and the activities of religious private schools are exempted from the ADA requirements. Does that exemption still apply when exempted religious private schools host activities that involve public schools and disabled public school participants and/or disabled public school spectators are planning to attend?

I also have additional questions for you about the ADA regarding local city governments. If a community evaluates its parks and community centers but determines that it would create an undue financial burden to provide accessibility and reasonable accommodations at each park and each community center, can a city government designate one city park as the handicapped accessible city park and one community center as the handicapped accessible community center in order to meet program accessibility standards as explained in Title II, page 57 of the ADA Handbook? In its evaluation the city in question determined it could provide program accessibility and avoid undue financial hardship by designating the most centrally located park with the most extensive playground and picnic facilities as its handicapped accessible park. This park has the largest swimming pool which is being made barrier free and the park is adjacent to the YMCA and the track and football stadium that is used by public schools, a religious private school and a private college. The same evaluation was used in designating the most centrally located community center as the handicapped accessible -community center. In

making these evaluations and determinations, the city formed an advisory committee, which included disabled individuals, to assist itself in making these decisions. Furthermore, when the city rents one of its parks or community centers to its citizens, the city informs them which city park and community center is handicapped accessible. Given the above described situation, is this city in compliance with or in violation of the ADA?

The city is also aware that all future improvements to any park must meet ADA requirements and in the city's long range ADA plan there are plans for upgrading other parks to provide for additional barrier free facilities.

01-02851

Thank you for your assistance. A very prompt response would be appreciated because I have had numerous constituents who have asked about these requirements. If you need additional information, please contact Lorelee Byrd at 402-727-0888. Please direct your reply to my Fremont Area District Office, P.O. Box 377, Fremont, Nebraska 68025.

Best wishes,

DOUG BEREUTER
Member of Congress

01-02852

U.S. Department of Justice
Civil Rights Division

Office of the Assistant Attorney General Washington, D.C. 20530

AUG 21 1992

The Honorable Doug Bereuter
U.S. House of Representatives
234B Rayburn House Office Building
Washington, D.C.20515-2701

Dear Congressman Bereuter:

This letter responds to your inquiry concerning compliance with the Americans With Disabilities Act (ADA) by public and private schools in the State of Nebraska.

The ADA authorizes the Department of Justice to provide technical assistance to entities subject to the Act. This letter provides informal guidance with regard to the questions you have posed, but does not constitute a determination by the Department of Justice of the rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

Your specific questions and our responses are as follows:

1. Must every area of an existing school facility be made accessible to an individual with a disability?

Section 35.149 of the enclosed title II regulation requires accessibility to programs, services, and activities in facilities existing on the effective date of the statute, January 26, 1992. The principal focus of the program accessibility standard is access to programs, services, and activities, as opposed to access to physical structures. Therefore, not every area of an existing school facility would have to be made accessible, as long as there is access to a schools programs, services, or activities. You may refer to II-5.1000, pages 19-20, of the enclosed Title II Technical Assistance Manual for further discussion.

In addition, section 35.150(b)(1) of the title II regulation

does not require that a school district eliminate structural barriers if it provides access to its programs through alternative methods. You may refer to 11-5.2000, page 20, of the Manual for further discussion of alternatives for making a program accessible.

01-02853

Even if structural alterations are necessary to provide program accessibility, section 35.150(a)(3) states that a public entity is not required to alter its facilities if it can demonstrate that the alterations would cause a fundamental change to its program or that the cost of the alterations would result n undue financial and administrative burdens. These limitations are discussed in II-5.1000, pages 19-20, of the Manual.

As you may, know, many Nebraska public school districts have been required to comply with section 504 of the Rehabilitation Act, which prohibits discrimination on the basis of handicap, since 1973, because they receive Federal financial assistance. Since Title II of the ADA merely extended section 504's program accessibility requirements to all programs, services, and activities of a State or local government, title II should impose few added burdens on Nebraska public school districts subject to Question 504.

2. Does the term "qualified individual with a disability" apply to students only, or does it apply to visitors? For example, could a grandparent wishing to visit the school sue because of lack of access?

Section 35.104 defines a "qualified individual with a disability" as "an individual with a disability who . . . meets the essential eligibility requirements for the receipt of services or participation in programs or activities provided by the public entity." With respect to those qualified to participate in a school district's programs, the preamble to the title II regulation states at page 35696 that [p]ublic school systems must comply with the ADA in all of their services, programs, or activities, including those that are open to parents or to the public." Therefore, if a public schools programs are open to visitors, access must be provided to them if they are individuals with disabilities.

3. Do the regulations apply to private schools in the same manner as public schools?

As places of public accommodation, private schools are

subject to the requirements of title III of the ADA (not title II, which applies to public schools) and the Department's title III regulation. Different standards apply under title III than under title II. For example, under the title III regulation, a private school must remove barriers to accessibility where such removal is "readily achievable."

4. At what point must a school district without a disabled student comply? When a disabled student enters the district or within a certain time frame after the January 26, 1992, date when structural barriers regulations went into effect?

Under title II, a school district must provide access to its programs, services, and activities after January 26, 1992. Under section 35.150(d) of the title II regulation, a school district with fifty or more employees that identifies structural barriers to program access must develop a transition plan by July 26, 1992. Please refer to S II-8.3000, page 43-44, of the Manual for further discussion of the requirements for a transition plan. In addition, section 35.105 requires a school district to conduct an addition, section 35.105 requires a school district to conduct a self-evaluation of its current services, policies, and practices and modify those services, policies, and practices that do not comply with the Department's title II regulation. The self-evaluation requirements are discussed in II-8.2000, pages 40-43, of the Manual.

5. Nebraska has many school districts which contain, only a one-room elementary school house. Many of these are not accessible to individuals with disabilities; however, there are no disabled students in those districts. How far must these schools go to comply with the ADA? Must they install chair lifts? Must they discontinue classes in their basements? Again, would the level of compliance be different for students and visitors?

Consistent with a longstanding interpretation of section 504 of the Rehabilitation Act by the former Department of Health, Education, and Welfare, (copy enclosed) the apparent lack of individuals with disabilities in a school district's service area does not excuse the school district from taking whatever appropriate steps are necessary to ensure that its programs, services, and activities are accessible to qualified individuals with disabilities. Section 501(a) of the ADA states that the ADA is not to be interpreted as providing a lesser standard than that

provided under the Rehabilitation Act. Thus, title II would require that steps be taken even if there are no disabled students in a district.

I hope this information is responsive to your inquiry.

Sincerely,

John R. Dunne
Assistant Attorney General
Civil Rights Division

Enclosures (3)

01-02855

(STAMP) FEB 20 1993

DJ 202-PL-553

Ms. Helen S. Found
Board of Trustees
Pavilion Public Library
7925 Telephone Road
Le Roy, New York 14482

Dear Ms. Found:

This letter is in response to your inquiry into the applicability of the Americans with Disabilities Act (ADA) to your new library.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice and it is not binding on the Department of Justice.

Entities that are part of a State or local government program, such as public libraries, may choose from two architectural standards when engaging in new construction: Uniform Federal Accessibility Standards ("UFAS"), or the ADA's Standards for Accessible Design ("Design Standards" or "ADAAG"). See discussion in the enclosed title II regulation at section

35.151(c) on pages 35,720 and 35,710. These standards are generally quite similar, but with respect to signage there are some differences. Once a standard has been chosen as the guiding standard for a particular architectural project, that standard must be followed throughout the entire project. For example, an entity cannot design its ramps according to the Design Standards and then install signage that only meets the requirements of UFAS.

Private foundations that build or operate public libraries must follow the Design Standards. They cannot choose UFAS as the governing architectural standard. Please see the enclosed title III regulation at section 36.401 on pages 35,599-600 and 35,574-75.

cc: Records, Chrono, Wodatch, Breen, Mobley, MAF, FOIA
udd\mobley\pletters\found

You have asked whether there is a height restriction on book shelves or stacks in libraries. Neither UFAS nor the Design Standards restricts maximum shelf height under these circumstances. Please refer to Design Standard section 8.5 at page 35,668, and UFAS section 8.5 at page 58.

You have also asked whether signs such as exit signs need to be in Braille as well as print. Under the Design Standards, signs that designate permanent rooms and spaces, including exit signs, must be in Grade 2 Braille and meet other specific design standards. Informational signs and signs that provide direction to functional spaces of the building do not have to be in Braille but have to meet other requirements. Please refer to Design Standard section 4.1.2.(7) at page 35,612 (scoping provisions for new construction), and section 4.30 at page 35,659 (design standards for signage) for more detailed information. UFAS does not require signage to be in Braille. Please refer to UFAS sections 4.1.2(15) and 4.30 (signage) at pages 6 and 47, respectively.

I have also enclosed the Technical Assistance Manuals for Titles II and III. The manual for title II discusses obligations applicable to public libraries that are part of a State or local government program. The manual for title III applies to private library foundations. The Department of Justice publishes these manuals to help entities and citizens understand their

responsibilities under the ADA. Please refer especially to the comparison of UFAS and the Design Standards (referred to therein as "ADAAG") in the Title II Manual at pages 23-32.

If you wish to subscribe to these manuals which will be supplemented annually, please complete the enclosed order form.

If you have additional questions, you may call Mary Lou Mobley, one of our staff attorneys, at (202) 307-0816. I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

Philip L. Breen

Dear Sir or Madam:

I have searched your most recent publications dealing with disabilities requirements, but cannot really find a specific answer to this question. Perhaps you could give me that answer. When building a new public library, is there a maximum height requirement for shelves or stacks?

This is our situation. We are a very small, rural library in

Pavilion, New York. We are building a new facility which will be handicapped accessible in regard to entrances, toilet facilities, drinking fountain, desk area, and aisles between shelving. We are hoping that the shelves themselves must not be lowered to a certain height. There would always be one, and sometimes two, aides in the library available to assist a person with any king of disability. Also, would the signs (exit,etc.) need to be in braille as well as print?

Any assistance you can give us in this matter would be greatly appreciated.

Sincerely,

Helen S. Found

DEC 20 1993 (STAMP)

The Honorable Bob Dole
United States Senator
444 S.E. Quincy
Suite 392
Topeka, Kansas 66683

Dear Senator Dole:

This is in response to your recent inquiry in behalf of your constituent, XX , regarding the Americans With Disabilities Act (ADA). XX owns a small business and has inquired whether the business must gross a certain dollar amount in order to be covered by the ADA.

Your letter does not describe the nature of XX (b)(6) business. However, the scope of a business's obligation under

title III of the ADA depends on whether it is a "commercial facility" or "public accommodation" within the meaning of title III. All nonresidential facilities that affect commerce, regardless of their size or income, are "commercial facilities" within the meaning of title III of the ADA. Certain categories of private businesses, regardless of their size or income, are considered "public accommodations" within the meaning of title III. See Section 36.104 of the title III regulations.

Both commercial facilities and public accommodations are obligated under title III to perform new construction and alterations of facilities in compliance with the accessibility standards of the ADA. Public accommodations have additional obligations to implement nondiscriminatory policies and procedures in providing their goods and services, to provide appropriate auxiliary aids and services where necessary for effective communication with persons with disabilities, and to remove architectural barriers to access in their facilities where such removal is readily achievable. Title III provides that a business with ten or fewer employees and gross receipts of $500,000 or less cannot be sued for a failure to comply with these obligations that occurs prior to January 26, 1993.

cc: Recds, Chrono, Wodatch, Magagna, Johansen, McDowney, MAF, FOIA
udd\johansen\dole2

01-02859

Failure to comply with these obligations subsequent to that date will render the business vulnerable to suit.

Businesses may also have nondiscrimination obligations under title I of the ADA which deals with employment. For purposes of title I, the term "employer" is defined as a person engaged in an industry affecting commerce who has 15 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding calendar year, except that from July 26, 1992, through July 25, 1994, an employer means a person engaged in industry affecting commerce who has 25 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding year and any agent of such person. For further information about title I, XX (b)(6) should consult with the

Equal Employment Opportunity Commission (EEOC).

We are enclosing a copy of our ADA Handbook, published jointly with the EEOC, which contains the statute and the regulations under titles I and III of the ADA. We hope this information is helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

T. 11-29-93

DEC 20 1993

The Honorable John C. Danforth
United States Senator
8000 Maryland Avenue, Suite 440

Clayton, Missouri 63105

Dear Senator Danforth:

This letter is in response to your inquiry on behalf of your constituent, William A. Bandle, Jr., which was referred to the Department of Justice by the Equal Employment Opportunity commission. Mr. Bandle inquired about the requirements of the Americans with Disabilities Act (ADA) that pertain to the installation of visual alarm devices.

The ADA requirements that apply to the installation of alarm systems in new construction and alterations in retail facilities are contained in the ADA Standards for Accessible Design (Standards) that are published as Appendix A to the Department of Justice regulation implementing title III. Section 4.28 of the Standards establishes the technical requirements for visual alarms.

The ADA Standards establish minimum requirements for the design and construction of new buildings and for alterations to existing buildings. They do not constitute a strict formula for design, nor are they intended to constrain design innovations that provide equal or greater access. The Department's regulation expressly recognizes that there may be other ways to provide access. Section 2.2 of the ADA Standards provides that "[d]epartures from particular technical and scoping requirements of this guideline by the use of other designs and technologies are permitted where the alternative designs and technologies used will provide substantially equivalent or greater access to and usability of the facility."

Determinations of equivalent facilitation must be made on a case-by-case basis taking into consideration whether the building element in question, as installed in a specific site, actually provides equal or greater accessibility. Neither the Department of Justice nor any other entity will certify that a specific design alternative that varies from the technical requirements of

cc: Records, Chrono, Wodatch, Blizard, McDowney, FOIA, Friedlander
n:\udd\blizard\control\danforth

01-02862

the ADA Standards is "equivalent." In any ADA enforcement

action, the covered entity will bear the burden of proving that a challenged alternative design provides equivalent access.

For your information, I am enclosing a copy of this Department's regulation implementing title III of the ADA, the Title III Technical Assistance Manual, and a recent technical assistance bulletin on visual alarms published by the U.S. Architectural and Transportation Barriers compliance Board. I hope that this information is helpful to you in responding to Mr. Bandle.

Sincerely,

James P. Turner

CASCO
of CASCO Ltd.

September 3, 1993

TO: Senator John C. Danforth
Senate Office Building
Washington, DC 20510

RE: Americans with Disability Act
Compliance Application

Dear Senator Danforth,

The CASCO Corporation is a St. Louis based, national Architectural/Engineering firm. The Americans with Disabilities Act has impacted the entire scope of our profession, so CASCO is sensitive to the goals of this legislation. The purpose of this letter is that, based on the recommendation of our regional A.D.A. information center, your office was identified as the source to contact for investigation of specific circumstances and interpretations of the A.D.A. intent.

As you may know, a "Strobe-Like" visual system is required to be combined with an audio warning system for those who are visually and/or hearing impaired. Our national retail client's response to this requirement is to have one half of the sales floor lights flash on and off at .8 second intervals. These are strip fluorescents hung approximately 14"-O" to 16"-O" above the sales floor. No emergency lighting or specific audio systems are planned for the storage or employee areas. Due to the newness of A.D.A., many sections and requirements are being challenged, re-evaluated and revised by the Justice Department and the handicapped community. We respectfully request your office to provide an official interpretation regarding the appropriateness of our client's system.

Thank you for your time and concern, as we await your response.

Sincerely,

William A. Bandle, Jr.
Associate

XX

DEC 22

XX
XX
Lake Charles, Louisiana 70601

Dear XX

The Architectural and Transportation Barriers compliance Board (Access Board) has asked us to respond to your letter asking about the application of the Americans with Disabilities Act (ADA) to places of public accommodation that have exterior doors that are heavy and difficult to open. I apologize for our delay in responding to you.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a legal interpretation of the ADA, and it is not binding on the Department.

Your letter addresses several issues pertaining to building entrances, but your primary concern appears to be that certain places of public accommodation have not installed automatic doors at the entrances to their facilities. Places of public accommodation have an obligation under title III to remove architectural barriers to access where such removal is readily achievable. However, where the ADA Standards for Accessible Design for new construction specify requirements for a particular element, the barrier removal obligation does not require existing facilities to exceed the Standards. The ADA Standards for Accessible Design applicable to new construction do not require electric doors, nor do they set a limit for the maximum door opening force for exterior hinged doors. See the ADA Standards for Accessible Design sections 4.13.11 and 4.13.12 (Appendix A to the enclosed regulation). Therefore, because the ADA Standards specifically do not require the installation of electric doors in new buildings, their installation is not required under the ADA's barrier removal requirements for existing buildings.

cc: Records, Chrono, Wodatch, Blizard, FOIA, Friedlander

(Handwritten)

March 12, 1993

Dear Sirs,

I am a Physical therapist in Lake Charles, LA, & have several pts. & a family member who are w/c bound & unable to independently negotiate a swinging door into a business or Doctor's office.

I have personally contacted KMart & Walmart locally & questioned them regarding installation of electric-eye entrance doors. Currently Walmart has automatic Exit doors, manual double-swinging entrance doors & a sign stating...Disabled persons, please let us know if we can help you ..... How can you tell them if you can't get in? The Kmart has manual swinging Entrance & Exit doors & one door width is too small to accommodate a w/c. Both stores stated their "courtesy" person is constantly watching the door. No one has come out to help me yet. Usually another shopper holds the door(s).

The entrance to my Orthopedic MD has 2 sets of extremely heavy double doors. The staff has said if I ever need help to come in & get one of them. A disabled person would not be able to go in & tell them he needed help to get in!

Any suggestions? I'm sure there are numerous examples of landlords & businesses dragging their feet to comply with ADA. Is there any way to speed them along?

Thank you for your time.

XX
XX (b)(6)
Lake Charles, LA XX

XX

DEC 29 1993

Mark S. Rabinowitz
Paul Rabinowitz Glass Company, Inc.
1421 S. 2nd Street
Philadelphia, Pennsylvania 19147

Dear Mr. Rabinowitz:

This is in response to your letter dated June 8, 1993, and your telephone conversations with Ms. Johansen of our staff on June 8, and June 14, 1993, regarding exterior doors at banks.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the application of the statute and it is not binding on the Department.

Your initial question when you called the information line dealt with exterior doors at existing banks that may be too heavy for some people with disabilities to open. You asked if it would be permissible to put a sign on the door with a bell for assistance. This is permissible. Existing facilities of this type have an obligation under title III of the ADA to remove architectural barriers to access where such removal is readily achievable. However, where the ADA Design Standards for new construction specify requirements for a particular element, the barrier removal obligation does not require existing facilities

to exceed the Design Standards. The ADA Standards for Accessible Design applicable to new construction do not set a limit for the maximum door opening force for exterior hinged doors. See the ADA Standards for Accessible Design Section 4.13.11 and 4.13.12, Appendix A to the enclosed title III regulation.

In your letter you state that you also want to provide a sign with a bell to ring for assistance on doors that are double leaf and do not meet the width requirements and on doors on which the hardware does not meet the Standards. As Ms. Johansen explained, title III obligates bank to remove architectural

cc: Records, Chrono, Wodatch, Magagna, Johansen, MAF, FOIA
udd\johansen\rabinowi.ltr

01-02868

barriers to access where it is readily achievable to do so. Readily achievable means easy to accomplish without much difficulty or expense. The factors that determine whether a particular action is readily achievable are discusses at pp. 35568-35570 and 35597-35598 of the enclosed Federal Register document and Section III -4.4000 of the enclosed Title III Technical Assistance Manual. Taking into account these factors, if it is readily achievable for the bank to install the appropriate hardware and to alter the doors to meet the width requirements, it must do so. Alternatives to barrier removal such as the bell arrangement you describe are appropriate, and indeed required, only if barrier removal is not readily achievable.

We hope this information is helpful to you.

Sincerely,

Joan A. Magagna
Deputy Chief
Public Access Section

JAN 4 1994

Mr. Thomas J. Camacho
Office of the Governor
Commonwealth of the Northern Mariana Islands
Developmental Disabilities Planning Office
P.O. Box 2565
Saipan, MP 96950

Dear Mr. Camacho:

This is in response to your inquiry regarding the Americans With Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the application of the statute and it is not binding on the Department.

Your first two inquiries concern whether it is appropriate

for an advocacy agency of a local government that is funded entirely by federal funds through the Administration on Developmental Disabilities Act to write a "premonition" letter on behalf of a complainant. We presume this type of letter would be one in which you advise the owner or operator of a facility that he is possibly in violation of the ADA. Your federal funding agency should be consulted to determine whether activities of this type are permitted.

Even if the funding agency permits this type of activity, the ADA itself does not authorize the State or Commonwealth officials to enforce the ADA. However, if the Commonwealth agency is simply representing complainants in the same manner in which a private attorney might do so, the ADA does permit such activity. Individuals have the right to enforce both titles II and III of the ADA through private civil actions.

The complainants directly or through your agency may also file complaints with the Department of Justice. Complaints

cc: Records, Chrono, Wodatch, Magagna, Johansen, MAF, FOIA
udd\johansen\camacho.ltr

01-02870

regarding title III entities should be forwarded to this office at the address on the letterhead. Complaints regarding title II entities should be submitted on the enclosed form and mailed to the address indicated. ADA enforcement is handled by the Civil Rights Division in Washington rather than by the local United States Attorneys.

Your third question seeks information on how to deal with a telephone company's failure to implement a relay service operation as required by title IV of the ADA. The Federal Communications Commission (FCC) is the agency responsible for enforcing title IV. You should write to the FCC at 1919 M Street, N.W., Washington, D.C. 20554, or call at (202) 632-7260.

Finally, you inquire whether a telephone company is a place of public accommodation providing sales and services and, consequently, whether the phone company must provide TDD/TTY equipment in the same circumstances in which it makes voice

equipment available to other users. Public utility companies, including telephone companies, are not generally considered to be places of public accommodations within the meaning of title III. However, if the utility maintains a customer service office which customers visit to open accounts or pay bills, this office would be a "service establishment" that is covered as a "place of public accommodation" under title III.

Similarly, if the telephone company operates a retail establishment where it sells telephone equipment, such a facility would be a "sales or rental establishment" that is covered by title III as a place of public accommodation. Title III, however, does not require public accommodations to alter their inventory to include accessible or special goods designed for individuals with disabilities. A public accommodation must special order accessible goods if, in the normal course of its operation, it makes special orders for unstocked goods and the special goods can be obtained from a supplier with whom the public accommodation customarily does business.

I have enclosed copies of the Department's Technical Assistance Manuals for titles II and III. We hope this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Enclosures
01-02871

JAN 3 1994

Mr. Richard W. Church
President
Plumbing Manufacturers Institute
800 Roosevelt Road
Building C, Suite 20
Glen Ellyn, Illinois 60137-5833

Dear Mr. Church:

This letter responds to your correspondence regarding the application of the Americans with Disabilities Act (ADA) to

drinking fountains.

The ADA authorizes the Department of Justice to provide technical assistance and information to individuals and entities who have questions about the Act or the Department's Standards for Accessible Design (Standards). This letter provides informal guidance to assist you in understanding and complying with the ADA accessibility standards. However, this technical assistance should not be viewed as legal advice or a legal opinion about your rights or responsibilities under the ADA.

The answers to the questions in your letter of September 2, 1993, appear below in like order. In the interest of conciseness, rather than repeat each question, we enclose a copy of your letter for your reference.

A. You asked for an explanation of the requirement that the water flow be within three inches of the front edge of a fountain with a round or oval bowl. Recent innovations in the design of drinking fountains forced the inclusion of this requirement because many individuals who use wheelchairs found it impossible to lean far enough over the projecting rim of large bowl fountains to take a drink even when the fountain was otherwise in compliance with the requirements in the Uniform Federal Accessibility Standards or the ANSI A117.1 Standard. This problem is alleviated when the water stream can be reached within three inches of the projecting rim.

cc: Records, Chrono, Wodatch, Harland, FOIA, Friedlander
n:\udd\harland\pmi.646

01-02872

B. A drinking fountain that provides for a front approach and is mounted 27 inches above the floor or ground surface meets the minimum knee space height requirement of Section 4.15.5 and also satisfies the provision of Section 4.4.1 that when the bottom edge of an object is at or below 27 inches above the floor, it may project any amount.

C. When considering the direction of approach and the requirements of Section 4.4.1, if the "hi" section of a "hi-lo" fountain presents a hazard as a protruding object, it

may be necessary to install the fixture in an alcove or to provide a cane-detectable element.

D. In the Standards, the words "maximum" or "minimum" are never specified when there is an allowable range of dimensions. This practice does not appear to cause any confusion in applying the standard for the height of grab bars or the diameter of handrails. We believe that "maximum" and "minimum" are implicit in this convention. For example, a range of "17 in to 19 in" means a minimum of 17 inches and a maximum of 19 inches.

E. The requirement for a fountain "at a standard height convenient for those who have difficulty bending," can be satisfied by applying conventional industry standards such as you cite.

Please feel free to contact the Public Access Section any time you have questions or need information. The Department maintains a telephone information line to provide technical assistance regarding the rights and obligations of individuals, businesses, agencies, and others covered or protected by the ADA. This technical assistance is available by calling 202-514-0301 (voice) or 202-514-0383 (TDD) between 1:00 p.m. and 5:00 p.m., Monday through Friday.

Sincerely,

John L. Wodatch

Ms. Irene Bowen, Deputy Director
Civil Rights Division
U.S. Department of Justice
1425 New York Ave. N.W.
Room 4053
Washington, D.C. 20530

Dear Ms. Bowen:

In remarks before our organization last fall you suggested we identify field enforcement problems associated with regulations promulgated under the ADA. We have tried to isolate some major concerns. Following are those problems associated with regulations affecting water coolers and fountains. We may be sending other concerns at a later date. The purpose is to ask for clarification and/or a specific interpretation on these issues.

Following is a description of those items which have caused the greatest confusion with respect to interpretation of the regulations directed at water fountains and coolers:

A. The purpose of Section 4.15.3 Spout Locations appears to be to make the water flowing from a drinking, fountain or water cooler accessible to the user. The last sentence of the section states: "On an accessible drinking fountain with a round or oval bowl, the spout must be positioned so the flow of water is within 3 in (75 mm) of the front edge of the fountain.

The language of the section is taken directly from ANSI A117.1 with the last sentence added. This sentence is creating, confusion. Some of the field interpretations encountered are:

1.) The language of the entire section has been interpreted to apply to round or oval bowls only.
2.) The language has been interpreted to apply only to round or oval "dish" receptors set on an arm extending out from the wall or pedestal.
3.) It has also been interpreted to apply to a receptor of any exterior shape, if a depression in the receptor were round or oval.

4.) It is also being interpreted to apply in every instance whether the bowls are round, oval or otherwise.

The last sentence of the regulation is not necessary and merely adds confusion. We request deletion of the last sentence of Section 4.15.3. If this is not possible, we request an interpretation of the last sentence.

B. Section 4.15.5 Clearances deals with minimum clearance for knee space and accessible floor space of water cooler installations. Section 4.4.1 Protruding Objects - General provides general requirements for protruding objects. The language and drawings of 4.15.5 seem to be straightforward. The sentence in section 4.4.1 which states: "Objects mounted with their leading edges at or below 27 in (685 mm) above the finished floor may protrude any amount..." also appears to be compatible with 4.15.5.

Yet, inspectors in the field are having a difficult time interpreting between the two sections. We very much need an interpretation clearly stating that accessible drinking fountains and coolers installed in accordance with Section 4.15.5 also meet the requirements of Section 4.4.1.

C. Section 4.1.3 (10) (a) specifically allows "hi-lo" fountains to accommodate those in wheelchairs and those who have trouble bending or stooping. These "hi-lo" fountains appear to be considered one unit for the purposes of Section 4.1.3. The "hi" section of the fixture (fountain) could protrude more than 4 inches from the wall and would be higher than 27 inches above the floor.

This appears to create a direct conflict with Section 4.4.1. We believe the intent of Section 4.1.3 (10) (a) should, in this case, negate the literal requirements of Section 4.4.1. Could we please have a specific interpretation on this issue?

D. Section 4.15.5 (1) Clearances (of drinking fountains and water coolers) and the associated drawings 27 (a) and (b) are creating confusion in the field because of the use (or lack of use) of the words "maximum" and "minimum." Is the intent to hold designers to a range of 17-19 inches, or is the intent to have at least (minimum) 17 inches clearance for accessibility?

We would request an interpretation on this issue. We believe that the intent would be best served by adding the word "minimum" to the range of 17-19 inches and to the drawings, 27 (a) and (b).

E. Section 4.1.3 (10) (a) mentions, "providing one fountain at a standard height for those who have difficulty bending;" but we cannot find dimensions or recommendations on the height for these higher fountains. Our own recommendation is 37 inches minimum to 43 inches maximum. Is there something else in the regulations relating to this issue we have missed? What process is available to add the height requirements for the higher fountains?
h:\...\pmi\stand\adaag.902

We appreciate the opportunity to submit these concerns for your review. We are not specifically familiar with interpretation procedures. Could you supply us with specific information on the procedure? Similarly, could you tell us what avenue(s) are open to requesting specific changes in the language of the regulations? If any of the above issues are unclear to your staff, we would be happy to supply them with more detailed information and drawings to illustrate the concerns. Also, we would be pleased to meet with you or your staff to further explain these issues.

Sincerely,

Richard W. Church, President

01-02876

JAN 4 1994

Ms. Carol Hunter
Carol Hunter Consulting, Inc.
P.O. Box 668
Empire, Colorado 80438

Dear Ms. Hunter:

Your inquiry of June 1, 1993, to the Access Board regarding which standards, UFAS or ADAAG, should be used when a federal agency and a state agency are equal partners in building a facility or conducting a program, was referred to us for reply. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the application of the statute and it is not binding on the Department.

Facilities built with Federal funds and subject to the Architectural Barriers Act of 1968 are covered by the Uniform Federal Accessibility Standards (UFAS). Many public entities that are recipients of Federal program funds also are subject to UFAS, which is the accessibility standard referenced in most section 504 regulations. Title II of the ADA 35.151(c) permits state and local governments to choose between two standards for accessible new construction and alteration, UFAS and ADA Standards for Accessible Design.

In instances where Federal and state agencies are equal partners in conducting a program, the Federal agency must use UFAS and the state may choose either UFAS or ADAAG. If the state agency chooses UFAS, then just one accessibility code would apply to the facility. If, however, the state agency selects ADAAG, then, a facility would be subject to both UFAS and ADAAG. In this

cc: Records, Chronc, Wodatch, Magagna, Johansen, MAF, FOIA

circumstance, if the standard for a particular element is more stringent in one standard than the other, the more stringent standard would apply.

We hope this information is helpful to you.

Sincerely,

John L. Wodatch
Section Chief
Public Access Section

cc: Marsha Mazz

01-02878

JAN 6 1994 (STAMP)

The Honorable Daniel Patrick Moynihan
United States Senate
464 Russell Senate Office Building
Washington, D.C. 20510

Dear Senator Moynihan:

This letter is in response to your inquiry on behalf of your constituent XX , who raises concerns about accessibility problems at a shopping mall, a school facility, and a doctor's office in his community. He also inquires about tax advantages for persons who are blind.

(b)(6)

With respect to the shopping mall, XX states that the Hudson Valley Mall in Ulster, New York, has heavy doors that are difficult to open. The Mall management has apparently denied requests to install electric doors that would be easier for persons with disabilities to use. Existing facilities of this type have an obligation under title III of the ADA to remove architectural barriers to access where such removal is readily achievable. However, where the ADA Design Standards for new construction specify requirements for a particular element, the barrier removal obligation does not require existing facilities to exceed the Design Standards. The ADA Standards for Accessible Design applicable to new construction do not require electric doors, nor do they set a limit for the maximum door opening force for exterior hinged doors. See the ADA Standards for Accessible Design Section 4.13.11 and 4.13.12, Appendix A to the enclosed title III regulation. Therefore, because the ADA Design Standards specifically do not require the installation of electric doors in new buildings, their installation is not required under the ADA's barrier removal requirements for existing buildings.

cc: Records; Chrono; Wodatch; McDowney; Magagna; Murrell; FOIA
MAF.
\udd\magagna\congress\moynihan

01-02879

(b)(6)
XX next complains about a two-story building operated by the public school district. State and local government entities are obligated under title II of the ADA to make all of their programs and activities accessible to persons with disabilities. Although a school district is not necessarily required to make every existing building accessible, it may have to relocate various services or programs if necessary to provide program accessibility. All State and local government buildings constructed after January 26, 1992, must be readily accessible to and usable by individuals with disabilities. The elevator exemption for newly constructed small buildings that XX discusses applies only to privately owned buildings, not State and local government facilities. See the enclosed title II regulation at Sections 35.150 and 35.151. if XX wishes to file a complaint under title II against the school district, he should write to the U.S. Department of Education, 330 C St., Rm 5000, S.W., Washington, 20202-1100. He also has the right under title II to file suit in federal court and he may wish to consult an attorney for that purpose.

Finally, XX complains about a doctor who has not made his office accessible but advises patients with disabilities that he will see them at the hospital. Existing places of public accommodations, such as doctor's offices, are required to remove architectural barriers to access to the extent such removal is readily achievable. Providing service at a different accessible location is an appropriate alternative to barrier removal, but only if barrier removal is not readily achievable. The determination of whether barrier removal is readily achievable requires inquiry into the specific facts of each case -- the size

and resources of the entity involved and the nature and cost of architectural changes required. See the enclosed title III regulation at Sections 26.304 and 36.305. If XX wishes to file a complaint under title III against the doctor, he may write to John L. Wodatch, Chief of the Public Access Section, Civil Rights Division, U.S. Department of Justice, P.O. Box 66738, Washington, D.C. 20035-6738.

We are enclosing copies of our title II and title III Technical Assistance Manuals as well as the regulations. If your constituent has further questions concerning the Americans with Disabilities Act, he may call our information line at (202) 514-0301 between 1 p.m. and 5 p.m. EST, Monday through Friday.

(b)(6) XX inquiry regarding tax advantages for persons with disabilities should be directed to the Internal Revenue Service.

01-02880

I hope this information will assist you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

XX (b)(6)
Kingston, NY XX
June 8, 1993
XX

The Honorable Daniel Patrick Moynihan
The Russel Building Room 464
Washington D.C. 20510

Dear Sir,

It has come to my attention that although there laws on the books that require public buildings to be accessible for persons with disabilities, the enforcement of these laws leaves much to be desired. In fact, it leaves everything to be desired as they are hardly enforced at all. Having XX who must use a wheelchair which makes it difficult if not impossible to gain access to many public buildings, I feel very strongly that something must be done to increase enforcement of these laws.

According to the Americans With Disabilities Act: Title III Sec 12182. Prohibition of discrimination by public accommodations subsection a) General rule, "No individual shall be discriminated against on the basis of disability in the full and equal enjoyment

of the goods, services, facilities, privileges, advantages, or accommodations of any place of public accommodation by any person who owns, leases (or leases to), or operates a place of public accommodation." Apparently, the owners of many public facilities, especially in the greater Kingston, N.Y area have not been informed of this fact. Sadly, I can speak from first-hand experience of many public buildings which are completely inaccessible by disabled persons, and the owners of these facilities have no intention of coming up to par on this law, because the authorities seem to let this behavior slide. It is a sad time in America when a business will knowingly discriminate against individuals with disabilities because they know that they won't lose enough money due to boycotts, and that the authorities will do nothing to remedy the situation.

For example. The Hudson Valley Mall, in Ulster, NY, has doors that are so heavy that "normal" people have trouble opening them. Imagine trying to open such a door while confined to a wheelchair with the limitations in movement that come with this. True, a person in a wheelchair could get someone else to open said door, but the word "accessible" implies that an individual can use or operate a device without outside help. Remarkably, these doors passed inspection and were allowed. When the mall added a new section, these same doors were again installed. The mall authorities were asked by the Resource Center for Accessible Living if they would consider installing electric doors that would he much easier for disabled persons to use. The answer was a resounding Is no". The rationale used was that teenagers who frequent the mall would use these doors as a source of entertainment by continually opening and closing these doors. Speaking as a teen, I must say

that neither myself nor my friends would do anything of the sort, despite the obvious temptation. True, electric doors are much more fun than a video arcade any day, but I think that we would be able to control ourselves. The I.B.M. plant in Kingston as well as other retail stores such as Caldor and various supermarkets have installed these doors, and I can't recall often hearing teenagers discussing hanging out at these locations in order to play with the doors.

Another example is the Kingston High School's MJM Building. A few years back, the school board was allotted money by the district to make the building accessible for the disabled. However, the district decided to spend the money elsewhere. I am aware of the regulation in the ADA Guidelines that states that all buildings under three stories do not have to modify themselves to meet the standards of the law, but isn't it ridiculous when a

disabled child can't be mainstreamed into society because the school would rather build a baseball field? This kind of thinking keeps the stereotypes about the disabled alive, that they can't be active members of society because their bodies cannot always respond to their brains, which happen to work as well as anyone (b)(6) else's. As an example, my XX has had XX hip revisions XX is currently serving as a XX and XX for the Town of Kingston. I can understand that smaller businesses cannot afford modifications, but what's to stop larger companies from simply renting smaller office buildings so that they don't have to spend money to flaunt the law? Perhaps this law should use income, and not building size as a cutoff for determining accessibility. Also, the school board itself meets on the second floor of it's office building. Since there is no elevator in this building (as it's under three stories tall), this seems to me to be a convenient way for the board to not have to deal with the problem, as no one confined to a wheelchair or walker can complain about conditions since they can't attend school board meetings anyway.

A third, and particularly sad, example is the case of a local doctor in Kingston. This man (who will remain nameless) refuses to build a ramp to his office although most of his patients have physical disabilities, as he is a practicing neurologist. He has told his patients that he will meet them at the hospital if they can't get in to the building, but this goes against the ADA on two counts. First, it is discriminatory against people confined to wheelchairs or walkers, and secondly, it is extremely difficult to find parking in the middle of the city that a disabled person can use which is close to the doors so that it is easier for the disabled person to get inside. Is money so important now to the medical profession that they won't spend money to make life a little easier for the people who not only are the ones they are supposed to help, but pay the doctors' salaries as well? According to section 12181 of the ADA, paragraph 7, such an office is considered "a professional health office of a health care provider" and therefore must be accessible. Why is he allowed to get away with this?

One final question. Why on tax forms do the blind receive tax breaks while other disabled persons do not. Who decided that the blind are always the worst off? I believe that the tax break should be based on the severity of the disease, and not a simple "he deserves it for being blind" decision.

People often wonder why disabled-rights groups such as the aforementioned RCAL become militant and stage boycotts of local businesses. Unfortunately, these people don't understand what it's like to not be able to enter a building because a physical malady

prevents one from entering the front door. These people will never understand until it happens to them or someone they care about. It's like the person who always parks in a disabled parking spot because they'll "only be a minute." As soon as they are injured and need this spot, they suddenly understand the frustration of not being as free as other members of society because of careless citizens and a disability. I always thought that America was a better country than that. I hope that I won't be proven wrong, and I hope something can he done to remedy this situation. Hopefully, some money can be appropriated to increase enforcement of the laws already on the books if new laws can't he passed or new committees created to prevent these problems before they occur. I don't think it much matters how the problem is solved as long as we can be assured that someone is at least making an attempt at trying to solve it.

Sincerely,

XX
XX

U.S. Department of Justice
Civil Rights Division
Coordination and Review Section

DJ 204-45-0 P.O. Box 66118
Washington, D.C. 20035-6118

Sheri E. Long, Esquire
Assistant City Attorney
City of Omaha
Omaha/Douglas Civic Center
1819 Farnam Street

Suite 804
Omaha, Nebraska 68183-0804

Dear Ms. Long:

This letter responds to the issues you raised in your letter of August 2, 1993, and in your December 14, 1993, phone conversation with Anne Marie Pecht, of my staff. In your letter you requested our opinion as to whether certain renovations that the City of Omaha is planning to make in a number of its firehouses will comply with the requirements of the Americans with Disabilities Act of 1990 (ADA). After Ms. Pecht spoke with you she discovered that you had also raised these issues in a letter to Senator Kerrey, which was recently forwarded to this office for our assistance in responding. You may already have received a response through Senator Kerrey's office. Because Ms. Pecht spoke directly with you she was able to provide the additional, more specific, information included in this letter.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities with rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the requirements of the ADA. It does not, however, constitute a legal interpretation and is not binding on the Department of Justice.

As you discussed with Ms. Pecht, you are aware that the ADA does not require the City of Omaha to renovate its firehouses, unless renovations are necessary to provide program access. We understand, however, that you are making these renovations for other purposes. Section 35.151 of the enclosed title II regulation covers new construction and alterations by entities subject to title II of the ADA, that is, State and local governmental entities such as the City of Omaha. Section 35.151(b) of the title II regulation requires that any

cc: Records CRS Chrono Friedlander Breen FOIA LOF Payne
Keenan Pecht.techasst.ltr.long.ltr

01-02885

alteration to a title II facility that affects or could affect the usability of the facility must, to the maximum extent feasible, be made in such a manner that the altered portion of the facility is "readily accessible to and usable by individuals with disabilities." Section 35.151(c) of the title II regulation currently allows title II entities to meet this requirement by following either the Uniform Federal Accessibility Standards

(UFAS) or the Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG), except that the elevator exception contained in sections 4.1.3(5) and 4.1.6(1)(k) of ADAAG is not available for title II facilities.

We understand that the City of Omaha has selected ADAAG as its accessibility standard. Therefore, the balance of this discussion will refer to the applicable sections of ADAAG. (As you discussed with Ms. Pecht, the U.S. Architectural and Transportation Barriers Compliance Board (Access Board) and the Department of Justice are in the process of amending ADAAG to include provisions directly applicable to title II facilities. After the revised Accessibility Guidelines are adopted by the Department of Justice, title II entities will be required to follow ADAAG and will no longer have the option of following UFAS. (We look forward to receiving any comments you may have on the proposed title II Guidelines when they are published by the Department of Justice.)

Your letter attempts to distinguish between renovations to bathroom and shower facilities in fire stations that are used solely by fire fighters (and not open in any way to members of the public) and renovations to those same facilities in fire stations that you plan to use for civil defense purposes. Under title II, however, restrooms and shower facilities (along with employee lounges, cafeterias, health units, and exercise facilities) are considered common use areas, and must be constructed or altered in full compliance with ADAAG, whether they are open to the public or are planned to be used solely by employees (such as fire fighters) who must meet rigorous physical qualification standards in order to perform the essential functions of their jobs.

Note, however, that areas used only by employees as work areas are subject to a more limited requirement. section 4.1.1(3) of ADAAG provides that employee work areas must be designed and constructed so that employees with disabilities can approach, enter, and exit such areas. The adaptations required by an individual employee with disabilities to permit that individual to work within the work area would, as you pointed out, be treated on a case-by-case basis as a reasonable accommodation under the standards established under title I of the ADA. The requirements applicable to employee work and common

use areas are discussed in section III-7.3110 of the enclosed title III Technical Assistance Manual. For your convenience, we have also enclosed a copy of the title II Manual.

The basic rule for alterations under ADAAG is that, when existing elements, spaces, or common areas are altered, each altered element, space, feature, or area shall comply with the applicable ADAAG requirements for new construction. See section 4.1.6(1)(b). The requirements for accessible toilet rooms (i.e., rooms that include fixtures such as water closets, toilet stalls, urinals, and lavatories) are located in section 4.22 of ADAAG. The requirements for accessible bathrooms, bathing facilities, and shower rooms are located in section 4.23.

An exception to full compliance with the standards for new construction is made when compliance would be "technically infeasible", as that term is defined under section 4.1.6(l)(j) of ADAAG. If it is technically infeasible to comply with 4.22 or 4.23 when altering toilet or bathing facilities, section 4.1.6(3)(e)(i) permits the installation of one unisex facility located in the same area as the existing facilities, in lieu of modifying the existing facilities to be accessible. If stalls are provided, section 4.1.6(3)(e)(ii) permits the use of one of the smaller alternate stalls where it is technically infeasible to install a standard stall.

As we understand it, there are three possible situations you may encounter in undertaking this renovation project, as follows: (i) an existing men's toilet room and/or shower room will be renovated and comparable women's facilities will be added; (ii) an existing men's toilet and/or shower room will be converted to unisex use; or (iii) a completely new unisex toilet and/or shower room will be added.

With respect to situation (i) above, the renovated men's facilities and the new women's facilities must comply with ADAAG standards for new construction, unless compliance is technically infeasible, in which case you may either install a unisex toilet and/or shower room as provided in section 4.1.6(3)(e)(i), or reduce the stall size as permitted by section 4.1.6(3)(e)(ii) Please note, however, that the technical infeasibility exception is meant to be a very limited exception to the requirement for accessibility in alterations. When entirely new facilities (such as the planned women's facilities) are located within an existing building, the exception for technical infeasibility will be very strictly interpreted. With respect to the situation described in (ii) above, it is permissible to convert an existing men's toilet and/or shower room to a unisex room. In the situation described in (iii) above, it is permissible to create a single new unisex toilet and/or shower room. In both cases the new unisex rooms must comply with the ADA Guidelines.
01-02887

For assistance in complying with technical aspects of the ADA Accessibility Guidelines, you may wish to contact an accessibility specialist at the Access Board by telephone at 800-USA-ABLE or 202-272-5434, or by TDD at 202-272-5449.

I hope this information has been helpful to you.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

Enclosures (3)

01-02888

T. 11/22/93 JAN 11 1994

DJ XX

XX
XX
Dallas, Texas XX

Dear XX

This is in response to your letter to this office regarding the ratification of House Bill 957 by the General Assembly of North Carolina.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA may apply to you. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

In considering the reach of the ADA, the Department of Justice has declined to state categorically that allergy or sensitivity to cigarette smoke should be recognized as a disability because, in order to be viewed as a disability under the ADA, an impairment must substantially limit one or more major life activities. An individual's respiratory or neurological functioning may be so severely affected by allergies or sensitivity to cigarette smoke that he or she will be considered disabled. Such an individual would be entitled to all of the protections afforded by the ADA. In other cases, however, an individual's sensitivity to smoke or other environmental elements will not constitute a disability. If, for instance, an individual's major life activity of breathing is somewhat, but not substantially, impaired, the individual is not disabled and is not entitled to the protections of the statute. Thus, the determination as to whether allergies or sensitivity to smoke are disabilities covered by the regulation must be made using the same case-by-case analysis that is applied to all other physical or mental impairments. (see the enclosed title III regulation at page 3554.9.)

cc: Records CRS Chrono Friedlander Breen
Milton.letterssmoking.you

01-02889

Because of the case-by-case nature of the determination, the Department of Justice ADA regulations do not mandate restrictions on smoking. In that regard, it is important to note that even though section 501(b) of the statute merely states that the prohibition of, or the imposition of restrictions on, smoking in places of public accommodation is not precluded by the ADA, the statute does not mandate imposition of any restrictions. Furthermore, there is currently no Federal statute that absolutely bans smoking in public buildings.

Because the ADA does not mandate restrictions on smoking, the North Carolina bill about which you are complaining does not, in itself, violate the ADA. However, if the effect of the law is to create barriers to access for a particular individual who is substantially impaired because of his or her sensitivity to cigarette smoke, then there may be a violation of the ADA as regards that individual. For instance, it may be necessary to modify the policy of allowing smoking in a designated smoking area if it affects a particular disabled individual.

If you believe that you are disabled as defined under the ADA and you can identify a particular State or local government facility in which you are denied access because of the presence of smoke, you may either file a private suit in Federal court or send a complaint to this office for investigation.

I hope this information has been helpful to you.

Sincerely,

Stewart B. Oneglia

DJ 171-32-0 P.O. Box 66118
Washington, D.C. 20035-6118

JAN 21 1994

Mr. Roger T. Boes
Boes Iron Works, Inc.
2321 Perdido Street
New Orleans, Louisiana 70119-7538

Dear Mr. Boes:

This responds to your letter to President Clinton concerning eligibility of individuals with disabilities for "minority status classification" under the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This response provides informal guidance to assist you in understanding the ADA's requirements. It does not, however, constitute a legal interpretation and is not binding on the Department.

Your inquiry appears to concern the exclusion of individuals with disabilities from the classes of individuals eligible for minority set aside programs. This exclusion would not necessarily constitute a violation of the ADA or of section 504 of the Rehabilitation Act of 1973, as amended, which applies to federally assisted as well as federally conducted programs and activities.

Title II of the ADA and the Department of Justice implementing regulation, 28 C.F.R. pt. 35 (copy enclosed), prohibit a public entity from discriminating on the basis of disability against a qualified individual with a disability in the benefits and services it provides. 28 C.F.R. 35.130 (a). A "qualified individual with a disability" is one who meets the essential eligibility requirements for the receipt of services or participation in the program or activity provided by the public entity. The ADA does not limit the authority of a public entity to establish eligibility requirements that are unrelated to disability, so long as those requirements do not exclude qualified individuals with disabilities. The exclusion of individuals with disabilities from a "set aside" established for

particular classes of individuals, such as racial, ethnic, or other minority groups, would not be discriminatory, unless individuals with disabilities who are also members of the particular classes covered by the set aside are excluded because of their disabilities. (Such an exclusion of an individual who is "qualified" because he or she meets the eligibility requirement of membership in a covered group could violate the ADA.)

We understand your position to be that the failure to include business owners with disabilities is discriminatory because those business owners are "disadvantaged" by their disabilities in the same way as others are disadvantaged by their membership in the covered groups. This argument is premised on the assumption that, in establishing a preference for particular classes of "disadvantaged" business owners, the State is obligated to include all categories of business owners that are similarly "disadvantaged." The ADA does not establish such an obligation. It does not prohibit State and local governments from establishing eligibility criteria that target specific groups as intended beneficiaries, based on the goals and purpose of authorizing legislation, so long as the program does not exclude or discriminate against persons with disabilities because of their disability.

Of course, if you seek to have the programs in question amended or revised to include the specific groups you represent as eligible for services or benefits, you should contact the agencies administering these programs and the appropriate legislative bodies that authorize them.

I hope this information is helpful.

Sincerely,

Stewart B. Oneglia

JAN 27 1994

Mr. Barry M. Vuletich
Manager of Consumer Affairs
Division of Rehabilitation Services
Department of Human Services
P.O. Box 3781
Little Rock, Arkansas 72203

Dear Mr. Vuletich:

This letter is in response to your letter of May 25, 1993, requesting our formal opinion on various issues that arise under the Americans with Disabilities Act of 1990 (ADA) when a State agency leases a building or facility from a private entity.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities with rights or obligations under the Act. This letter does not, however, constitute a legal interpretation or a formal legal opinion, and

is not binding on the Department of Justice.

Although your letter is not completely clear, we assume you are referring to the issues that arise when a State agency, subject to title II of the ADA, leases a building or facility from a private landlord. These issues are discussed, in some detail, in the preamble to section 35.151 of Department's regulation implementing title II of the ADA (the Preamble). See page 35711 of the enclosed copy of the title II regulation.

As noted in the Preamble, existing buildings leased by a public entity are not required to meet accessibility standards simply by virtue of being leased. The activities that the State conducts within such buildings are, however, like all services, programs, and activities conducted by the State, subject to the "program access" requirement set forth in section 35.150 of the title II regulation and further discussed in section II-5.0000 of the Department's title II Technical Assistance Manual, a copy of which has been enclosed for your convenience.

Under the "program access" requirement, a public entity, such as the State of Arkansas, must operate each of its services, programs, and activities, so that when viewed in its entirety, that service, program, or activity is readily accessible to and usable by individuals with disabilities. See section 35.150(a) of the title II regulation.

Although it is not necessary for a public entity to make each of its existing facilities accessible, and the regulations provide other methods by which the entity may comply with the "program access" requirement, see section 35.150(b)(1), the Department encourages public entities to lease the most accessible space available.

At a minimum, public entities are encouraged to lease space that complies with the minimum standard applicable to the Federal government when it leases space. That standard is discussed in the Preamble to section 35.151, cited above. The three elements of the standard are: (i) an accessible route from an accessible entrance to the areas where the primary activities for which the building was leased take place; (ii) accessible toilet facilities; and (iii) accessible parking facilities. Leasing space that complies with this minimum standard, while not

required, will greatly facilitate the State's obligation to provide program access.

Thus, in response to your first question, the State retains all of its title II responsibilities for providing program access, and for otherwise complying with title II, when it leases a building or facility from a private entity. In response to your second question, this would, of course, include its responsibility for identifying barriers to program access as part of the process of preparing the State's transition plan. Finally, even if the State's landlord is "not agreeable" to making the necessary changes, the State continues to be the party responsible for complying with all aspects of title II.

We assume that by the phrase "agreeable to" making changes, you are referring to the landlord's willingness to pay for such changes. Whether a private landlord is willing to make changes (or to permit changes to be made) to its buildings or facilities that would assist a State in complying with its obligations under title II is likely to be largely determined by the provisions of the lease. By virtue of the definition of "public accommodation" under the regulation implementing title III of the ADA (ie., a private entity that owns, leases (or leases to), or operates a place of public accommodation), a private landlord leasing to a public entity does not have any independent obligation to modify (or to permit the public entity to modify) buildings or facilities owned by the private entity.
01-02899

If the landlord refuses to pay for, or even to allow the State to make the modifications needed for compliance with the ADA, whether or not its refusal violates the terms of its lease with the State, the State retains an independent obligation to provide program access by some other method. (The State would, however, retain any rights against the landlord provided by the lease.)

I hope this information has been of assistance to you. If you require further assistance or advice, please do not hesitate to write. The Department can also be reached through its ADA Information Line at (202) 514-0301 (Voice) and (202) 514-0383 (TDD) 1:00 p.m. to 5:00 p.m., Monday through Friday.

Sincerely,

Stewart B. Oneglia

Mr. Warren T. Hanna
Director
Hard of Hearing Advocates
245 Prospect Street
Framingham, Massachusetts 01701

Dear Mr. Hanna:

This is in response to your letter to Attorney General Reno seeking advice on what can be done to educate the hard of hearing community about the availability of hearing aids with telecoil wires.

Although the ADA does not require manufacturers to educate consumers about products they manufacture, there are a number of Federal agencies that may be able to provide information that will assist you in educating consumers who are hard of hearing about hearing aid products that are available on the market:

* In addition to this Department, the Architectural and Transportation Barriers Compliance Board and the Equal Employment Opportunity Commission can provide information and technical assistance to assist the public in understanding the types of assistive listening systems that are appropriate for different applications; the circumstances under which an employer is required by the ADA to provide an assistive listening system to communicate with an employee; and the circumstances under which businesses or State or local government agencies that serve the public are required to provide an assistive listening system to communicate with consumers.

* The U.S. Department of Education's National Institute on Disability and Rehabilitation Research does research on a variety of disability issues and may have information about assistive listening systems that work better for consumers who use hearing aids with telecoil wires than for consumers who use hearing aids without telecoil wires or consumers who

cc: Records; Chrono; Wodatch; Magagna; Willis; McDowney; FOIA; MAF. \UDD\WILLIS\CTHANNA

01-02901

are hard of hearing but cannot benefit from any hearing aids currently on the market, along with the research it has done on the types of assistive listening systems (FM, infra-red, and loup) that are appropriate for different applications.

* The Federal Communications Commission regulates under the Hearing Aid Compatibility Act and may have information about telephone models that work better for consumers who use

hearing aids with telecoil wires than for consumers who use hearing aids without telecoil wires or consumers who are hard of hearing but cannot benefit from any hearing aids currently on the market.

* The U.S. Department of Health and Human Services, Public Health Service, Food and Drug Administration regulates under the Federal Food, Drug, and Cosmetic Act and may have information about manufacturers or distributors of hearing aids suspected of "overselling" their products, claiming them to be more effective than they really are.

Enclosed is a booklet that provides information about the ADA and lists the telephone numbers for ADA information lines operated by the Architectural and Transportation Barriers Compliance Board and the Equal Employment Opportunity Commission. The Department of Justice operates an ADA information line at (202) 514-0301.

Sincerely,

James P. Turner
Acting Assistant Attorney General

The Honorable Janet Reno
Attorney General of the United States

Main Justice Building
Constitution Avenue between 9th & 10th Streets
Washington, D.C. 20530

August 20, 1993

Dear Honorable Janet Reno:

The following describes a relatively widespread problem in which your input would be appreciated.

This relates to hearing aids and the uniqueness of the problem in which consumers, as a result of their affliction, tend to become passive. They lose their willingness to assert themselves verbally. This results in a high rate of dissatisfaction, as well as high prices for hearing aids.

Another factor: The American Disability Act. Many hearing aid wearers are being denied access to social environments in which they could hear, if only they were educated properly. To explain: all but the smallest hearing aids have the potential of having a small coiled wire (called a telecoil) installed in it. This telecoil allows a person not only to hear better on the telephone, but it serves as a receiver to pick up sound from other sources. These other sources include receivers that can be connected to FM, Infra-red and/or Loop systems. A hearing aid wearer using such a system can literally hear better than a normal hearing person under certain conditions.

Industry people give many reasons for their failure to educate consumers, though it appears clear that they just do not want to take the time to demonstrate and explain the procedure. This technology is something that has been used in Scandinavian countries for 40 years, allowing people to go to churches, to theaters, etc. and to be able to function as normal hearing people do.

Many businesses today are willing to put in what are called assistive listening systems (FM), Infra-red and Loop systems), but the hard of hearing consumer without a telecoil is very limited in his ability to use such a system.

I realize this is a brief description of a somewhat complex problem and that you may need more information. Should you have any questions, I would be happy to get into them with you. The end result is, "What can the splintered hard of hearing community do in such a case?" It seems logical to seek help via litigation, possibly to create a small claims procedure to help in individual cases, or is a class action apt to prove more effective?

Input from you would be sincerely appreciated.

Sincerely,
Warren T. Hanna, Director

FEB 9 1994

The Honorable Robert S. Walker
U.S. House of Representatives
2369 Rayburn House Office Building
Washington, D.C. 20515-3816

Dear Congressman Walker:

This letter is in response to your inquiries an behalf of your constituent, XX (B)(6)

Your letter indicates that XX has recently purchased a three story bed and breakfast inn. She wishes to obtain information regarding the requirements of the Americans with Disabilities Act ("ADA") applicable to the two floors of bedrooms in the inn. XX also inquired as to a deadline to meet the requirements, particularly for work on the entrance door and bathrooms.

Title III of the ADA applies to all privately owned places of public accommodation. Title III sets forth twelve categories of entities that are places of public accommodation having obligations under the Act. One of these categories is "an inn, hotel, motel, or other place of lodging, except for an establishment located within a building that contains not more than five rooms for rent or hire and that is actually occupied by the proprietor of the establishment as the residence of the proprietor." Unless XX inn is an owner-occupied establishment renting fewer than six rooms, the inn is subject to the ADA requirements to have nondiscriminatory policies and procedures, to provide effective communication to persons with disabilities, and to remove architectural barriers in the facility where it is readily achievable. These obligations are described in more detail in the enclosed Technical Assistance Manual published by the Department of Justice. See Part III-3.0000 (pp. 14-21) and Part III-4.0000 (pp. 22-39).

cc: Records; Chrono; Wodatch; McDowney; Pestaina; Magagna; FOIA; MAF. \udd\pestaina\cgl\walker

01-02906

(b)(6)

The effective date for compliance with the ADA requirements was January 26, 1992. Thus, if XX inn contains any architectural barriers whose removal is "readily achievable," including any work on the entrance door or bathrooms, work to remove those barriers should have been completed.

I have also enclosed for your information a copy of the title III regulation promulgated by the Department of Justice. The provisions regarding the effective date of the Act and the obligation to remove architectural barriers may be found in sections 36.304 and 36.508 of the regulation, and are discussed in the Technical Assistance manual on pages 30 through 39 (barrier removal), and page 71 (effective date). The penalties provided for a violation of the Act are set out in sections 36.501 and 36.504. They are discussed in the Technical Assistance Manual on pages 68 through 71.

(b)(6)

For further information about the ADA, XX may call our ADA information line at (202)514-0301 from 1 p.m. to 5 p.m. EST.

I hope this information is useful to you in responding to XX (b)(6)

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Mr. Mario Pimenta
Product Manager
Auditorium/Theater Seating
JG Furniture Systems, Inc.
121 Park Avenue, Box 9002
Quakertown, Pennsylvania 18951-9002

Dear Mr. Pimenta:

I am responding to your letter concerning the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute and it is not binding on the Department.

Your letter asks what the specifications are for signs at accessible fixed seating in assembly areas. As you noted in your letter, section 4. 1. 3 (19) (a) of the ADA Standards for Accessible Design (28 C.F.R. pt. 36, Appendix A) requires each such seat to be "identified by a sign or marker." Section 4.30.7 provides: "Facilities and elements required to be identified as accessible by 4.1 shall use the international symbol of accessibility. The

symbol shall be displayed as shown in Fig. 43 (a) and (b) ."

Signage on accessible fixed seating such as that described in your letter falls within the requirements of section 4.30.7 and should comply with Figure 43(a) and (b) of the ADA Standards. For your reference, I have enclosed a copy of the Department of Justice regulations containing the ADA Standards.

cc: Records, Chrono, Wodatch, Hill, FOIA, Library
a:\udd\hille\policylt\pimenta

I hope that this information is helpful to you and that this letter fully responds to your inquiry.

FEB 9 1994

The Honorable Sonny Callahan
Member, U.S. House of Representatives
2970 Cottage Hill Road
Suite 126
Mobile, Alabama 36606

Dear Congressman Callahan:

This letter is in response to your inquiry on behalf of your constituent, XX (b)(6) concerning the applicability of the Americans with Disabilities Act ("ADA") to persons with HIV.

Your constituent inquired as to whether and why the Department of Justice filed lawsuits against two dentists who refused to treat HIV-positive persons. Specifically, your constituent asked whether HIV-positive persons are protected by the ADA, and whether dentists are required to treat such persons.

The Department of Justice did, in fact, file such lawsuits. See United States v. Morvant, Civ. Act. No. 93-3251 (E.D.La.), and United States v. Castle Dental Center, Civ. Act. No. H-93-3140 (So.D.Tx.). The complaints allege that dentists in New Orleans and Houston violated the ADA by refusing to treat HIV-positive individuals, solely on the basis of their HIV-positive status.

Title III of the ADA prohibits discrimination on the basis of disability by places of public accommodation, including dental offices. See 36.104 and 36.201(a) of the enclosed regulation. HIV infection meets the definition of "disability" because it is a physical impairment that substantially limits one or more major life activities, e.g. reproduction. 28 C.F.R. 36.104. In fact, HIV disease, both symptomatic and asymptomatic, is specifically listed as a covered disability in the title III regulation. See 28 C.F.R. 36-104.

Accordingly, dentists are prohibited from discriminating against HIV-positive persons under the ADA. Dentists may not refuse to treat such persons solely on the basis of their HIV-

cc: Records, Chrono, Wodatch, Bowen, Perley, McDowney, MAF, FOIA
udd\gloriamc\callahan

01-02912

positive status. While it is true that a dentist is not required to treat someone who would pose a significant risk to the health or safety of others (see 28 C.F.R. 36.208), treating individuals who have tested positive for HIV does not pose such a risk.

According to the federal Centers for Disease Control and Prevention ("CDC"), the risk of transmitting viruses like HIV in the health-care setting is minimal, and can be severely lessened by the use of infection control procedures, often described as "Universal Precautions." These protective measures -- which include the use of gloves, surgical masks, and protective eyewear, the sterilization of medical instruments, the disinfection of exposed environmental surfaces, and proper waste

disposal methods -- prevent the spread of almost all bloodborne diseases, including HIV. The CDC recommends that dentists use Universal Precautions with all patients and has not suggested that additional precautions, such as "space suits," are warranted. Moreover, the American Dental Association has taken the position that Universal Precautions are an effective and adequate means of preventing the transmission of HIV from dental health care worker to patient and from patient to dental health care worker.

Indeed, to date, there have been no documented cases of HIV transmission from patient to dental health care worker. In light of this information, and the information provided by the CDC and the American Dental Association, the Department of Justice has taken the position that, so long as the dental team follows Universal Precautions, treating HIV-positive persons does not pose a significant risk to the health or safety of the dentist, the dental staff, or other patients. Accordingly, a dentist may not refuse to treat an HIV-positive person, solely on the basis of that patient's HIV-positive status.

I hope this information is helpful to you in responding to your constituent. You may wish to inform your constituent that further information is available through our Americans with Disabilities Act information Line at (202) 514-0301.

Sincerely,

James P. Turner
Acting Assistant Attorney General

Congressman Sonny Callahan
United States House of Representatives
2418 Longworth Bldg.
Washington, D.C. 20515

Dear Representative Callahan:

National Public Radio reported this morning that the U.S.. Justice Department had filed its first lawsuit against discrimination relative to people who are HIV positive. The report said the lawsuit was against two dentists who refused to provide care to an AIDS infected person.

Please provide me with information about what our "Justice Department is doing here. Is the population of HIV people "protected class" under "civil rights" laws? How is this case framed?

If seems to me that the dentists acted prudently. Do you remember Kimberly Bergalis?

If care were to be administered to an HIV positive person, the dentist should be wearing a space suit. Shall we require all dentists to equip themselves with space suits to prevent descrimnation?

I believe that I see the light at the end of the Hillary tunnel, and it is an oncoming train. What she intends to do is provide one mandatory healthcare for all, and don't ask, don't tell, and don't pursue HIV. That will solve it. We will a11 be infected!

Sincerely,
XX

XX

01-02914

T 2-7-94

DJ 202-PL-133 FEB 10 1994

Mr. Marc N. Katz
Manager, Congressional Affairs

National Association of Convenience Stores
1605 King Street
Alexandria, Virginia 22314-2792

Dear Mr. Katz:

This letter is in response to your request for guidance on the requirements for barrier removal applicable under title III of the Americans with Disabilities Act (ADA). I apologize for the delay in responding to your inquiry.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that are subject to the Act. This letter provides informal guidance to assist you in understanding the ADA accessibility standards. However, this technical assistance does not constitute a legal interpretation of the application of the statute and it is not binding on the Department.

In existing facilities that are not otherwise being altered, a public accommodation is required to remove architectural barriers to the extent that it is readily achievable, i.e., easily accomplishable and able to be carried out without much difficulty or expense. Measures taken to remove barriers should comply with the Standards for Accessible Design (Standards). contained in the appendix to the Department's rule. (Barrier removal in existing facilities does not, however, trigger the accessible path of travel requirement.) Deviations from the Standards are acceptable only when full compliance with those requirements is not readily achievable. In such cases, barrier removal measures may be taken that do not fully comply with the Standards, so long as the measures do not pose a significant risk to the health or safety of individuals with disabilities or others.

For example, in the situation described in your letter, if widening a continuous aisle to 32 inches is readily achievable, such widening would be required. However, if this change would require the removal of shelves and result in a significant loss

cc: Records, Chrono, Wodatch, Lusher, FOIA
n:\udd\mercado\policy\katz.rhl

01-02915

of selling space, the change would not be considered readily achievable (see 36.304(f) of the Department's regulations for

title III at 28 CFR Part 36). If in a convenience store it is not readily achievable to widen all the aisles, it may be appropriate to widen the most frequently used aisle to 36 inches and to widen the other auxiliary aisles to widths below 36 inches.

The requirements for barrier removal are not to be interpreted to exceed the title III rule's alteration standards. For elements not specifically covered under the alteration standards, the requirements for barrier removal are not to be interpreted to exceed the requirements for new construction (see 36.304(g)(1) and (2) of 28 CFR Part 36). The Standards specifically refrain from applying the requirements for accessible reach ranges to fixed shelves or display units (4.1.3(12)). Therefore, convenience stores are not required to adjust the height of existing shelves or display units. They are, however, required by title III to provide assistance to patrons who use wheelchairs or others who, because of a disability, cannot independently retrieve items from store shelves.

For your information I am enclosing a copy of the Department's Title III Technical Assistance Manual. Readily achievable barrier removal is specifically addressed on pages 29 through 35. However, further information on the differences between readily achievable barrier removal and other provisions, such as requirements for new construction and alterations, are discussed throughout the text.

I hope that the above information is helpful to you and the members of the National Association of Convenience Stores.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Enclosure

01-02916

National Association of Convenience Stores
NACS
30
years of service
1961-1991

April 17, 1992

Mr. John L Wodatch, Director
Office of the Americans with Disabilities Act
Civil Rights Division
U.S. Department of Justice
P.O. Box 66118
Washington, D.C. 20035-6118

Dear Mr. Wodatch:

The National Association of Convenience Stores respectfully requests guidance on the interpretation and application to the convenience store industry of certain provisions of the final regulations implementing the Americans with Disabilities Act ("ADA"), which the Department of Justice issued on July 26, 1991. 56 Fed. Reg. 35,543 (1992).

NACS is a national trade association representing over 1,400 retail members that operate more than 64,000 convenience stores. A typical convenience store ranges from only 1,500 to 5,000 square feet in size with a majority between only 2,000 and 3,000 square feet. Convenience stores are usually densely stocked with 2,000 to 3,500 units of merchandise, including grocery items, tobacco products, health and beauty aids, and confectionery items. Many convenience stores also offer prepared foods to go, frozen foods, beer and wine, general merchandise, and gasoline. Convenience stores generally offer extended hours of operation. In 1989, the most recent year for which statistics are available, the average convenience store had 5.9 employees. However, on average, only one to two employees were generally on duty at any given time.

Specifically, NACS seeks guidance concerning the requirements for barrier removal under section 36.304 of the final regulations. 56 Fed. Reg. at 35,597-8. First, NACS is concerned about the extent of its obligation to remove barriers under subsection 36.304(d)(2). That part states:

> If as a result of compliance with the alteration requirements specified in paragraph (d)(1) of this section, the measures required to remove a barrier would not be readily achievable, a public

> accommodation may take other readily achievable measures to remove the barrier that do not fully comply with the specified requirements. Such measures include, for example, providing a ramp with a steeper slope or widening a doorway to a narrower width than those mandated by the alterations requirements.

The requirements specified in paragraph (d)(1) are the requirements applicable to alterations under sections 36.402 and sections 36.404-36.406 of the final regulations. 56 Fed. Reg. at 35,559-35,602. Subsection 36.406(a) specifically requires that alterations meet the ADA Accessibility Guidelines ("ADAAG") that were published by the Attorney General as an appendix to the final rules. 56 Fed. Reg. at 35,605. Thus, it appears that places of public accommodations must remove barriers only if removal of those barriers results in reaching or exceeding the ADAAG standards.

However, NACS is concerned that the final regulations may be interpreted to require barrier removal even if such removal would not result in reaching or exceeding the ADAAG accessibility standards. Thus, if widening, a continuous aisle to 32 inches is readily achievable, such widening could be required even though the ADAAG accessibility standard for continuous aisle width for a single wheelchair is 36 inches. See 56 Fed. Reg. at 35,620. NACS seeks the Justice Department's guidance on this issue.

Second, NACS seeks guidance on whether the reach range requirements of sections 4.2.5 and 4.2.6 of the ADAAG are relevant to the barrier removal requirements for convenience store operators. See 56 Fed. Reg. at 35,620-35,625. The ADAAG accessibility standards for new construction do not require "[s]helves or display units allowing self-service by customers in mercantile occupancies" to comply with requirements for accessible reach range. ADAAG 4.1.3(12)(b); 56 Fed. Reg. at 35,615. Thus, it appears that while newly constructed convenience stores need not comply with the reach requirements, existing convenience stores must remove barriers to satisfy those requirements if doing so would be readily achievable. NACS requests your assistance in resolving this apparently anomalous situation.

NACS looks forward to working with the Justice Department to assist its members in complying with the ADA. Thank you very much for your assistance with these requests.

Sincerely,

Marc N. Katz
Manager, Congressional Affairs

Dear XX

I am writing in response to your inquiry about the responsibility of a church to comply with title III of the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute and it is not binding on the Department.

Section 36.102 (e) of the Department's implementing regulation for the title III of the ADA states that title III, which prohibits discrimination on the basis of disability by public accommodations and in the construction or alteration of commercial facilities, "does not apply to ... any religious entity." The Department's Title III Technical Assistance Manual clarifies the definition of "religious entity" and explains the scope of the exemption. I have enclosed a copy of the Technical Assistance Manual. Sections III-1.5000 to III-1.5200 address the exemption of religious entities.

I hope that this information is helpful to you.

Sincerely,

Janet L. Blizard
Supervisory Attorney

Dear Mr. XX

I am writing in response to your inquiry regarding accessibility requirements under the Americans With Disabilities Act (ADA) and the Department of Justice regulations implementing the ADA. Specifically, your letter asks about the applicability of the ADA parking facility requirements to St. Vincent de Paul Church in Houston, Texas.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and institutions that may have rights or duties under the act. This letter provides informal guidance and information to help you understand your rights under the act. However, this technical assistance does not constitute a determination by the Department of Justice of your rights or of the responsibilities of St. Vincent de Paul Church under the ADA and does not constitute a binding determination by the Department of Justice.

Section 36.102 (e) of the Department's implementing regulations for the ADA state that title III of the ADA, which prohibits discrimination on the basis of disability by public accommodations and in commercial facilities, "does not apply to ... any religious entity." The Department's "Title III Technical Assistance Manual" explains the definition of "religious entities" and the scope of the exemption. I have enclosed a copy of the technical assistance manual. Sections III-1.5000 to III-1.5200 address the exemption of religious entities from coverage.

Dear XX

This is in response to your letter to the Civil Rights Division regarding respiratory disabilities and the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA may apply to you. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

In publishing regulations to implement the ADA, the Department of Justice has declined to state categorically that sensitivity to cigarette smoke should be recognized as a disability because, in order to be viewed as a disability under the ADA, an impairment must substantially limit one or more major life activities. An individual's respiratory or neurological functioning may be so severely affected by sensitivity to cigarette smoke that he or she will be considered disabled. Such an individual would be entitled to all of the protections afforded by the ADA. In other cases, however, an individual's sensitivity to smoke or other environmental elements will not constitute a disability. If, for instance, an individual's major life activity of breathing is somewhat, but not substantially, impaired, the individual is not disabled and is not entitled to the protections of the statute. Thus, the determination as to whether sensitivity to smoke is a disability covered by the regulation must be made using the same case-by-case analysis that is applied to all other physical or mental impairments. (See the enclosed title III regulation at page 35549.)

Because of the case-by-case nature of the determination, the Department of Justice ADA regulations do not mandate restrictions on smoking. It is important to note that section 501(b) of the statute merely states that the prohibition of, or the imposition

Records, Chrono, Wadatch, Blizard, FOIA, Friedlander
\udd\blizard\adaltrs\ XX
(b)(6)

01-02927

of restrictions on, smoking in places of public accommodation is not precluded by the ADA. The statute does not mandate imposition of any restrictions. Furthermore, there is currently no Federal statute that absolutely bans smoking in public buildings.

An individual who has a disability (as defined under the ADA) and who is excluded from specific facilities because of the presence of smoke, may either file a private suit in Federal court or send a complaint to the Department of Justice for investigation. Complaints against State or local government facilities may be sent to the:

Coordination and Review section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66118
Washington, DC 20035-6118

Complaints against privately owned places of public accommodation should be sent to this Section at the address listed above.

I hope this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Mr. Mark Smith
Executive Director
Coalition of Citizens with Disabilities
3111 North State Street, Suite 2
Jackson, Mississippi 39216

Dear Mr. Smith:

This letter responds to your inquiry to Senator Thad Cochran requesting clarification regarding a perceived conflict between the requirements of Mississippi State law and those of the regulations implementing title III of the Americans with Disabilities Act of 1990 (ADA). Senator Cochran has requested our assistance in responding to your inquiry.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities with rights or obligations under the Act. This letter provide informal guidance to assist you in understanding the requirements of the ADA. It does not, however, constitute a legal interpretation and is not binding on the Department of Justice.

We understand from you letter that Mississippi State law requires that the curbs and striping of handicapped parking spaces be painted blue and that, because the ADA Accessibility Guidelines (ADAAG) do not specify a paint color for such spaces, certain businesses have asserted that they are not required to use blue paint in designating handicapped parking. Further, you report that, in some localities, restrictions on the use of such spaces are not enforced because they are not painted blue in compliance with State law.

Your understanding that State laws that provide greater or equal protection for the rights of individuals with disabilities than are afforded by the ADA are not invalidated or limited by the ADA is correct. See Section 501 (b) of the ADA. If a particular building or facility is covered by both the ADA and a State statute, an entity covered by the ADA should comply with those technical requirements of each law that provide the greatest degree of access. If there is no conflict between the ADA and State law, the requirements of both should be met.

cc: Records CRS Chrono MAF Pecht.congress.93.cochran.con
McDowney FOIA
01-02931

In this instance, the Mississippi State law requiring parking spaces to be painted blue does not conflict with ADAAG (and, may even provide greater access). Under such circumstances, parking spaces should be painted blue in accordance with State law and should be designed and constructed so as to otherwise follow the law providing the greatest degree of access. For example, if ADAAG requires that such spaces be of a greater width than State law requires, then ADAAG would apply.

I hope this information is helpful to you.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

cc: The Honorable Thad Cochran

November 30, 1993

Honorable Thad Cochran
U.S. Senate
326 Russell Senate Office Building
Washington, D.C. 20510

Dear Senator Cochran:

We are in need of your assistance regarding a matter of great interest to a significant sector of the disability community in Mississippi. I have been advised that a determination is needed from the U.S. Department of Justice related to an apparent conflict between state and federal law. Specifically, we need a determination pertaining to the color used to designate handicapped parking spaces.

State Law -- Section 27-19-56, Mississippi Code of 1972 as amended -- (see attached) specifies that, in order to enforce the handicapped parking restrictions, the curb and striping of such parking spaces "shall be blue for easy identification." Unfortunately, the Americans with Disabilities Act Accessibility Guidelines (ADAAG) do not specify the color of the spaces. Consequently, many businesses assert that since they are in compliance with the requirements outlined in the ADAAG, they do not feel compelled to, in accordance with state law, paint the spaces blue.

As a result, in some localities, law enforcement officials are unwilling to write tickets on vehicles misusing handicapped parking spaces if the markings aren't blue. Furthermore, some judges have even thrown out tickets that were written in such circumstances.

It is our understanding that, regarding the A.D.A., if state law is deemed to be strenghening or furthering the impact of the provisions of that federal law, the state law would supersede the federal requirements Certainly, it is our opinion that the state law should take precedence since we feel it "strenghens" the impact of the handicapped parking requirements by making the spaces more visible and definable.

01-02933

To begin addressing this quandary, we consulted representatives of relevant state and federal entities and were apprised that we need a written determination from the U.S. Department of Justice to resolve the question. Due to the fact that, if the state law would have to be changed, it could most expediently be addressed In the upcoming session of our Legislature, a timely decision on this issue is needed.

Therefore, we would appreciate your assistance in procuring a formal determination in this matter from the proper official within the U.S. Department of Justice. If that federal agency concurs with the dictates of the state law, and, thus, issues a statement that the blue colored markings would supercede the ADAAG, or otherwise be an addendum to those requirements, we would then use that statement in notifying relevant businesses about the need to paint the spaces blue. If the agency does not concur, we will inform the Legislature and advocate for suitable changes to the state law to eliminate the conflict.

As always, if you have questions at need additional information regarding this request, please do not hesitate to contact me by calling 601-362-9599.

Thank you for your cooperation and assistance in this matter.

Sincerely,

Mark Smith
Executive Director

XX FEB 16 1994

(b)(6)

XX
XX
Newport News, Virginia 23607

Dear XX

Your letter to the Attorney General regarding the application and enforcement of the Americans with Disabilities Act (ADA) to restaurants, new buildings, and parks throughout Newport News has been referred to this office for response.

The ADA authorizes the Department of Justice to provide technical assistance and information to individuals and entities who have questions about the Act or the Department's ADA Standards for Accessible Design. This letter provides informal guidance to assist you in understanding and complying with the ADA accessibility standards. However, this technical assistance should not be viewed as legal advice or a legal opinion about your rights or responsibilities under the ADA.

New buildings such as restaurants or office buildings, built by private entities, must be designed and constructed in compliance with the ADA Standards for Accessible Design. These standards appear as Appendix A in the Department of Justice's Final Rule for Title III of the ADA, a copy of which is enclosed. Places of public accommodation, including restaurants, retail stores, and theaters, in existing buildings must remove barriers

insofar as it is readily achievable to do so.

The Newport News Building Department enforces State and local building regulations (and Virginia does indeed have accessibility requirements similar to those of the ADA) but cannot enforce the Federal ADA. If you believe that there has been discrimination on the basis of disability because someone has failed to remove barriers or failed to build an accessible building as required in the ADA regulations, you may file a complaint with the Department of Justice or you may file suit in court.

Please contact the Public Access Section any time you have questions or need information about the ADA. The Department

The Honorable Janet Reno
Attorney General of the United States
Tenth and Constitution Ave. NW
Washington D.C. 20530

July 24, 1993

Dear Madam Attorney General,

Its with aching heart that I come to you with this letter today. I hope that I can express myself and you can see what I mean with these letters enclosed in this envelope. The City of Newport News has no one checking compliance with the Americans Disabilities Act (ADA) on restaurants, new buildings, parks and etc. throughout the city. Mr. Bill Ritter of Building Permits says they stamp every new building with a disclaimer; Attorney General how much longer would it take for them to check to see that they are

in code? 15 or 20 minutes more? IHOP restaurant opened last year and where open one month before they installed a wheelchair ramp. The handicap parking is located six spaces from this ramp where you travel through the parking lot and not on the sidewalk. IS THIS WHAT THE LAW SAYS?

Miss Reno our City Assessor has houses appraised so high that we are paying more on taxes now than what we originally paid for the house. EVERY DAY PEOPLE ARE BEING EVICTED OUT OF THEIR HOUSES BECAUSE OF THIS. AND LAST WEEK THREE PEOPLE COMMITTED SUICIDE. ONE MAN ALSO DID TWENTY-ONE YEARS IN THE ARMY: IS THIS THE THANKS HE GETS? Mr. Larry Trent our City Assessor is going up on houses that the City condemned. Please explain this to me; I'm rather dumb.

XX

(b)(6)

XX

01-02937

Attorney General, our schools are integrated here, but in ward XX (b)(6) XX Our neighborhood school is named XX nd its 10 miles from where we live. It sure seems funny we can spend millions of dollars on parks and nothing on education. Your position requires you to help us. They have closed two schools, but in the last 12 years no new school has been built in this part of town. I bring this to your attention because Hilton claims there school is a neighborhood only school, yet my taxes are paying. Why is the rich can do what they want and the poor Black and White working man can not do anything right?

Honorable Janet Reno you have a tremendous job; my heart goes out for your job, but these are some of the answers we need in Newport News, Va. I hope you or one of your staff members can answer this; as I'm getting ashamed of being a part of this United States. All these folk thats not living within this city shouldn't be telling the city citizens how to do things. WHITE FLIGHT NEVER PROVED ANYTHING.

I thank you for these few moments that you have given me and my neighbors in East End of Newport News.

Yours Truly,

XX
XX

Washington, D.C. 20035-6118

FEB 26 1994

Mr. Richard B. Engelman
Chief
Technical Standards Branch
Office of Engineering and Technology
Federal Communications Commission

Washington, D.C. 20554

Dear Mr. Engelman:

This letter is in response to your request for information about Federal laws pertaining to closed captioning of television programs and films. We apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights and obligations under the Act. This letter provides informal guidance to assist your agency in understanding the ADA's requirements. However, it does not constitute a legal opinion or legal advice and it is not binding on the Department.

You state that you are aware of the FCC requirements that television public service announcements that are funded by the Federal government be closed captioned (47 U.S.C. 611) and that television stations transmit information during emergencies both aurally and visually (47 C.F.R. 73.1250(h)). You also state you are unaware of any other requirements.

In addition to those requirements you mentioned, at least three Federal requirements deal with the provision of closed captioning: title II of the Americans with Disabilities Act (ADA) , title III of the ADA, and section 504 of the Rehabilitation Act of 1973, as amended.

Title II of the ADA prohibits discrimination on the basis of disability in all programs, activities, and services provided or made available by State and local governments, instrumentalities,

or agencies, regardless of the receipt of Federal funds. Title III of the ADA covers public accommodations such as shopping centers, doctors' offices, museums, zoos, private schools, and other private establishments. Copies of the title II and III regulations and manuals explaining the regulations are enclosed.

Regulations implementing titles II and III require the provision of auxiliary aids and services by public and private entities where necessary to ensure effective communication with an individual who is deaf or hard of hearing (section 35.160, p.

35721, of the title II rule; and section 36.303, p. 35597, of the title III rule, respectively). For individuals with hearing impairments, auxiliary aids and services include, but are not limited to, qualified interpreters, closed captioning, and transcription services such as computer aided real-time transcription (section 35.104, p. 35717, of the title II regulation; and section 36.303(b)(1), p. 35597, of the title III regulation).

The title II regulation covers television and videotape programming produced by public entities. Access to audio portions of such programming may be provided through the use of closed captioning. Page 35712 of the title II regulation explains this concept.

The title III regulation, section 36.307, p. 35598, does not require that video-tape rental establishments stock closed-captioned video tapes, although the most recent titles in the establishments are, in fact, closed-captioned. Further discussion of this point can be found on p. 35571 of the title III regulation. Movie theaters are not required by title III to present open-captioned films. However, other public accommodations that impart verbal information through soundtracks an films, video tapes, or slide shows are required to make such information accessible to persons with hearing impairments. Captioning is one means to make the information accessible to individuals with disabilities. Page 35567 of the title III regulation explains this concept.

Section 504 of the Rehabilitation Act prohibits discrimination on the basis of handicap in federally conducted and assisted programs. Like the title II regulation, regulations implementing section 504 require that Federal agencies and recipients provide auxiliary aids and services whenever necessary to ensure effective communications with members of the public. Services include the provision of closed captioning. Thus, audio-visual materials produced by the Federal government should be captioned.

01-02940

I hope this information is helpful to you.

Sincerely,

Stewart B. Oneglia
Chief
Coordination and Review Section
Civil Rights Division

Enclosures (3)

T. 2-16-94

DJ 202-PL-727

MAR 10 1994

Mr. Richard K. Abraham
Law Offices of Arthur L. Drager
Five Light Street, Suite 510
Baltimore, Maryland 21202

Dear Mr. Abraham:

I am responding to your letter concerning the Americans with Disabilities Act (ADA). I apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter asks whether Maryland National Bank's form contract for rental of safe deposit boxes violates the ADA. The contract provides that, in the event of incompetency "or other disability" of a lessee, a legal representative of a lessee may open the safe deposit box only if all lessees of the box are present or have consented in writing. According to your letter, any non-disabled lessee may open the box without the presence of the other lessees.

Title III of the ADA imposes obligations on private entities that operate "places of public accommodation." Banks are places of public accommodation covered by the ADA. 42 U.S.C. 12181(7)(F); 28 C.F.R. 36.104. Title III protects persons with disabilities. The ADA defines disability as "a physical or mental impairment that substantially limits one or more of the major life activities of [an] individual." 42 U.S.C. 12102(2); 28 C.F.R. 36.104. A person who has been found legally incompetent is most likely an individual with a disability within the meaning of the ADA (unless the incompetency is due solely to youth). Whether a lessee who has a condition that falls within the category of "other disability" under the bank's contract is protected by the ADA would depend on whether the person has a

physical or mental impairment that substantially limits a major life activity.

The ADA requires that the bank provide individuals with disabilities an equal opportunity to participate in and benefit from the goods and services it offers. 42 U.S.C. 12182(b)(1)(A); 28 C.F.R. 36.202. Clearly, by imposing requirements on persons with disabilities that are not imposed on others, the bank is treating persons differently on the basis of disability. This action (imposing additional eligibility criteria on persons with disabilities) is not permitted by the ADA unless the bank can show that it is necessary for the provision of its services to the persons with disabilities. 42 U.S.C. 12182(b)(2)(A)(i); 28 C.F.R. 36.202.

I am enclosing copies of the regulation implementing title III of the ADA and the Department's Title III Technical Assistance Manual. I hope that this information is helpful to you and that this letter fully responds to your inquiry.

Sincerely,

John L. Wodatch
Chief

RE: The Americans with Disabilities Act

Dear Sir/Madam:

I am a staff attorney with the above-named firm. Mr. Drager is frequently appointed Guardian of the Property of disabled persons in Maryland. Mr. Drager, in his capacity as Court Appointed Guardian, has an absolute duty to safeguard his ward's assets and interests. On occasion he is prevented from doing so. Attached hereto please find a copy of Maryland National Bank's safe deposit box contract, which is used by said institution to prevent Mr. Drager from performing the above-referenced duties.

In particular, please reference paragraph 21. Paragraph 21 states that "a legal representative of one of the lessees of the box, appointed in the event of death, incompetency, insolvency, or other disabilities shall be permitted access to the box only is accompanied by all other lessees or if all such lessees shall have consented by writing filed with the lessor to permit the legal representative access alone to the box." It should be noted that prior to declaration of disability, the owner is allowed access to his or her box. Subsequent to a finding of disability, a Guardian is prevented from obtaining access, while the other joint tenant(s) can access the box without notice to the Guardian. Accordingly, once the person is disabled their rights are diminished. This has resulted in several safe deposit boxes being emptied of their contents by the co-owners, and appears to be a discriminating contract under the Americans with Disabilities Act.

I would appreciate a call from someone on your legal staff in

order that we may discuss this matter.

Very truly yours,
Richard K. Abraham

01-02944

MAR 11 1994

The Honorable Bob Graham
United States Senator
Post Office Box 3050
Tallahassee, Florida 32315

Dear Senator Graham:

This is in response to your inquiry on behalf of your constituent, E. Denise Lee, who seeks information about the Americans with Disabilities Act (ADA). We apologize for the delay in responding.

Your constituent asks whether the ADA requires Regency Square Mall to permit buses operated by the Jacksonville Transportation Authority (JTA) to discharge passengers with mobility impairments at mall entrances. She states that currently JTA buses must discharge all passengers on "service roads and major thoroughfares."

Title III of the ADA, which applies to public accommodations, such as shopping malls, requires that such facilities reasonably modify their policies, practices, and procedures, if such modifications are necessary to afford those facilities, services to persons with disabilities. Therefore, if permitting JTA passengers with mobility impairments to be discharged at mall entrances is necessary for those Passengers to enjoy Regency Square Mall's services, and if such a modification to policy is reasonable, it would be required by title III.

Whether such a modification is necessary for persons with mobility impairments to enjoy Regency Square Mall's services would depend at least in part on the proximity of the current discharge areas on the "service road and major thoroughfares" to the mall entrances, a fact that your constituent's letter does not make clear.

Moreover, title III requires only modifications that are reasonable. The reasonableness of a -modification may depend on a

number of factors in any particular situation, including any adverse effects of allowing discharge at mall entrances and the existence of any alternative discharge areas that would effectively serve persons with mobility impairments.

01-02945

I hope this information is helpful to your constituent in understanding the requirements of the ADA.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

METROPOLITAN PLANNING ORGANIZATION
Jacksonville Urbanized Area

November 1, 1993

The Honorable Senator Bob Graham
U. S. Senator
524 Hart Senate Office Building
Washington, D. C. 20510

Dear Senator Graham:

As a friend and supporter of transportation for the transportation disadvantaged I am sure that you share my concern, and the concern of the Duval County Transportation Disadvantaged Coordinating Board for the safety and convenience of the elderly and disabled at area shopping malls. In April of this year, it was brought to the Board's attention that the management of The Avenues Mall and Regency Square Mall do not permit buses operated by the Jacksonville Transportation Authority (JTA) to discharge passengers at entrances to the facilities. Bus stops are relegated to service roads and major thoroughfares. The location of these bus stops create obvious difficulties for the disabled, who with the addition of wheelchair lifts as standard features on buses, are being encouraged to utilize this service. In April the Board corresponded with he management of both malls, and was pleased to receive a positive response from he management of The Avenues Mall. As of October 1, 1993, JTA buses are allowed direct access to a mall entrance. Unfortunately, no response was forthcoming from the management of Regency Square Mall. A second letter was sent in July, and as yet there has been no response.

Denying the disabled users of fixed route bus service in this County full

access to the Regency Square Mall is a violation of Section 302 of the Americans With Disabilities Act of 1990 which mandates "full and equal enjoyment of goods, services, facilities, privileges, advantages, or accommodations of any place of public accommodations..." including shopping, centers and shopping malls.

On behalf of the Duval County Transportation Disadvantaged Coordinating Board and the elderly and disabled users of JTA fixed-route bus service, I am requesting your assistance in persuading

Duval County and Portions of Clay and St. Johns Counties

01-02947

the management of the Regency Square Mall to allow JTA buses direct access to at least one mall entrance on a regular basis. This is no small matter to the transportation disadvantaged of Duval County and I trust you will give it the attention it deserves.

If you have any questions, please do not hesitate to contact me.

Sincerely,

E. Denise Lee
Chairman, Duval County Transportation
Disadvantaged Coordinating Board

The Honorable Benjamin A. Gilman
U. S. House of Representatives
2185 Rayburn Building
Washington, D.C. 20515-3220

Dear Congressman Gilman:

This letter responds to your recent inquiry on behalf of your constituent, Ronald Scott, the Mayor of the Village of Bloomingburg, New York. Mayor Scott states that the Village of Bloomingburg has recently purchased an existing building and will be moving the Village's office, the Justice of the Peace Court, and the Village's public library to the newly purchased facility. Mayor Scott seeks suggestions concerning accessibility by individuals with disabilities to the newly purchased facility. We apologize for the delay in responding.

To clarify Mayor Scott's request, an attorney from our Division called and discussed the matter with an employee of the Village. We were informed that the newly purchased facility has

two stories. The Village will occupy the first floor with the second floor being used for storage. There is an existing ramp at a side entrance to the building.

The Village will be doing significant alterations to the first floor of the building including electrical wiring, plumbing, and the construction of walls or dividers for the different offices of the Village government. Also, the Village employee stated since there are no restrooms on the first floor, the Village plans on installing restrooms on that level.

Title II of the Americans with Disabilities Act (ADA) prohibits discrimination against qualified individuals with disabilities by state and local governments such as the Village of Bloomingburg. For your information we are enclosing a copy of the Department of Justice's title II regulation, 28 C.F.R. Part 35, that implements title II of the ADA and a copy of our Title II Technical Assistance Manual that provides additional information on title IIs requirements.

cc: Records CRS Chrono MAF Stewart.gilman.con McDowney
FOIA

01-02949

Under title II, all facilities designed, constructed, or altered by, on behalf of, or for the use of a public entity must be readily accessible and usable by individuals with disabilities, if the construction or alteration is begun after January 26, 1992. 28 C.F.R. 35.151. To be "readily accessible and usable," a facility must be altered in strict compliance with a design standard.

Under the regulation, the Village of Bloomingburg may choose from two design standards for alterations. The Village can choose either the Uniform Federal Accessibility Standards (UFAS) or the Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG), which is the standard that must be used for public accommodations and commercial facilities under title III of the ADA. For a discussion of the major differences between UFAS and ADAAG, see the enclosed technical assistance manual at pages 23-32. We have enclosed copies of UFAS and ADAAG to assist the Village. Therefore, the alterations made to the Village's newly purchased building should comply with

either UFAS or ADAAG.

We hope that this information is helpful to you in responding to Mayor Scott's request for assistance.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Enclosures (4)

01-02950

MAR 11 1994

The Honorable Christopher Shays
Member, U.S. House of Representatives
10 Middle Street, 11th Floor
Bridgeport, Connecticut 06604

Dear Congressman Shays:

This letter is in response to your inquiry on behalf of your constituent, XX (b)(6)

Your letter indicates that XX uses a wheelchair and

must use the full-service pumps at gasoline stations. XX asked whether the Americans with Disabilities Act ("ADA") requires gasoline stations to offer self-service prices to individuals with disabilities who must use full-service pumps.

Title III of the ADA applies to all privately owned places of public accommodation. Title III sets forth twelve categories of entities that are places of public accommodations having obligations under the Act. One of these categories is "service establishments," which includes gasoline stations.

Under title III existing facilities must remove all architectural barriers to access if such removal is readily achievable. Removal is "readily achievable" if it is easily accomplishable and able to be carried out without much difficulty or expense. Accordingly, a gasoline station with self-service pumps must remove any barriers that prevent individuals with disabilities from using the self-service pumps, as long as the removal is readily achievable.

If it is not readily achievable for a gasoline station to remove these barriers, then the service station must use an alternative method to provide its services to individuals with disabilities, such as providing refueling services upon request to an individual with a disability, if the alternative is readily

achievable. In certain situations some alternative methods are not required because of security considerations. For example, a cashier at a gasoline station is not required to leave his or her post to provide refueling services for an individual with a disability when there are no other employees on duty. If, however, a gasoline station provides its services through alternative measures, it cannot place a surcharge on individuals with disabilities for the costs associated with that alternative method.

Thus, if a person with a disability is provided full-

service refueling because the self-service island is inaccessible, the gasoline station must provide the refueling service at the self-service price. These obligations are described in more detail in the enclosed Technical Assistance Manual published by the Department of Justice. See sections III-4.4000 and III-4.5000. If you would like to obtain a subscription to the Technical Assistance Manual and annual supplements, please see the enclosed subscription form for further information.

If XX believes that the gasoline station in question has violated title III, he may file a complaint in Federal court to enforce the Act, or he may file a complaint with the Department of Justice, which is authorized to investigate allegations of violations of title III in cases of general public importance or a pattern and practice of discrimination. If (b)(6) XX wishes to file a complaint with the Department of Justice under title III, he may address it to the Public Access Section, Civil Rights Division, U.S. Department of Justice, Post Office Box 66738, Washington, D.C. 20035-6738.

I hope this information is useful to you in responding to XX . For further information about the ADA, XX may call our ADA hotline at (202) 514-0301 from 1:00 p.m. to 5:00 p.m. EST.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

XX

MAR 15 1994

The Honorable Harris Wofford
United States Senate
Washington, D.C. 20510-3803

Dear Senator Wofford:

This is in response to your recent letter on behalf of your constituent, XX of Richland, Pennsylvania. (b)(6) XX has requested your assistance in determining whether or not it is appropriate, under the Americans with Disabilities Act of 1990 (ADA), for Richland to charge him for a ramp that the town is planning to install in front of his house. We apologize for the delay in responding to your letter.

As you know, this Department's title II regulation requires state and local governmental entities with authority over streets, roads, or walkways (including sidewalks) to construct certain curb ramps or similar structures in order to provide access to sidewalks for individuals with mobility impairments. In responding to your inquiry, we have assumed that Richland is installing a curb ramp in front of XX home as part of its overall effort to comply with the ADA. If so, the town should be commended for such compliance efforts.

The ADA does not regulate the manner in which a covered entity, such as Richland, should finance changes it must make in order to bring itself into compliance with the ADA. It does, however, prohibit such an entity from placing a surcharge on any particular individual with a disability or group of individuals with disabilities in order to cover the cost of complying with the Act. See section 35.130(b)(8)(f) of the title II regulation (copy enclosed).

Although the ADA does not mandate any particular method of financing required changes, it has generally been assumed that such changes would be financed through the covered entity's general revenues, not by imposing special costs on any individual resident of a town or city. In this instance, however, it appears that XX may be being billed for the cost of (b)(6)

cc: Records CRS Chrono MAF Pecht.congress.93wofford
McDowney FOIA

01-02954

the curb ramp under Richland's general system for financing sidewalk improvements. While it is common for municipalities to bill abutting property owners for the cost of sidewalk improvements (typically, based on the cost per linear foot of the improvements abutting the property), these charges are usually allocated to such owners an the theory that their abutting property is benefitted or enhanced by the installation of the improvements. In our view, curb ramps that are installed to meet the town's overall obligations under the ADA do not provide a particular benefit to the adjacent property owner and are more properly paid for through general revenues or other funds available for street and sidewalk improvements.

Again, we must stress that, other than prohibiting a surcharge against a particular individual or group of individuals with disabilities, the ADA and its implementing regulations do not address this issue. Thus, unless a covered entity attempts to place a direct change on such an individual or group of individuals, the final determination with respect to payment for any improvements undertaken to comply with the ADA falls within the discretion of the taxing entity.

I hope the information provided above will assist you in responding to XX concerns.

MAR 15 1994

The Honorable Tillie K. Fowler
U.S. House of Representatives
413 Cannon Building
Washington, D. C. 20515-0904

Dear Congresswoman Fowler:

This is in response to your letter on behalf of your constituent, Ms. Sharon L. Hartsell, who is concerned about the costs of complying with the Americans with Disabilities Act of 1990 (ADA).

Title II of the Americans with Disabilities Act (ADA) prohibits discrimination on the basis of disability in State and local government services. This prohibition includes a requirement that all State and local government programs, including schools, be made accessible. For existing facilities, however, every building does not necessarily have to be made accessible if all of the programs located inside that building can be made accessible by alternative means, such as relocating them to an accessible ground floor. (28 CFR 35.150). Structural modifications are required only if no other means are available to make the program accessible. Moreover, existing facilities do not have to be retrofitted to comply with the ADA Accessibility standards, which apply only to new construction and alterations. Thus, for example, if the current water fountains are usable by individuals in wheelchairs, provision of water fountains at two heights (as is required for new construction and alterations) would not be mandated.

Furthermore, section 35.150(a)(3) of the title II regulation states that a public entity is not required to take an action that it can demonstrate would result in undue financial and administrative burdens. The Department of Justice's title II

cc: Records CRS Chrono MAF Milton.congress.exitfac.fow
McDowney FOIA

01-02957

regulation and technical assistance manual give further information regarding the ADA's requirements. Copies of that regulation and manual are enclosed.

Finally, while there are no Federal funds specifically available for the purpose of complying with the ADA, the Department of Housing and Urban Development makes community development block grants available to communities in need of funds for a number of reasons, one of which is to provide accessibility for disabled individuals. Requests for grants may be sent to: Andrew Cuomo, Assistant Secretary, Office of Community Planning and Development, Department of Housing and Urban Development, 451 7th Street, S.W., Room 7100, Washington, D.C. 20410.

I hope this information assists you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General

01-02958

T. 3-7-94
Control No. 4012502345

MAR 16 1994

The Honorable Michael Bilirakis
Member, U.S. House of Representatives
1100 Cleveland Street, Suite 1600
Clearwater, Florida 34615

Dear Congressman Bilirakis:

This is in response to your inquiry on behalf of your constituent, XX , regarding her complaint that Smith Barney Shearson, Inc. refuses to provide financial statements in large print.

Title III of the Americans with Disabilities Act (ADA) prohibits discrimination against individuals with disabilities by places of public accommodation. Places of public accommodation include service establishments such as banks and brokers. Smith Barney Shearson appears to be such a service establishment and, therefore, to be a covered entity under the ADA.

The ADA requires a public accommodation to take whatever steps are necessary to ensure that individuals with disabilities are not denied its services because of the absence of auxiliary aids, unless providing the auxiliary aids would fundamentally alter the goods and services offered by the public accommodation or would result in an undue burden. A public accommodation is required to furnish appropriate auxiliary aids where they are necessary to ensure effective communication with persons with

disabilities. The provision of large print materials to persons who have a vision impairment is one type of auxiliary aid. Therefore, Smith Barney Shearson has an obligation to provide appropriate auxiliary aids, such as materials in large print, unless it can show that providing its materials in large print would fundamentally alter its services or would cause significant difficulty or expense. The requirement to provide auxiliary aids is discussed in the enclosed title III regulation at p. 35597 and in the enclosed Technical Assistance Manual at Section III-4.3000.

(b)(6)

If XX wishes to have further information about the requirements of the ADA, she may contact our ADA information line at (800) 514-0301 (voice) or (800) 514-0383 (TDD)

01-02960

I hope this information will be useful to you in responding to your constituent.

Enclosures

01-02961

MAR 16 1994

The Honorable Terry Everett
U.S. House of Representatives
208 Cannon House Office Building
Washington D.C. 20515

Dear Congressman Everett:

This letter is in response to your inquiry on behalf of your constituent, Dr. Larry T. Howell, concerning the provision of auxiliary aids or services for persons with disabilities. We apologize for the delay in responding to your inquiry.

The ADA requires public accommodations, including dentist's offices, to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities. In determining what constitutes an effective auxiliary aid or service, a dentist must consider, among other things, the length and complexity of the communication involved. For instance, a notepad and written materials may be sufficient to permit effective communication when a dentist is explaining routine dental procedures. Where the information to be conveyed

is lengthy or complex, however, handwritten notes may be ineffective and the use of an interpreter may be the only effective form of communication.

Use of interpreter services is not necessarily limited to the most extreme situations -- for example, a discussion of whether to undergo surgery. Further discussion of this point may be found on page 35567 of the preamble to the enclosed regulation. While the nature of the dental services is considered one factor in determining what auxiliary aid is necessary for effective communication, the focus should be not only on the nature of the services, but also on the type of communication between the dentist and the patient. Generally, interpreters are not needed for routine office visits. However, the fact that an office visit is characterized as routine does not necessarily negate the need for interpreting services. For instance, an interpreter may be required if a notepad does not

facilitate effective communication between the dentist and an individual who is undergoing a complete dental examination and related testing procedures.

Under section 36.301(c) of the regulation, when an interpreter or other auxiliary aid or service is necessary to ensure effective communication, the dentist 'must absorb the cost for this aid or service. As provided in section 36.303(f), however, the dentist is not required to provide any auxiliary aid that would result in an undue burden. The term "undue burden" means "significant difficulty or expense." Undue burden must be determined on a case-by-case basis in light of factors such as the nature and cost of the aid or service, and the overall financial resources of the practice. Further discussion of the meaning and application of the term undue burden may be found in the preamble discussion of section 36.303, on pages 35567-35568.

In determining whether the provision of an interpreter would result in an undue burden, the dentist should consider not only

the fees paid for providing the dental service or procedure, but also the overall financial resources of the practice. The dentist should consider other factors that would minimize the degree of burden on the practice, such as the ability to spread costs throughout the general clientele and the provision of tax credits for costs of providing auxiliary aids (which is available for eligible small businesses).

The Department's Technical Assistance Manual for title III (copy enclosed) at page 26, and the ADA's legislative history, as described in the regulation's preamble, at pages 35566-35567, strongly encourage consultation with persons with disabilities in order to determine which particular auxiliary aid or service will ensure effective communication. Not only will consultation ensure that equal services are provided to individuals with disabilities, it may also significantly reduce the costs of providing such auxiliary aids or services.

Dr. Howell's letter also raises the issue of whether an outside agency such as the Alabama Institute for the Deaf and Blind may charge a public accommodation for the use of an interpreter that was not discussed with or authorized by that public accommodation. Clearly, the auxiliary aid provisions of the ADA (cited above) do not contemplate that a person with a disability can unilaterally decide on the appropriate type of auxiliary aid. Further discussion on this point can be found in the enclosed January 1993 update to the Department's Title III Technical Assistance Manual (copy enclosed) at page 5.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Enclosures

LARRY T. HOWELL, D.M.D., P.C.

December 29, 1993

Congressman Terry Everett
208 Cannon Blvd.
Washington DC 20515

Dear Congressman Everett,

I am a dentist practicing in Enterprise and have some questions concerning the "Americans with Disabilities Act" after a recent experience

in my office with this law. A young girl age 9 recently came to my office for an appointment and without my knowledge or consent brought an interpreter from the Alabama Institute for the Deaf and Blind. I was never informed as to who the interpreter was until after the second appointment with the girl. I received a bill for $80.00 from the Alabama Institute for the Deaf and Blind. My problem with what happened was that no one asked me if I thought an interpreter would be needed and if necessary, how much I would be expected to pay. I think it's a dangerous position to be placed in when someone thinks that they can show up at my office and be provided a service that I did not think was necessary and expect me to pay for it.

In a dental setting only a parent or guardian can gave consent for treatment. When treating a child I always discuss treatment options or possible outcomes with the parent rather than the child because the child is not capable of making decisions related to treatment. The above is true regardless of whether or not a child is hearing impaired. The only situation in which I can see needing an outside interpreter other than the parent would be when both parents would need an interpreter themselves because they both were hearing impaired. Another point of concern to me was that the $80.00 billed me by the Alabama Institute for the Deaf and Blind amounted to two-thirds of my total fee charged the patient for these two appointments.

508 North Main Street
nterprise, Alabama 36330

01-02965

MAR 17 1994

The Honorable Howard P. "Buck" McKeon
U.S. House of Representatives
307 Cannon House Office Building
Washington, D.C. 20515

Dear Congressman McKeon:

This letter is in response to your inquiry on behalf of your constituent, XX , concerning the applicability of the Americans with Disabilities Act ("ADA") to funeral homes and persons who died from the AIDS virus.

Title III of the ADA prohibits discrimination by "public accommodations" on the basis of disability. See 28 C.F.R. 36.201(a). A funeral home is specifically defined as a "place of public accommodation" by the title III implementing regulation, 28 C.F.R. 36.104 (copy enclosed), and is, therefore, subject to the non-discrimination provisions of the ADA.

Title III prohibits discrimination against persons with disabilities, as well as those individuals who have a "relationship or association" with a person with a disability. 28 C.F.R. 36.205. The AIDS virus (HIV) specifically meets the definition of "disability" within the meaning of title III, as it is a physical impairment that substantially limits one or more major life activities. 42 U.S.C. 12102(2) (definition of disability); see also 28 C.F.R. 36.104 ("HIV disease (whether symptomatic or asymptomatic)" is a physical impairment).

Accordingly, the ADA requires funeral homes to provide their services on a non-discriminatory basis to persons who have AIDS and seek to make funeral arrangements prior to their death, as well as to family members and loved ones who have "an association" or "relationship" with persons infected with the AIDS virus and who seek funeral home services after the individual with AIDS has died. It is the Department's position that the death of the person with the disability in no way affects the reach of the association provision when the discrimination is based on the known disability of the decedent. Refusal to provide funeral services for and/or to embalm the body

cc: Records, Chrono, Wodatch, Magagna, Perley, McDowney, MAF,
FOIA
udd\perley\congress\ XX
(b)(6)

01-02966

of a person who died from AIDS is, therefore, a violation of the ADA.

Your constituent's position appears to be that handling

bodies that once harbored the AIDS virus would put him at great risk of contracting the virus, and that he should not be required to do so under the ADA. The ADA does not require a public accommodation to engage in any activity that would pose a "direct threat" to the health or safety of others. 28 C.F.R. 36.208(a).

Under title III, the term "direct threat" is defined as "a significant risk to the health or safety of others that cannot be eliminated by a modification of policies, practices, or procedures . . . " 42 U.S.C. 12182(b)(3) (emphasis added); see also 28 C.F.R. 36.208. The title III regulation clarifies the direct threat exception:

> In determining whether an individual poses a direct threat to the health or safety of others, a public accommodation must make an individualized assessment, based on reasonable judgment that relies on current medical knowledge or on the best available objective evidence, to ascertain: the nature, duration, and severity of the risk; the probability that the potential injury will actually occur; and whether reasonable modifications of policies, practices, and procedures will mitigate the risk.

28 C.F.R. 36.208(c).

According to the Federal Centers for Disease Control and Prevention ("CDC"), the risk of transmitting viruses like HIV in the health-care setting and similar settings is minimal, and can be severely lessened by the use of infection control procedures, often described as ''universal precautions.'' These protective measures -- which include the use of gloves, surgical masks, and protective eyewear, the sterilization of instruments, the disinfection of exposed environmental surfaces, and proper waste disposal methods -- prevent the spread of almost all bloodborne diseases, including HIV.

Indeed, the CDC specifically recommends the use of universal precautions when handling the body of a deceased person, Guidelines for Prevention of Transmission of HIV and HBV in Health-Care and Public-Safety Workers, U.S. Department of Health and Human Services, Centers for Disease Control, February 1989, at 18, as does the National Funeral Directors Association. National Funeral Directors Association Policy on Contagious, Communicable and Infectious Disease, at 1. Moreover, the Occupational Safety and Health Administration ("OSHA") has adopted most of the protective measures outlined by the CDC in

its Bloodborne Pathogen Rule. See 29 C.F.R. Ch. XVIII 1910.1030. The theory underlying these requirements is that funeral home workers often do not know whether the bodies they are handling once harbored an infectious disease. Persons who are HIV-positive or have other infectious diseases, such as Hepatitis B, often die from other causes, such as car accidents and heart attacks. Accordingly, universal precautions should be utilized when handling all human remains.

To date, there is not one documented case of occupational HIV transmission to either an embalmer or a morgue technician. HIV/AIDS Surveillance Report, Centers for Disease Control, October 1993, at 13. Indeed, in the approximately 10 years that the CDC has been monitoring occupationally acquired AIDS/HIV infection, only 3 possible cases of occupational transmission to embalmers or morgue technicians have even been identified. In light of the fact that funeral home workers may be routinely exposed to the AIDS virus, whether or not they know it, and that the scientific evidence has strongly demonstrated the efficacy of universal precautions, we believe that the use of universal precautions make the direct threat defense inapposite in the funeral home setting. The outright refusal to handle an AIDS case is, therefore, discriminatory and thus violates the ADA.

I hope this information is useful to you in addressing your constituent's concerns. Please inform him that if he has any further questions, he may contact our information line at (202) 514-0301.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Enclosure

1 These workers were without identifiable behavioral or transfusion risks. However, HIV seroconversion specifically resulting from an occupational exposure to the virus was not documented.

01-02968

President Bill Clinton November 24, 1993
The White House
Washington, D.C. -20500

Dear Mr. President, (b)(6)
My name is XX and I am a single parent of two children, ages ten and eight years. I am writing to you on behalf of these children and a law that I believe actually endangers my ability to provide for those children.
The law in question is the Americans with Disabilities Act. As I understand it, the ADA is a blanket type of law. I have a unique circumstance for which, I believe, the law can be made more definite for.
I am a funeral director and embalmer who owns a small (two employees besides myself) funeral home XX I have been under fire by local AIDS activists for helping refer families of people passing away who have the AIDS virus to funeral homes in my community who have no problem with the HIV virus. My decision was based upon three main criteria. First, and foremost, I do not believe that I should have the right as a parent and small business operator to be able to choose what risks I should take in my profession. I need to be around this world to be able to take care of my children and I do not relish the fact that I may become even a tenth of a percentage point in some statistic.
My second reason was that my own state board of funeral directors and embalmers told me that they (the board) had no law which forced me to handle such a risk as the HIV virus presents. Thirdly, the other funeral establishments in our community do accept cases involving HIV virus and I believed that I could help families by working with them in finding another establishment of their choice and in any other way possible.
A local physician who is also head of her own local AIDS activist group asked me if I would like to be on the list of funeral homes in the area who extend services to persons passing away from AIDS. She had held a seminar at a competitor's business that I was unable to attend as it coincided with my children's open house at school. When I tried to explain my reasoning for declining her invitation to be an the list, she launched into a tirade and threatened that if I did not bend to her opinion she would ruin my and my families reputation by going to the media, have my state board revoke my license (thus removing my ability to support my children) and have me investigated by the Federal Government.
Knowing that she was not well informed about the state law regarding my circumstances, I doubted how valid the rest of her argument was. She never offered to how me any of these laws. Shortly thereafter, a press conference was held and I was blasted along with a large local hospital and a large insurance company. After that, I found that it was basically me, the little fellow with the kids who, having the most to lose, was singled out for a vendetta of attacks by the physician and some of the media.

I always held by the principle that unless there was a law, I should not be threatened or bullied because I failed to be "politically correct" and instead put the welfare of my children first. After much press, I found, in a news story the name of a spokesperson from the United States Department of Justice. As everybody else was so busy going after me with such terms as "bigotry" and "ignorance", I searched for the very part of the law that could even be in direct opposition to my position. As I told my children, if here is a law, one must obey that law whether you do or do not agree with it. I did, through the ADA folks, find that portion of the law which covered the argument against my concerns for my children. Yes, as the law is written, though not specifying embalmers or funeral homes specifically, I must accept the risk of handling persons passing away from the HIV virus as those people are covered under that law as having a disability and that the protection of the law extends to their families.

I was told by some, the morning that I found this out that it would be best to "wait" until I needed to make it public. Well, that didn't set well with me as I figured since nobody cared enough to find the answer to all of the arguing and fighting but me, I should make public what I found out and my

what it meant for me. To wait would only hurt everyone involved. So I did notify the media as to the law and the fact that, I had always maintained, given the law, I must abide by that law. We are a society of laws and must obey them, but we do not need to agree with all of them. That is why, laying the circumstances that I am now in, I come to you for counsel and help.

I do not have powerful, if any, political connections. I am not a large company with dozens of attorneys. I am Mr. President, just one single voice who is trying to speak up for the rights of his children. My children have a right to have me around to love and guide and raise them. No law, I believe should force any man or woman to take any risk, albeit one which is not yet fully understood as the large gulf between statistics that I have been given reflects, that would imperil their right to be around for their children.

To me a blanket-type law has the ability to be changed or modified for special circumstances. I believe that this applies to the ADA. What can I, as a single voice who so deeply loves his Children, do to get changes made? What can you do to help insure the future of a ten-year-old girl who's sole ambition in life is to serve her country as a fighter pilot and an astronaut and of her eight-year-old brother who sees law enforcement as a possible goal?

Mr. President, I ask you to consider this matter from both your position as head of the Nation and also as parent yourself.

This matter is, I admit, small when put against the situation in the world today, but my children and the world to me.

Respectfully,

XX
(b)(6)

cc: Congressman Howard McKeon (U.S. Congress)

01-02970

MAR 17 1994

The Honorable Porter Goss
Member, U. S. House of Representatives
2000 Main Street
Suite 303
Ft. Myers, Florida 33901

Dear Congressman Goss:

(b)(6)

This is in response to your inquiry on behalf of your constituent, XX , who asks about Federal laws regarding accessibility in apartment buildings.

Your constituent states that he lives in a "fairly new" 64-unit apartment building in which persons with disabilities "have no access to [the] lobby because of the lack of doors allowing opening without assistance by another person." He asks for information on Federal laws that might apply to this situation.

The Federal Fair Housing Act contains standards for accessibility to persons with disabilities in residential facilities. For more information on the Fair Housing Act, your constituent may contact the U.S. Department of Housing and Urban Development.

The Department of Justice enforces title III of the Americans with Disabilities Act (ADA), which applies to certain privately owned and operated facilities. Title III does not apply to strictly residential dwellings, but it does apply to common areas in residential buildings, such as rental offices, that function as one of title III's twelve categories of places of public accommodation and that are not intended for the exclusive use of tenants and their guests. The twelve categories of places of public accommodation are listed in section 36.104 of the enclosed title III implementing regulation, at pages 35593-94. Parking, entrances, access routes, and restrooms serving the areas covered by the ADA would also be covered.

Therefore, the lobby of your constituent's building is covered by title III only if it serves as the access route to a rental office, or other common area that functions as a place of public accommodation and is open to persons other than the tenants and their guests. In new construction and alterations covered by title III, the ADA Accessibility Standards (the "Standards") prohibit interior hinged, sliding, or folding doors that require more than 5 pounds of force to open, but the Standards do not require doors to have automatic opening mechanisms. This provision appears in section 4.13.11 of the Standards, on page 35463 of the title III regulation. The opening force requirement does not apply to exterior hinged doors, because requirements for exterior doors have been reserved for further study.

In existing places of public accommodation the ADA requires that architectural barriers to access, such as interior doors that exceed ADA door opening force requirements, be removed if the removal is readily achievable. See title III regulation and preamble, 36.304, at pages 35597 and 35568-70. Readily achievable means capable of being done without much difficulty or expense. See title III regulation and preamble, 36.104, at pages 35594 and 35553-54.

I hope this information is useful to your constituent in understanding the requirements of the ADA.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Fort Myers, FL XX

December 3, 1993

Honorable Porter Goss
House of Representatives
224 Cannon House Office Building
Washington, D.C. 20515

Dear Congressman Goss:

I am writing as a representative of the residents of a fairly new 64 unit apartment building regarding access of the handicapped to our building. The handicapped have no access to our lobby because of the lack of doors allowing opening without assistance by another person. In lieu of adequate access through the lobby, the handicapped residents and guests must use the freight elevator.

It is requested that we be furnished the applicable federal statutes regarding access of the handicapped and any implementing regulations of HUD or other implementing agencies. While we understand that some of these statutes and regulations may only be applicable to public buildings, we believe they will assist us in using public policy and/or moral suasion to convince management to remedy the present situation.

Thank you for any assistance you may be able to give regarding this matter.

Very truly yours,

MAR 18 1994

The Honorable Robert C. Byrd
United States Senate
Washington, D. C. 20510-6025

Dear Senator Byrd:

This responds to your inquiry on behalf of your constituent (b)(6) XX . XX wanted information about the policies of various government agencies concerning multiple chemical sensitivities (MCS). We have forwarded your letter to the Architectural and Transportation Barriers Compliance Board, the Environmental Protection Agency, and the Department of Labor for response to the questions concerning the policies of those agencies. The National Academy of Sciences is not an agency of the federal government.

XX requested information about actions by the Department of Justice since its issuance of regulations to implement the Americans with Disabilities Act (ADA) in July 1991. Although the Department has taken no regulatory actions, it did issue one Letter of Findings with respect to an individual with environmental illness. The complainant alleged the City of San Francisco violated title II of the ADA when he was denied access to municipal buildings because of the perfume used by municipal employees.

Our September 8, 1993, Letter of Findings assumed that the

complainant's factual allegations were accurate, but concluded that a public entity is not required to prohibit use of perfume or other scented products by employees who come into contact with the public because such a requirement would not be a "reasonable" modification to its personnel policies, as is required by title II. Furthermore, nothing in the ADA or its legislative history indicates that Congress intended to require public entities to regulate use of such products by its employees. The failure of a public entity to adopt such a policy, therefore, does not violate title II of the ADA.

The complaint also alleged generally that the city and County of San Francisco had not adopted a public access policy for individuals with environmental illness. Although formal

cc: Records CRS Chrono MAF Kaltenbo.byrd.2 McDowney FOIA

adoption of nondiscrimination policies may be helpful in ensuring that a public entity meets its obligations under the statute and regulation, our letter concluded that the regulation does not require public entities to adopt such policies with respect to individuals with disabilities or any particular class of individuals with disabilities. Also, after the complaint was filed, the City adopted an accessible meeting policy that included a requirement that all public meeting notices and agendas must include a notice asking individuals attending the meeting to refrain from wearing perfume or other scented products in order to allow individuals with environmental illness or multiple chemical sensitivity to attend the meeting. We therefore determined that the allegations in the complaint did not state a violation of title II of the ADA.

We hope that this information will assist you in responding to your constituent.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

XX (b)(6)
Welch, West Virginia 24801

Honorable Robert C. Byrd
United States Senate
311 Hart Senate Office Building
Washington, DC

Dear Senator Byrd:

I would appreciate if your staff could research some issues on a health topic, MCS (multiple chemical sensitivities). From the enclosed two pages from a magazine "The Delicate Balance", there is a discussion of how various government agencies treated this issue in 1991, a year after the Americans With Disabilities Act became law on July 26, 1990.

As noted in the enclosure, the Department of Justice said that specific regulations about environmental illness would be omitted until several government agencies considered this topic further. Could you please let me know the current position of the agencies noted: Architectural and Transportation Barriers Compliance Board; the Environmental Protection Agency;

and OSHA; as well as any update by the Department of Justice.

On a related issue, the National Academy of Sciences has considered this topic. From my own independent reading, I learned that the NAS wrote some sort of journal or book called "Multiple Chemical Sensitivities" in 1992. Would it be possible for your staff to secure a copy for me? In addition, there was a workshop held in March 1991 in Irvine, California on this topic. If the proceedings of this workshop are available, I would like to have them. I tried to contact NAS on my own, but they were uncooperative about stating their position on MCS and shifted me from one employee to another, but I hope that due to your eminence, that this agency will cooperate with you.

Thank you,
XX
(b)(6)

p.s. Since typing the main body of this letter, I read that the Environmental Protection Agency has acknowledged MCS, as noted in the enclosure, p. xvi from "Chemical Exposures". Could you also send me the document on this? Thank you.

01-02976

xvi Introduction

health can assist the chemically sensitive person and disengage the patient from the medical cross fire and its attendant conflict. In this book We argue that both federal and state initiatives are needed. In undertaking this task, wee reviewed much of the available scientific and medical Literature relating to low-level chemical exposure and resulting disease. We interviewed key individuals in various medical disciplines including allergy, clinical ecology, and occupational, medicine. This effort was facilitated by the fortuitous scheduling of national conferences by the allergists and by the clinical ecologists in the same 7-day period in Texas in February 1989. Physicians involved with the chemically sensitive patient are concerned about being drawn into a legal and political struggle that ultimately may not help the patient. Through our interviews we were able to identify not only ears of conflict between the allergists and clinical ecologists but also unexpected areas of common ground.

This book comes at a critical time. Since the government of Ontario completed a report on "environmental hypersensitivity disorders" (Thomson 1985) in 1985, sensitivity to chemicals has received unprece-

dented attention from many quarters in the United States. A "Workshop on Health Risks from Exposure to Common Indoor Household Products in Allergic or Chemically Diseased Persons" held by the National Academy of Sciences (NAS) on July 1, 1987, recommended on 18-month Study to address the "15 percent of the U.S. population (who) have an Increased allergic sensitivity to chemicals commonly found in household Products, such as detergents, solvents, pesticides, metals and rubber, Thus pacing them at increased risk (of) disease" (National Research Council 1987). Although that study has not yet been funded, in 1989 The NAS convened a panel to examine the interrelationships of toxic Exposures and immune response. Later the same year, the U.S. office of Technology Assessment (OTA) began a study of noncancer risks of Chemicals, including immunotoxicity. OTA completed a neurotoxicity Study in 1990 [OTA 1990]. Scheduled for 1990 is a Canadian federal Advisory committee on multiple chemical sensitivity. The NAS, in response to request from the EPA's office of Indoor Air, will be conducting a multiple chemical sensitivity workshop in early 1991.

The U.S. Congressional Research Service has issued a report on in-Door air pollution in which chemical sensitivity is explicitly recognized (Courpas 1988, p. CRS-9). The Environmental Protection Agency (EPA) acknowledges that health problems exist with low-level exposures well below those allowed by existing regulations (Clauseen 1988); in its Report to Congress on Indoor Air Quality, EPA identifies multiple chemical sensitivities as a health concern (EPA 1989, p. 16). The Superfund Amendments, SARA, Title IV mandate a vigorous investigation of the problems of indoor air pollution by EPA. John D. Spengler of Harvard's School

National Center for Environmental Health Strategies

ISABLITY RIGHTS
DA ON MCS

Regulations to implement the Americans With sabilities Act. PL101-336 were published in the ederal Register on July 25, 1991.

The Architectural and Transportation Barriers Compliance Board, also known as the "access board," d two dockets at the Department of Justice, received ousands of NCEHS preprinted postcards encouraging clusion of policies to address the needs of the emically sensitive in ADA regulations. And we were ccessful-to a degree.

NCEHS began distributing postcards approximately

o weeks before the March 25, 1991 closing date for e Architectural and Transportation Barriers Compliance ard. The '400 comments' mentioned in the excerpt n the access board regulations include those ceived during that two-week period. (See "Excerpts m ADA Regulations on MCS" below.) Postcards and comments are still being received and filed. They have d a significant impact on the agency.

Take a look at the statements on MCS from the Architectural and Transportation Barriers Compliance Board and the Department of Justice. While the Justice Department "declines to state categorically that these types of allergies or sensitivities are disabilities," the Department does note that individuals with severe sensitivities that limit one or more major life activities may meet the ADA definition of disabled. "Sometimes respiratory or neurological functional is so severely affected that an individual will satisfy the requirements to be considered disabled under the regulation."

The Justice Department, however, failed to announce specific regulations related to environmental illness "pending future consideration of the issue by the Architectural and Transportation Barriers Compliance Board, the Environmental Protection Agency, and the Occupational Safety and Health Administration of the Department of Labor.

Comments from the Architectural and Transportation Barriers compliance Board does acknowledge the access plight of the chemically sensitive; however, the regulations do not address policy issues related to those with chemical and environmental sensitivities.

XCERPTS FROM ADA REGULATNS ON CS

CHITECTURAL AND TRANSPORTATION BARRIERS OMPLIANCE BOARD:

mericans With Disabilities Act (ADA) Accessibility uidelines for Buildings and Facilities: Final Guidelines.

Chemical and Environmental Sensitivities

The Board received over 400 comments from individuals who identified themselves as

chemically sensitive. Many of the comments were sent in on preprinted postcards distributed by the National Center for Environmental Health Strategies (NCEHS). The commenters described the health problems that they have experienced due to exposure to chemical substances and indoor contaminants in buildings, including certain building materials, furnishings, cleaning products and fragrances, and tobacco smoke. They requested that the Board address their need for access to place of public accomodation and commercial facilities. Acting on Smoking and Health (ASH) also requested the Board to address tobacco smoke in buildings. NCFEHS and Environmental Health Network provided additional background materials on chemical sensitivities. Among the suggestions made to lessen exposure to chemical substances and indoor contaminants in buildings were providing windows that open; improving the design and requirements for heating, cooling, and ventilation systems; and selecting building materials and furnishings that do not contain certain chemical substances.

Chemical and environmental sensitivities present some complex issues which require coordination and cooperation with other Federal agencies. Pending further study of these issues, the Board does not believe it is appropriate to address them at this time. 36 CFR Part 1191, Friday, July 26, 1991. Federal Register. Vol. 56, No 144, p. 35412.

DEPARTMENT OF JUSTICE

Nondiscrimination on the Basis of Disability by Public Accomodations and in Commercial Facilities. Final Rule;

Nondiscrimination on the Basis of Disability in State

and Local Government Service: Final Rule

Many commenters asked that environmental illness (also known as multiple chemical sensitivity) as well as allergy to cigarette smoke by recognized as disabilities. The Department, however, declines to state categorically that these types of allergies or sensitivities are disabilities, because the determination as to whether an impairment is a disability depends on whether, given the particular circumstances at issue, the impairment substantially limits one or more major life activities (or has a history of, or is regarded as having such an effect).

Sometimes respiratory or neurological functioning is so severely affected that an

XX

(b)(6)

XX
XX MAR 21 1994
San Jose, CA XX

Dear XX

This is in response to your letter to the Department of Justice dated January 3, 1994 concerning the inaccessibility of a local movie theater. The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements; however, it does not constitute a legal interpretation and it is not binding on the Department.

Under Title III of the Americans with Disabilities Act (ADA), the theater is a place of public accommodation and must remove all architectural barriers to the degree such removal is "readily achievable." The term "readily achievable" is a legal term used in the ADA, and is defined as "easily accomplishable and able to be carried out without much difficulty or expense."

Where a public accommodation can demonstrate that barrier removal is not readily achievable, the public accommodation must make its goods, services, facilities, privileges, advantages, or accommodations available through alternative methods, if those methods are readily achievable. If it is not readily achievable to remove barriers to provide access by persons with mobility impairments to all of the theaters of a multiscreen cinema, the cinema must establish a film rotation schedule that provides reasonable access for individuals who use wheelchairs to all films. Reasonable notice must be provided to the public as to the location and time of accessible showings.

It should also be noted that the ADA provides that the landlord of the theater may also be held responsible for violations of the Act, and therefore, you may want to consider communicating your concerns to the landlord as well.

The ADA may be enforced by the Justice Department or by private counsel. Should you wish to file a formal complaint with our office, you should address the complaint to:

U.S. Department of Justice
Civil Rights Division
Public Access Section
P.O. Box 66738
Washington, D.C. 20035-6738

I hope this information is of assistance to you.

Sincerely,

Philip L. Breen

SBO:NM:ca MAR 24 1994

DJ 204-11-0

Ms. Phyllis Cangemi
Executive Director
Whole Access
517 Lincoln Avenue
Redwood City, California 94061

Dear Ms. Cangemi:

Your letter to Attorney General Reno concerning enforcement of requirements for parks and trails under section 504 of the Rehabilitation Act of 1973 was referred to this office for response.

Under section 504, all entities receiving federal financial assistance must design facilities in accordance with the Uniform Federal Accessibility Standards (UFAS). Parks and trails that are operated or owned by a State or local government are also covered by title II of the Americans with Disabilities Act (ADA). Under title II, public entities can choose to design facilities either in accordance with the Americans with Disabilities Act Accessibility Guidelines CADAAG) or in accordance with UFAS. Finally, parks and trails that are designed, constructed, or altered by the federal government are covered by the Architectural Barriers Act, which is implemented by UFAS. Neither UFAS nor ADAAG, however, contains specific sections on recreational facilities such as parks and trails.

The Architectural and Transportation Barriers compliance Board (Access Board) is currently in the process of developing guidelines for recreational facilities under the ADA. In June 1993, the Access Board established a Recreation Access Advisory committee to provide advice on issues related to making recreational facilities and outdoor developed areas readily accessible to and usable by individuals with disabilities. The

Advisory Committee has formed several subcommittees to assist in its work, including a Subcommittee on Developed Outdoor Recreation Facilities and Areas. Once the Access Board has completed developing its recreational guidelines for ADAAG, the agencies responsible for issuing UFAS intend to amend UFAS to be consistent with ADAAG. Eventually, then, UFAS will contain

cc: Records CRS Chrono MAF Milton.letters.recreatn.can
McDowney Breen FOIA

01-02982

standards for recreational facilities. However, parks and trails need not be built in compliance with any specific design standards until those standards are finalized.

Nevertheless, State and local recreational facilities are not exempt from either section 504 or the ADA. Both section 504 and title II of the ADA require that qualified individuals with disabilities be given an equal opportunity to participate in the programs of covered entities. Providing an equal opportunity may entail provision of such things as accessible equipment and an accessible surface in a public park or trail.

If you wish to file a complaint against a specific entity that maintains inaccessible parks or trails, you should send your complaint to: Ms. Carmen R. Maymi, Director, Office of Equal Opportunity, Department of the Interior, Room 1324, 18th and C Streets, N.W., Washington, DC 20240.

I hope this information has been helpful to you.

Sincerely,

James P. Turner

P&R
THIS MONTH

With the Americans With Disabilities Act now signed into law, Park and recreation providers have clear cut guidelines for making their facilities accessible to all. The process can be confusing, however-it isn't always easy to figure out the regulations, or the best way to make your area accessible. Phyllis Cangemi, founder and executive director of Whole Access consultants, and Wayne Williams and Paul Gaskell associate professors in the Department of Health, Leisure and Exercise Science at Appalachian State University, address this issue in "Going to the Sources for Accessibility Assessment," page 66.

In the past, military recreation was designed primarily for single men. The trend has changed out of necessity, as our armed forces "downsize" and as more women and families take advantage of Morale, Welfare and Recreation (MWR) services, James A. Wilgus, civil engineer and aquatics specialist for Heery International, Inc, describes the "Military Communities for Excellence" program, specifically the family aquatic center concept, in "Recreation for the Military Family," page 46.

Summer is over, but it's never too early to plan for next year What do you do on a military

base when school gets out? In "Willie Wildcat's Day Camp In Japan," page 50, Dr. Al Jackson, Program director for Willie Wildcat Summer Day Camp program and associate professor at California State University-Chico, describes this popular day camp,

(handwritten)

1/21/94

Dear Attorney General Reno,

My name is Phyllis Congemi. My organization, Whole Access works with park agency officials to help make parks and trails accessible to all people.

A major concern we have is that park agencies and cities and counties continue to receive federal funding - with little to no fear of loss of those funds, - inspite of the fact that they routinely (for 20 yrs.) ignore the requirements of Sect. 504 of the Rehab. Act.

In short, there is little to no enforcement of the federal funding link to the Nat. Rehab. Act.

What can you do to see that the federal gov't enforces it's own laws in its own house?

Thank you for the wonderful work you have begun.

Sincerely,

Whole Access

DJ 204-16-0

The Honorable Joe Skeen
U.S. House of Representatives
Washington, D.C. 20515-3102

Dear Congressman Skeen:

This letter responds to your inquiry concerning whether the Americans with Disabilities Act (ADA) applies to the U.S. House of Representatives. Specifically, you requested a legal opinion on whether the ADA requires a member of Congress to provide a sign language interpreter at a public meeting held by the member, and whether the ADA provides remedies for a private individual against the House of Representatives.

The Attorney General is authorized by law to render legal opinions only to the President and heads of the executive departments. However, under the ADA, the Department of Justice is authorized to provide technical assistance to individuals and entities having rights or obligations under Titles II and III of the ADA. In that regard, Titles II and III do not apply to Congress, since Title II pertains to State and local government entities and Title III applies to public accommodations and commercial facilities.

Section 509 of the ADA, however, does cover Congress and other entities in the legislative branch of the Federal Government. 42 U.S.C. 12209. With respect to matters other than employment, section 509 mandates that the Architect of the Capitol, after approval by the Speaker of the House, establish remedies and procedures to be utilized in the House of Representatives regarding rights and protections provided under the ADA. For more information on these procedures and remedies, we suggest that you contact Ms. Peggy Lambert, Attorney, the Office of the Architect of the Capitol, at (202) 225-1200.

Sincerely,

Sheila F. Anthony
Assistant Attorney General

Russell Senate Office Building
Room 453
Washington, D.C. 20510

Dear Senator Boren:

This is in response to your recent letter on behalf of your constituent, Ms. Susan L. Bello, the Executive Director of Therapetics, Service Dogs of Oklahoma, who has requested your advice on how to change the language of the regulation implementing title III of the Americans with Disabilities Act of 1990 (ADA). Specifically, Ms. Bello would like to change the language of section 36.302(c) of the title III regulation, which requires a public accommodation to modify its programs, practices, or procedures to permit the use of a service animal (emphasis added) by an individual with a disability. Instead, Ms. Bello would prefer that the regulation refer to "assistance animals." We apologize for the delay in responding to your letter.

The ADA regulations were adopted only after an extensive opportunity for review and comment by affected parties. On February 22, 1991, the Department published a notice of proposed rulemaking (NPRM) for the title III regulation in the Federal Register (56 FR 7452). (An NPRM for the title II regulation, which covers State and local governmental entities, was published on February 28, 1991). The Department read and analyzed each of the over 2,718 public comments that were submitted within the official comment periods. The vast majority of those comments addressed the issues raised in the title III regulation. In an effort to encourage broad public participation, the Department also held four public hearings at sites across the country. The comments from those hearings were also carefully analyzed by the Department during the process of drafting the final ADA regulations. Thus, the Department made an extensive effort to give individuals and groups interested in commenting on the provisions of concern to Ms. Bello every opportunity to do so. This process is described in the preamble to the title III regulation at 56 FR 35544. A copy of the regulation has been enclosed for your convenience.

Records, CRS, Chrono, MAF, Pecht, McDowney, FOIA
:UDD\PECHT\CONGRESS.93\BOREN

01-02989

You may wish to explain to Ms. Bello that the fact that the Department has adopted the generic term "service animal" to refer to any animal that fits the definition set forth in the title III regulation, does not mean that the Department is attempting to regulate the terminology used by any particular subgroup within that broad category, such as the "assistance dog industry." Far example, if Therapetics changed its name from "Assistance Dogs of Oklahoma" to "Service Dogs of Oklahoma" because of the terminology used in the title III regulation, it was not required to do so by the ADA, and may return to its original name. If Therapetics provides animals "individually trained to do work or perform tasks for the benefit of an individual with a disability," those animals are covered by the ADA regardless of what they are called. The same is true of other types of animals that may be trained by groups that prefer to use terminology different from that used by the "assistance dog industry."

I hope the information provided above will assist you in responding to Ms. Bello's concerns.

Sincerely,

James P. Turner
Acting Assistant Attorney General
Civil Rights Division

Senator David Boren
453 Russell
Washington D.C. 20510

December 2,1993

Dear Senator Boren,

How do I go about changing the terminology of a CFR? CFR Part 36 covers the rules and regulations regarding service animals. TheraPetics and many other assistance dog organizations want the terminology changed from "service animals" to "assistance animals".

I have no idea why they used this terminology in the first place, since the industry has used the term 'assistance dogs' for twenty years. It would be silly to allow bureaucrats to tell us what terminology we should use in our own industry.

For your information, I've enclosed one of our brochures, a summary of CFR Part 36, and a copy of the Model State Law, which gives the definitions that the industry uses. Even the law in Oklahoma uses the correct terminology!

Please let me know how we can proceed with accomplishing this goal.

Sincerely,

Susan L. Bello
Executive Director

01-02991

AMERICANS WITH DISABILITIES ACT

RULES AND REGULATIONS REGARDING SERVICE ANIMALS

28 Code of Federal Regulations (CFR) Part 36

Subpart A - General

36.104 Definitions.

Service animal means any guide dog, signal dog, or other animal individually trained to do work or perform tasks for the benefit of an individual with a disability, including but not limited to guiding individuals with impaired vision, alerting individuals with impaired hearing to intruders or sounds, providing minimal protection or rescue work, pulling a wheelchair, or fetching dropped items.

Subpart C - Specific Requirements

36.302 Modifications in policies, practices, or procedures.

(a) General. A public accommodation shall make reasonable modifications in policies, practices, or procedures when the modifications are necessary to afford goods, services, facilities, privileges, advantages or accommodations to individuals with disabilities unless the public accommodation can demonstrate that making the modifications would fundamentally alter the nature of the goods, services, facilities, privileges, advantages, or accommodations.

(c) Service animals.
(1) Areas open to the general public. A Public accommodation shall modify policies practices, or procedures to permit the use of a service animal by an individual with a disability in any area open to the general public.
(2) Areas not open to the general public. In areas not open to the general public, a public accommodation shall modify policies, practices, or procedures to permit the use of a service animal by an individual with a disability. If the modification would fundamentally alter the nature of the goods, services, facilities, privileges, advantages, or accommodation, offered or provided by the

public accommodation, or if the policies, practices, or procedures are necessary for safe operation, the use of a service animal may be denied.
(3) Care or supervision of service animals. Nothing in this part requires a public accommodation to supervise or care for a service animal.

01-02992

MODEL STATE LAW

010 Declaration - Policy. The legislature declares:

(1) As citizens, persons who are blind, visually impaired, deaf, hard of hearing, or otherwise physically disabled have the same rights as the able-bodied to the full and free use of the streets, highways, walk-ways, public buildings, public facilities, and other public places.
(2) Persons who are blind, visually impaired, deaf, hard of hearing, or otherwise physically disabled are entitled to full and equal accommodations, advantages, facilities, and privileges on any public conveyance operated on land or water, or in the air, or any stations and terminals thereof, not limited to, taxis, airplanes, motor vehicles, railroad trains, motor buses, street cars, boats, and in; any educational institution, not limited to, any kindergarten, primary and secondary school, trade or business school, high school, academy, college and university, and in; places of public resort, accommodation, assemblage or amusement, not limited to, hotels, lodging places, restaurants, theaters, and in all other places to which the general public is invited, subject only to the conditions and limitations established by law and applicable alike to all persons.
(3) Persons who are blind, visually impaired, deaf, hard of hearing, or otherwise physically disabled persons shall be entitled to rent, lease, or purchase, as other members of the general public, any housing accommodations offered for rent, lease, or other compensation in this state, subject to the conditions and limitations established by law and applicable alike to all persons.
(a) "Housing accommodations" means any real property or portion thereof that is used or occupied, or intended, arranged, or designed to be used or occupied, as the home, residence, or sleeping place of one or more human beings, but does not include any single-family residence the occupants of which rent, lease, or furnish for compensation to more than one room therein.

030 "Guide Dog" defined.

Guide Dog, means a dog that has been or is being specially trained to aid a particular blind or visually impaired person.

032 "Hearing Dog" defined.

Hearing Dog, means a dog that has been or is being specially trained to aid a particular deaf or the hard of hearing person.

034 "Service Dog" defined.

Service dog, means a dog that has been or is being specially trained to aid a particular physically disabled person with a physical disability other than sight or hearing.

040 "Assistance Dog" defined.

Assistance Dog means a dog that has been or is being trained as a Guide Dog, Hearing Dog or Service Dog.

050 Assistance dog - Extra charge or refusing service because of dog is prohibited. Every disabled person has the right to be accompanied by an Assistance Dog, specially trained for that person, in any places listed in 010 (2) and (3) without being required to pay an extra charge for the Assistance Dog. Each disabled person using an Assistance Dog is solely liable for any damage done to persons, premises or facilities by the Assistance Dog.

055 Trainers and dogs in training.

Every trainer or puppy raiser of an Assistance Dog shall have the same rights and privileges as stated in 050 for every person with a disability. Each trainer or puppy raiser, during the training of an Assistance Dog is liable for any damage done to persons, premises or facilities by that Assistance Dog.

060 Penalty for injuring, or interfering with an Assistance Dog. Civil actions; damages; cost and attorney's fees.

1. It is unlawful for any person, corporation or the agent of any corporation who:

(a) Withholds, denies, deprives or attempts to withhold, deny or deprive any other person of any right or privilege secured by 050 and 055;

(b) Intimidates, threatens, coerces or attempts to threaten, intimidate or coerce any other person to interfere with any right or privilege secured by 050 and 055; or

(c) Punishes or attempts to punish any person for exercising or attempting to exercise any right or privilege secured by 050 and 055.

2. It is unlawful for any person to injure an Assistance Dog and shall be liable for the injuries to the Assistance Dog and if necessary the replacement and compensation for the loss of the Assistance Dog.

3. It is unlawful for the owner of a dog to allow that dog to injure an Assistance Dog, because the owner failed to control or leash the dog. The owner shall also be liable for the injuries to the Assistance Dog and if necessary the replacement and compensation for the loss of the Assistance Dog.

4. Any person who violates subsection 1, is guilty of a misdemeanor. Any person who purposely or negligently violates subsections 2 or 3, is guilty of a misdemeanor. Violations shall be punished by imprisonment in the county jail for not more than 6 months, or by a fine of not less than $100.00, or by both fine and imprisonment. Any person or corporation who violates subsections 1, 2, or 3 is also liable to the person whose rights under 050 and 055 were violated, for actual damages for any economic loss and/or punitive damages, to be recovered by a civil action in a court in and for the county in which the infringement of civil rights occurred or in which the defendant lives.

5. In an action brought under this section, the court shall award costs and reasonable attorney's fees to the prevailing party.

070 Precautions for drivers of motor vehicles approaching pedestrian who is carrying white cane or using an Assistance Dog.

The driver of a vehicle approaching a totally or partially blind pedestrian who is carrying a cane predominantly white in color (with or without a red tip) or a blind, visually impaired, deaf, hard of hearing, or otherwise physically disabled person using an Assistance Dog shall take all necessary precautions to avoid injury to such pedestrian. Any driver who fails to take such precaution shall be liable in damages for any injury caused to such a pedestrian and/or any injury caused to the pedestrian's Assistance Dog. It shall be unlawful for the operator of any vehicle to drive into or upon any crosswalk while there is on such crosswalk, such pedestrian, crossing or attempting to cross the roadway, if such pedestrian indicates his intention to cross or to continue. The failure of any such pedestrian so to signal shall not deprive him of the right of way accorded him by other laws.

090 Exemption from license fees.

Assistance Dogs shall be exempt from any state or local fees for licenses.

01-02994

APR 15 1994

The Honorable Charles Grassley
United States Senate
Washington, D.C. 20510-1502

Dear Senator Grassley:

This letter is in response to your inquiry on behalf of your constituent, John H. Roberts, M.D., regarding the provision of interpreters during office visits to his patients with hearing impairments. Specifically, your constituent was concerned about the costs of providing such interpreters.

Title III of the Americans with Disabilities Act (ADA), 42 U.S.C. 12181-12189, prohibits discrimination on the basis of disability by places of public accommodation. The professional office of a health care provider is a place of public accommodation subject to the requirements established in this Department's regulation implementing title III, 56 Fed. Req.

35544 (July 26, 1991).

Title III of the ADA requires physicians to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities, unless doing so would result in an undue burden, or would fundamentally alter the nature of the service provided. What constitutes an effective auxiliary aid or service will vary depending on the unique facts of each situation. The particular communication needs of the individual and the nature of the communication involved, including features such as length and complexity, will determine which auxiliary aid or service is required.

An interpreter is not, therefore, mandated in every office visit situation. In some circumstances involving short, simple communication, a health care provider may satisfy the auxiliary aid or service requirement by using a note pad and written

materials. At the other extreme, discussion of whether to undergo major surgery is a prototypical situation in which an interpreter will be required for someone who needs one. The regulation envisions a wide range of situations involving health matters that may be sufficiently lengthy or complex to require the provision of an interpreter. Because effective communication of symptoms or case history is an important diagnostic tool in medical treatment, many office visits might require the provision of an interpreter for someone who needs one.

A doctor is not, however, required to provide an auxiliary aid that would result in an undue burden. In determining whether the provision of an interpreter would result in an undue burden, the physician should consider not only the fees paid for providing the medical service or procedure, but also the overall financial resources of the practice. The physician should consider other factors that would minimize the degree of burden

on the practice, such as the ability to spread costs throughout the general clientele and the provision of tax credits for costs of providing auxiliary aids (which is available for eligible small businesses).

We hope that this information is useful to you in addressing the concerns of your constituents The flexibility of the auxiliary aids requirement, the undue burden limitation, and the ability to spread costs over all patients should minimize any burden on the medical profession.

For your information I have enclosed a copy of the Department's regulation implementing title III and our Title III Technical Assistance Manual. A public accommodation's obligation to provide auxiliary aids is addressed in section 36.303 of the regulation, in the preamble to section 36.303 (pages 35565-35568), and in section III-4.3000 (pages 26-30) of the technical assistance manual.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

The Honorable Senator Charles Grassley

135 Hart Senate Office Building
Washington, D.C. 20510

Dear Senator Grassley,

Enclosed please find a copy of a letter I directed to Senator Harkin about the problems related to the Americans with Disabilities Act that was recently passed. We are finding that mandates of the law difficult to live up to. We are accustomed to giving away care with charity work and with reimbursements from Medicare and Medicaid running around 50%. The problem here, however, is that we are not only giving away all of our care and the use of our facility but we are actually having to come with out of pocket money to pay for the interpreter services.

This is grossly unfair and needs to be remedied quickly. With overhead running at 60% we simply cannot afford to take on this additional burden.

Please direct your attention to this problem. Your consideration will be greatly appreciated.

Sincerely,

John H. Roberts, M.D.

JHR/rjr

January 6, 1994
The Honorable Senator Tom Harkin
531 Hart Senate office Building
Washington, D.C. 20510
Dear Senator Harkin,
We are writing to express our concern with the situation in which

we find ourselves relative to the Americans With Disabilities Act that you sponsored.

We have several deaf patients for which we have been caring for years, utilizing note pad messages or family member interpreters. We now find we are mandated to provide interpreter service to deaf patients. Apparently this is supposed to improve the quality of medical care.

Our charge for a Medicare patient for a 99213 office visit is $24.54. Medicare will pay $14.72. We try to collect $4.09 from the patient if we accept assignment or $9.82 if we don't accept assignment.

The interpreter charges $15 per hour with a two-hour minimum for her services. For each visit we are either $5.46 in the hole or $11.19 in the hole, depending on whether we accept assignment or not. That is assuming we are able to collect from the patient what is supposed to be their obligation to pay. We lose money on every visit.

We never discriminated against deaf people in the past and we saw them willingly for usual fees. It frequently took us longer to see these patients because of the extra time required for waiting notes back and forth but did not increase our fees because of that.

The squeeze is on in primary care because of Medicare fees being frozen in 1984 with minimal increases since then and because of diminishing opportunity to cost shift to other payors. This kind of mandate by the federal government is grossly unfair. To require us to bear the burden of the noble idea of having no discrimination against disabled people makes no sense to us. We were doing our share before the law was passed. You have now made it onerous to provide the care that we gladly did before.

Please direct your attention to providing some sort of relief for this problem. Thank you for your consideration.
Sincerely,
John H. Roberts, MD, F. John Kissel, MD Terry H. Mitchell, MD
01-02998

APR 20 1994

The Honorable Bob Kerrey
United States Senator
7602 Pacific Street

Suite 205
Omaha, Nebraska 68114

Dear Senator Kerrey:

This letter is in response to your inquiry on behalf of your constituent, (b)(6) XX concerning the purchase of a touch tone telephone from AT&T. Your letter, which was originally directed to the Federal Trade Commission, was forwarded to the Department of Justice, which has the responsibility of enforcing and providing technical assistance concerning the Americans with Disabilities Act (ADA).

Title III of the ADA prohibits discrimination on the basis of disability by places of public accommodation, including sales or rental establishments. To the extent that AT&T operates places of public accommodations that sell or rent telephones to the public, it is subject to the full range of ADA obligations, including the obligation to make reasonable modifications in policies, practices, or procedures, when the modifications are necessary to afford goods, services, facilities, privileges, advantages, or accommodations to individuals with disabilities, unless making the modification would fundamentally alter the nature of the goods, services, facilities, privileges, advantage, or accommodations.

However, the ADA does not require a public accommodation to alter its inventory to include accessible or special goods that are designed for, or facilitate use by, individuals with disabilities. Further discussion of this point may be found in 36.307 of the enclosed regulation, in the preamble to that section on page 35571, and in section III-4.2500 of the Department's Title III Technical Assistance Manual.

If XX wishes to file a formal complaint with the Civil Rights Division, he may send any relevant information to the Public Access Section, Civil Rights Division, U.S. Department of Justice, Post Office Box 66738, Washington, D.C. 20035-6738.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

FEDERAL TRADE COMMISSION
WASHINGTON, D.C. 20580
OFFICE OF THE SECRETARY

December 23, 1993

The Honorable Bob Kerrey
United States Senate
7602 Pacific Street, Suite 205
Omaha, Nebraska 68114

Dear Senator Kerrey:

Thank you for your letter on behalf of XX (b)(6) of Omaha, who has encountered difficulty acquiring a touch tone telephone from AT&T. As you may know, the Federal Trade Commission has been directed by Congress to act in the interest of all consumers to prevent deceptive or unfair practices and unfair methods of competition, pursuant to the Federal Trade Commission Act, 15 U.S.C. 41 et seq. In determining whether to take enforcement or other action in any particular situation, the Commission may consider a number of factors, including the type of violation alleged; the nature and amount of consumer injury at issue and the number of consumers affected; and the likelihood of preventing future unlawful conduct and securing redress or other relief.

I would like to emphasize that letters from your constituents provide valuable information that is frequently used to develop or support Commission enforcement initiatives. I should not, however, that the practices to which XX refer fall within the jurisdiction of the U.S. Department of Justice. I have therefore taken the liberty of forwarding your correspondence to the Department for their review. Please let us know whenever we can be of service.

Sincerely

Donald S. C1ark
Secretary

APR 20 1994

The Honorable John Breaux
United States Senate
Washington, D.C. 20510

Dear Senator Breaux:

This letter is in response to your inquiry on behalf of your constituent, XX who seeks information about the transportation provisions of the Americans with Disabilities Act (ADA). According to XX he uses a wheelchair and is required to get to a deviated fixed route in order to receive bus service. Because the distance to the fixed route pick-up points is too great for him to negotiate, he inquiries about the requirements under the ADA for at-home pick up and return service for persons with disabilities.

Subtitle B of title II of the ADA establishes standards for the operation of public transportation systems, including fixed route bus transportation. Under the subtitle, every public entity operating a fixed route system must provide paratransit or other special service to individuals with disabilities that is comparable to the level of service provided to individuals without disabilities who use the fixed route system. This paratransit requirement applies to all public fixed route transportation, with the exception of commuter bus, commuter rail, and intercity rail systems.

The Department of Transportation is responsible for the implementation of subtitle B of title II and its regulations and that Department will be able to provide more specific information regarding standards for eligibility for paratransit service. Accordingly, we have taken the liberty of forwarding a copy of your inquiry to that agency and have requested that they reply directly to you.

01-03003

I hope that this information is helpful to you in responding to XX (b)(6).

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

01-03004

(b)(6) XX
Arabi, La. 70032
XX

Hon. John B. Breaux
U.S. Senate
Washington, D.C. 20510

March 2, 1944

XX

Dear Senator Breaux:

As a victim of multiple sclerosis, I am permanently confined to a wheelchair. As such am very interested in the "Americans With Disabilities Act". If properly implemented, this Act is the most significant legislation enacted to assist disabled persons.

With regard to the transportation provision of this Act, we in St. Bernard [illegible] of Louisiana are required to get to a deviated fixed route in order to [illegible] [illegible] service. The distances to the deviated fixed pick-up points are too great for a disabled person to negotiate and I feel this is a violation of the transportation provision of the Act. It is my understanding that this Act requires at-home pick up and return to home service for the handicapped. This type of service is available in the neighboring [illegible] of Orleans and

Jefferson.

01-03005

[Hand written]

It is my understanding that Federal funds subsidize local transit systems. If this is so, why did the Federal Government approve an exception to policy which incumbents the intended mandate of this Act?

I would appreciate your comments regarding this situation. Hopefully, through your efforts, this problem can be resolved.

Sincerely,
XX (b)(6)

01-03006

MAY 2

The Honorable Peter A. DeFazio
Member, U.S. House of Representatives
211 East Seventh Avenue
Eugene, Oregon 97401

Dear Congressman DeFazio:

This letter is in response to your inquiry on behalf of your constituent, William Doerr, which you sent to the United States Commission on Civil Rights and was by that agency forwarded to the Department of Justice. According to Mr. Doerr, he has attempted to establish a vocational program for persons with developmental disabilities in downtown Coos Bay, Oregon, but has met with opposition from at least one member of the city's Downtown Association, who allegedly has encouraged building owners not to rent space to Mr. Doerr because persons with developmental disabilities do not belong in the downtown area.

Mr. Doerr inquires whether he has any recourse in this situation.

A vocational rehabilitation program, such as a social service center establishment, would likely be considered a place of public accommodation within the meaning of title III of the Americans with Disabilities Act (ADA) and the title III regulation, 42 U.S.C. 12181(7); 28 C.F.R. 36.104. Private entities that lease to places of public accommodation are also considered public accommodations under title Ill. 42 U.S.C. 12182(a); 28 C.F.R. 36.104. Under title III, public accommodations are prohibited from discriminating on the basis of disability in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, or accommodations of any place of public accommodation. 42 U.S.C. 12182(a); 28 C.F.R. 36.201(a). It is also a violation of title III for a public accommodation to discriminate against any individual or

FOIA

01-03007

entity based upon that individual's or entity's known relationship with a person who has a disability. 42 U.S.C. 12182(b)(2)(E); 28 C.F.R. 36-205. Thus, the ADA does not permit a commercial landlord to refuse to lease space for the operation of a place of public accommodation because of the disabilities of the anticipated clientele of the place of public accommodation.

While it does not appear that the Downtown Association, as a group, operates a place of public accommodation, interference with an individual's attempt to exercise or enjoy any rights under the Act is also prohibited, see 42 U.S.C. 12203; 28 C.F.R. 36.206, even if the person responsible for the interference does not operate a place of public accommodation. Thus, Mr. Doerr and persons with developmental disabilities who might use the vocational program may be able to seek redress under this portion of the ADA.

Mr. Doerr may seek enforcement of his rights under the ADA

by filing a suit in Federal court. He may also file a complaint with the Department of Justice by writing to the address below outlining in detail the facts giving rise to the alleged discrimination and, to the extent he knows them, providing the names and addresses of individuals and entities responsible for the discrimination.

Public Access Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66738
Washington, D.C. 20035-6738

The Department is authorized to investigate complaints of discrimination and to file suits where there is a pattern or practice of discrimination or discrimination that involves an issue of general public importance. Mr. Doerr should be advised, however, that the Department is not able to investigate every complaint that it receives but, in the event he does file a complaint with us, he will be notified as soon as possible concerning the action the Department intends to take on his complaint.

I have also enclosed a list of organizations in Oregon that may be of some assistance to Mr. Doerr in pursuing his claim, as well as copies of the Department of Justice title III implementing regulation and the ADA Title III Technical Assistance Manual.

01-03008

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

Congressman DeFazio
Coos Bay Office
Coos Bay Oregon

Dear Congressman;

Recently we started a Coos County Vocational Program for Developmentally Disabled Adults. The intent of the program is to develop and blend employment opportunities and community integration activities. To facilitate this goal we decided to locate in the downtown area of Coos Bay. We have received many favorable reactions to this endeavor.

However, one person seems adamant that "these kinds of persons do not belong in the downtown area". Following up the first phone call, this person said he would work with the Downtown Association to find us an "appropriate place:. The person creating this problem is a property owner of several buildings and an influence in the downtown areas being the president of the Downtown Association.

We feel that this is an infringement on the rights of our clients. Our understanding is that the American Disabilities Act was enacted partially to stymie this kind of discrimination. How do we proceed to address this problem? To whom do we talk?

Any assistance you can give us will be appreciated.

Sincerely,

William A. Doerr
Chief Executive Officer

01-03010

Coos Curry Transitional House

6/2/93

Re: Telephone conversation with XX re storefront for rent on Commercial St.

5/24/93 Visited storefront, left business card at XX Enterprises, requested call re storefront

5/25/93 Called XX Enterprises re storefront.

5/27/93 received call from D. Fletcher. Was grilled re nature of Coos Bay Vocational Services. Was told it was inappropriate in "mixed retail" ... beside a "fine jewelry store." Was questioned about being in the downtown core area. I regretted it appeared we couldn't do business and cautioned XX re civil rights of the Developmentally Disabled.

5/27/93 received call back from XX re concern for giving wrong impression. He reiterated his feelings that I didn't understand the requirements of "mixed retail". I responded that apparently "mixed retail" did not understand the requirements of the Developmentally Disabled. He wanted to know why we had to be in the downtown core area at all. I responded that we were committed to integrating our clients into the community. that we were already there.

5/28/93 XX calls again, extremely concerned about sounding biased, told story about his two small children once in a public school which had a DD person enrolled. I commented "How broadening for them." XX claims that as president of the Downtown Business Ass. he will direct it to aggressively assist us in locating a storefront in the core. He asks us if we would be interested in renting the A.S.I. Voc. building on Virginia in North Bend. I indicate that its location does not meet our needs. he says the Association will help "place us".

6/1/93. Follow-up at Coos County Mental Health, Ginger Swan tells of receiving several agitated calls from XX who is unsettled that the Developmentally Disabled will be/are in the downtown area. . .given that the Downtown business Ass. is interested in "mixed retail" and attracting tourism. Ms. Swan suggests he discus his position with a lawyer before he acts precipitously, and that his first question concern the civil rights of the disabled.

Gary Ostrom,
Program Manager
01-03011

MAY 2 1994

The Honorable Ted Stevens
United States Senate
Washington, D.C. 20510-6025

Dear Senator Stevens:

This is in response to your inquiry on behalf of a constituent regarding the requirements of the Americans with Disabilities Act (ADA) for businesses to accommodate persons with hearing impairments.

Most privately owned businesses offering goods and services to the public are places of public accommodations within the meaning of title III of the ADA. Title III requires places of public accommodations to provide appropriate auxiliary aids and services to persons with hearing impairments where necessary to ensure effective communication, unless doing so would cause an undue burden or a fundamental alteration to the nature of the goods or services offered by the public accommodation. The Department of Justice's title III regulation lists some examples of auxiliary aids and services for persons with hearing impairments: qualified interpreters, notetakers, computer-aided transcription services, written materials, telephone handset amplifiers, assistive listening devices, assistive listening systems, telephones compatible with hearing aids, closed caption decoders, open and closed captioning, telecommunications devices for deaf persons (TDD's), and videotext displays.

The public accommodation should consult with individuals with disabilities in determining what auxiliary aids or services are necessary to provide effective communication in a particular circumstance, depending on the nature of the communication involved and the needs of the particular individual with a hearing impairment. If providing a particular auxiliary aid or service would cause an undue burden, i.e., significant difficulty or expense, the public accommodation must provide an alternative aid or service that does not cause such a burden and that provides effective communication to the maximum extent possible.

FOIA

01-03012

In addition to the general requirements for providing appropriate auxiliary aids and services, there are specific requirements for particular types of businesses. For example, public accommodations, such as hotels and hospitals which offer customers or patients the opportunity to make outgoing telephone calls on more than an incidental convenience basis, must provide TDD's upon request to individuals with hearing impairments. Similarly, hotels and hospitals that provide televisions must provide caption decoders upon request.

In new construction and alterations of places of public accommodations, the ADA requires strict compliance with the ADA Standards for Accessible Design (ADA Standards). The Standards require certain design features to meet the needs of persons with hearing impairments. Such features include visual alarm systems, TDD's and hearing aid compatible telephones, and assistive listening systems in assembly areas.

I have enclosed copies of the title III regulation, which includes the ADA Standards, and the title III Technical Assistance Manual. I hope this information is helpful to you in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

Dear Ms. Anthony

I have been contacted by a hearing-impaired constituent that is interested in the kinds of measures that businesses must take under the Americans With Disabilities Act in order to accommodate the hearing-impaired. Any information you have on this subject that you could send me would be appreciated. Thank you for your time and attention to this matter.

With best wishes,

Cordially,

TED STEVENS

01-03014

MAY 2 1994

The Honorable Trent Lott
United States Senator
3100 South Pascagoula Street
Pascagoula, Mississippi 39567

Dear Senator Lott:

This letter is in response to your inquiry on behalf of your constituent, Richard Wilkinson, who asks about the applicability of the Americans with Disabilities Act (ADA) to the new construction of a fraternity house on land owned by a university. Mr. Wilkinson's letter states that his fraternity intends to build a two-story building to house 27 occupants, plus an attic, which might be used for study hall and meetings. We have learned from a telephone conversation with Mr. Wilkinson that the university is privately owned.

Under title III of the ADA, an entity that owns, operates, or leases a place of public accommodation, must ensure that ADA standards are met in all of its activities, including the new construction of its facilities. Universities are places of public accommodation. Therefore, if the university owns or operates the fraternity house, or if it has contracted to or intends to own or operate the house in the future, the university is obligated to ensure that the construction of the house meets ADA new construction standards. University-owned fraternity houses, like all other aspects of a university experience, are part of the place of education, and are covered by title III.

If the fraternity house is not owned or operated by the university, and will not be owned or operated by it in the foreseeable future, the house may be exempt from ADA coverage. Even if the house would otherwise fit into one of the categories of places of public accommodation, it is exempt from title III's coverage if it is a private club. Whether a particular facility is a private club is a case-by-case determination, based on a

variety of factors that have been recognized by courts. We cannot make a particular determination of whether Mr. Wilkinson's fraternity house will constitute a private club, but some of the factors to be considered in such a determination are the following:

(1) whether the club is highly selective in choosing members;
(2) whether the club membership exercises a high degree of control over the establishment's operations;
(3) whether the organization has historically been intended to be a private club;
(4) the degree to which the establishment is opened up to non-members;
(5) the purpose of the club's existence;
(6) the breadth of the club's advertising for members;
(7) whether the club is non-profit;
(8) the degree to which the club observes formalities;
(9) whether substantial membership fees are charged;
(10) the degree to which the club receives public funding; and
(11) whether the club was created or is being used to avoid compliance with a civil rights act.

Nonetheless, private clubs are still covered by title III to the extent that they open up their establishments to the general public for a purpose that falls within one of the categories of places of public accommodation. Thus, if the fraternity hosts events that are open to persons other than the fraternity members and their guests, the fraternity must make accessible the public areas during those events. The more often such public events occur, the higher the obligation to make the publicly used areas accessible. If, for example, only one event in several years is open to the general public, a temporary ramp may be sufficient to make the area accessible, while, if the fraternity hosts several such events during the course of a year, it may be obligated to construct a permanent ramp.

I hope this information is useful to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

Senator Trent Lott
487 Russell Senate Office Building
Washington, D.C. 20510

Dear Senator Lott:

Please refer the attached request for information on the American Disabilities Act of 1990 to the proper governmental office.

Your assistance is being requested in an effort to expedite a reply.

Cordially,

Richard G. Wilkinsons

RGW/ddb

I am the President of a fraternity house corporation planning the immediate construction of a house (not a public facility) for a chapter of this fraternity. This house will be built on college campus land owned by the college.

Differing opinions as to the required compliance with handicap laws have been received. Your prompt ruling would be appreciated as there are no local federal or state agencies to contact.

A two-story house for 27 male occupants is planned with a roof support configuration that would permit possible future use for a study hall and weekly chapter meetings - no bedrooms or restrooms - in the attic area. Handicap requirements (ramp, door and corridor widths, and restroom facilities for residents and female guests at social functions) will be met on the first floor. Currently there are no handicapped members, but there may be in the future. Meetings will be held on the first floor and occupants will study in their rooms.

Local opinions range as follows:

1. Fraternity houses are not public accommodations and are therefore exempt from handicap requirements regardless of possible future handicap membership (none now).

2. If the attic area is finished in the future for use

as a study hall and for chapter meetings, and IF there is a hadicapped member, chapter meetings would have to be held on the first floor, but the attic area could still be used as a study hall and the handicapped member (if a resident) could study in his room as is the case initially.

3. Regardless of handicapped membership, handicap access to the attic area is required if this area is utilized as a study hall or meeting room.

I may be contacted by phone (office):1-800-967-5650 or 601/969-0717 or by mail: P.O. Box 445, Jackson, MS 39205 or FAX 601-961-5958 should further information or discussion be required.

Sincerely,

Richard G. Wilkinson

01-03018

DJ 202-PL-790

MAY 3 1994

Craig Nishimura
Building Department
City and County of Honolulu
650 South King Street
Honolulu, HI 96813

Dear Mr. Nishimura:

I am writing in response to your letter regarding the new construction of the Campbell Industrial Park Fire Station and Aikahi Fire Station projects.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. The Department does not review designs or drawings for compliance with the ADA. This letter provides informal guidance to assist you in understanding the ADA's requirements. However,

it does not constitute a legal interpretation, and it is not binding on the Department.

Title II of the ADA requires all new facilities constructed by, on behalf of, or for the use of a public entity to be designed and constructed to be "readily accessible to and usable by individuals with disabilities." Title II permits public entities to choose either of two design standards -- the Uniform Federal Accessibility Standards (UFAS) or the Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG). Your letter indicates that the Honolulu Fire Department has selected UFAS as it design standard for the facilities in question.

In a new facility, UFAS must be met in all areas for which the intended use will require public access or which "may result in employment ... of physically handicapped persons" UFAS 4.1.4(7). Your letter states that "all operational areas of the station are intended for fire fighters use only and will be restricted." Your letter further states that persons with disabilities "obviously cannot be hired for fire fighting positions." The letter describes the restricted areas, not open

cc: Records, Chrono, Wodatch, Magagna, Justesen, MAF, FOIA
udd\justesen\nishimur

01-03019

to public access, to include "kitchens, dorms, fire fighters and officers bathroom/shower facilities, storage areas, laundry, decontamination room, library, physical training areas, work room, meeting room, generator room, etc." Accordingly, you believe that UFAS Section 4.1.4(7) authorizes the exemption of the "restricted areas" from the accessibility standards.

This analysis is not necessarily correct for all of the areas mentioned, even if the fire department could establish that it is lawful under the employment requirements of titles I and II of the ADA to exclude persons with certain types of physical disabilities from firefighter positions. For example, other employees, such as those responsible for cooking, cleaning, laundry, maintenance, and clerical tasks, may be permitted in some or all of the areas in question and it is not likely that the department could demonstrate that persons with physical disabilities are lawfully excluded from those types of positions.

Supervisory personnel and city officials may also have access to such areas. Accordingly, such areas of a new facility should be constructed to meet UFAS.

I hope this information is of help to you. In the future if you need assistance, the Department maintains a telephone information line to provide technical assistance regarding the rights and obligations of individuals, businesses, agencies, and others covered or protected by the ADA. This technical assistance is available by calling 800-514-0301 (voice) or 800-514-0383 (TDD). Use of the information line will ensure a more timely response to questions.

Sincerely,

John L. Wodatch
Chief
Public Access Section

XX

Ms. Elena Wahbeh-Foster
President
American Rehabilitation Centers, Inc.
6724 Troost, Suite 310
Kansas City, Missouri 64131

MAY 3 1994

Dear Ms. Wahbeh-Foster:

This letter is in response to your request for information regarding the obligations under the Americans with Disabilities

Act ("ADA") for private entities that sponsor educational seminars to provide sign language interpreters for hearing impaired persons who attend their seminars.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA requirements. However, it does not constitute a legal interpretation or legal advice, and is not binding on the Department.

Title III of the ADA requires all public accommodations to furnish appropriate auxiliary aids and services where necessary to ensure effective communication with individuals with disabilities. A public accommodation must provide the necessary auxiliary aids unless it can demonstrate that providing the auxiliary aids would fundamentally alter the nature of the public accommodation's services or would result in an undue burden to the public accommodation. Places of education, such as educational seminars, are considered places of public accommodation under the ADA.

Your correspondence indicates that two companies that sponsor educational seminars failed to provide interpreters for your hearing impaired employee. These entities, as public accommodations, are required to provide qualified interpreters only when such interpreters are necessary for effective communication with an individual with disabilities. If, for example, the. information being conveyed at a particular seminar

FOIA

01-03021

is lengthy and complex then the use of a interpreter may be necessary. If the provision of an interpreter by a public accommodation results in a fundamental alteration of the nature of the services provided by the public accommodation or creates an undue burden on the public accommodation, then the public accommodation still must provide an alternative auxiliary aid to ensure effective communication to the maximum extent possible.

I have enclosed for your information a copy of the title III regulation promulgated by the Department of Justice. The provisions regarding auxiliary aids are found in section 36.303

(pp. 35597) of these regulations, and are discussed in the enclosed Technical Assistance Manual in section III-4.3000 (pp. 26-30).

If you feel that an interpreter was necessary to provide effective communication for your employee at the two seminars in question, then you or your employee may file a complaint in Federal court to enforce the Act, or may file a complaint with the Department of justice, which is authorized to investigate allegations of violations of title III in cases of general public importance or a pattern and practice of discrimination. If you or your employee wish to file a complaint with the Department of Justice under title III, you may address it to the Public Access Section, Civil Rights Division, U.S. Department of Justice, P.O. Box 66738, Washington, D.C. 20035-6738.

You also asked what your responsibilities are as an employer to make sure that seminars are handled properly for your employees with disabilities. Title I of the ADA governs the application of the ADA in the employment relationship. Under that title an employer must provide reasonable accommodation for the physical or mental limitations of its otherwise qualified employees with disabilities. For questions regarding the scope of the reasonable accommodation requirement and other requirements of title I, you can contact the U.S. Equal Employment Opportunity Commission, the Federal agency that enforces title I.

I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Washington D.C. 20035-9998

Dear Sir:

Accept this letter as an expression of concern, placing of a formal complaint and the need for me to receive further direction regarding my obligations and responsibilities, if any are applicable.

I am a Physical Therapist and owner of a company providing rehabilitation services by physician referral. My company is located in the State of Missouri and the company employs approximately 30 individuals, one of whom is deaf.

My therapist who is deaf had requested to travel out of state to an educational seminar--in fact on two occasions. The first occasion was a total disaster and the company sponsoring the seminar did not produce an interpreter. The second seminar, again, was a disaster and frankly embarrassing to both me and my employee. We requested an interpreter in August, 1993 for a seminar to be held in October, 1993. The company failed to provide the interpreter and failed to notify us of this until the evening before. Travel had already been scheduled and my employee was on her way. Obviously, she did not actually "go in" into the seminar as she could not read lips for 16 hours and aspects of the seminar were with slides and in a dark room. She requested the written material so she may at least read it and was denied. It was not until a formal letter of complaint was made that the written material was submitted. The company sponsoring the seminar did refund the registration fee, but no other expenses.

My point of concern is now focused for future rather than the past. My questions are:
1. who is responsible for the interpreter when out of state seminars are scheduled?
2. what can be done to assure that my employee is not faced with another situation such as these?
3. what responsibilities do I have as the employer to assure that out of state functions such as seminars are handled properly for my staff? Currently, on premises any formal meetings will have an interpreter for my employee and a TDD on premises for my employee's use.

AMERICAN
XX
REHABILITATION

CENTERS
(b)(6)

Dear XX

We have been making great efforts to touch base with you for the past several weeks and regret that I personally was not able to speak with you on one previous occasions. I am,however, happy to have finally gotten to speak to you on this day. As you will recall, our Facility Coordinator, Dawn Meyer, touched base with you earlier and had a conversation regarding, your seminar in XX
, Missouri which will take place XX In specific, Dawn was interested in obtaining, information regarding your policy with regard to an interpreter for your seminar and/or some sort of "close-caption" for the hearing impaired. At the time of your phone call with Dawn, the information was relayed that you did not feel it to be your obligation to provide this accommodation.

In an effort to pursue the attendance of our staff member, we were making ourselves ready to make the investment and began researching the availability of an interpreter. As our conversations progressed, we were advised by various agencies for the hearing impaired as well as government offices that although our efforts were benevolent, they were not necessary. Evidently, our resources advise that when and if a company presents itself to the public, then this company must abide by ADA regulations and provide access to the impaired and/or handicapped. Thus, "every road leads us back to you" the company sponsoring, the seminar.

We are still interested in having our staff attend and along with our staff, we have one individual who is deaf and will need an interpreter. Our agencies advise that actually two will be needed as one person is only able to "sign" for 30-40 minutes and then rest to avoid repetitive motion disorders.

Please respond to my letter as soon as you are able to and prior to the seminar. I do regret that I was unable to personally speak with you prior to the registration deadline of May 10, but feel since we made efforts as early as May 1 to reach you that an extension is more than appropriate.

Thank you for your time and attention to this matter.

Sincerely,

01-03025

MAY 3 1994

Mr. Warren T. Hanna
Executive Director
Hard of Hearing Advocates
245 Prospect Street
Framingham, Massachusetts 01701

Dear Mr. Hanna:

This letter is in response to your recent letter inquiring whether individuals who sell hearing aids have an obligation under the Americans with Disabilities Act (ADA) to advise customers about the option of installing a telecoil device in the hearing aids. You indicate that such devices can offer advantages to the user where assistive listening systems are available and in other circumstances.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informational guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation, and is not binding on the Department.

Title III of the ADA does not require sales establishments to alter their inventory to carry accessible or special products that are designed for persons with disabilities. When such

goods, such as hearing aids, are offered, the ADA does not require the sales establishment to educate consumers about all the use options or other products that might be of benefit.

The ADA is a civil rights statue that is intended to prohibit discrimination against persons with disabilities in many aspects of their lives. It is not structured to guarantee that the most desirable or beneficial services and products possible will be made available to persons with disabilities. The circumstance you describe where salespersons fail to notify

cc: Records, Chrono, Wodatch, Magagna, MAF, FOIA
udd\bwms\hanna.jam

hearing aid purchases that telecoil devices will be very useful to them does not constitutee discriminatory conduct in violation of title III.

I hope that this information is responsive to your question.

Sincerely,

John L. Wodatch
Chief
Pubic Access Section

T. 5-3-94
DJ 202-PL-754

May 4 1994

Mr. Curt Wiehle
Accessibility Specialist
Minnesota State Council on Disability
121 East Seventh Place, Suite 107
St. Paul, Minnesota 55101

Dear Mr. Wiehle:

I am responding to your letter concerning the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute and it is not binding on the Department.

Your letter asks whether the State of Minnesota's building

code complies with the ADA Standards for Accessible Design (28 C.F.R. part 36, Appendix A) regarding grab bars in toilet stalls. The Minnesota code requires accessible toilet stalls to include horizontal grab bars 27-29 inches above the floor and vertical grab bars 3 inches above the horizontal bars. The ADA Standards, by contrast, require horizontal grab bars 33-36 inches above the floor and do not address vertical bars. See ADA Standards for Accessible Design, section 4.17 and figure 30.2

The ADA Standards are supported by substantial research regarding the best placement for grab bars. For example, research conducted on behalf of the United States Department of Housing and Urban Development indicates that both walking aid users and wheelchair users preferred horizontal grab bars at heights of 33-36 inches rather than lower bars. See Steinfeld, Schroeder, and Bishop, Accessible Buildings for People with Walking and Reaching Limitations, HUD-PDR-397, prepared by Syracuse University for the U.S. Department of Housing and Urban Development, Office of Policy Development and Research (April 1979) (excerpt attached). Therefore, it appears that Minnesota's lower horizontal grab bars may provide less accessibility than the ADA Standards.

cc: Records, chrono, Wodatch, Blizard, Hill, FOIA, Friedlander
n:\udd\hille\policylt\wiehle.ltr

01-03033

The ADA Standards, however, provide only minimum guidelines for achieving accessible building design. Jurisdictions are, of course, free to exceed these minimum standards, and I applaud your desire to do so. In addition, the Standards allow some flexibility. Section 2.2 provides: "Departures from particular technical and scoping requirements of this guideline by the use of other designs and technologies are permitted where the alternative designs and technologies used will provide substantially equivalent or greater access to and usability of the facility." Therefore, the grab bar configuration proposed by the Minnesota code will be acceptable only if it provides access and usability substantially equivalent to or greater than that provided by the configuration in the ADA Standards.

The Department of Justice will not certify any specific variation from the Standards as being equivalent, except in the context of a formal request for code certification pursuant to 28 C.F.R. 36.602. However, the use of alternate designs is not

prohibited if the available data shows that such alternate designs are, in fact, substantially equivalent to the Standards. In any ADA enforcement action, the covered entity would bear the burden of proving the equivalency of any alternate design.

I hope this information is helpful, and I hope this letter fully responds to your questions.

Sincerely,

John L. Wodatch
Chief
Public Access Section

RE: Grab Bar Configuration - State of Minnesota

Dear Mr. Wodatch:

The State of Minnesota is currently involved in the process of revising its building code requirements as they relate to accessibility. Of

particular concern, and an item which has developed into a major stumbling block, is the State's requirement for grab bar location at the toilet. The State of Minnesota has, for a period of 15 years or more, required both a horizontal and vertical grab bar at the toilet. Since this requirement differs from ADAAG guidelines, the question has arose as to how our guidelines will be received by the Department of Justice. It is very difficult for the State of Minnesota to continue in this process without some indication or clarification from Justice.

A diagram of our proposed guideline is enclosed. Essentially, we have lowered the horizontal grab bar from 33"-36" to 27"-29" and added a vertical grab bar component. The State Council on Disability strongly feels that this configuration provides equivalent facilitation and is in fact more restrictive than ADAAG. Our argument is that the two bars serve two different populations of individuals with disabilities.

The horizontal bar is used primarily by persons who use wheelchairs. This population requires that the point of leverage be just above the seat height of the wheelchair. We also recognize the need for the toilet paper dispenser to be located below the horizontal grab bar,so that it does not interfere with usage of the grab bar. Therefore, the 27"-29" range in mounting height of the horizontal grab bar.

To compensate for lowering the horizontal grab bar, and to facilitate ambulatory individuals, a vertical bar is used in conjunction with the horizontal bar. The vertical grab bar is mounted approximately 12" in front of the toilet bowl with a minimum of 3" clearance between the horizontal bar and the lower end of the vertical bar (this is to allow someone to slide their

121 E. 7th Place; Suite 107; St. Paul, MN 55101; (612) 296-6785; 1-800-945-8913 (V/TDD); Fax (612) 296-5935

hand along the horizontal bar without interruption). The vertical bar is used primarily by ambulatory individuals who require assistance going from a standing position to a sitting position, and vice versa. With the wrist in a vertical position on the vertical grab bar, an individual has much more strength and leverage to raise or lower oneself.

We feel that this combination grab bar configuration serves an expanded population of individuals with disabilities. If the horizontal bar is raised to the 33"-36" ADAAG range, many wheelchair users will not be able to benefit from its provision because the raised leverage point will require too much strength. Likewise, ambulatory individuals have a

more difficult time raising or lowering themselves with their wrists in a horizontal position.

The State of Minnesota has held 12 informational sessions on its proposed building code. Much discussion has occurred regarding the grab bar configuration. There are legitimate liability concerns involved in deviating from ADAAG without comment from your office. Although builders, architects and building officials concur with the logic of the grab bar configuration, the liability concerns remain.

We are basically at a stand still in this process. It will be very difficult for the State of Minnesota to continue with its efforts to develop a building code that is in compliance with ADAAG without resolving this grab bar issue. In order to proceed with the code change without comment from the Department of Justice, we would have to concede our grab bar configuration and follow ADAAG. A significant number of individuals with disabilities would be greatly disadvantaged if they had to loose their grab bar configuration. The Council on Disability has received many letters of support from the disability community regarding this issue. Comment from your office would be greatly appreciated and is urgently needed.

We do not feel that the inclusion of the vertical grab bar is in question as it clearly exceeds ADAAG in that it is not required. What we must have answered is whether lowering the horizontal grab bar and including the vertical component would be considered equivalent facilitation by the Department of Justice.

Thank you in advance for your consideration in this matter. Please contact me as soon as possible with any comments, questions or concerns.

Sincerely,

Curt Wiehle
Accessibility Specialist

Ms. Linda A. Bowlby
President
The World Sidesaddle Federation, Inc.
P.O. Box 1104
Bucyrus, Ohio 44820

Dear Ms. Bowlby:

Your letter, on behalf of the World Sidesaddle Federation, Inc., regarding the Americans with Disabilities Act (ADA) was referred to me by the United States Commission on Civil Rights. I apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act.. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter asks about the application of the ADA to events sponsored by horse show and horse breed associations. Title III of the ADA prohibits discrimination on the basis of disability by private entities that own, operate, lease, or lease to places of public accommodation. Horse showing events, if they are open to public participation, may be considered to be places of exercise or recreation covered by the Act.

To the extent that participation in horse showing events is covered by title III, the operator of the event is required to ensure that individuals with disabilities have an opportunity to participate in, and benefit from, the event that is equal to the opportunity afforded to people without disabilities. In order to fulfill this obligation, the operator may be required to make reasonable modifications in its policies if such modifications are necessary to afford an individual with a disability the opportunity to participate in the event, unless such modifications would fundamentally alter the nature of the event.

cc: Records, Chrono, Wodatch, Blizard, Hill, FOIA, Friedlander

THE WORLD SIDESADDLE FEDERATION, INC.
Formerly Mid-West Sidesaddle Association

Civil Rights Commission
1121 Vermont Ave., NW.
Washington, D.C. 20425

Dear Sirs:

We are seeking information about the Federal Rehabilitation Act particularly section 504, and the recently passed Americans with Disabilities Act. Our association, The World Sidesaddle Federation, Inc., has been working with several horse show and horse breed associations to change various rulings that they currently have that will not allow the use of the sidesaddle at their sponsored events. Rules that disallow the use of the sidesaddle prevent those that have to ride aside because of some physical limitation to participate in approved events. Thus the disabled rider can not earn points or awards that are offered by these show and breed associations.

WSFI needs to know if these federal acts cover this type of discrimination. We have not been able to obtain copies of these acts and are not familiar with the wording. Could you provide us with copies of the necessary sections that would apply to our particular situation or advise us on how these or similar federal regulations might affect the disable rider that requires the use of the sidesaddle

Thank you for your time and assistance

Sincerely yours,

Linda A. Bowlby
President/WSFI

DJ 204-50-0

MAY 5, 1994

The Honorable Alfonse M. D'Amato
United States Senate
Washington, D.C. 20515-3202

Dear Senator D'Amato:

This letter responds to your recent inquiry on behalf of your constituent, the Honorable Robert J. Valachovic, the Mayor of the City of Johnstown, New York (the City). On behalf of the City, Mayor Valachavic is seeking relief from meeting certain requirements set forth in the regulations that implement title II of the Americans with Disabilities Act of 1990 (ADA). The Mayor also requests assistance in obtaining funding to comply with the ADA.

Title II of the ADA prohibits discrimination against qualified individuals with disabilities on the basis of their disability in services, programs, or activities conducted by a State or local governmental entity such as the City of Johnstown. A copy of the regulation implementing title II is enclosed for your convenience.

In recognition of the fact that covered entities might require some time to come into compliance with any structural alterations required by the ADA, the Department's title II regulation requires covered entities to make such changes as expeditiously as possible, but in no event later than January 26, 1995, three full years after the effective date of title II. The Department of Justice does not have the authority to waive any applicable requirements imposed by the ADA or to extend the time frames for meeting such requirements.

According to the information provided to you by Mayor Valachovic, the city has been advised that it will need to spend approximately $640,000 to meet ADA requirements, funds that it does not have in its budget. We assume that this estimate relates to physical alterations that the city believes necessary to make its existing facilities accessible.

cc: Records CRS Chrono MAF Pecht.congress.93.d'amato
McDowney FOIA
01-03041

With respect to existing facilities, the focus of title II of the ADA and its implementing regulation is to ensure that, to the extent the City provides programs, services, and activities to the public, they are readily accessible to and usable by individuals with disabilities. The concept of program access is discussed on pages 19-22 of the enclosed title II Technical Assistance Manual.

Providing access to its programs, services, and activities does not mean, however, that the City is necessarily required to make each of its existing facilities accessible. In some situations, providing access to facilities through structural methods, such as the alteration of existing facilities and the acquisition or construction of additional facilities, may be the most efficient method of providing program accessibility. Can the other hand, nonstructural methods, such as the acquisition or redesign of equipment, the assignment of aides to beneficiaries, and the provision of services at alternate accessible sites, may be acceptable alternatives. Thus, the City may wish to reevaluate its planned structural alterations to determine whether they are, in fact, necessary to achieve program access.

With respect to the costs of complying with the ADA, the City of Johnstown is not required to make alterations to its existing facilities, if the City can demonstrate that the expense of making the facilities accessible would result in undue financial and administrative burdens. See 35.150(a)(3) of the enclosed title II regulation. Of course, in those circumstances where a public entity believes that proposed physical alterations to its facilities would result in undue financial and administrative burdens, the public entity has the burden of proving that compliance with title II's program accessibility requirements would result in such burdens.

The decision that any proposed alterations would result in undue financial and administrative burdens must be made by the head of the public entity or his or her designee after

considering all the resources available for use in the funding and operation of the service, program, or activity. The decision must be accompanied by a written statement of the reasons for reaching the conclusion that undue burdens would occur. If alterations to facilities would result in such burdens, the public entity must take other actions that would not result in such hardships but that would, nevertheless, ensure that individuals with disabilities receive the benefits or services provided by the public entity to other individuals. These requirements are also explained in 35.150(a)(3) of the title II regulation.

Finally, we note that limited federal funding for barrier removal may be available in some instances. The Department of Housing and Urban Development (HUD) provides community

development block grants designed to assist low and moderate income households and communities. These grants may be used to remove architectural barriers that restrict accessibility to publicly owned and privately owned buildings, facilities, and improvements. For information on applying for a community development block grant, Mayor Valachovic should contact HUD's Office of Block Grant Assistance at (202) 708-3587.

We hope this information is helpful in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

RE: Legislative Grant

On February 14, 1994 Board Member Gerry Christman and I met with Senator Farley to discuss the Library renovation and expansion plans. The Senator invited us to submit a proposal for a legislative grant by March 1, 1994. Enclosed is a copy of our proposal with letters of support from ten members of the community. We are very, proud of the response that we received from Patrons and community leaders which demonstrates the value

of the Library to the citizens of Johnstown.

We are hopeful that Senator Farley will be able to direct funds to the Library project. While we cannot guarantee that a grant will be forthcoming. We are this avenue in a continuing, effort to seek additional funds for renovation and expansion of the Library.

February 24, 1994

Honorable Hugh Farley
Legislative office Building
Room 412
Albany, New York 12247

Dear Senator Farley:

Thank you for the opportunity to submit a proposal for a legislative grant. As Chairman of the Subcommittee on Libraries you are well aware of the challenges that public libraries face, particularly in the area of facilities management. Our community has made it clear that they would like us to remain in our 1902 Carnegie building which is a rich resource in the downtown environment. We therefore are undertaking an estimated $2,000,000 renovation and expansion long range program.

The Board of Trustees with the assistance of Architecture + of

Troy. New York has divided the initial Phase into two components. Phase 1, Part I addresses compliance with the Americans with Disabilities Act and is estimated to cost $500 - $600,000. The following elements of new construction and renovation to the existing facility will be included in Part 1:

1. New handicap entrance
2. New elevator to provide 3-floor access
3. New accessible reference shelving
4. New accessible circulation desk
5. New accessible bathrooms.

Phase 1, Part 2 addresses the correction of deficiencies in the existing building which are considered high priority. They are estimated to cost $225,000 and include exterior and interior tasks such as:

1. Window replacement
2. Foundation repair
3. Masonry repointing
4. Interior wall repair and/or replacement
5. Lighting system update
6. Installation of new heating system

Johnstown, New York 12095
(518) 762-8317

The Mayor and Common Council recognize the worthiness of Library renovation and expansion, but face numerous State and Federal mandates which stretch the community's tax base to the limit. We therefore respectfully request a legislative grant of $100,000 to assist us in the funding of our project. Other avenues of funding are being explored, including an application for a Library Services and Construction Act grant. Enclosed are letters of support written by a representative sampling of community leaders and library users.

Thank you again for the opportunity to present our proposal. We are confident that you will assist us whenever possible. If you have any questions, please do not hesitate to telephone me at 762-9776. Also, we would be pleased to offer you a tour of the facility in order to more clearly illustrate the renovation and expansion needs. We look forward to hearing from you.

Sincerely yours,

Barbara Germain

RE: Additional Phase I Repairs

As a follow-up to our January 31, 1994 meeting, please find attached a listing of both interior and exterior renovation work Architecture + has identified as needing to be completed at the Library. The Library Board believes that each of these Projects are necessary and should be completed. However, they were not included in the proposed Phase 1 project in order to keep the project cost down.

The Library Board would support a decision by the Common Council to include any of these work tasks into the Phase I project.

If you would like additional information regarding any of these proposed work tasks, please contact me and I will provide it for you.

RE: Phase I - ADA Compliance

I would like to take the opportunity to follow-up on my memorandum of February 7, 1994. As you know, our presentation of the Phase I proposal on January 31, 1994 emphasized compliance with the Americans with Disabilities Act. During the course of the meeting several additional interior and exterior deficiencies were outlined. As a result of your request, Architecture + transmitted a list of deficiencies with corresponding cost estimates. As stated previously, the Library Board of Trustees would support a decision to include any or all of the itemizes renovation tasks into the Phase 1 project. A review of the deficiencies with Architecture + may assist you in placing renovation tasks in priority order.

Based upon radio and newspaper reports, a special Council meeting may be called to focus on the Library. As always, I and Library officials stand ready to meet with you or answer any additional questions that you may have. Thank you again for your consideration in this matter.

RE: Phase I Project

On behalf of the Board of Trustees I would like to thank you for taking the time to meet with us and discuss the proposed plan to bring the Library into compliance with the Federal mandate known as the Americans with Disabilities Act (ADA). The plan presented represents the outcome of 6 months of diligent reviews and evaluations by Library Trustees and Staff and Architecture +. It is the most cost effective option for addressing ADA and building code deficiencies.

The next steps in the decision making process are for the Common Council to:

1. Determine what work you would like to be included in the Project. To that end, I will be sending you shortly a listing of all other building deficiencies that are known to exist but were not included by the Board of Trustees in the proposed Phase I

plan. We ask that the Common Council review the listing and determine which of these work tasks you may want to include in the Project. The Library Board encourages the Council to include these items in the Project because they represent serious deficiencies that need to be addressed.

Once the exact scope of the Project is defined, an asbestos survey could be completed. As was explained at the meeting, the Library

Board does not want to proceed with conducting an asbestos survey until the specific areas of the building to be renovated are defined. This will allow the survey to focus only on those areas. This will help to hold down the cost of the survey. The cost estimates presented on January 31 did not include any funds for an asbestos survey or asbestos removal work.

2. Pass a resolution endorsing the Project, which will authorize Architecture + to proceed with the final design, and authorize the financing for the Project.

3. Determine what work, such as site work, could be completed in-house by the City's Department of Public Works and to project a schedule to have the work completed.

The timeline in which these decisions are made is important. As was presented to you at the meeting, it will take approximately 7 months to proceed from the final decision to the start up of construction. If the desire is to start construction in 1994 and have it proceed through the winter of 1994/95, construction should start by October 1, 1994. This would allow the addition to be enclosed in time to allow interim work to continue through the winter. In order for this timeline to occur, a decision to proceed to final design should be made around March 1, 1994. The longer it takes beyond March 1, 1994 to make a decision, we are jeopardizing the ability to allow the project to proceed through the 1994/95 winter without higher construction costs being

incurred to pay for winter protection measures.

The Library Board of Trustees and Staff are prepared and ready to provide any additional information you may need or desire to help in your decision making process. Please feel free to contact me at any time for any information. Thank you for your continued interest and commitment to the Library. I look forward to working with you on finalizing the scope of the Phase I Project.

MAY 11 1994

The Honorable Paul D. Wellstone
United States Senator
2550 University Ave. West
Suite 100 North
St. Paul, Minnesota 55114

Dear Senator Wellstone:

This letter is in response to your inquiry on behalf of the Center for Learning and Adaptive Student Services ("CLASS") at Augsburg College in Minneapolis, Minnesota, regarding the Americans with Disabilities Act of 1990 ("ADA"). CLASS representatives expressed concern over documentation required by the Educational Testing Service's ("ETS") for students with disabilities registering to take the Pre-professional Skills Test ("PPST") and the Graduate Records Examination ("GRE").

In its administration of the PPST and the GRE to students with disabilities, ETS is subject to two civil rights statutes: the Americans with Disabilities Act of 1990, 42 U.S.C. 12101 et seq., and the Rehabilitation Act of 1973, 29 U.S.C. 794, as amended. The Department of Education and the Department of

Justice share the responsibility of enforcing these statutes.

It is our understanding that the Office for Civil Rights at the Department of Education has investigated ETS' documentation requirements regarding the PPST. The changes in ETS' documentation policies and procedures for the PPST referenced in your letter may have been influenced by these enforcement efforts. All inquiries into ETS' documentation requirements for the PPST should be directed to:

Norma V. Cantu
Assistant Secretary for Civil Rights
U.S. Department of Education
400 Maryland Avenue, SW.
Washington, D.C. 20202

cc: Records, Chrono, Wodatch, Magagna, Mobley, McDowney, MAF, FOIA
udd\mobley\congress\wellston

01-03051

Based on your inquiry and other complaints, we have opened an investigation into ETS' documentation requirements with respect to the GRE and other examinations it administers such as the Scholastic Assessment Tests. Please refer specific inquiries to:

Mary Lou Mobley
Attorney, Public Access Section
Civil Rights Division
United States Department of Justice

United States Senate
WASHINGTON, DC 20510-2303

March 4, 1994

Attorney General Janet Reno
Department of Justice
Tenth & Constitution Avenue NW
Washington, DC 20585

Dear Ms. Reno:

I am writing to you in regard to a matter that has been brought to my attention by the Center for Learning and Adaptive Student Services (C.L.A.S.S.) at Augsburg College in Minneapolis, Minnesota.

The coordinator of the C.L.A.S.S. program has grave concerns about the treatment of students with disabilities who have asked for special testing accommodations from the Educational Testing

Services in Princeton, New Jersey. The specific tests in question are the PPST (Pre Professional Skills Test for individuals who want to be licensed as teachers) and the CRE (Graduate Record Examination for students planning to pursue graduate studies). The students with disabilities who have applied to ETS to take these tests by special arrangement have had to meet requirements that appear to be unduly difficult and perhaps discriminatory.

In the past, ETS has required students with disabilities who wished to use special accommodations to submit the same application as non-disabled students. They also required a statement from a professional in the field attesting that the claimed disability had been diagnosed and documented and that the student had utilized similar accommodations in her or his current educational setting. This information was usually readily available in the student's file. Once the student followed these procedures, permission to test was generally granted in a timely manner, and the student was allowed the accommodations requested.

Students with disabilities from Augsburg College who have attempted to take the test recently have encountered new and onerous obstacles. ETS has told them that they must provide newer and additional documentation before being granted special accommodations. When C.L.A.S.S. contacted ETS for clarification, they were told that ETS was changing its policies and now wanted copies of original documentation of the student's disability, which should include a list of specific accommodations needed for the test. These requirements are not stated in the PPST (now PRAXIS) application materials which ostensibly cover registration

procedures through August 6, 1994. They also appear to be unnecessary and illogical: original diagnostic reports and documentation, typically completed several years ago and under vastly different circumstances, would be unlikely to contain a list of special testing accommodations needed by the student several years in the future, and quite probably would not accurately reflect the student's present needs.

These new requirements, which are contrary to the requirements delineated in ETS application materials, have proved to be considerable obstacles to students with disabilities from Augsburg College who have been attempting to secure the accommodations to which they are entitled under Section 504 of

the Americans with Disabilities Act. Apparently, students from other states have encountered similar difficulties. Dr. Jane Jarrow of the Association on Higher Education and Disability, a national organization, has written a letter to Ms. Jeanette Lim of the Department of Education's Office of Civil Rights. Dr. Jarrow details the consequences of ETS's unclear and difficult requirements for students with disabilities and questions their usefulness. I would like to add my voice to hers.

I would appreciate it if you would review this matter and apprise me of your findings. I fear that students with disabilities, as a consequence of these new requirements, are being denied access to tests that are crucial for their future academic and professional prospects. You may direct your response to Sue Abderhlden, a member of my staff, at:

2550 University Ave. West
Suite 100 North
St. Paul, MN 55114

The Honorable Pete V. Domenici
United States Senator
Room 302
New Post Office Building
120 South Federal Place
Santa Fe, New Mexico 87501

Dear Senator Domenici:

This letter is in response to your inquiry on behalf of your constituent, (b)(6) XX who is asking for assistance in her efforts to get captioning or films in Santa Fe movie theaters.

Movie theaters are "places of public accommodation," and, therefore, are covered by the Americans with Disabilities Act (ADA) and 36.104 of the title III regulation. Public accommodations are required to provide appropriate auxiliary aids and services to persons who are deaf or who have hearing impairments. However, the legislative history of the ADA indicates that this requirement does not mandate open captioning of films shown in movie theaters. Moreover, at present there is no proven technology available for providing closed captions (i.e. captions visible only to individuals who need them) in this setting. Accordingly, captioning in movie theaters is currently not required by the ADA.

We hope this information is helpful to you in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

MAY 12 l994

The Honorable Lauch Faircloth

United States Senate
Washington, D.C. 20510-3305

Dear Senator Faircloth:

This letter is in response to your inquiry on behalf of your constituents, regarding detectable warnings under the Americans with Disabilities Act (ADA).

On April 12, 1994, the Access Board, the Department of Justice, and the Department of Transportation published a joint final rule in the Federal Register suspending the requirements of the ADA Standards for Accessible Design for detectable warnings at curb ramps, hazardous vehicular areas, and reflecting pools until July 26, 1996. This suspension was in response to the safety concerns that have been raised about the use of the warnings and gives the Access Board time to research the question of whether the warnings are needed. The suspension does not apply to the requirement for detectable warnings on transit platforms.

We hope this information is helpful to you in responding to your constituents' concerns.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

U.S. Department of Justice
Post Office Box 66738
Washington, D.C. 20035

Dear Mr. Wodatch:

I have been informed by several of my constituents that the Architectural and Transportation Barriers Compliance Board has voted to suspend regulations regarding detectable warning surfaces under the Americans with Disabilities Act until July 26, 1996.

I have constituents who believe that these rules concerning detectable warning surfaces are currently being suspended, although the ruling has not been agreed to by the Department of Justice nor the Department of Transportation, nor have these new regulations appeared in the Federal Register.

The confusion created by the board's actions penalizes the very disabled people whom these laws are intended to protect. I simply want to know if these laws are legally suspended and why they have not appeared in the Federal register if they are?

I look forward to hearing from you concerning this matter at you earliest possible convenience. I appreciate your assistance to this matter.

Sincerely,

Lauch Faircloth
United States Senator

01-03058

MAY 12 1994

The Honorable Sam Farr
Member, U.S. House of Representatives
701 Ocean Street, Room 318
Santa Cruz, California 95060

Dear Congressman Farr:

This is in response to your inquiry on behalf of your constituent, John Jones, regarding the requirements of the Americans with Disabilities Act (ADA). Mr. Jones an architect, asks whether city and county governments must enforce the ADA by insuring that local building projects comply with the ADA Standards for Accessible Design (ADA Standards).

The ADA requires all renovated and newly constructed commercial facilities and places of public accommodations to be built in accordance with the ADA Standards. The ADA is not enforced by county or city officials but by the Department of Justice and private individuals who may bring suits in federal court.

Under the ADA, local building codes remain in effect. However, if elements of a local code provide a lesser standard of access than the ADA requires, a public accommodation or commercial facility is still required to comply with the applicable provision of the ADA Standards. The ADA further provides that local accessibility codes can be submitted to the Department of Justice for certification that they meet or exceed the ADA requirements. Compliance with a certified State or local code will constitute rebuttable evidence of compliance with the ADA in any enforcement proceeding.

You may advise your constituent that further information about the APA is available by contacting the Department's ADA Information Line at 800-514-0301 between 11:00 a.m. and 5:00 p.m. E.S.T.

I hope this will be helpful to you in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

CONSTITUENT REQUEST

DATE: April 4, 1994

STAFF: JU

CONSTITUENT NAME: John Jones

ADDRESS: P.O. Box 371
Salinas, Ca. 93902

PHONE: (408) 753-0764

POSITION/_ INFORMATION/XX BILL STATUS/- DOCUMENT/_

VIEWPOINT OR REQUEST

Mr. Jones, a local architect, wants to know whether the City of Salinas and the County of Monterey must enforce the Americans With Disabilities Act (ADA). Specifically, Mr. Jones asks whether local governments must assure that building projects honor those ADA sections which establish building and building access standards.

01-03061

The Honorable Porter Goss
Member, U.S. House of Representatives
2000 Main Street
Suite 303
Fort Myers, Florida 33901

Dear Congressman Goss:

This letter is in response to your inquiry on behalf of your constituent, (b)(6) XX regarding her inability to find parking spaces large enough to accommodate her lift-equipped van.

The Americans with Disabilities Act of 1990 ("ADA") authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist your constituent in understanding the ADA's requirements. However, it does not constitute a legal interpretation, and it is not binding on the Department.

(b)(6) XX should be pleased to know that under title III of the ADA, a new commercial facilities must provide accessible parking spaces with adjacent access aisles that are designed to be wide enough to accommodate lift-equipped vans. In general, title III of the ADA requires that any new commercial facility be constructed to commonly with the Standards for Accessible Design, 28 C.F.R. Part 36, Appendix A ("the Standards"). A copy of these Standards, which are sometimes referred to as the ADA Accessibility Guidelines, is enclosed.

The Standards require that every new facility have a certain number of accessible parking spaces, including what are called

"van accessible" spaces. An ordinary accessible parking space includes a demarcated access aisle 60" wide, where no cars can park. Van accessible spaces must have an access aisle 96" wide. The total number of accessible parking spaces and access aisles that must be provided depends on the total number of spaces in

cc: Records, Chrono, Wodatch, McDowney, Breen, Contois, OIA
MAF
Udd:Contois:CGL:Goss

01-03062

the parking lot, but even in the smallest parking lots, there must be at least one accessible parking space with a 96" wide access aisle, marked by a sign designating it as "van accessible." These same requirements for accessible parking spaces also apply when a commercial facility is renovated, remodeled, or otherwise altered.

In addition, many existing facilities may be required to provide accessible parking spaces, including van accessible spaces. Among other things, title III of the Americans with Disabilities Act requires anyone who owns, operates, or leases a place of public accommodation -- including grocery stores, shopping centers, restaurants, movie theaters, banks, barber and beauty shops, -medical offices and facilities, and so on -- to remove architectural barriers to access for individuals with disabilities wherever it is readily achievable to do so. A lack of accessible parking spaces (and the accompanying access aisles) constitutes a barrier to access that must be removed if it is readily achievable to do so. Title III defines readily achievable to mean "easily accomplishable and able to carried out without much difficulty or expense." For most public accommodations, it is readily achievable to provide accessible parking spaces, with the-accompanying access aisles, including van accessible spaces.

If (b)(6) XX believes that particular places of public accommodation in her area have failed to comply with the ADA, she

may either file a complaint in federal court to enforce the Act, or file a complaint with the Department of Justice, which is authorized to investigate allegations of violations of title III. If XX(b)(6) wishes to file a complaint with this Department, she should address it to the Public Access Section, Civil Rights Division, Department of Justice, Post Office Box 66738, Washington, D.C. 20035-6738. She should be aware, however, that due to our limited resources and the great volume of complaints we receive, the Department is not able to investigate every complaint.

For your information, I am enclosing a copy of this Department's regulation implementing title III of the ADA and the Technical Assistance Manual that was developed to assist individuals and entities subject to the ADA to understand the requirements of title III. The requirements for new construction and alterations to commercial facilities can be found in sections 36.401 through 36.403 of the Department's title III regulation (pages 35599 through 35601), and are discussed in the preamble to the regulation on pages 35574 through 35583. Section 4.1.2(5) and 4.6 of the Standards contain the specific provisions governing provision of accessible parking spaces and access aisles.

The requirement to remove barriers to access in existing facilities can be found in section 36.304 of the regulation (page 35597), and is discussed on pages 35568 through 35570 of the preamble.

The Technical Assistance Manual for title III contains sections on the requirements for new construction (pages 45-50); alterations (51-56); the Standards for Accessible Design (referred to in the TA Manual as the ADA Accessibility Guidelines), including their requirements for accessible parking (pages 60-61); and the requirements for removal of barriers in existing facilities (pages 30-37).

I hope this information is useful to you in responding to XX (b)(6).

Sincerely,

Deval L. Patrick

Assistant Attorney General
Civil Rights Division

MAR 16 1994

Congressman Porter Goss,

This is a request for help in solving a problem I have with handicap parking.

I have multiple sclerosis and am in a wheelchair. I have a handicap equipped van with a lift. My problem is finding handicap parking spaces wide enough to accommodate a vehicle with a lift.

Even though my van has a sign on it saying the vehicle has a lift and requires extra space and asking others not to park within eight feet, cars still park too close so that I can't get back into my van when I return.

There seem to be several handicap parking

spaces around but very few wide enough for a vehicle with a lift.

I have contacted the Sheriff, DOT, Code and Regulation and have found no help. Even the sheriff's department isn't certain if I can legally park in two spaces.

Is there some way to get more extra wide handicap parking spaces required by law, not

01-03065

only for new facilities but also for existing ones as well?

Thank you,
XX
(b)(6)
XX

01-03066

MAY 12 1994

The Honorable Larry LaRocco
Member, U.S. House of Representatives
621 Main Street
Lewiston, Idaho 83501

Dear Congressman LaRocco:

This letter is in response to your inquiry on behalf of your constituent, XX who seeks information about the requirements, of the Americans with Disabilities Act (ADA).

(b)(6)
XX writes that she leases office space to a bookkeeping business. She inquires whether the ADA requires her

to provide toilet facilities and whether there are exceptions to toilet specifications.

Title III of the ADA would be applicable to XX (b)(6) because she leases to a business that would appear to be a place of public accommodation. Title III does not require a landlord in this circumstance to install toilet facilities where there previously were none. However, if toilet facilities are provided, title III imposes certain requirements to make the toilet rooms accessible to and usable by persons with disabilities.

For existing buildings not undergoing alteration, architectural barriers to access must be removed where it is readily achievable to do so. Readily achievable is defined to mean easily accomplishable and without much difficulty or expense. The ADA makes both the landlord and tenant responsible for such changes, but the obligations can be allocated between them by contractual arrangement.

01-03067

If toilet rooms are being altered, they must be altered to meet the ADA Standards for Accessible Design (ADA Standards) unless doing so would be technically infeasible. If toilet rooms serve other parts of a building that are being altered, the toilet rooms may also have to be altered to meet the ADA standards if the cost of doing so would not be disproportionate to the cost of the overall alteration. In a newly constructed building, all parts of the facility, including toilet rooms, must be built according to the ADA Standards.

I am enclosing copies of the title III regulation which include the ADA Standards and the Department's title III Technical Assistance Manual. The Department also provides information about the ADA by telephone at 1-800-514-0301. The information line is staffed Monday through Friday from 11:00 a.m. to 5:00 p.m. EST.

I hope this information will assist you in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

MAY 12 1994

The Honorable William V. Roth, Jr.

United States Senator
12 The Circle
Georgetown, Delaware 19947-1502

Dear Senator Roth:

This letter is in response to your inquiry on behalf of your constituent, Steven D. Beaston, Town Manager of the Town of South Bethany, who seeks information about the application of the Americans With Disabilities Act (ADA) to local zoning enforcement activities. We have no record of having received Mr. Beaston's letter.

All state and local governmental entities and instrumentalities are public entities within the meaning of title II of the ADA, which provides that "no qualified individual with a disability shall, by reason of such disability, be excluded from participation in or be denied the benefits of the services, programs, or activities of a public entity, or be subjected to discrimination by any such entity." See 42 U.S.C. 12132. By this language, Title II prohibits local governments from discriminating on the basis of disability in all actions they take, including zoning enforcement activities.

There is nothing in title II or the implementing regulation that prescribes a particular type of zoning scheme. Set-back requirements are not prohibited. However, title II requires public entities, including zoning authorities, to make reasonable modifications to their policies, practices, or procedures, if such modifications are necessary to avoid discrimination against individuals with disabilities. 28 C.F.R. 35.130(b)(7). For example, if a zoning ordinance requires a certain set-back between a business entrance and a curb, but the business must encroach on the set-back to ramp its entrance, the zoning authority may be required to issue a variance as a reasonable modification to that ordinance. See example in Title II Technical Assistance Manual, Part II-3.6100, Illustration 1. Thus, the zoning procedures must allow for some process whereby requests for exemptions or special permits for such purposes may be considered. Such requests must be granted where reasonable.

The Honorable William V. Roth, Jr.
Senator, United States Congress
12 The Circle
Georgetown, DE 19947

Dear Senator Roth:

We have attempted to obtain some information on the American's with Disabilities Act. As you can see by the letter attached, I spoke with the Department of Justice, and they informed me that they do have the information we requested.

We have not received a written reply to our letter as of this date with this information. We need to put it into our Zoning Ordinance, which we are presently updating.

We would appreciate any assistance you could provide in either obtaining a response to our letter or providing the information we need as indicated in the letter. Thank you for your attention in the matter.

Sincerely

TOWN OF BETHANY

Mr. John Wodatch, Chief
Public Access Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66378
Washington, DC 20035

Dear Mr. Wodatch:

The Town of South Bethany is in the process of revising it's zoning ordinance. We want to assure adequate provision for handicap access. We are particularly concerned with making provisions in setback requirements that meet requirements of the Americans with Disabilities Act but still permit us some control.

I spoke on the phone with Ms. Lucille Johanson of your staff, and she was very helpful. She cited a case where a ramp had to be permitted even thought it encroached into a required setback. I would appreciate this and other information I could use in ensuring our zoning ordinance meets ADA requirements.

Sincerely yours,

TOWN OF BETHANY

Steven D. Beaston
Town Manager

SDB/tlb

01-03073

MAY 12 1994

The Honorable Richard Shelby
United States Senator
U.S. Courthouse, Room B-28
15 Lee Street
Montgomery, Alabama 36104

Dear Senator Shelby:

This letter is in response to your inquiry on behalf of your constituent. XX who seeks information regarding Federal laws that may require modification of the sidewalks in his apartment complex to be accessible to individuals who use wheelchairs.

The Federal Fair Housing Act is the principal civil rights statute that applies to private residential property. The Fair Housing Act contains guidelines for accessibility to persons with disabilities in residential facilities. For information about the requirements of that Act and information an how to file a complaint under the Fair Housing Act, XX may contact: B6

U.S. Department of Housing and
Urban Development
Office of Fair Housing
451 Seventh St., S.W.
Washington, D.C. 20410-2000
(202) 708-8041

Another potentially applicable Federal law is the Americans with Disabilities Act (ADA), which applies to certain privately owned and operated facilities. The Public Access Section of the Civil Rights Division of the Department of Justice enforces title III of the ADA, which covers places of public accommodation and

commercial facilities. However, it does apply to common areas in residential buildings, such as rental offices, that function as a place of public accommodation and that are not intended for the exclusive use of tenants and their guests. The twelve categories of places of public accommodation are listed in section 36.104 of the enclosed title III implementing regulation,

cc: Records, Chrono, Wodatch, McDowney, Blizard, Novich, FOIA, MAF
Udd:Novich:Congress:Shelby

01-03074

at pages 35593-94. Parking, entrances, access routes, and restrooms serving the areas covered by the ADA would also be covered. Thus, if the sidewalks about which XXXX is concerned serve as routes to a place of public accommodation within his apartment complex, they would be covered by title III of the ADA. However, areas and routes that serve only the residential areas of the facility are not covered by title III.

Title III can be enforced by private litigation or by filing a complaint with the Department of Justice. If the sidewalks are covered by title III, and if XXXX would like to file a complaint regarding the sidewalks, XX should send any relevant information, including the names and addresses of the businesses he alleges to be in violation of the ADA, to:

Public Access Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 66738
Washington, D.C. 20035-6738

All complaints should be in writing and should set forth, in as complete a manner as possible, the factual circumstances surrounding the complaint.

I hope this information is useful to your constituent in understanding the requirements of the ADA.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

DJ 202-PL-615

Mr. William F. Carroll
Executive Director
Portable Sanitation Association
International
7800 Metro Parkway, Suite 104
Bloomington, Minnesota 55425

MAY 13 1994

Dear Mr. Carroll:

I am responding to your letter on behalf of the Portable Sanitation Association International regarding the Americans with Disabilities Act (ADA). I apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights

or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter requests that manufacturers of portable restroom facilities be granted a 2-year exemption from the ADA requirements regarding such facilities. Your letter further requests that portable restroom service companies be allowed to continue to use existing facilities that do not comply with the ADA requirements until they are replaced with complying facilities through normal attrition.

The ADA is a comprehensive civil rights law that prohibits discrimination on the basis of disability by a wide range of covered entities. Accessibility requirements are established by title II, which prohibits discrimination in the programs, activities, and services of public entities, and title III, which covers private entities that own, operate, lease, or lease to places of public accommodation and commercial facilities. Title III provides narrow exemptions for private clubs and religious entities. The Department of Justice is not authorized to grant exemptions from the requirements of the ADA.

cc: Records, Chrono, Wodatch, Blizard, Hill, FOIA, Friedlander
n:\Udd\hille\policylt\carroll.ltr

01-03078

The ADA does not directly regulate the manufacture or distribution of portable restroom facilities. Therefore, the manufacture and sale of inaccessible facilities are not prohibited by the ADA. However, the ADA does regulate the use of inaccessible portable toilet facilities by entities subject to title II or title III of the Act.

When a covered entity provides common use restroom facilities (including portable facilities) in a new or altered facility, the ADA generally requires every public toilet facility to be accessible, unless a number of single user portable toilet facilities are clustered together. 28 C.F.R. part 36, Appendix A, Standard 4.1.2(6); 41 C.F.R. part 101-19.6, Appendix A, Standards 4.1.1(6), 4.1.2(10). At existing facilities that now

use portable restroom facilities, a public entity must ensure that there are sufficient accessible restrooms to meet the entity's obligation to provide "program access;" a place of public accommodation must remove barriers to access to the extent that it is readily achievable to do so.

I hope that this information is helpful to you and that it fully responds to your inquiry.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Washington, DC 20035-6738

Dear Sir,
The mission of the Portable Sanitation Association International (PSAI) is "To expand and improve portable sanitation services and facilities worldwide and to be recognized as the preeminent authority within our industry."

In the spirit of our mission statement, members of our industry have been providing the disabled with accessible portable restroom facilities prior to the enactment of the Americans with Disabilities Act of July 26, 1990.

On May 21, 1993 a delegation of members from our industry, including manufacturers of portable restrooms and portable sanitation service company operators, met with representatives of the Access Board in Washington, DC.

Based on the outcome of this meeting there are no portable restrooms currently being utilized by the disabled community that are in compliance with Title III of the ADA. This is not to say that, in the opinion of the Portable Sanitation Association International, portable sanitation facilities currently in use by the disabled are not adequate to meet their needs.

Portability, clear floor/ground space, transportation and set-up are the reasons existing accessible portable restroom facilities were designed and why they have been used for twenty years without objection. However, based on the ADA requirements and recommendations from the Access Board, the manufacturers are in the process of reviewing the ADA standards to develop portable sanitation facilities that will meet the requirements of the ADA.

The problem in existence now is when the portable sanitation service companies are asked to provide a portable accessible restroom that meets the ADA requirements they are unable to do so, because they do not exist.

The Portable Sanitation Association International requests that the manufacturers of portable restroom facilities be granted a 24 month research and development period to provide the disabled accessible portable restrooms that meet the requirements of the ADA.

In addition we request that the portable restroom service companies

receive grandfathering to allow continued use of the accessible portable restrooms currently being used in their rental fleet. This period of time should be long enough to allow these companies to change their existing equipment to the new equipment through normal attrition of their current fleet.

As you can understand, this issue is time sensitive and needs to be resolved as quickly as possible. Please do not hesitate to contact me regarding this matter.

Sincerely,

William F. Carroll
Executive Director

MAY 13 1994

DJ 202-PL-764

Mr. Kenneth Conaway
Adaptive Mobility, Inc.
1233 Country Club Road
Indianapolis, Indiana 46234

Dear Mr. Conaway:

This is in response to your letter about vehicle accessibility requirements under the Americans with Disabilities Act (ADA) for a private nursing home and/or retirement center. I apologize for the delay in responding.

The ADA authorizes the Department to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding how the ADA may apply to private entities. This technical assistance, however, does not constitute a determination by the Department of Justice of any entity's rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

The Department of Justice regulation implementing title III provides that a public accommodation that provides transportation services, but that is not primarily engaged in the business of providing transportation, must comply with all the applicable nondiscrimination requirements of the Department's regulation, including the obligation to remove transportation barriers to the extent that it is readily achievable to do so. 28 C.F.R. 36.310. However, a public accommodation is not required to retrofit an existing vehicle with a lift.

In addition, a public accommodation is required to comply with the applicable provisions of the Department of Transportation's regulation implementing titles II and III of the ADA. Under the ADA, and the DOT implementing regulation, key elements in determining an entity's obligation is whether the public accommodation provides transportation through a fixed-route or demand responsive system, and whether the entity is

purchasing new vehicles or operating a system with existing vehicles.

cc: Records, Chrono, Wodatch, Blizard, Alfaro, FOIA, Friedlander
n:\udd\alfaro\conway.ltr

01-03082

If the private nursing home and/or retirement center acquires a new vehicle with a capacity of 16 or less for the residents on a fixed route, then the vehicle must be readily accessible to and usable by individuals with disabilities, including those who use wheelchairs unless the vehicle is part of the system that already meets the "equivalent service" standard.

When the private entity purchases or leases a new vehicle that is to be used in a demand responsive system, the new vehicle need not be accessible if the transit provider can show that the system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to the level of service provided to the general public.

The standard of the system when viewed in its entirety providing an equivalent level of service is met when a private entity has, or has access to, a vehicle (including a vehicle operated in conjunction with a portable boarding assistance device) that is readily accessible to and usable by individuals with disabilities to meet the needs of such individuals on an "on call" basis.

For further information, you may contact the Department of Transportation at 1-800-366-1656. I am enclosing copies of the Department of Justice regulation implementing title III of the ADA and the Department's Title III Technical Assistance Manual. I hope that this information is helpful to you and that this letter fully responds to your inquiry.

Sincerely,

Janet L. Blizard
Supervisory Attorney

Coordination and Review Section
Civil Rights Division
U. S. Department of Justice
PO Box 66118
Washington, D.C. 20035-6118

Dear Sir:

Regarding: a. Public Law 101-336, July 25, 1990 - Americans with Disabilities Act of 1990

b. Part 38 - Americans with Disabilities Act (ADA), Accessibility Specifications for Transportation Vehicles, Subparts A and B, Federal Register, Vol 56, No. 173, Part IV, Department of Transportation, 49 CFR

Question - If a private nursing home and/or retirement center operates an existing and/or purchases a new standard, automotive van, less than 22 feet in length and capacity of 8-15 passengers or less including the driver, to transport only the residents of their specific organization at no charge to the residents:

a. Must the vehicle be accessible to wheelchair individuals?

b. If so, must the vehicle comply with the guidelines and requirements for accessibility standards as specified in Part 38, subpart B?

c. If the answer to a and/or b above are yes, what parts of Public Law 101 336 require this compliance?

d. If the answer to a and/or b above are yes, what parts of 28 CFR Part 36 require this compliance?

e. If the answer to a and/or b above are yes, what parts of 49 CFR Parts 27,

37, and 38 require this compliance?

01-03084

Our interpretation of 28 CFR Part 36.310 and 49 CFR Part 37.101 - Since the vehicle has seating capacity of 16 or less, is operated by a private entity not primarily engaged in the business of transporting people, and is not operated on a fixed route, it is our interpretation that: 1) Existing vehicles do not have to be retrofitted to comply and 2) that new vehicles purchased do not have to comply with 49CFR Part 38, Subpart A and B.

Your assistance is greatly appreciated.

Sincerely,

KENNETH CONAWAY

T 5-9-94

DJ 202-PL-590

May 13 1994

James R. Judge, Esquire
Foley Maehara Judge Nip & Chang
2233 Vineyard Street, Suite B
Wailuku, Maui, Hawaii 96793

Dear Mr. Judge:

I am responding to your letter asking for clarification of the requirements of title III of the Americans with Disabilities Act (ADA), and this Department's regulation implementing title III. Specifically, you have asked for an interpretive opinion about the application of the ADA to XXX, which you have identified as an Episcopal School in XXX, XXX, XXX.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. This letter provides informal guidance to assist you in understanding the ADA and the Department's regulation. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Title III of the ADA prohibits discrimination on the basis of disability by any private entity that owns, leases, leases to, or operates a place of public accommodation. A private school, as a place of education, would ordinarily be regarded as a place of public accommodation subject to title III. However, a religious entity, i.e., a religious organization or an entity controlled by a religious organization, is exempt from the requirements of title III. The exemption is intended to have broad application; it applies to both religious and secular activities of a religious entity. Therefore, a private school controlled by a religious entity is exempt from coverage under title III.

Please note, however, that the ADA establishes no procedure through which a religious entity may be "certified" eligible to claim this exemption. The ADA, like all other Federal civil rights laws, requires each covered entity to use its best

cc: Records, Chrono, Wodatch, Breen, Blizard, FOIA, Friedlander
n:\udd\blizard\adaltrs\judge

01-03086

judgment to comply with the statute and the implementing regulations.

For your information, I am enclosing a copy of the regulation implementing title III of the ADA and the Department's Title III Technical Assistance Manual, which was developed to assist individuals and entities subject to the ADA to understand the requirements of title III. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch

Mr. John Wodatch, Director
American's With Disabilities Act
Civil Rights Division
Washington, DC

Dear Mr. Wodatch,

This office has been retained by XXX, an Episcopalian School, who would like to build a gymnasium on its campus in XXX, XXX, XXX.

It is my understanding that if an organization has a religious affiliation, it is exempt from certain ADA requirements.

I would like to obtain an interpretative opinion from you as to whether or not XXX would qualify for such an exemption.

In that regard, enclosed you will please find a copy of a Deed dated September 14, 1992 from the Episcopal Church to XXX, a Hawaii nonprofit corporation. You can see from the restrictive covenants contained therein that the property can only be used for an Episcopal School. Further, the property cannot be conveyed or encumbered without the prior written consent of the Diocesan Council, the Standing Committee and the Bishop of The Diocese of Hawaii, which consent may be withheld. Any breach of the restrictive covenants causes the property to revert to the Grantor, the Episcopal Church.

It is my further understanding that the Episcopal Church maintains insurance coverage on the property, enclosed is a copy of the Schedule of Insurance indicating the same.

Please advise if you require any further information in order to render your opinion.

Thank you very much for your immediate attention to this matter.

Very truly yours,

JAMES R. JUDGE

DJ 202-PL-750

May 13 1994

Mr. Belk Null
Production Manager
Berger Iron Works, Inc.
P.O. Box 7628
Houston, Texas 77270

Dear Mr. Null:

I am responding to your letter concerning the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter requests a clarification of Section 4.26.2 of the ADA Standards for Accessible Design (ADA Standards), which provides: "The diameter or width of the gripping surfaces of a handrail or grab bar shall be 1-1/4 in to 1-1/2 in (32 mm to 38 mm) or the shape shall provide an equivalent gripping surface." As Figure 39 of the Standards illustrates, this measurement applies to the outer diameter of the handrail. Section 4.26.2 does not, however, purport to establish the only acceptable design for accessible handrails.

The ADA is a civil rights law, not a building code. This Department established the ADA Standards in order to eliminate discrimination in the built environment. Those Standards establish minimum guidelines for achieving accessible building design. They do not constitute a strict formula for design and they are not intended to prohibit alternative designs that provide equal or greater access. Section 2.2 of the Standards specifically provides that "[d]epartures from particular technical and scoping requirements of this guideline by the use of other designs and technologies are permitted where the alternative designs and technologies used will provide substantially equivalent or greater access to and usability of

cc: Records, Chrono, Wodatch, Blizard, Hill, FOIA, Friedlander
n:\udd\hille\policylt\null.1tr

the facility." Therefore, alternate designs are not prohibited if the available data shows that such alternate designs are, in fact, substantially equivalent to the Standards. However, in any ADA enforcement action, the covered entity would bear the burden of proving the equivalency of any alternate design.

I hope this information is helpful to you.

Sincerely,

John L. Wodatch

Ref: A.D.A.- Title III- Section 4.26.2- Size of Handrails

Dear Mr. Wodatch,

As a custom metals fabricator, our company builds miles of handrails each year. The size limitations restricting the outside diameter of handrails to 1.5 inches is a major concern to us and others in our industry.

We recently contacted the Access Board regarding this, and they were very quick to respond with a clarification(see enclosed responses). The problem with their clarification is the disclaimer at the end that states that their advisory is not a determination of our responsibility under the A.D.A..

Since you are the enforcing body of the A.D.A., we would like to know what interpretation you have been using in the enforcement of the handrail size restrictions.

As the enforcing body, your input would be of great assistance in solving this matter.

If you have any questions, please call me at 1-800-635-3457.

We look forward to your response.

Thank you very much for your assistance,

Belk Null
Production Manager

01-03091

NOV 24 1993

Mr. Belk Null

Berger Iron Works, Inc.
P.O. Box 7628
Houston, Texas 77270

Dear Mr. Null:

In response to your fax of November 17, 1993 requesting a clarification of ADAAG paragraph 4.26.2 Size and Spacing of Grab Bars and Handrails, the Access Board confirms the advisory that standard IPS pipe sizes designated as 1-1/4 in and 1-1/2 In (nominal) diameter are considered to fall within conventional building Industry tolerances for the purposes of this application.

The Americans with Disabilities Act authorize the Access Board to provide technical assistance to individuals and entities subject to title III of the Act in the application of the ADA Accessibility Guidelines. Please note, however, that the Department of Justice--not the Access Board--is responsible for the enforcement of title III. Thus, this advisory can provide informal guidance only; it is not a determination of your legal rights or responsibilities under the ADA, or any State or local government building code, and is not binding on the Access Board or on the Department of Justice.

Sincerely,

Jim Pecht
Accessibility Specialist

NOV 18 1993

Mr. Belk Null
1414 Bonner Street
Houston, Texas 77007

Dear Mr. Null:

This letter is in response to your inquiry concerning the Americans with Disabilities Act Accessibility Guidelines (ADAAG) and the specified diameter for handrails and grab bars. ADAAG section 4.26.2 specifies a diameter between 1 1/4 to 1 1/2 Inches. This specification applies to the outer diameter, as is shown in Figure 39. However, building industry practice typically specifies pipe size according to the inside diameter, so that a 1 1/2 inch pipe handrail may actually have an outer diameter closer to 2 inches. Such handrails have not posed any known problem. Thus, according to the Access Board, standard pipe sizes designated by the industry as 1-1/4 inch to 1-1/2 inch are acceptable for purposes of section 4.26.2.

You should be aware that although the Americans With Disabilities Act (ADA) authorizes the Access Board to provide technical assistance with respect to ADAAG, the Department of Justice is responsible for enforcement of certain titles of the Act. This letter provides informal guidance only. It is not a determination of your legal rights or responsibilities under the ADA and is not binding on the Access Board or the Department of Justice.

Sincerely,

Dave Yanchulis

Accessibility Specialist

T. 5-13-94

MAY 13 1994

DJ 202-PL-520

Robert Wilkinson
Village Administrator
Village of Canal Fulton
155 East Market Street
P.O. Box 607
Canal Fulton, Ohio 44614-0607

Dear Mr. Wilkinson:

This letter responds to your inquiry on behalf of the Village of Canal Fulton, Ohio. You requested an opinion from the Department of Justice regarding the Village's responsibilities under the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to entities that are subject to the Act. This letter provides informal guidance to assist you in understanding the responsibilities of the Village under the ADA. However, this technical assistance does not constitute a determination by the Department of Justice of the Village's rights or responsibilities under the ADA and does not constitute a binding determination by the Department of Justice.

You have raised a number of questions regarding the use of the basement of the Village Hall for Village programs or activities. Under title II of the ADA, a State or local governmental entity must operate its programs and activities so that, when viewed in their entirety, such programs and activities are readily accessible to and usable by individuals with disabilities. A public entity may not deny the benefits of its programs, activities, and services to individuals with disabilities because its facilities are inaccessible. This standard, known as "program accessibility," applies to all existing facilities of a public entity. Public entities, however, are not necessarily required to make each of their existing facilities accessible.

cc: Records, Chrono, Wodatch, Blizard, Prieto, FOIA, Friedlander
n:\udd\prieto\policy\localgov

01-03094

The concept of "program accessibility" is discussed in sections 35.149 and 35-150 of this Department's title II regulation, 28 C.F.R. Part 35, and section II-5.000 of the title II Technical Assistance Manual (copies enclosed). As stated in section 35.150(a)(3) of the title II regulation, a title II entity is not required to take any actions that it can demonstrate would result in a fundamental alteration of its services, programs, or activities, or in undue financial and administrative burdens. If an action would result in such an alteration or such burdens, the public entity must take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits and services of the program or activity.

Public entities may achieve program accessibility by a number of methods. In many situations, providing access to facilities through structural methods, such as alteration of existing facilities and acquisition or construction of additional facilities, may be the most efficient method of providing program accessibility. The public entity may, however, pursue alternatives to structural changes in order to achieve program accessibility. Nonstructural methods may include the provision of services at alternate accessible sites. When choosing a method of providing program access, a public entity must give priority to the one that results in the most integrated setting appropriate to encourage interaction among all users, including individuals with disabilities.

As a general matter, it is preferable to locate offices serving the public, such as a police department, in an accessible location. Where such space is not available, or where relocation or structural modifications to the site would pose undue financial and administration burdens, individuals who are unable to climb stairs may be served in an alternative accessible location. However, care should be taken to ensure that an equivalent level of service is provided.

To the extent that the Village Hall basement space (or any other existing space owned or operated by the village) is used by employees of the police and other departments, such use is governed by the employment provisions of title II, which adopt

the employment standards promulgated by the Equal Employment Opportunity Commission in its title I regulation. Under title I standards, an employer is not required to make all work areas accessible. Instead the requirement is for "reasonable accommodation" of qualified individuals with disabilities, which is decided on a case-by-case basis. One example of such a reasonable accommodation could be the restructuring of a job by reallocating or redistributing marginal job functions; another example could be offering part-time or modified work schedules. For further discussion of this and other employment issues, we

suggest that you contact the EEOC and request a copy of their title I Technical Assistance Manual. The EEOC can be reached at 1-800-663-EEOC (Voice) or 1-800-800-3302 (TDD).

I hope this information is helpful to you.

Sincerely,

Janet L. Blizard
Supervisory Attorney

Department of Justice
Office on the Americans with Disabilities Act
Civil Rights Division

P.O. BOX 66118
Washington, D.C. 20035-6118

Gentlemen/Ladies:

The Village of Canal Fulton (population 4,157) currently is assessing what structural changes should be made in its public accommodations to comply with the Americans with Disabilities Act (ADA). The Village respectfully requests an opinion from the Department of Justice regarding compliance with ADA requirements in this area.

Village Hall is a one-story structure containing administrative offices and Council Chambers on a first floor which is accessible to the disabled. The Police Department and an office used by utility, payroll and zoning/engineering personnel are located in the basement. The basement level currently is not accessible to the disabled. (Please note there are no detention facilities in the Police Department; prisoners are taken to a jail in a neighboring community.)

In our review of operations, we cannot identify any services which are provided in the basement that could not be provided on the first floor. For example, inquiries regarding utility bills can

and often are handled on the first floor. The same applies for a disabled person who desires to meet with the Village Engineer or Zoning Inspector. A disabled person wishing to meet a police officer or fill out or review a report could easily do so on the first floor.

Based on the foregoing, is the Village still required to install an elevator or chair lift to the basement to comply with the ADA? A related question is whether the Village needs to provide access as part of its employment practices. None of our current employees

01-03097

is disabled. Does the Village have to provide access in anticipation of the possibility that a disabled person might some day be hired?

The Village currently has 23 full-time employees, the majority of which work outside of Village Hall (street and utility employees and police officers). There are 56 part-time employees, 37 of which are volunteer firefighters working from facilities next door to Village Hall.

The Administration and Village Council are committed to complying with the requirements of the ADA. We feel, however, that we can continue to provide services to the disabled without costly structural modifications.

We look forward to receiving direction from the Department of Justice on this issue.

Very truly yours,

Robert Wilkinson
Village Administrator

Mr. Alan Gugenheim
ISI Houston
ADA Compliance Specialists
5005 Riverway, Suite 160
Houston, TX 77056

Dear Mr. Gugenheim:

This letter is in response to your inquiry about the jurisdiction of the Department of Justice under the Americans with Disabilities Act (ADA). I apologize for the delay in our response.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal

advice, and it is not binding on the Department of Justice.

Your letter inquires first about whether the Department's authority extends to title III as well as title II. The Department is responsible for the implementation of both title II and title III. On July 26, 1991, the Department published regulations implementing both titles. Copies of these regulations are enclosed for your information.

You have also asked if the termination of Federal funds is an available remedy under ADA. Fund termination is not a remedy that is available under the ADA; it is an available remedy under section 504 of the Rehabilitation Act of 1973. The Department's regulation implementing title II recognizes that in some situations, both title II and section 504 may be applicable to a single complaint; therefore, the regulation provides that title II complaints may be filed with any Federal agency that would have jurisdiction under section 504. An agency that has section 504 jurisdiction over a complaint will process that complaint according to its procedures for enforcing section 504.

cc: Records, Chrono, Wodatch, Blizard, Alfaro, FOIA, Friedlander
n:\udd\Alfaro\pol.L89

01-03099

Finally, you asked how to file a complaint with the Department of Justice. In the case of a title II complaint, a complaint must be filed in writing within 180 days of the alleged act(s) of discrimination. Complaints should be sent to:

Coordination and Review Section
P.O. Box 66118
Civil Rights Division
U.S. Department of Justice
Washington, D.C. 20035-6118

In the case of a title III complaint, a complaint must be filed in writing and sent to:

Public Access Section
Civil Rights Division

U.S. Department of Justice
P.O. Box 66738
Washington, D.C. 20035-9998

I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

Janet L. Blizard
Public Access Section

Civil:

This letter is directed to your agency to attempt to clarify the ADA law and your authority to resolve entities who do not comply with Title II and III of the law in the list of twenty-one (21) readily achievable modifications that are enumerated in Title III of the DOJ Technical Assistance Manual.

* Does your authority extend into Title III as well as Title II?

* Are you able and willing, if your finding of the facts substantiate such decision, to withhold or terminate federal funding to those entities who ignore their compliance to the ADA Title II or III equirements?

* To accomplish such consideration by your office, what type of form and information should be forwarded to your agency and to whom should it be directed?

Thank you for your prompt attention.

Sincerely,

Alan Gugenheim
President

/ba

MAY 23

The Honorable Tim Holden
U.S. House of Representatives
1421 Longworth House office Building
Washington, D.C. 20515

Dear Congressman Holden:

This letter is in response to your inquiry on behalf of communities in your District seeking guidance concerning their

obligations under the Americans with Disabilities Act (ADA), specifically, their obligations to provide curb cuts or ramps where pedestrian walks cross curbs.

State and local governments are subject to title II of the ADA which requires them to make their services, programs, and activities, when viewed in their entirety, readily accessible to and usable by persons with disabilities. To implement this requirement, the title II regulation explicitly requires newly constructed and altered streets to have curb ramps or other sloped areas at any intersection having curbs or other barriers to entry from a street level pedestrian walkway. The United States Court of Appeals for the Third Circuit recently held that street resurfacing constitutes an alteration within the meaning of title II triggering this obligation to provide curb ramps at every intersection.

With respect to unaltered existing streets and walkways, State and local governments were required by title II to assess whether and to what extent structural modifications were required to meet the title II program accessibility requirement. A transition plan for completion of necessary structural modifications was to have been developed by July 26, 1992, with completion of all work scheduled for no later than January 26, 1995. The title II regulation required transition plans to include a schedule for providing curb ramps and also specified priorities for installing them at walkways serving entities covered by the ADA -- i.e., State and local government

facilities, transportation, places of public accommodations, and employers, followed by walkways serving other areas. The title II regulation does not necessarily require construction of curb ramps at every intersection. Alternative routes to buildings that make use of existing curb cuts may be acceptable under the concept of program accessibility in the limited circumstances where individuals with disabilities need only travel a

marginally longer route.

The number of curb ramps required in a given community may also be limited by the fundamental alteration and undue burden limitations in title II. A State or local government must meet the program accessibility requirements described above unless it can demonstrate that meeting it would result in a fundamental alteration in the nature of the service, program, or activity or undue financial and administrative burdens. The decision that compliance would result in such alteration or burdens must be made by the head of the covered public entity after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching such a conclusion.

I hope this information will be useful to you in advising communities in your District.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

01-03103

DJ 202-PL-757

MAY 23 1994

Ms. Sue Maxwell
Alpena Civic Theatre
10039 U.S. 23 South
Ossineke, Michigan 49766

Dear Ms. Maxwell:

I am responding to your letter to Ms. Sheila Foran regarding the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

You have asked about the requirements of the ADA in regard to providing access to persons with disabilities in an existing city-owned building that is leased to a volunteer theater group. According to your letter, the building has three stories, all of which are accessible only by use of stairs. Your letter expresses concern that an elevator may have to be installed between the stories.

The first issue raised by your letter is whether the building is covered by title II, which prohibits discrimination on the basis of disability in programs offered by public entities, or title III, which prohibits discrimination on the basis of disability by private entities that own, operate, lease, or lease to places of public accommodation, including theaters, or both. The factors to consider in determining if a private entity such as your theater group is operating a program subject to title II are discussed in section II-1.2000 of the enclosed Title II Technical Assistance Manual.

It is possible that both title II and title III may apply to this building, because the theater group may be seen as providing its program on behalf of the city. In that case, each covered entity would be responsible for ensuring compliance with the title to which that entity is subject. Thus, the city would be responsible for ensuring program accessibility under title II

its program on behalf of the city. In that case, each covered entity would be responsible for ensuring compliance with the which that entity is subject. Thus, the city would be responsible for ensuring program accessibility under title II and, at the same time, the theater group would be responsible for ensuring accomplishment of readily achievable barrier removal under title III.

If the theater group is operating a city program, the city must ensure that the program, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities, but it is not required to take any action that it can demonstrate would result in a fundamental alteration in the nature of the program or in undue financial and administrative burdens. 28 C.F.R. 35.150. If the installation of ramps or elevators in the theater at issue would create such undue burdens, the ramps or elevators need not be installed, but the city would be required to find other ways to provide access to its program, including, for example, moving some performances to an accessible location and advertising such performances as being accessible.

Under title III, if applicable, the theater group, as the operator of a place of public accommodation located in an existing building, would be required to remove architectural barriers to the extent such removal is readily achievable, i.e., easily accomplishable and able to be carried out without much difficulty or expense. 28 C.F.R. 36.304. Replacing stairs with a ramp or elevator would constitute barrier removal. Whether removal of any particular barrier is readily achievable is determined on a case-by-case basis and will depend on a number of factors that are discussed in section III-4.4200 of the enclosed Title III Technical Assistance Manual.

A public accommodation generally would not be required to remove a long flight of stairs if such barrier removal would require extensive ramping or installation of an elevator. Therefore, if removal of the stairs in your theater would require installation of an elevator and such installation would be very difficult and expensive in comparison to the theater's size and financial resources, the theater would not be required to install the elevator. If only a few stairs at the entrance needed to be ramped in order to provide an accessible entrance, on the other hand, the balance might shift to the point where, in light of the theater's resources, that form of barrier removal would be required.

If removal of stairs were found not to be readily achievable, the theater would not have to be demolished or closed. Nor, however, would it be completely exempted from the ADA. The theater would still be required to perform whatever

barrier removal was readily achievable. For example, the lack of

an accessible entrance would not excuse the theater from providing accessible seating or accessible restrooms to the extent such measures are readily achievable. In addition, the lack of an accessible route to the upper floor would not excuse the theater from providing an accessible entrance or making the facilities on the upper floor accessible, to the extent those measures are readily achievable.

The distinction between title II and title III may also affect the elevator requirement in other ways. Under title III, an elevator will generally not be required in a building that has fewer than three stories or less than 3,000 square feet per story. Therefore, if your theater building had less than 3,000 square feet per story, it would be exempt from the requirement to provide an elevator between floors under title III (although all other accessibility requirements would still apply), even if installation of an elevator were readily achievable. This elevator exemption is not provided under title II.

More stringent requirements may apply to your building under either title II or title III if any alterations have been undertaken since the effective date of the Act, January 26, 1992.

Your letter also asks whether the city could obtain a determination of ADA compliance in advance of the filing of a formal complaint. The ADA does not provide such a procedure. Finally, your letter asks what the enforcement procedures are under title II and what the deadlines are for compliance with title II. The applicable procedures under title II depend, to a certain extent, on the size of the covered entity. The final deadline for making structural changes to achieve program access is January 26, 1995. However, such structural changes must be completed as expeditiously as possible. The procedures and deadlines under title II are described in detail in the enclosed regulations at pp. 35718-35721.

I am enclosing the Department's regulations implementing title II and title III, and the Department's Technical Assistance Manuals for your further reference. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Civil Rights Division
Office on the Americans with Disabilities Act
U.S. Dep't. of Justice
P.O. Box 66118
Washington, D.C. 20035-6118

Atten: Ms. Sheila Foran

Dear Ms. Foran:

I spoke to you by telephone on January 12 regarding our theater's situation with regard to the ADA. The advisory information you gave was very helpful, as were the publications you forwarded. Thanks so much for your assistance.

While members of our theater group are less concerned now, we find that the Council and staff of the City of Alpena, owners of the building, continue to be worried about possible suit. They cannot afford to install an elevator, even if that were possible, and they are investigating terminating our lease or, possibly, razing the building. I'm writing for more help. I've tried to call you again, but, as I'm sure you know well, it's difficult and expensive to get through.

To refresh your memory: we're an all-volunteer group with no paid staff, occupying a City-owned building which is not accessible. We are the sole occupants of the building and have been there for 30 years. The building has a basement (down nine steps from the lobby), an office and lobby in the front of the building (up three steps from ground level), and an upstairs auditorium (up 15 steps from the lobby). When you asked us the test questions from the Supplement to the Title II Technical Assistance Manual, our answers were: the City pays approx. $2,000 per year, half of the building's heating costs; we have no employees; the $1.00 per year leased building is critical to our existence; we are governed by a board made up of our officers and the directors of our plays. This board has no connection of any kind to City government and the City is not involved in our operation in

any way.

01-03108

Your interpretation, as I understood it, was that the building in question would fall under Title III, even though the City owns the building, because the nexus between the City and the occupant is not close enough for us to be considered to be part of a City program or service. Thus, barrier removal work that is not "readily achievable" would not be required by the ADA.

In addition, as I understood you, even if it should be determined that ACT is part of a City program and therefore under Title II, the City could successfully defend itself against a Complaint, if one were filed, by arguing that it would be an "undue burden" to the City to provide accessibility because of the City's size (13,000) and especially because of its previous expenditures to provide access in other City buildings.

If the above is a valid statement of your advisory opinion, could you please either initial this letter and return it to us, or write one of your own saying so? We need to have some documentation, even though we know that the opinion is not legally binding.

Also, we need further information. If a Complaint were filed against the City, what would happen? What process would be followed" Is a predetermination or waiver of some sort in advance of a Complaint possible or is determination and enforcement dependent upon a Complaint?

Is the City required to do anything now if the building would fall under Title II? What deadlines for compliance do they face?

Again, thanks so much for your help.

Sincerely,

ALPENA CIVIC THEATRE

Mr XX (b)(7) (c)
XX
SIUC
Carbondale, Illinois 62901

Dear Mr. XX (b)(7)(c)

I am responding to your letter concerning the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

You have asked whether the Southern Illinois University at Carbondale (SIUC) is required by the ADA to clear snow from the sidewalks on its campus. SIUC is a covered entity under title II, which prohibits discrimination on the basis of disability in programs offered by public entities.

A public entity is required to provide "program access", that is, the entity is required to operate each service, program, or activity it provides so that, when viewed in its entirety, the service, program, or activity is readily accessible to and

usable by individuals with disabilities. 28 C.F.R. 35.150. See also section II-5.000 of the enclosed Title II Technical Assistance Manual. Providing program access does not necessarily require a public entity to make each of its facilities fully accessible. For example, program access can be achieved by the relocation of services from inaccessible to accessible buildings or by the assignment of aids to program beneficiaries. A public entity is not required to take any action that it can demonstrate would result in a fundamental alteration in the nature of its services, programs, or activities or in undue financial and administrative burdens. 28 C.F.R. 35.150(a)(3).

cc: Records, Chrono, Wodatch, Blizard, Hill, FOIA, Friedlander
n:\udd\hill\policylt\ XX 2.ltr

01-03110

With respect to the situation you describe, if SIUC has responsibility for, or authority over, sidewalks or other public walkways, it must ensure that any such sidewalks and walkways that are necessary to meet the program access requirement are readily accessible to and usable by individuals with disabilities. To meet the program access requirement, a public entity may be required to remove obstacles blocking the passage of persons using wheelchairs or other devices to assist mobility.

The title II regulation also requires covered entities to "maintain in operable condition those features of facilities and equipment that are required to be readily accessible to and usable by persons with disabilities by the Act or this part." 28 C.F.R. 35.133. Therefore, to the extent SIUC is required by the Act to provide accessible sidewalks, the Act also requires maintenance of those sidewalks in accessible condition. Such required maintenance could include reasonable snow removal efforts.

Title 11 specifically provides that "isolated or temporary interruptions" are permitted. 28 C.F.R. 35.133. Therefore, the Act would be violated only to the extent the interruptions in accessibility "persist beyond a reasonable period of time" or are "due to improper or inadequate maintenance." See enclosed title II regulations, p. 35707.

The title II regulation also requires a public entity to

make reasonable modifications in its policies, practices, or procedures when "... necessary to avoid discrimination on the basis of disability, unless the public entity can demonstrate that making the modifications would fundamentally alter the nature of the service, program, or activity." 28 C.F.R. 35.130(b)(7). Under this provision, title II might require SIUC to modify its snow removal procedures if such modification is necessary to ensure that, aside from temporary and unavoidable situations, its sidewalks are not blocked by impediments to travel by wheelchair.

I am enclosing copies of the regulations implementing Title II and the Department's Title II Technical Assistance Manual. I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Enclosures

01-03111
The Honorable Janet Reno 24 January 1994
United States Attorney General

Dear General Reno:
(b)(7)(c)
My name is XX I am a 100% disabled person and I live in a wheelchair. I attend Southern Illinois University at Carbondale and I have a question regarding the new requirements that places be accessible to disabled persons like myself.

It is and has been for the five years I've attend SIUC, the policy of my institution, not to properly and timely clear the sidewalks and access ways after a snow storm. The school receives ever year, un-total'd complaints from students about how the school takes its time about clearing away the snow from the walk ways. Most of the time, they just don't bother to clear the snow at all. When they do, they fail to lay down salt or sand, and even when they do make some effort the work quality is always unusually poor. Often these complaints wind up in the newspaper.

I'm sure that you are aware of the usually bad weather we've had here in the Midwest. Despite the dangerous conditions, the closing of almost every public institution in the county, Southern Illinois University was open. Even if one is a fully functional human, the conditions here were as bad as I've ever seen them. But again, like every other year, I and the rest

of the people who get around in wheelchairs,[and there are quite a few of us at SIUC] were denied access to classrooms. The reason being, that even if a normal human can navigate through the uncleared snow and ice, those of us in wheelchairs cannot. I've missed a weeks worth of school. As an educated person I'm sure you understand the difficult situation one is in when one fails to show up at the opening class. I'm quite sure that like in years gone by, the administration will fail to change anything to make a permanent difference as to how bad weather is dealt with here at SIUC. The administration really doesn't care one little bit, and if they do, I

(b)(7)(c)
XX

01-03112

certainly haven't notice any significant changes in the last five years.

My question to you is if the new law requiring access to the schools for disabled persons applies. Clearly, I believe that the school has a lawfully duty to completely clear away all the snow and ice from around the living halls, school buildings, and the pathways between. This is the only way people with disabilities can access the campus. Most institutions that can't adequately clear away snow and ice close. Most schools and public buildings that can't do this in this county close. With good reasons too, the conditions are very dangerous, and people can get hurt. Most that is, except SIUC. Here at SIUC we are willfully denied access. I believe the clearing, should be timely. Maybe 24 hours after the end of a storm. If you agree, that the failure of the university to timely remove ice and snow does willfully denied access to disabled persons, then please accept this letter as my complaint to you that the disabilities act is being violated here at SIUC.

I will be most grateful for any assistance that you can provide those of us with disabilities here at SIUC. Like every other year since I've been here the university is ignoring the problem. They are waiting for it to melt away

while I am trapped in my room for days. It is not right and it is exactly what Congress wanted to bring to an end when they required access for those of us who are disabled. I hope you will investigate. It is not unlikely that you will receive letters denying these charges from members of the SIUC Administration. If you send someone to investigate I will be happy to prove my statements and provide witnesses as to the truthfulness of my statements. In that many of my friends here at the university are also engineers, I would be happy to provide your investigators with truly expert witnesses if it becomes required.

Sincerely Yours, (b)(7)(c)

DJ 202-PL-424

MAY 23 1994

Ms. Meredyth P. Partridge
Executive Director
Virginia Department of Health Professions
6606 West Broad Street
Fourth Floor
Richmond, Virginia 23230-1717

Dear Ms. Partridge:

This letter is in response to your inquiry of January 4, 1993, regarding whether the Americans with Disabilities Act

("ADA") prohibits funeral homes from imposing increased fees in cases involving bodies harboring infectious diseases. We regret the delay in responding to your letter.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA's requirements. However, it does not constitute a legal interpretation or legal advice, and it is not binding on the Department of Justice.

Title III of the ADA prohibits discrimination on the basis of disability in the full and equal enjoyment of the goods and services of a place of public accommodation. See, e.g., 36.201(a), 36.202(a) and (b), and 36.205 of the title III regulation (copy enclosed). Under title III, funeral homes are considered to be places of public accommodation (28 C.F.R. 36.104), and are, therefore, subject to the non-discrimination provisions of the ADA.

The first question you asked was whether a funeral home may charge an increased embalming fee for a body harboring an infectious disease. In light of the regulations promulgated by the Occupational Safety and Health Administration of the Department of Labor (OSHA) and the guidelines promulgated by the federal Centers for Disease Control and Prevention (CDC), which

cc: Records, Chrono, Wodatch, Breen, Contois, Delaney, Perley,
MAF, FOIA
udd\delaney\partridg.2

01-03114

apply to the handling of all human remains without regard to whether an infectious disease is known to be present, it would be discriminatory under the ADA to assess an extra charge only when a body is known to be harboring an infectious disease. OSHA's Bloodborne Pathogen Rule, 29 C.F.R. 1910.1030, applies to all occupational exposures to blood and other potentially infectious materials and specifically governs those employees who handle human remains. Id. at 1910.1030(a). The regulation requires that employers ensure that their employees follow the standards articulated in the rule at all times. Id. at 1910.1030(a) and (b). Specifically, all blood and certain other bodily fluids

must be treated as if known to be infectious for the human immunodeficiency virus (HIV), the hepatitis B virus (HBV), and other bloodborne pathogens. Id. at 1910.1030(b). Engineering and work practice controls, which eliminate or minimize employee exposure to bloodborne pathogens, must be used at all times, as must personal protective equipment. Id. at 1910.1030(b)(2) and (3).

In addition, the CDC has recommended the use of Universal Precautions -- infection control procedures that treat all human blood as if it is infectious, regardless of whether the person is known or suspected to be infected with HIV or HBV -- when handling the body of a deceased person. Guidelines for Prevention of Transmission of HIV and HBV in Health-Care and Public-Safety Workers, U.S. Department of Health and Human Services, Centers for Disease Control, February l989, at 18. Similarly, the National Funeral Directors Association has adopted a policy recommending the use of the CDC's Universal Precautions by all personnel involved in the handling and preparation of human remains. National Funeral Directors Association Policy On Contagious, Communicable and Infectious Disease, at 1.

Since the OSHA regulation and CDC guidelines require that all bodies be treated as if harboring an infectious disease, the imposition of an additional embalming fee only in cases where a body is known to be harboring such a disease would violate the ADA. Imposition of such an additional fee impermissibly treats persons with disabilities and/or persons known to have a relationship or association with persons with disabilities differently from others who seek the services of a funeral home.1

1 It has come to our attention that some trade embalmers impose a contagious disease surcharge. The funeral director may not pass the surcharge on to the family of the deceased. The funeral director must either (a) find a trade embalmer that does not impose an additional fee or (b) absorb the surcharge and/or

(continued...)

The second question you posed was whether a funeral home can charge a fee for protective gear used by funeral home staff when handling or preparing an infectious disease case. The same analysis applies. Since such protective gear must be worn when handling any body, in compliance with the OSFA Bloodborne Pathogen Rule and Universal Precautions, an additional fee for

protective gear may not be imposed for handling or preparing a body known to be harboring an infectious disease. Again, both the OSHA Bloodborne Pathogen Rule and Universal Precautions require that all bodies be treated as if harboring an infectious disease and that appropriate protective gear be utilized when handling or preparing all human remains. Accordingly, imposition of an additional fee for handling those bodies known to be harboring an infectious disease would violate the ADA, as imposition of such a fee would impermissibly treat persons with disabilities and/or persons known to have a relationship or association with persons with disabilities differently from others who seek the services of a funeral home.

I hope this information is useful to you in understanding the requirements of the ADA. If you have any further questions,feel free to contact our information line at (800) 514-0301.

Sincerely,

John L. Wodatch

MAY 23 1994

DJ 202-PL-629

XX

XX
Bethesda, Maryland XX

Dear XX

I am responding to your letter regarding the Americans with Disabilities Act of 1990, 42 U.S.C. 12181-12189. 1 apologize for the delay in responding.

The Americans with Disabilities Act (ADA) authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter asks about the obligations of law schools under the ADA toward students with learning disabilities, specifically ADD and dyslexia. The ADA prohibits discrimination against persons with disabilities. A disability for purposes of the ADA is a physical or mental impairment that substantially limits one or more major life activities of an individual. A learning disability, such as ADD or dyslexia, may be a disability for purposes of the ADA if it substantially limits a major life activity.

A law school may be covered under title II, which prohibits discrimination on the basis of disability in programs offered by public entities, or title III, which prohibits discrimination on the basis of disability by private entities that own, operate, lease, or lease to places of public accommodation, including places of education.

cc: Records; Chrono; Wodatch; Blizard; Hill; FOIA; MAF.
\udd\hille\policylt\ryan.ltr

01-03117

Title II requires a public (i.e., State or local government) entity to afford individuals with disabilities an opportunity to participate in and benefit from its programs and services that is equal to that afforded to others. A covered public entity must make reasonable modifications in policies, practices, or procedures when necessary to avoid discrimination on the basis of disability, unless such modifications would fundamentally alter the nature of the program. A covered public entity must not impose eligibility criteria that screen out or tend to screen out individuals with disabilities unless such criteria are necessary for the provision of the program. See 28 C.F.R. 35.130. In addition, a public entity must furnish appropriate auxiliary aids and services where necessary to afford an individual with a disability an equal opportunity to participate in and enjoy the benefits of its programs, unless provision of such aids would result in a fundamental alteration in the nature of the program or in undue financial or administrative burdens.

Title III requires a place of public accommodation to afford individuals with disabilities an opportunity to participate in and benefit from its services that is equal to that afforded to other individuals. To fulfill this obligation, a public accommodation may be required to make reasonable modifications in policies, practices, or procedures when necessary to provide services to persons with disabilities, unless such modifications would fundamentally alter the nature of the services. A public accommodation must also take steps to provide auxiliary aids and services when necessary to ensure participation by individuals with disabilities, unless such steps would fundamentally alter the nature of the services provided by the public accommodation or would result in an undue burden, i.e., significant difficulty or expense. Title III prohibits a public accommodation from applying eligibility criteria that screen out or tend to screen out individuals with disabilities unless such criteria are necessary for the provision of the public accommodation's services. See 28 C.F.R. 36.301-36.303.

For your further reference, I am enclosing copies of the regulations implementing titles II and III of the ADA and the Department's Title II and Title III Technical Assistance Manuals. I am also enclosing, for your convenience, a list of organizations serving your area that may be able to assist you in addressing your concerns. These listings come from various sources, and the Department cannot guarantee that the listings are current or accurate. I suggest that if you contact any of these organizations, you let them know that you have received this letter from the Department.

If you have any further questions concerning the ADA, you may call our information line at 800/514-0301 (voice), 800/514-0383 (TDD). I hope this information is helpful to you and that this letter fully responds to your inquiry.

Sincerely,

John L. Wodatch

MAY 23 1994

DJ 202-PL-577
DJ 202-PL-578

Mr. Daniel M. Sprague
Executive Director
The Council of State Governments
Iron Works Pike
P.O. Box 11910
Lexington, Kentucky 40578-1910

Dear Mr. Sprague:

I am responding to letters from yourself and Mr. William Voit on behalf of the Council of State Governments concerning the Americans with Disabilities Act (ADA). I apologize for the delay in responding.

I appreciate your transmittal of the Resolution on Federal Assistance with State Level Implementation of the Title II Provisions of the Americans with Disabilities Act, and your organization's willingness to use its unique position and abilities to assist States and the Department of Justice in implementing the ADA. I believe the efforts of organizations such as yours are valuable to the ultimate fulfillment of the spirit and goals of the Act.

The ADA itself recognizes, as you do, the need for dissemination of information to covered entities, including State and local governments. For that reason, the ADA expressly requires each agency charged with enforcing the ADA to provide technical assistance regarding the agency's area of expertise. Therefore, questions and concerns may be directed to any of several different enforcing agencies, including the Equal Employment Opportunity Commission (for employment issues), the Department of Transportation (for transportation issues), and the Department of Justice (for public access and public services issues).

Over the past two years, the Department of Justice and the other enforcement agencies have been actively pursuing their duties to inform the public and covered entities of the rights and obligations imposed by the ADA. For example, the Department of Justice and the Equal Employment Opportunity Commission have

cc: Records, Chrono, Wodatch, Hill, FOIA, Friedlander
n:\udd\blizard\adaltrs\hill.578

01-03121

jointly published the ADA Handbook, which provides annotated regulations for titles I, II, and III, appendices of information related to the ADA, and resources for gathering additional information. The Department of Justice and Equal Employment Opportunity Commission have also jointly published a booklet of Questions and Answers addressing some of the most often asked questions about the ADA. In addition, the agencies have published Technical Assistance Manuals to provide information about the ADA in a complete and comprehensible format. The Technical Assistance Manuals for titles II and III are updated annually by the Department of Justice and are available on a subscription basis.

In addition to such general information, the Department of Justice has undertaken to provide more specific information and analysis about the application of the ADA through a variety of programs. First, the Department issues letters in response to written questions from covered entities and protected individuals. These letters are available to the public pursuant to the Freedom of Information Act. They can be obtained by sending a written request to: Freedom of Information/Privacy Acts Branch, Civil Rights Division, Department of Justice, Washington, D.C. 20530. Second, the Department has a Speakers' Bureau, made up of speakers with training and expertise in the ADA, that is made available to groups needing more detailed information regarding particular aspects of the Act. Third, the Department of Justice operates a toll-free telephone information line to respond to requests for publications and to provide advice to individuals about specific problems. The information line number is (800) 514-0301 (voice), (800) 514-0383 (TDD) and currently operates from 11:00 AM to 5:00 PM (eastern time).

Finally, to ensure further dissemination of technical assistance, the Department has awarded a substantial number of grants addressing the needs of both covered entities and protected individuals. For example, in 1992, the National Conference of States on Building Codes and Standards received a

grant to prepare and present a training seminar and materials regarding the process, provided by title III of the ADA, for Department of Justice certification of State and local building codes that meet the accessibility requirements of title III.

A number of recent grants have focused particularly on title II of the ADA. For example, the U.S. Conference of Mayors Research and Education Foundation has received a grant to provide material on title II of the ADA to more than 1000 cities, to publish articles on the ADA in its newsletter, to hold an ADA seminar at its annual conference, to create a directory of city ADA coordinators, and to select examples of good ADA practices for use as models by city officials in complying with title II of the ADA. The National Association of Towns and Townships has received a grant to produce ADA training materials for use by

State and regional ADA technical assistance providers to assist the providers to explain the ADA to towns and townships. The Bazelon Center for Mental Health Law has received a grant to document an analysis of South Carolina's public benefit and social services programs and to share the results with other States. The Police Executive Research Forum has received grants to produce materials for training police officers regarding the ADA rights of persons with disabilities. Through these efforts, the Department of Justice is attempting, and will continue to attempt, to address the general concerns raised by your letters regarding the dissemination of ADA information.

Your letter, and the subsequent letter from Mr. Voit, included specific questions that your organization's members had directed to you. Many of these questions can be answered by reference to the Technical Assistance Manuals developed by the Department of Justice and Equal Employment Opportunity Commission to assist entities subject to the ADA to understand and satisfy their obligations. Additional questions pertaining to titles II and III may be resolved as they arise by contacting the Department of Justice telephone information line. Questions regarding title I may be directed to the Equal Employment Opportunity Commission at the address and telephone number provided in the title I Technical Assistance Manual. I encourage you to make your members aware of these resources.

For your reference, I am sending, in a separate package, the Technical Assistance Manuals addressing titles I, II, and III, the Department of Justice regulations regarding titles II and III, the ADA Handbook and the ADA Questions and Answers booklet.

I hope that this information is helpful to you.

Sincerely,

John L. Wodatch
Chief
Public Access section

March 10, 1992

Mr. John Wodatch
Director, Office on the
Americans with Disabilities Act
Civil Rights Division
U.S. Department of Justice
P.O. Box 75087
Washington, D.C. 20013

Dear Mr. Wodatch:

The Americans With Disabilities Act (ADA) affects state governments as employers, service providers, Inspectors, regulators, landlords and tenants. While states applaud the spirit of the Act, further guidance from the federal government is necessary in order for them to comply.

The Council of State Governments (CSG) is the principal secretariat for a number of professional associations of state officials. The members of these associations will be instrumental in implementing the Act. Their association with CSG puts CSG in a unique position to collect and disseminate information about the ADA.

In December 1991, The Council of State Governments' (GSG) Governing Board approved a resolution urging the U.S. Department of Justice to help states implement Title II. Attached is a list of questions we have received from some of our members. To the extent

possible, we have listed the questions by ADA category. The questions are unedited. Some could probably be answered by the ADA Handbook, but presenting them in an unedited format will give you a better idea of state officials' range of awareness about the requirements of this Act.

We would appreciate written response(s) from the Department of Justice and appropriate federal agencies that we could forward to our associations either in report form or via association newsletters. We hope CSG can become a two-way conduit for state-related ADA material and activities.

Please assist us as we help the states achieve compliance with the Americans with Disabilities Act.

Sincerely,

Daniel M. Sprague
Executive Director
cc: Senator Robert Dole
Senator Tom Harkin

Civil Rights Division
U.S. Department of Justice
P.O. Box 75087
Washington, D.C. 20013

Dear Mr. Wodatch:

The Council of State Governments' (CSG) Executive Director, Dan Sprague, recently sent you a letter, a resolution endorsed by our Governing Board, and questions about the Americans with Disabilities Act (ADA).

Attached is another set of questions (and some comments) about the ADA. They are from CSG affiliates. CSG affiliates are professional associations of state officials, some of whom will be instrumental in implementing the ADA. These include the Council on Licensure,
Enforcement and Regulation, the National Association of Government Training and Development Directors, National Association of State Facilities Administrators and the National Association of State Personnel Executives.

The questions are basically unedited. They are categorized by ADA title and by state. Twenty-two states and one territory are represented. We would appreciate a written response from the Department of Justice or appropriate federal agencies. CSG will publish the response(s) to our constituents in a report format or via our affiliate newsletters.

States want to comply with the spirit and letter of the Act, and avoid litigation. However, the nature of the language, apparent delay in some technical standards, and sheer number of agencies involved at all levels of government frustrates the process. We hope you can help.

Please call me at (606) 231-1838 if you need more information. Thanks for your consideration. We look forward to your reply.

Sincerely,
William K. Voit
Senior Policy Analyst

01-03125

5-12-94
Control No. 4040710761

The Honorable Jim Leach
Member, U.S. House of Representatives
102 South Clinton, #505
Iowa City, Iowa 52240-4025

Dear Congressman Leach:

This is in response to your inquiry on behalf of your constituents, participants in the Iowa City Kickers Soccer Club ("Kickers"), regarding the application of the Americans with Disabilities Act (ADA) to such a club and the possible implications of the participation of individuals with disabilities in the club.

The Kickers may be covered by title III of the ADA, which prohibits discrimination on the basis of disability by private entities that own, operate, or lease places of public

accommodation. Places of entertainment, gathering, recreation, and exercise, such as sports facilities, are places of public accommodation. When the Kickers are using such facilities, they may be considered to be the operator of those facilities and, therefore, may be subject to title III. To the extent the Kickers are covered by title III of the ADA, they are prohibited from discriminating against prospective participants on the basis of disability.

The second aspect of the issue your letter raises is the possibility that the Kickers will be denied liability insurance coverage because they allow individuals with disabilities to participate in their program. The club's insurance company may also be considered to be the operator of a place of public accommodation, i.e., an insurance office. Thus, the insurance company may be prohibited by title III from discriminating on the basis of disability in making decisions to grant or deny coverage. The insurance company will not, however, be prohibited by the ADA from administering its benefit plan in accordance with State insurance laws. 28 C.F.R. 36.212. Therefore, State law may also play a significant role in the determination of the insurance company's duties regarding individuals with disabilities, but such State law may not be used as a subterfuge to evade the purposes of the ADA.

CC: Records, Chrono, Wodatch, Hill, McDowney, FOIA, Friedlander
n:\Udd\hille\policylt\leach.ltr

01-03126

Notably, assuming the insurance company were to deny liability coverage to the Kickers, the Kickers could not, under the ADA, use that denial as a basis for refusing to allow individuals with disabilities to participate in the soccer club. 28 C.F.R. 36.212(c).

The final aspect raised by your letter is the possibility that the State and national soccer associations of which the Kickers are members may cancel the Kickers' membership because of the participation of an individual with a disability. The State and national associations would only be subject to title III to the extent they own, operate, lease, or lease to one or more places of public accommodation, e.g., soccer fields, tournaments, or meetings. To the extent such an association fell within title III, it would be prohibited from imposing eligibility criteria that exclude individuals with disabilities unless such criteria

are necessary to the activity. In addition, the association would have to make reasonable modifications to its current policies, practices, and procedures in order to ensure participation of individuals with disabilities in the covered activities, unless making the modifications would fundamentally alter the nature of the activities. Thus, for example, if a State or national soccer association operated a tournament in a facility that it owned, operated, or leased, the association may have to permit the participation of individuals with disabilities. To the extent membership in the association was a requirement for participation in the tournament, the association may need to reasonably modify its membership criteria so that they do not screen out individuals with disabilities. In the absence of a place of public accommodation owned, operated, or leased by the State or national association, however, the association's membership decisions may not be covered by the ADA.

If the Kickers wish to have further information about the requirements of the ADA, they may contact our ADA information line at 800/514-0301 (voice) or 800/514-0383 (TDD) .

I hope this information will be useful to you in responding to your constituents.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

RE: Iowa City Kickers Soccer Club

Dear Mr. Wodatch:

I have been contacted by the above named youth soccer club asking For my assistance in obtaining information about how the Americans with Disabilities Act applies to their club.

The Iowa City Kickers is a nonprofit recreational soccer club servicing over 2,400 children on 150 teams. The Kickers do not own, lease or operate any facilities. They use, with permission, soccer fields in parks owned by two cities and provide financial contributions to the cities to maintain and develop fields.

The Kickers are members of the Iowa State Youth Soccer Association and the National Youth Soccer Association. Through the national organization the Kickers receive liability insurance. Because the Kickers have adopted a policy of compliance with the ADA, and therefore are allowing a disabled person aided by a walker to play, the state and national organizations are reviewing the Kickers membership and insurance.

This matter is very important to my 2,400 young constituents and their soccer club. The Kickers are in jeopardy of losing their liability insurance because it is not clear that Title III of the ADA applies to their situation. Their concerns are intensifying so I would appreciate receiving any information you can provide.

Please address any additional questions and a response to the attention of Janelle Rettig in my Iowa City office, 102 S. Clinton #505, Iowa city, Iowa 52240, (319) 351-0789. Thank you for your assistance.

Sincerely,
Jim Leach
Member of Congress

01-03128

DJ 202-PL-746 JUNE 2 1994

Ms. Barbara Foster
Director of Residence Services
Laurel Lake Retirement Community

200 Laurel Lake Drive
Hudson, Ohio 44236

Dear Ms. Foster:

This letter is in response to your request for information about the requirements of the Americans with Disabilities Act ("ADA") applicable to the swimming pool at your retirement community.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities having rights or obligations under the Act. This letter provides informal guidance to assist you in understanding the ADA requirements. However, it does not constitute a legal interpretation or legal advice, and is not binding on the Department.

Title III of the ADA applies to all privately owned places of public accommodation that fall within one of the twelve categories of "places of public accommodation" listed in the Act. Strictly residential facilities are not included in the twelve public accommodation categories and are thus not covered by the ADA. However, places of public accommodation within strictly residential facilities, such as recreational facilities, may be covered by the ADA, if their use is not limited exclusively to the owners, residents, and their guests.

Your correspondence to us indicates that the swimming pool in your facility is utilized only by residents and their visitors. Thus, assuming that the retirement community is a privately owned residential facility and would not be considered a social service center establishment, the pool would not be subject to the ADA requirements for accessibility. Nonetheless, your housing units may be subject to the requirements of the Fair Housing Act of 1968, as amended, which prohibits discrimination

on the basis of disability. For further information on the accessibility standards of the Fair Housing Act, please direct

your inquiries to the U.S. Department of Housing and Urban Development. The provisions of the ADA regarding public accommodations within residential facilities are described in more detail in the enclosed Technical Assistance Manual published by the Department of Justice. See Part III-1.2000 at page four.

If your residential facility provides a significant enough level of social services, such as meals, counseling, transportation or training, it may be covered under title III of the ADA as a "social service center establishment." The owners and operators of such a "social service center establishment" are required to remove architectural barriers to accessibility if removal is readily achievable, that is, without much difficulty or expense. The barrier removal obligations for existing facilities do not require a facility to exceed the requirements that would apply to new construction that are set out in the ADA Standards for Accessible Design. The Standards do not have specific provisions regarding swimming pools. When there are no specific standards for a particular type of facility in the Standards, the general standards should be applied to the extent possible. For example, a swimming pool complex must comply with the requirements for the parking facility, route to the facility door, route to the pool, locker rooms, showers, etc. Discussion of these provisions can be found in section 36.304 of the enclosed title III regulation, and at pages 30-40 and 46-47 of the Technical Assistance Manual. Also enclosed as Appendix A to the title III regulation are the ADA Standards for Accessible Design.

I hope this information is useful to you in understanding the requirements of the ADA.

Sincerely,

John L. Wodatch
Chief
Public Access Section

Enclosures

June 3 1994

The Honorable Amo Houghton
Member, U. S. House of Representatives
32 Denison Parkway West
Corning, New York 14830

Dear Congressman Houghton:

This letter responds to your inquiry on behalf of your constituent, Dr. Bruce Surosky, concerning the regulatory requirements of the Americans with Disabilities Act (ADA) for accessibility to toilet rooms associated with examination rooms in a doctor's office.

The ADA carefully balances the rights of persons with disabilities with the costs to businesses of providing access. The regulations formulated by the Department of Justice maintain the law's careful balance and recognize the legitimate needs of the business community for efficiency and profitability.

In new construction, where good design practices can result in accessibility with little or no increase in overall square footage and where knowledgeable application of the technical requirements allows ordinary, "off-the-shelf" toilets and sinks to be used if properly installed, accessibility costs have been repeatedly demonstrated to be minimal. Therefore, the new construction requirements are that each public or common use toilet, such as the toilet associated with an examination room, must be accessible.

If a doctor's office, including examination rooms, is being voluntarily altered, then each altered space or element must comply with the new construction requirements unless technically infeasible. If the constraints of existing conditions constitute technical infeasibility, the alteration must provide accessibility to the maximum extent feasible.

01-03131

Another consideration is that when undertaking alterations to an area containing a primary function the path of travel to the altered area and the restrooms, telephones, and drinking fountains that serve the altered area must be made accessible to the extent that such additional modification costs do not exceed 20% of the cost of the overall alterations.

Enclosed are copies of the Department's implementing regulation for Title III of the ADA and the Title III Technical Assistance Manual. You may wish to pass these on to Dr. Surosky for his further reference. I hope this information is helpful to you in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

Mr. John Wodatch
U.S. Department of Justice
Chief of Public Access Section
Civil Rights Division
PO Box 66738
Washington, D.C. 20035

Dear Mr. Wodatch:

I am enclosing a letter from one of my constituents.

Any assistance you may be able to provide Dr. Snyder would be greatly appreciated.

When Congress approved the Americans With Disabilities Act it was intended to help those with disabilities. Despite the good intentions of this bill, it is important that it is reasonably implemented. As we provide disabled individuals with accessible accommodations, we must make certain that the requirements placed on businesses are consistent with the intent of the legislation and do not place an unfair burden on the owners of these businesses. In this particular case, mandating wheelchair accessible bathrooms for each of the examining rooms seems to exceed the requirements that Congress had intended. I would appreciate hearing from you in this regard.

If you have any questions, please contact John Campbell in our Corning district office.

Thank you for your time and consideration.

Sincerely,

Amo Houghton
Member of Congress

January 13, 1994

Congressman Amory Houghton
32 Denison Parkway West
Corning, New York 14830

Dear Congressman Houghton:

Thank you for your courtesy and interest in the problem that we discussed during our telephone conversation January 3, 1994. Your assistance in solving our dilemma--which seems to involve the spirit of the law, as opposed to the letter of the law, but has great access and cost repercussions--would be greatly appreciated.

Specifically, our problem involves an interpretation of the Americans With Disabilities Act by the Architectural and Transportation Barriers Compliance Board--wherein it is their position that all bathroom facilities in a new or substantially renovated medical office suite be built to handicap specifications. This means that each of these rooms must be oversized (about two times normal) and have special toilets, sinks and support/transfer bars. In a busy primary care office such as ours, where each of three to eight examination rooms requires its own bathroom, this certainly creates an undue hardship and may in fact, reduce access to care if we cannot sufficiently expand our operation to meet current patient demand. Even if we can find the additional space to meet their expectations, it significantly increases the cost of providing health care services.

Please be assured that it is not our intention to ignore the needs of our physically disabled patients or employees. On the contrary, we support and are more than willing to comply with the spirit of the Americans With Disabilities Act. However, it is our position that reasonable accommodations can certainly be made for affected individuals by having one bathroom in our suite--as well as all corridors and passageways--accessible to the handicapped. I would

note that the Health Center For Women, where our office is located, was constructed only two years ago and also provides excellent access parameters and handicapped-accessible public facilities. I honestly believe that the addition of one handicapped bathroom in our suite will adequately complement these accommodations, without creating undue and counter-productive hardships for our medical

01-03134

offices. It is also worthwhile to note that other parameters associated with accessing our services (such as parking) don't have to be 100% handicapped accessible. Rather, only a representative portion of available parking spaces have to be handicapped accessible.

Finally, it is important to note that the Department of Justice and the U.S. Equal Employment opportunity Commission have published their interpretation of the ADA (attached), wherein they indicate that only "a reasonable number . . . of bathrooms must be made accessible." Unfortunately, the Architectural and Transportation Barriers Compliance Board--to which the EEOC refers technical questions on accessible design in new construction and alterations--does not share this view.

Again, any assistance you can give us in negotiating this legal gridlock would be greatly appreciated.

Respectfully,

Bruce Surosky, M.D.

T. 6/17/94
MAF:AMP:ca
DJ 204-29-0

Ms. Kathleen Hagen
Attorney-at-Law
Minnesota Disability Law Center
430 First Avenue North, Suite 300
Minneapolis, Minnesota 55401

Dear Ms. Hagen:

This is in response to your letter to Attorney General Janet Reno regarding a letter to her from the Council of State Administrators of Vocational Rehabilitation. Although we are unable to comment on correspondence the Attorney General receives, we are able to address the issues you raise in your letter. Specifically, you express concern regarding the responsibility of State Vocational Rehabilitation Agencies to pay the cost of auxiliary aids for students with disabilities in light of newly raised arguments that the Americans with Disabilities Act of 1990 (ADA) changes the existing allocation of responsibility to pay for such aids. We apologize for any delay in responding to your letter.

The ADA authorizes the Department to provide technical

assistance to individuals and entities with rights or obligations under the Act. This letter does not constitute a legal interpretation or a formal legal opinion, and is not binding on the Department of Justice.

Generally, under the ADA, both public and private institutions of higher education have an independent responsibility to provide auxiliary aids and services, such as interpreter services and readers, to individuals with disabilities. Under title II this obligation arises when such aids and services are " ... necessary to afford an individual with a disability an equal opportunity to participate in, and enjoy the benefits of, a service, program, or activity conducted by a public entity." See Section 35.160(b)(1) of the enclosed title II regulation.

CC: Records CRS Chrono MAF Pecht. FOIA congress.93/hagen
McDowney

01-03136

Under title III, such aids and services must be provided ". . . when necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individuals because of the absence of auxiliary aids and services .... " See Section 36.303(a) of the enclosed title III regulation.

The provision of an aid or service is not required under either regulation when the covered entity can demonstrate that providing such an aid or service would result in a fundamental alteration in the program or activity being offered (or, in the case of a title III entity, in the nature of the goods, services, facilities, privileges, advantages or accommodations being offered) or in undue burdens. These concepts are explained in more detail in the enclosed regulations and in section II-7.0000 of the enclosed title II Technical Assistance Manual and section III-4.3000 of the enclosed title III Technical Assistance Manual.

The ADA was not intended to affect existing law and policy under the Rehabilitation Act of 1973, as amended (the Rehabilitation Act), with respect to the general obligations of State Rehabilitation Agencies. As noted in the preamble to the

original regulation, promulgated by the now-defunct Department of Health, Education and Welfare to implement Section 504 of the Rehabilitation Act, " ... the Department anticipates that the bulk of auxiliary aids will be paid for by state and private agencies, not by colleges and universities." See 42 FR 22693 (May 4, 1977). Nothing in this Department's title II regulation was intended to change that expectation. The specific issue of whether a student who is not already the client of a Vocational Rehabilitation program can be required to apply for vocational rehabilitation services is currently under review.

We hope that this information will be of assistance to you.

Sincerely,

Deval L. Patrick
Assistant Attorney General
Civil Rights Division

Enclosures (4)

01-03137

May 18, 1994

The Honorable Janet Reno
United States Attorney General
Washington D.C. 20530

Dear Ms. Reno:

I am writing to you concerning the letter you received from the Council of State Administrators of Vocational Rehabilitation. I am a staff attorney with the Minnesota Disability Law Center, and my specialty is ADA issues. I receive questions daily from persons with disabilities regarding the ADA and hear stories of discrimination they have experienced in, violation of the ADA. I an, also a person with a disability, I am blind. I received an education, including a law degree, with assistance from the vocational rehabilitation agency in my state. Without their assistance in paying for readers, and in providing, some other financial services, I would not have been able to get my degree. I am very distressed by the implications of this

letter. I am also angered by the fact that our state vocational rehabilitation agencies are using time and money which could better be spent providing services for persons with disabilities, in the hiring of legal counsel to formulate such specious arguments as were raised in this letter. Without exception, the arguments raised are disingenuous and without merit.

The first argument raised is that state-funded institutions of post-secondary education are public entities covered under Title II of the Americans with Disabilities Act (ADA.) The letter argues that to send students with disabilities to State Vocational Rehabilitation Agencies to gain services, instead of providing those services themselves, subjects the colleges receiving state funding to charges of violation of the ADA. They argue that this is true, not merely because the school fails to provide physical or program access, but also because it imposes an extra burden, in fact they refer to it as a "surcharge" for students to have to contact Rehabilitation Agencies to seek such services. Such a "surcharge", they argue, is in violation of the ADA. This argument is flawed. Services provided by Vocational Rehabilitation Agencies are generally free to students with disabilities who qualify for such

services. Students with disabilities who are gaining an education with a goal toward future employment almost always can gain such services from these agencies. The "surcharge" imposed on persons with disabilities would occur if State Rehabilitation Agencies were allowed to stop providing such auxiliary aids as are necessary for students to gain an education, merely because such services should be provided by the college the student is attending. This would mean that the students with disabilities would be left to institute the complaint process against the University, and might not gain an education at all if they did not have the private means to pay for the services they needed, or if they could not get the college to provide such services. Persons with disabilities denied such an education, when such

persons already constitute the largest group of unemployed persons, will have greatly decreased chances of productive employment. State Vocational Rehabilitation Agencies would, at best, be placing a "surcharge" on persons with disabilities in violation of the ADA.

The second argument raised is that the ADA prohibits one state-subsidized agency from perpetuating ongoing discrimination perpetrated by another state-funded agency. Thus, they argue, that if they participate in providing services to students with disabilities that a post-secondary college receiving public funding should provide, that the rehabilitation agency will be perpetuating the ongoing discrimination perpetrated by the college in question. This argument ignores the question of how students with disabilities are to gain services, including auxiliary aids, in order to complete their education, if a college cannot or will not provide that service, and the State Rehabilitation Agency will not provide the service. If a state agency refuses to provide services to a student with a disability simply because a post-secondary school should be providing those services, unquestionably the State Rehabilitation Agency itself would be perpetuating ongoing discriminatory actions against students with disabilities.

The third argument raised, more of a rhetorical question actually, is: why should students with disabilities be discriminated against by not being provided services which would be provided to students without disabilities? This question is based on a flawed premise. The University has no obligation to provide additional services or pay for auxiliary aids for students without disabilities. In fact, to ask for such accommodation, a student has the obligation to produce evidence of disability and indicate what accommodation is necessary.

The fourth argument raised was that post-secondary schools falling under Title III, in essence private schools, are considered public accommodations and must not discriminate against

students with disabilities in the provision of services. Again, the agencies attempt the specious argument discussed before that asking students to seek assistance from vocational rehabilitation agencies is a burden on the student with a disability. I can guarantee you that no student with a disability considers it more of a burden to seek services from a Vocational Rehabilitation Agency than they do to attempt to pay for those services themselves or to not gain an education at all because they cannot gain such services.

Finally, the letter concedes that previous cases decided under Section 504 of the Rehabilitation Act do not support these arguments, but they argue that those cases were decided prior to the passage of the ADA. The cases to which they refer indicate that, while a federally funded post-secondary school has the obligation to provide physical and program access, that a vocational rehabilitation agency, also receiving federal subsidies, cannot refuse to cover the services. The object of both Section 504 and the ADA is, after all, the provision of an education to a person with a disability, not to quibble about who will provide the service. The language incorporated into Title II of the ADA to provide a student with a disability with services whether or not the college in question refused to cover the services. The object of both Section 504 and the ADA is all, the provision of an education to a person with a disability, not to quibble about who provide the service. The language incorporated into Title II of the ADA is the same language that already existed in Section 501, and the administrative remedies are the same as well.

The purpose of Title II of the ADA was to provide the same protection for persons with disabilities receiving state or locally subsidized funding, that such persons currently receive from agencies receiving federal funds. Thus far, cases brought under the ADA have used Section 504 as instructive guidance, and it is unlikely that such cases brought under the ADA would result in a different decision than that reached previously under Section 504. The Council of State Administrators of Vocational Rehabilitation should be ashamed to advocate the balancing of their budgets on the backs of persons with disabilities. Rather than attempt the decrease of services they provide to persons with disabilities, such agencies should be seeking additional ways to provide such services as persons with disabilities need to become productive citizens.

No one would disagree that all post-secondary schools should provide physical and program access to persons with disabilities. Perhaps your office can advise post-secondary schools that they must make themselves accessible physically, as well as providing program access and reasonable accommodation, for students with disabilities. However, I would request that you also advise State Vocational Rehabilitation Agencies that they cannot avoid the responsibility of providing services, including auxiliary aids, to persons with disabilities, and that attempts to avoid their responsibilities in this area would constitute a violation of the ADA.

Thank you for the opportunity to respond to this letter. If you have questions, you may call me at (612) 334-5785, Extension 253.

Sincerely,

Kathleen Hagen
Attorney-at-Law

KH:dld

01-03141

T. 6-13-94

DJ 202-PL-762 JUN 20 1994

Dale J. Atkinson
Atkinson & Atkinson
1603 Orrington Avenue
Suite 2080
Evanston, Illinois 60201

Dear Mr. Atkinson:

I am responding to your letter, on behalf of the National Association of Boards of Pharmacy (NABP), regarding the Americans with Disabilities Act (ADA).

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

Your letter addresses the application of the ADA to the National Association of Boards of Pharmacy Licensing Examination (NABPLEX), which is developed and owned by NABP and licensed to and administered by State pharmacy licensing agencies. You have asked whether the NABP or the State licensing agencies are responsible under the ADA for providing reasonable accommodations to individuals with disabilities who take the NABPLEX.

Title II of the ADA prohibits discrimination on the basis of disability in the programs, activities, and services of public (i.e., State and local government) entities. Title III requires private entities who offer examinations related to licensing to ensure that those examinations are accessible to individuals with disabilities.

The State licensing agencies that administer the NABPLEX are covered by title II. Title II provides that a public entity must not administer a licensing program in a manner that subjects qualified individuals with disabilities to discrimination on the basis of disability. 28 C.F.R. 35.130(b)(6). In order to fulfill that obligation, a public entity administering a

cc: Records, Chrono, Wodatch, Blizard, Hill, FOIA, Friedlander
n:\udd\hille\policylt\atkins.ltr

01-03142

licensing examination must take appropriate steps to ensure effective participation of individuals with disabilities. Such steps may include reasonable modification of policies, practices, and procedures, elimination of unnecessary eligibility criteria, and provision of auxiliary aids and services where necessary. 28 C.F.R. 35.130; 28 C.F.R. 35.160. Therefore, title II requires the State licensing agencies to ensure that the administration of the NABPLEX does not discriminate on the basis of disability.

The fact that title II obligates the State licensing agencies to administer their licensing examination in a non-discriminatory manner does not necessarily mean that NABP is exempt from obligations under the ADA. Under title III, any private entity that offers an examination related to licensing must ensure that the examination is selected and administered so that its results accurately reflect the aptitude or achievement of individuals with disabilities, rather than reflecting the disabilities. 28 C.F.R. 36-309. Therefore, to the extent that the administration of an examination related to licensing is within the control of a private entity, that private entity may be required to ensure accessibility to individuals with disabilities.

In addition, title II prohibits covered entities from discriminating on the basis of disability through contractual arrangements. 28 C.F.R. 35.130(b)(1). Therefore, the State licensing agencies would be prohibited from contracting with NABP to have NABP administer the test in a way that would not meet the requirements of title II. Further, title II prohibits covered entities from providing significant assistance to any organization that discriminates on the basis of disability in providing any service to beneficiaries of the covered entity. 28 C.F.R. 35.130(b)(1)(v). Therefore, to the extent the NABPLEX itself has the effect of excluding people because of their disabilities, the State licensing agencies may be prohibited by the ADA from dealing with NABP.

In situations where the ADA imposes overlapping obligations on two or more entities, the ADA does not determine which entity must accept ultimate responsibility for meeting or failing to meet those obligations. Instead, both entities are considered to be fully legally responsible and either party, alone, may be held liable for a violation. The allocation of responsibility between the parties is a contractual matter to be resolved by the parties. The allocation of responsibility is binding only between the parties.

For your further information, I am enclosing copies of the regulations implementing titles II and III. I hope that this information is helpful to you and that this letter fully responds to your inquiry.

Sincerely,

John L. Wodatch
Chief
Public Access Section

ATKINSON & ATKINSON
1603 ORRINGTON AVENUE
SUITE 2080
EVANSTON, ILLINOIS 60201

February 3, 1994

Mr. John Wodatch, Director
Office of the Americans with Disabilities Act
Civil Rights Division
US Department of Justice
Washington, DC 20530

RE: Americans with Disabilities Act

Dear Mr. Wodatch:

This law firm represents the National Association of Boards of Pharmacy ("NABP" or "Association") which hereby formerly requests a letter of opinion or letter ruling from the civil Rights Division of the U.S. Department of Justice with regard to the Americans with Disabilities Act.

NABP was established in 1904 by the state boards of pharmacy to serve as a mechanism for sharing information and for the purpose of establishing licensure transfer (interstate recognition) through the development and implementation of uniform licensure requirements. NABP is a not-for-profit Kentucky corporation recognized by the Internal Revenue Service as an organization exempt from taxation under Section 501(c) (3) of the Internal Revenue Code. Its members include the boards of pharmacy of all of the states of the United States, the District of Columbia, Puerto Rico, eight (8) of the provinces of Canada, and two (2) of the states of Australia.

The regulation of the pharmacy profession is statutorily vested in the boards of pharmacy or relevant state departments of professional regulation (licensing agency) of each jurisdiction. These licensing agencies are granted the ultimate authority in

decision making with regard to the licensure of pharmacists by the respective state legislation, generally referred to as the Pharmacy Practice Act. As a prerequisite to licensure, most practice acts require graduation from an accredited school, completion of an internship, successful completion of a licensure examination, completion of an application form and payment of applicable fees. Statutorily, the licensing agency is responsible for, and cannot delegate, its authority to issue or deny a license to an applicant.

01-03145

These licensing agencies, as mandated by statute, utilize a licensure examination which tests for minimum competencies to safely practice pharmacy. The complex process of developing a psychometrically sound and valid examination requires specialized skills and is extremely costly. State boards do not have the skilled personnel nor funds to prepare such an examination on an individual basis. Accordingly, the states have elected to utilize a national standardized examination to enhance initial licensure and to foster the ability of pharmacists to transfer from Jurisdiction to jurisdiction based on uniform standards.

NABP developed a uniform licensing examination referred to as the National Association of Boards of Pharmacy Licensing Examination (NABPLEX). The NABPLEX was developed through interaction with practitioners, academia, and regulators, to produce a valid and defensible test in accordance with contemporary testing standards. As an aid to government, NABP utilizes its resources and access to data to produce a valid examination which is standardized and which is sold to and administered by each board on uniform dates. NABPLEX has been utilized since the early 1970's. Currently, all states (with the exception of California), the District of Columbia, and Puerto Rico require successful completion of the NABPLEX as a prerequisite to licensure as a pharmacist. NABPLEX is copyrighted and owned by NABP.

The states, through their regulatory departments or boards of pharmacy, contract with NABP to purchase the NABPLEX which they utilize in the licensure process. The board or the state designated testing service administers the NABPLEX. NABP does not administer the NABPLEX in any jurisdiction.

The rights and obligations between NABP and the licensing authority are contractually set forth in an agreement duly executed

between the parties. NABP does not offer its examination directly to candidates for licensure. It contracts with and provides the state board of pharmacy with the examination and related scoring and statistical services. The state board offers the exam to candidates for licensure and administers the exam under conditions agreed to by NABP and the states to assure the continued validity and security of the NABPLEX.

Candidates apply for licensure, sit for the examination, and provide substantiation of compliance with the statutory requirements for licensure with the board of pharmacy. NABP has no direct nor indirect contact with candidates for licensure with regard to the application for licensure nor the administration of the NABPLEX.

In light of the Americans with Disabilities Act, issues have been raised over the entity legally and fiscally responsible for providing reasonable accommodations to disabled candidates who apply through the states to sit for the NABPLEX. Specifically, NABP respectfully requests the opinion of the Department of Justice as to the entity responsible for bearing the costs of accommodations where the state licensing agency (which administers the NABPLEX) is requested by a disabled candidate for licensure to provide a reasonable accommodations) related to NABPLEX. The state agency consults with NABP to determine whether an accommodation compromises the security or validity of the NABPLEX.

It is NABP's position that Title II of the ADA (which covers public entities) is applicable and therefore, the legal and fiscal responsibility to provide reasonable accommodations rests with the state licensing authority which administers the licensure process, including the administration of the NABPLEX.

Since, (i) under law, the authority to issue pharmacy license cannot be delegated by the state licensing authority to the NABP or any outside organization, (ii) NABP cannot offer its examinations directly to candidates for licensure and (iii) NABPLEX is administered by the state authority, NABP has concluded that Title III (which covers private entities) is not applicable under the facts as set forth in this letter.

NABP respectfully requests verification from the Department of Justice of these conclusions. Should you have any questions or need any further data, please do not hesitate to contact us. We look forward to your prompt reply.

Very truly yours,

Dale T. Atkinson

Roger Pauly
City Attorney
City of Eden Prairie
370 Suburban Place Building
250 Prairie Center Drive
Eden Prairie, Minnesota 55344

Dear Messrs. Brooker, LeFevere, and Pauly:

I am responding to your letter concerning the Americans with Disabilities Act (ADA). I apologize for the delay in responding.

The ADA authorizes the Department of Justice to provide technical assistance to individuals and entities that have rights or responsibilities under the Act. Pursuant to that authority, this letter provides informal guidance to assist you in understanding the ADA. However, this technical assistance does not constitute a legal interpretation of the statute, and it is not binding on the Department.

You have asked about the application of the ADA to the activities of a joint powers organization (JPO) among three cities. The JPO is covered by title II of the ADA, which prohibits discrimination on the basis of disability by public (i.e., State or local government) entities and instrumentalities.

Your letter specifically addresses recreational programs provided by the JPO for individuals with disabilities, including "adaptive" programs that serve only individuals with

cc: Records, Chrono, Wodatch, Blizard, Hill, FOIA, Friedlander
n:\udd\hille\policylt\brooker.ltr

01-03148

disabilities, and "integrated" programs that serve individuals both with and without disabilities together. Your questions focus on the JPO's dealings with non-residents of the participating cities, and particularly on whether such non-residents can legally be excluded from the programs or charged a higher fee for participation therein.

The ADA prohibits discrimination on the basis of disability. It does not address other bases for treating people differently. Therefore, the primary consideration in answering your questions is whether the JPO's proposed actions would treat an affected person differently from other people in similar situations on the basis of the person's disability.

A public entity may not impose eligibility criteria that screen out individuals with disabilities from fully and equally enjoying any program, unless such criteria are necessary for the provision of the program. Thus, the JPO may not legally exclude non-residents with disabilities from any particular activity while permitting non-residents without disabilities to participate. Nor may the JPO legally charge a higher fee to non-residents with disabilities than it charges to non-residents without disabilities, even if the higher fee is based on the

higher cost of providing service to the individuals who have disabilities. 28 C.F.R. 35.130(f). Rather, the ADA requires that such costs be absorbed by the service provider or distributed to all users of the program, regardless of disability. Thus, all non-resident participants in an integrated activity must be charged the same fee, regardless of whether or not they have disabilities. Further, non-resident participants in an adaptive activity may not be charged a higher fee than non-resident participants in the comparable integrated activity.

If an activity, such as basketball, were offered only in an integrated setting, the JPO would be free to exclude all non-residents from participating in the activity. Similarly, if the activity were offered only in an adaptive setting, the JPO would be free to exclude all non-residents. If the activity were offered in both integrated and adaptive settings, again, the JPO could exclude all non-residents from both settings without violating the ADA. However, the JPO may not legally be able to exclude non-residents from the adaptive basketball program while allowing non-residents to participate in the integrated basketball program. Such a distinction may constitute an eligibility criterion that screens out individuals with disabilities from full enjoyment of the JPO's programs while allowing similarly situated (i.e., non-resident) individuals without disabilities to benefit fully. 28 C.F.R. 35.130(b)(8). A similar analysis would apply to the issue of a higher fee for non-resident participants.

The JPO is free, under the ADA, to adopt different residence criteria for different activities. For example, the basketball program could permit non-resident participation, while the swimming program excludes all nonresidents, as long as the criteria do not screen out individuals with disabilities.

For your further information, I am enclosing a copy of the regulation implementing title II of the ADA and the Department's Title II Technical Assistance Manual. I hope that this information is helpful to you and that this letter fully addresses your question.

Sincerely,

John L. Wodatch

T 6-3-94 JUN 23 1994
DJ 202-74-0

The Honorable E. "Kika" de la Garza
U.S. House of Representatives
1401 Longworth House Office Building
Washington, D.C. 20515-4315

Dear Congressman de la Garza:

This letter is in response to your inquiry on behalf of your constituent, XX , who seeks information about the applicability of the Americans with Disabilities Act (ADA) to parking spaces for a recreation hall in a subdivision.

Since the request for information from your constituent

describes only "a recreation hall - in a subdivision," we will assume for purposes of this response that the subdivision is a private residential community. Title III of the ADA imposes certain obligations on places of public accommodation. The Act lists twelve types of entities as places of public accommodation; strictly residential facilities are not among the twelve categories. Accordingly, residential communities are not covered by title III of the ADA, and common areas in such communities are not covered where use is restricted exclusively to residents and their guests.

However, if a residential community opens up common areas to general use by non-residents, it may lose its strictly residential character. Areas open to the public will probably be covered by the ADA if common activities or facilities fall within one of the twelve categories of places of public accommodation in title III. Discussion of these provisions can be found at pages 35551 - 35552 of the enclosed title III regulations and further discussion is included in Section III - 1.000 of the enclosed Technical Assistance Manual.

If the recreation hall is a place of public accommodation, then the owners or operators of the recreation hall would be required to remove architectural barriers to accessibility if their removal is readily achievable, that is, able to be accomplished without much difficulty or expense. Providing accessible parking spaces, where it is readily achievable to do

cc: Records, Chrono, Wodatch, Prieto, McDowney, FOIA, Friedlander
n:\udd\prieto\policy\residntl

01-03154

so, would be included in barrier removal by a public accommodation that provides parking spaces for self-parking by employees or visitors, or both. The requirements for parking spaces are set forth in the standards ("ADA Accessibility Guidelines for Buildings and Facilities"; Appendix A to the enclosed title III regulations), at pages 35612 and 35630 - 35632.

I hope this information will be useful to you in responding to your constituent.

Sincerely,

Deval L. Patrick

Ms. Margaret S. Rogers
Cape Fear Chapter
National Association of the
Physically Handicapped, Inc.
406 Mosley Street
Wilmington, North Carolina 28405

Dear Ms. Rogers:

This is in response to your letter to the White House concerning the Wilmington Post Office. We are sorry for the delay in responding.

Because the Wilmington Post Office was not constructed or altered after 1968, it does not fall under the requirements of the Architectural Barriers Act (ABA). Therefore, as you were informed by the Architectural and Transportation Barriers Compliance Board, that agency can take no further action with respect to your complaint and has closed its case against the Wilmington Post Office under the ABA.

Furthermore, the Americans with Disabilities Act (ADA) applies only to private employers, State and local government entities, and privately owned and operated places of public accommodation and commercial facilities. When Congress enacted the ADA, it specifically exempted the Federal government from coverage. The Department of Justice can take no action, therefore, against the Wilmington Post Office under the ADA.

However, all Federal government entities (including the United States Postal Service) must comply with section 504 of the Rehabilitation Act of 1973. The ADA was modeled on section 504, which prohibits discrimination against qualified individuals with disabilities in employment and the provision of services.

It is our understanding that you have already filed a complaint against the Wilmington Post Office with the Postmaster General's office. The U.S. Postal Service (USPS) is the Federal agency responsible for enforcing section 504 in all postal

service programs and activities. The Department of Justice does not generally monitor or review individual compliance investigations and decisions made by other agencies, such as the

USPS. If you are dissatisfied with the Postmaster General's handling of your complaint, however, you may be entitled to file a private suit in Federal court under section 504.

We hope that your complaint is resolved to your satisfaction and to the satisfaction of all concerned parties.

Sincerely,

Merrily Friedlander
Acting Chief
Coordination and Review section
Civil Rights Division

01-03159

Wilmington, NC 20405
April 20, 1994

Marsha Scott
Deputy Illegible to the President
The White House
1600 Pennsylvania Ave.
Washington, DC 20007

Ms. Scott:

March 8, 1994, you mailed a letter to me informing me of your intention to forward my concerns over the inaccessibility of the handicapped to the main Post Office in Wilmington to the Architectural and Transportation Barriers Compliance Board. As we have been in constant contact with ATCB for over a year, we felt that was would not help.

Cathy Johnson once again called with same news. There is nothing they can do. Since this issue is too important to the more than 3,000 handicapped citizens in our area, it is mandatory that we continue to press the issue.

Cathy mailed us two pamphlets concerning the ADA and Historic Buildings. Granted, the Post Office was built in 1937, but this is a FEDERAL building. According to Architects: John B.G. Seimen, Sharon C. Park and Thomas C. Jeter, in the U.S. Department of Interior, National Park Service Cultural Resources, Preservation Assistance - November - December 1992 Pamphlet. "Historic buildings and sites are irreplaceable and require special stewardship to ensure that they will be preserved to the maximum extent possible. By the same measure, accessibility is a Civil Right for all persons and we must strive to make all existing buildings accessible.

It is just inconceivable, morally and ethically wrong that a Federal building would be able to circumvent the ADA and not provide this needed service for the elderly, disabled and handicapped or more than 3,00 in the area.

01-03160

There are ways to make this building accessible without a great deal of expense while not compromising the aesthetics and historic significance. There is, I am positive, a way to accomplish this and by God, I will not stop trying to find it.

If the Federal Government doesn't have to make its buildings accessible, then ADA really doesn't mean a lot, does it? I will not stop trying to solve this problem!!!

Sincerely,

Margaret S. Rogers

DJ 204-69-0

The Honorable Tom Daschle
United States Senate
Washington, D.C. 20510-4103

Dear Senator Daschle:

This letter responds to your recent inquiry on behalf of your constituents, officials of Deuel County, South Dakota, regarding their efforts to bring the Deuel County Courthouse into compliance with the Americans with Disabilities Act of 1990 (ADA). on behalf of Deuel County (the County), its officials are seeking information on enforcement of the ADA at the county level, particularly with respect to the County Courthouse which, they note, is on the National Register of Historic Places. They are also seeking sources of outside funding for ADA compliance. We apologize for any delay in responding to your letter.

Title II of the ADA prohibits discrimination against qualified individuals with disabilities on the basis of their disability in services, programs, or activities conducted by a State or local governmental entity such as Deuel County. A copy of the regulation implementing title II is enclosed for your convenience.

In recognition of the fact that covered entities might require some time to come into compliance with any structural alterations required by the ADA, the Department's title II regulation requires covered entities to make such changes as expeditiously as possible, but in no event later than January 26, 1995, three full years after the effective date of title II. As an enforcement matter, the Department of Justice does not have the authority to waive any applicable requirements imposed by the ADA or to extend the time frames for meeting such requirements. It appears, however, that County officials may have overestimated the County's obligations under the ADA and, consequently, may

have overestimated the County's cost to comply with that Act.

cc: Records CRS Chrono MAF McDowney, FOIA
Pecht\Congress.93\Daschle

01-03162

According to the information provided to you by the County, it has been advised that it will need to spend a minimum of $259,600.00 in order to modify the Courthouse to meet ADA requirements. In another document enclosed with your letter, the County Auditor states that compliance would require a 7.5% increase in county taxes over the next five years. The Auditor's calculation apparently is based on a transition plan for the Deuel County Courthouse prepared by an independent architectural consultant.

The Federal government does not generally review self-evaluation and transition plans required by ADA (except in the context of complaint investigations or compliance reviews). In the process of preparing this response, we did, however, briefly look at the transition plan sent to you by the County. From this brief review, which did not include a technical review of the architects recommendations, it appears that the architect surveyed the Courthouse to determine how it deviated from the ADA design standards for new construction (the ADA Accessibility Guidelines or "ADAAG"), and then provided estimates for retrofitting the Courthouse to comply with the new construction standards.

This approach reflects a fundamental misunderstanding of the requirements of title II. Title II does not require that existing buildings and facilities be brought up to the standards for new construction. Instead, the focus of title II of the ADA and its implementing regulation is to ensure that, to the extent that a covered entity provides programs, services, and activities to the public, they are readily accessible to and usable by individuals with disabilities. The concept of program access is discussed on pages 19-22 of the enclosed title II Technical Assistance Manual.

Providing access to its programs, services, and activities does not mean, however, that the County is necessarily required to make each of its existing facilities accessible. In some situations, providing access to facilities through structural

methods, such as the alteration of existing facilities and the acquisition or construction of additional facilities, may be the most efficient method of providing program accessibility. On the other hand, nonstructural methods, such as the acquisition or redesign of equipment, the assignment of aides to beneficiaries, and the provision of services at alternate accessible sites, may be acceptable alternatives. Thus, the County may wish to reevaluate its planned structural alterations to determine whether they are, in fact, necessary to achieve program access.

With respect to its Courthouse, the County should first analyze the programs, services, and activities it provides at the Courthouse. Providing access to some activities, such as judicial proceedings, may require that a specific part of the

building (i.e., a courtroom) be made accessible. However, it may be the case that some County services now provided in inaccessible locations within the Courthouse can be easily moved to accessible locations when an individual with a mobility impairment needs access to such services. Physical changes are only required when a public entity cannot provide equal access to its programs, services, and activities through alternative methods.

In addition, the County is not required to make alterations to its existing facilities, if it can demonstrate that the expense of making the facilities accessible would result in undue financial and administrative burdens. See 35.150(a)(3) of the enclosed title II regulation. Of course, in those circumstances where a public entity believes that proposed physical alterations to its facilities would result in undue financial and administrative burdens, the public entity has the burden of proving that compliance with title II's requirement for program access would result in such burdens.

The decision that any proposed alterations would result in undue financial and administrative burdens must be made by the head of the public entity or his or her designee after considering all the resources available for use in the funding and operation of the service, program, or activity. The decision must be accompanied by a written statement of the reasons for reaching the conclusion that undue burdens would occur. If alterations to facilities would result in such burdens, the public entity must take other actions that would not result in such hardships but that would, nevertheless, ensure that individuals with disabilities receive the benefits or services

provided by the public entity to other individuals. These requirements are also explained in 35.150(a)(3) of the title II regulation.

Finally, County officials should be made aware of the special provisions applicable to historic structures. Section 4.1.7 of the ADA Standards contains special provisions and procedures applicable to historic structures, which are designed to ensure that the historic significance of such structures is preserved. A copy of the ADA Standards is located at Appendix A to the enclosed title III rule.

With respect to financial assistance, we note that limited Federal funding for barrier removal may be available in some instances. The Department of Housing and Urban Development (HUD) provides community development block grants designed to assist low and moderate income households and communities. These grants may be used to remove architectural barriers that restrict accessibility to publicly owned and privately owned buildings,

facilities, and improvements. For information on applying for a community development block grant, the County should contact HUD's Office of Block Grant Assistance at (202) 708-3587.

We hope this information is helpful in responding to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General
civil Rights Division

UNITED STATES SENATE
Washington DC. 20510-4103
March 14, 1994

The Honorable Henry Cisneros
Secretary
Department of Housing and Urban Dev
451 Seventh Street, S.W.
Washington, DC 20410

Dear Mr. Secretary:
I was recently contacted by officials from Deuel County, South Dakota, regarding the effort to bring, the Deuel County Courthouse into compliance with the Americans with Disabilities Act (ADA). I have attached for your review copies of a letter I received from Mr. Robert Atyeo, Deuel County Auditor, and the County's architect's compliance cost-projection report.

I write you today in accordance with the guidelines spelled out in President Clinton's Executive Order #12875, "Enhancing the Intergovernmental Partnership," which went into effect January 24, 1994. It is my hope that the Department will work with Deuel County officials on their effort to meet their obligations under the Americans with Disabilities Act.

Deuel County is located in northeastern South Dakota. Over the course

of the past five years, the area has been devastated by a series of natural disasters. The early 1990S brought repeated flooding, which inflicted costly damage on Clear Lake. Last summer's Mississippi River flooding was only the latest in an extended sequence of the region's problems.

Deuel County has a population of 4,522 individuals and a total county valuation less than $200 million. It is highly dependent upon the success of its predominantly agricultural population. Unfortunately, farm income in the area has been down for some time. A succession of poor crops and natural disasters have resulted in unexpected Country expenditures and reduced revenue. Deuel County's current fiscal status is extremely precarious.

In his letter Mr. Aryeo outlines his concerns about how the county would be negatively impacted by further increases necessitated by the demands of ADA compliance. Atyeo also points out that Deuel county experiences an extremely small demand for disability services, I should emphasize that my constituents do recognize their need to ensure access for disabled individuals and want to meet this civic obligation.

Finally, Deuel County officials are concerned about preserving the historic integration of the Deuel County Courthouse building This limestone and pared concrete structure was built between 1916 and 1919. It is my understanding that it is on National Register of Historic Places.

The County is currently struggling with the challenge of complying with regulations promulgated by the ADA. On behalf of Deuel County, I am requesting a timely review of their situation. Any
01-03166

consideration you can afford them, either in the form of regulatory flexibility or financial assistance, would be greatly appreciated.

With best wishes, I am

Sincerely

Tom Daschle
United States Senate

TAD/mdc

(Handwritten)

OFFICE OF
COUNTY AUDITOR
DEUEL COUNTY
CLEAR LAKE, S. DAK. 57226

13 Jan 94

Hon: Sen. Thomas Daschle,
317 Hart Bldg

Washington, DC 20510

Senator Daschle,

Mike Cole

Enclosed please find an estimate prepared for ADA Compliance at our County Courthouse by Michael Burns at a cost of $3,304.27

The Deuel County Courthouse is a limestone and poured concrete structure built in 1916-19. It is on the National Register of Historic Places.

Deuel County has a population of 4522 and a valuation of $193,633,946. We experience a very low demand for services by handicapped individuals.

A tax levey to find the modifications over a 5 year period would result in a tax increase of 7.5% per year in the County levey.

What are the plans for endorsement of ADA at our level? And, What if any outside resources would be available.

Sincerely,
Robert G. Atyer

01-03168

T. 6-7-94
Control No. 4051013783

JUN 30 1994

The Honorable Jesse Helms
United States Senate
403 Dirksen Senate office Building
Washington, D.C. 20510-3301

Dear Senator Helms:

This letter is in response to your inquiry on behalf of your constituent, Katherine P. Hux, MPH, Executive Director of the North Carolina Psychiatric Association. Ms. Hux requested clarification of the term "reasonable accommodation" as it is applied in title III of the Americans with Disabilities Act (ADA). She further sought to clarify whether patients or physicians make the determination of what constitutes a "reasonable accommodation."

Based upon the content and context of Ms. Hux' query, it would appear that her concerns relate most directly to the auxiliary aids and services provisions of title III. Such aids and services are measures that are undertaken to ensure effective communication for individuals with impaired speech, hearing, and/or vision, as well as those who are profoundly deaf. The auxiliary aids requirement is intended to be flexible, reflecting the variable nature of what constitutes "effectiveness."

In addition to the specific nature of the disability involved, factors used to determine communication effectiveness in any given circumstance are most generally related to the length, complexity, and significance of the information being exchanged. Appointments for psychotherapy sessions, due to the sensitive nature of the information being exchanged, their length, complexity, and potential long-term, impact on the patient's well-being would appear to require the highest level of communication effectiveness possible. Further discussion of this point may be found on page 35567 of the enclosed title III regulation.

The psychiatrist should weigh other factors that would minimize the degree of burden on the practice, such as the ability to spread costs throughout the general client population and the provision of tax credits for small businesses for costs

cc: Records, Chrono, Wodatch, Bouvier, McDowney, FOIA, Friedlander
n:\Udd\bouvier\plhlms

01-03169

incurred to provide auxiliary aids. Eligibility criteria for this credit is found in publication 907, available from the Internal Revenue service. This document will be a useful resource for the Psychiatric Association's membership.

Under section 36.301(c) of the regulation, when an

interpreter or other auxiliary aid or service is required to ensure effective communication, the physician or therapist must absorb the cost for this aid or service. The auxiliary aid requirement does not require a physician or therapist to take any action that would result in an undue burden. The term "undue burden" means "significant difficulty or expense." In determining whether the provision of an interpreter or other aids or services would result in an undue burden, the therapist should consider the overall financial resources of the practice, not just the fees paid for a particular procedure or treatment session.

Ms. Hux also addressed the issue of a patient who demanded that the physician pay for the interpreter of his or her choice. The auxiliary aids provisions of the ADA do not compel the physician to comply with the unilateral determination of the patient that a particular interpreter, or any auxiliary aid is essential to effective communication. Ideally, the psychiatrist and patient would arrive at a mutually acceptable choice through the consultation process. This specific point is illustrated in the Department's Title III Technical Assistance Manual, Supplement - January 1993 at page 5. Additional relevant information may be found in the preamble discussion of section 36.303 on pages 35567-35568 of the title III regulation. These documents are enclosed.

I trust that this information will be helpful in your response to your constituent.

Sincerely,

Deval L. Patrick
Assistant Attorney General

April 5, 1994

The Honorable Jesse Helms
Dirksen Building Room 403
lst and C Streets, NE
Washington, DC 20510

Dear Senator Helms:

I recall you expressed a number of concerns regarding Title III of the Americans with Disabilities Act. I have contacted the North Carolina Governor's Advocacy Council and the North Carolina Medical Society, and no one seems to have a definitive answer to a question I pose to your staff for research.

What is a reasonable accommodation?

A Greensboro psychiatrist providing services to a deaf person has been told that he, the psychiatrist, must provide an interpreter for the psychotherapy session. We may assume it is for approximately 30-45 minutes. The Service agency which provides signers (interpreters for a deaf person) charges for a minimum of two hours. The result is that the physician has a total loss (or more) of income from treating the individual. If the doctor (particularly one in solo practice or in practice with one or two other physicians) refuses to provide a service he can be charged with discrimination on the basis of handicap. Are there "reasonable accommodation" guidelines on a threshold of size of the provider entity, such as a clinic with 10 or more employees as opposed to one or two doctors who share a nurse and secretary.

A second question relates to who determines what is a reasonable accommodation?

Is it the health care provider or is it the patient? The Medical Society staff person told me that a physician made inquiry after a patient insisted upon the doctor paying for an interpreter of the patient's choice. Again, what is reasonable accommodation

01-03171

If I can get some clear recommendations on this I will plan to publish, with your permission, your staff's response to these questions in our bi-monthly newsletter.

I thank you and your staff for any help you can provide. I'm sure you know that you and your staff have a superb reputation for problem-solving on behalf of your constituents.

I look forward to a response.

Sincerely,

Katherine P. Hux, MPH

01-03172

JUN 30 1994

The Honorable Harold L. Volkmer
Member, U.S. House of Representatives
Federal Building, Room 370
Hannibal, Missouri 63401

Dear Congressman Volkmer:

This letter is in response to your inquiry on behalf of your constituent, Colonel Ronald Kelly, President of the Missouri Military Academy, regarding the application of the Americans with Disabilities Act (ADA).

Colonel Kelly's letter indicates some confusion regarding the scope of the ADA. The ADA is a comprehensive civil rights law. It seeks to eliminate the barriers that have previously kept persons with disabilities from full access to the mainstream of American life. Title III of the ADA addresses such barriers by prohibiting discrimination on the basis of disability in places of public accommodation, including private schools. The ADA does not exempt military schools.

As Colonel Kelly has noted, the ADA sets cut certain requirements for accessibility of buildings and facilities. For existing buildings and facilities, the ADA requires a public accommodation to remove architectural and communication barriers to access to the extent such barrier removal is readily achievable. 28 C.F.R. 36.304. A list of examples of barrier removal is provided by the enclosed regulation implementing title III at p. 35597.

For alterations to, and new construction of, buildings and facilities, the ADA requires full compliance with the ADA Standards for Accessible Design (Standards), 28 C.F.R. part 36, appendix A, which provide detailed minimum guidelines for accessible buildings. Colonel Kelly's letter mentions that the

Missouri Military Academy may be building new barracks for its students. Such new barracks would be required to comply with the general requirements of the Standards and also with section 9 of the Standards, which provides additional requirements for dormitories and similar places of lodging. The barracks may also be required to comply with the Department of Housing and Urban Development's guidelines implementing the Fair Housing Amendments Act of 1988.

Colonel Kelly also specifically mentions the possible need to include an elevator in any newly constructed barracks. The ADA generally requires an accessible elevator in new construction. However, if the facility being built has less than three stories or has less than 3,000 square feet per story, the ADA does not require provision of an elevator.

The application of the ADA is not, however, limited to the buildings and facilities of covered entities. The policies, practices, and procedures of public accommodations can also sometimes constitute barriers to full participation by individuals with disabilities. For this reason, the ADA prohibits a public accommodation from applying eligibility criteria that screen out individuals with disabilities, unless the public accommodation can show that the criteria are necessary for the provision of the services at issue. 28 C.F.R. 36.301(a). In addition, the ADA requires that a covered entity make reasonable modifications to its policies, practices, and procedures when necessary to ensure full participation of individuals with disabilities, unless the public accommodation can show that the modifications would fundamentally alter the nature of the services provided. 28 C.F.R. 36.302.

The ADA also requires a public accommodation to provide auxiliary aids and services, such as brailled material or sign language interpreters, when necessary to ensure effective communication with individuals with disabilities, unless the public accommodation can show that providing such aids would fundamentally alter the nature of the services at issue or would result in an undue burden. 28 C.F.R. 36.303.

These provisions may require the Missouri Military Academy to review its admissions policies and the requirements of its programs and, if necessary, to modify them to ensure that individuals with disabilities are given the opportunity to participate in, contribute to, and enjoy the benefits of the programs offered by the Academy.

encs.

01-03176

May 2, 1994

The Honorable Harold L. Volkmer
Room 370
Federal Building
Hannibal, MO 63401

Dear Congressman Volkmer:

Like everyone else, we need your help! Help in this case is with the ADA and the Justice Department.

We have asked the Great Plains Disability and Business Technical Assistance Center at the University of Missouri to review the needs of Missouri Military Academy in light of the ADA and our interest in building a new barracks for our cadets.

M.M.A. does not accept cadets who cannot participate in military drill and does not have to meet the ADA guidelines for complete accessibility in our dormitories. If the ADA says that we have to accept children who are in wheelchairs and cannot perform military drill, it will destroy one of the pillars upon which the Academy was founded. We see military drill as critical to our disciplinary system and to the development of esprit de corps, and thus, M.M.A. is exempt from accepting children who cannot participate.

Given the above, why should we be forced to install a very expensive elevator in our new barracks, when the elevator will not be used? When

boys are hurt and must temporarily be on crutches, we move them, to the first floor of the dormitories for ease of accessibility. A boy with a handicapped parent would be housed on the first floor in any case.

What we need at this point is someone from the Department of Justice to rule that we do not need to construct an elevator in our new dorm because of our special status. Architects and contractors are afraid to act, for fear of law suits in the future. The Board of Trustees is willing to place in writing the fact that elevators will be installed in the future, should the mission of the school change.

Will it be possible to get the Justice Department on this as soon as possible? I will be willing to meet with them on our campus or in Washington, D.C., if needed, to resolve the issue quickly.

01-03177

Thank you in advance for any assistance you may offer. I know how much of a favor this is and appreciate your help.

Sincerely,

Ronald J. Kelly
President

JUL 18 1994

The Honorable Benjamin A. Gilman
United States House of Representatives
2185 Rayburn Building
Washington, D.C. 20515-3220

Dear Congressman Gilman:

This letter is in response to your inquiry on behalf of Mr. Ralph Mandia concerning the implementation of the Americans with Disabilities Act (ADA). Mr. Mandia has asked if Federal financial assistance is available to enable the Rockland County Girl Scouts to pay for alterations to the New City Girl Scout House to make that facility accessible to individuals with disabilities.

Because the ADA is a civil rights statute, not a Federal assistance program, the ADA itself does not provide financial

assistance to fund compliance by covered entities. However, the Internal Revenue Code, as amended in 1990, allows a deduction of up to $15,000 per year for expenses associated with the removal of qualified architectural and transportation barriers. The 1990 amendment also permits eligible small businesses to receive a tax credit for certain costs of compliance with the ADA. An eligible small business is one whose gross receipts do not exceed $1,000,000 or whose work force does not consist of more than 30 full-time workers. Qualifying businesses may claim a credit of up to 50 percent of eligible access expenditures that exceed $250.00 but do not exceed $10,250. Examples of eligible access expenditures include the necessary and reasonable costs of removing architectural, physical, communications, and transportation barriers; providing readers, interpreters, and other auxiliary aids; and acquiring or modifying equipment or devices.

In addition, the Department of Housing and Urban Development makes community development block grants available to communities in need of funds for a number of reasons, one of which is to provide accessibility for disabled individuals. If Mr. Mandia

cc: Records, Chrono, Wadatch, Blizard, McDowney, FOIA, Friedlander
n:\Udd\blizard\control\gilman

would like to apply for such a grant, he may send a request to: Andrew Cuomo, Assistant Secretary, Office of Community Planning and Development, Department of Housing and Urban Development, 451 7th Street, S.W., Room 7100, Washington, D.C. 20410.

I hope that this information is helpful to you in responding to your constituent.

Sincerely,

Gerald W. Jones
Acting Assistant Attorney General

01-03180

May 5, 1994

U.S. Rep. Benjamin A. Gilman
2185 Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Gilman:

Girl Scout House in New City has recently undergone some renovations and repairs to improve special utilization, heating and

air conditioning, etc. It appears that further work needs to be done to provide for Americans With Disabilities Act requirements. Fund-raising efforts in these difficult economic times are, of course, hampered.

Rockland County Girl Scouts provides a worthwhile service to girls throughout Rockland County and it is imperative that reasonable accommodation be made for girls with special needs as well as volunteers. I am seeking your advice as to whether Federal grants or funds may be available to offset the expense associated with ADA compliance.

The repairs necessary include items such as additional restrooms, several ramps and widening of access doors. I don't know an exact dollar figure at this point however, I would imagine $30,000 - $40,000 would be necessary for this purpose. You may contact Sandra Pochapin, the Executive Director of Girl Scout House, at 638-0438 for further information if required. Please let me know if there is anything I can do to help.

Thank you for your consideration. I am hopeful that something is available to assist in this matter.

Sincerely,

Ralph F. Mandia

JUL 13 1994

The Honorable Mark O. Hatfield
United States Senator
727 Center Street N.E., Suite 305

Salem, Oregon 97301

Dear Senator Hatfield:

This letter is in response to your inquiry on behalf of your constituent, XX regarding the requirements of the Americans with Disabilities Act (ADA) for physicians to provide auxiliary aids or services to deaf patients.

Title III of the ADA requires physicians to furnish appropriate auxiliary aids and services, including sign language interpreters, where necessary to ensure effective communication with individuals with disabilities. Physicians should consult with their patients to determine what type of auxiliary aid or service is appropriate for particular circumstances. However, doctors are not required to provide sign language interpreters for deaf patients upon demand. Title III of the ADA does not require a doctor to accede to a patient's specific choice of auxiliary aid or service as long as the doctor satisfies his or her obligation to provide effective communication.

In determining what constitutes an effective auxiliary aid or service, doctors must consider, among other things, the length and complexity of the communication involved. For instance, a note pad and written materials may he sufficient means of communication in some routine appointments or when discussing uncomplicated symptoms resulting from minor injuries. Where, however, the information to be conveyed is lengthy or complex, the use of handwritten notes may be inadequate and the use of an interpreter may be the only effective form of communication. Use of interpreter services is not necessarily limited to the most extreme situations -- for example, a discussion of whether to undergo surgery or to decide on treatment options for cancer.

cc: Records, Chrono, Wodatch, Magagna, Mobley, McDowney, MAF, FOIA
udd\mobley\congress\hatfield

01-03182

Dr. XX suggests that the ADA's requirements for providing sign language interpreters will not inspire physicians

to take on the care of people with disabilities. However, health care professionals cannot use a patient's disability as the basis on which to refuse treatment to that individual.

A physician may not impose a surcharge on any particular individual with a disability to cover the costs of providing auxiliary aids and services. Instead, the costs should be treated like other overhead expenses that are passed on to all patients. However, the obligation to provide auxiliary aids and services is not unlimited and a doctor is not required to provide auxiliary aids and services if doing so would result in an undue burden, that is, a significant difficulty or expense. The factors to be considered in determining whether there is an undue burden include the nature and cost of the action, the type of entity involved, and the overall financial resources of, the entity.

Finally, as amended in 1990, the Internal Revenue Code permits small businesses to receive a tax credit for certain costs of compliance with the ADA. An eligible small business is one whose gross receipts do not exceed $1,000,000 or whose work force does not consist of more than 30 full-time workers. Qualifying businesses may claim a credit of up to 50 percent of eligible access expenditures that exceed $250 but do not exceed $10,250. Examples of eligible access expenditures include the necessary and reasonable costs of providing readers, interpreters, and other auxiliary aids and services to persons with disabilities.

The flexibility of the auxiliary aids requirement, the undue burden limitation, the ability to spread costs over all patients, and the small business tax credit should minimize any burden on the medical profession.

I hope this information will be helpful to you in responding to your constituent.

Sincerely,

Gerald W. Jones
Acting Assistant Attorney General
Civil Rights Division

Mr. John Wodatch
Director, Public Access Section
Civil Rights Division
U.S. Department of Justice
P.O. Box 6118
Washington D.C. 20035-6118

Dear Mr. Wodatch:

Please find enclosed a copy of correspondence I recently received from XX M.D., regarding his concerns with the Americans with Disabilities Act. Because I want to do everything possible to be responsive to constituent concerns and inquiries, I would he grateful if your office would review his correspondence and respond to his question.

Dr. XX raises concerns about the costs associated with providing interpretive services to hearing impaired Patients that he sees. As you will note, in this instance, Dr. XX was charged more for the interpretive services than he charged the patient, resulting in a net loss for his practice.

According to the regulations formulated to implement the Americans with Disabilities Act, can charges for interpretive services be passed on to the individual? I believe that an interpretation of the meaning of providing a "reasonable" accommodation" in such situations would be very helpful. Once you have had an opportunity to review this matter, please send your findings and comments to my office in the Special Districts Center at 727 Center Street N.E., Suite 305, Salem, Oregon 97301. Your assistance in this matter is appreciated.

With kind regards.

Sincerely,

Mark O. Hatfield
United States Senator

Enclosure

01-03184

March 25, 1994

Senator Mark Hatfield
711 Hart
Senate Office Building
Washington D.C. 20510

Dear Senator Hatfield:

I am writing to protest a rather blatant example of reverse discrimination that comes about as a result of what I think is called the Americans With Disabilities Act. For your interest, I am enclosing two billing statements of one of my deaf patients. Up until the time of the above-mentioned act, I always dealt with my deaf patients by taking whatever time was needed to communicate with them, through writing, when an office communication was necessary, and they did not bring someone to act as an intermediary interpreter. In spite of the fact that it took more time, I never billed extra for the additional time, nor did I complain about having to write my notes. Under the Disabilities Act, I am now required to provide, at my expense, an interpreter when I see such a patient if they request. If you look at the billings, you will see that I saw this patient and my total bill for evaluating him for his problem and beginning treatment was $34.85. You will also note that I subsequently received a bill from the interpreter, to me, for $40.00. Hence, without even taking into account such things as my overhead and lost time, you can see that I have gone $5.15 in the hole on such an exchange. To me, this seems somewhat analogous to someone walking into a grocery store loading up their basket, and then walking out the door stopping only long enough to ask the owner of the store to give them a tip on the way out. I believe that there is a term that covers forcing someone to work at either no gain or a loss to them personally, and that term is slavery.

I don't know what you personally can do about this injustice. However, I am sure that this type of legislation is not going to do anything to inspire physicians to take on the care of people with disabilities. I look forward to hearing your comments.

Sincerely yours,

XX

T. 7-1-94

JUL 13 1994

The Honorable Toby Roth
Member, U. S. House of Representatives
2101 South Oneida Street
Green Bay, Wisconsin 54304

Dear Congressmen Roth:

This is in response to your inquiry on behalf of your constituent, Mr. Steve Barnett, regarding a health care providers obligation to provide auxiliary aids or services to persons with disabilities. I apologize for failing to respond to your prior correspondence. My office has no record of receiving that letter.

Title III of the Americans with Disabilities Act (ADA) requires public accommodations, including health care providers, to furnish appropriate auxiliary aids and services, including sign language interpreters, where necessary to ensure effective communication with individuals with disabilities. Health care providers should consult with their patients to determine what type of auxiliary aid or service is appropriate for particular circumstances. However, health care providers are not required to provide sign language interpreters for deaf patients upon demand. Title III of the ADA does not require a provider to accede to a patients specific choice of auxiliary aid or service as long as the provider satisfies his or her obligation to ensure effective communication.

In determining what constitutes an effective auxiliary aid or service, health care providers must consider, among other things, the length and complexity of the communication involved. For instance, a note pad and written materials may be sufficient means of communication in some routine appointments or when discussing uncomplicated symptoms resulting from minor injuries. Where, however, the information to be conveyed is lengthy or complex, the use of handwritten notes may be inadequate and the

use of an interpreter may be the only effective form of communication. Use of interpreter services is not necessarily limited to the most extreme situations -- for example, a discussion of whether to undergo surgery or to decide on treatment options for cancer.

cc: Records, Chrono, Wodatch, Hill, McDowney, FOIA, Friedlander
n:\Udd\hille\policylt\roth2.ltr1

Mr. Barnett suggests that provision of sign language interpreters will cause his clinic to lose money when treating individuals with disabilities. However, health care professionals cannot use a patient's disability as the basis for refusing treatment to that-individual.

A health care provider may not impose a surcharge on any particular individual with a disability to cover the costs of providing auxiliary aids and services. Instead, the costs should be treated like other overhead expenses that are passed on to all patients. However, the obligation to provide auxiliary aids and services is not unlimited and a health care provider is not required to provide auxiliary aids and services if doing so would result in an undue burden, that is, a significant difficulty or expense. The factors to be considered in determining whether there is an undue burden include the nature and cost of the action, the type of entity involved, and the overall financial resources of the entity.

Finally, as amended in 1990, the Internal Revenue Code permits small businesses to receive a tax credit for certain costs of compliance with the ADA. An eligible small business is one whose gross receipts do not exceed $1,000,000 or whose work force does not consist of more than 30 full-time workers. Qualifying businesses may claim a credit of up to 50 percent of eligible access expenditures that exceed $250 but do not exceed $10,250. Examples of eligible access expenditures include the necessary and reasonable costs of providing readers, interpreters, and other auxiliary aids and services to persons with disabilities.

The flexibility of the auxiliary aids requirement, the undue burden limitation, the ability to spread costs over all patients, and the small business tax credit should minimize any burden on

health care professionals.

I hope this information will be helpful to you in responding to your constituent.

Enclosure

01-03189

November 24, 1993

Congressman Toby Roth
2234 Rayburn Building
Washington, D.C. 20515

Dear Congressman Roth:

This is regarding an aspect of the American Disabilities Act that, was recently passed. I am the owner of a private practice physical therapy clinic in Green Bay and Menasha.

We recently had a deaf individual referred to our clinic for evaluation and treatment of low back pain. According to the patient's lawyer and the American Disabilities Act, the patient, had the authority to request an interpreter present for all his visits. It was also noted to us that we must pay for the interpreters time for travel and during the visit.

My concern with this is, interpreters are hired at a minimum of two hours or a total cost of $25.00 per hour. Our treatments normally last one half hour with our patients. Our charge for patient treatment is approximately $45.00. Therefore, we would

be losing revenue while treating this patient.

We were informed by the patient's lawyer that we must provide services for this patient, we must provide an interpreter for this patient, and we cannot bill the patient or bill excess charges to cover for the cost of the interpreter.

Please do not hesitate to give me a call if you do have any questions regarding this issue, I felt it was necessary to bring this matter to your attention.

Sincerely,

Steve Barnett, P.T.
President

SB/ch
01-03190

JUL 22 1994

Mr. Gene Colin
Chair
State Building Code Council
State of Washington
906 Columbia Street SW
P.O. Box 48300
Olympia, Washington 98504-8300

Dear Mr. Colin:

Thank you for your supplemental submissions of August 20, 1993, and March 23, 1994, in support of your request for certification that the Washington State Regulations for Barrier Free Design (WSR), as adopted on November 8, 1991, and amended on November 13, 1992, meet or exceed the new construction and alterations requirements of title III of the Americans with Disabilities Act (ADA). We greatly appreciate your thorough

responses to our initial review of the WSR.

We are still awaiting written confirmation from your staff of the legal effect of the State Building Code Council's (Council) "interpretations" of the WSR, and without such confirmation we are unable to issue a preliminary determination regarding certification. However, in order to avoid any unnecessary delay, we have proceeded to review the WSR and the additional information, explanations, interpretations, and amendments provided in your recent submissions.

Our analysis of the material you have submitted is discussed in detail in the attached side-by-side comparison. That analysis addresses only the issues raised in our initial response to your certification request and those raised by the 1992 amendments to the WSR. For each issue, the side-by-side comparison contains the relevant ADA provision in the left column, the WSR provision, with any amendments, in the center column, and the Department's original (May 1993) comment in the right column. Following that, the comparison provides, in the center column, the Council's

cc: Records; Chrono; Wodatch; Blizard; Hill; FOIA
\udd\hille\wash\final.mem

01-03192

"comment" (italicized) and, in the right column, our response (underlined and bracketed) to the Council's comment. Following that, the analysis provides, in the center column, any interpretation (italicized and underlined) issued by the Council to address the issue, and, in the right column, our response (underlined and bracketed) to the interpretation.

Based on this analysis, we have determined that in only a very few areas does the WSR not meet or exceed the relevant requirements of title III of the ADA. Therefore, upon correction of these few remaining problems, we propose to recommend that the Assistant Attorney General issue a preliminary determination of equivalency pursuant to 42 U.S.C. S 12188(b)(1)(A)(ii) and 28 C.F.R. SS 36.601 et seq.

The remaining areas of nonequivalency are discussed below and noted in the right column of the side-by-side analysis in underlined and bracketed text. Many of these issues may be addressed through further interpretations of the WSR. A few others may require amendments to the WSR.

A number of items that do not necessarily pose obstacles to certification require further discussion:

1) A number of items that are addressed by the ADA Standards for Accessible Design (ADA Standards), 28 C.F.R. Part 36 Appendix A, are not addressed by the WSR, including limited-flow toilet paper dispensers (Standard 4.16.6), telephone books (Standard 4.31.7), and audible alarms (Standard 4.28.2). These omissions from the WSR are based, in part, on the difficulty of regulating such items at the pre-construction/pre-occupancy stage. Because the omissions are limited to such "non-code" items, they will not prevent certification. Rather, the certification determination will not apply to those omitted items at all. Therefore, if such equipment is installed in a building, the certification determination will not constitute evidence of ADA compliance with respect to such equipment. 28 C.F.R. S36.607(a)(1). This limitation of the certification determination should be noted in any publication of the WSR if certification is issued.

2) The certification determination will be limited to the version of the WSR, including the amendments and interpretations, that has been submitted to the Department. The certification determination will not apply to amendments or interpretations that have not been submitted to and reviewed by the Department. This limitation should be noted in any publication of the WSR if certification is issued. In addition, any future uncertified

amendments should be distinguished from the certified version of the WSR. Finally, because the certification determination will be based, in part, on official interpretations of the WSR, those

interpretations should be made public and published together with the WSR.

3) The certification determination will not apply to waivers granted under the WSR by local building officials. 56 Fed. Reg. 35592 (July 26, 1991), 28 C.F.R. Part 36, Appendix B. Therefore, if a builder receives a waiver, modification, variance, or other exemption from the requirements of the WSR for any element of construction or alterations, the certification determination will not constitute evidence of ADA compliance with respect to that element. Examples of such waiver provisions include WAC S 51-20-3101(e) (allowing modifications where full compliance is impractical), WAC S 51-20-3113 and S 51-20-3114 (allowing modifications when full compliance would threaten or destroy the historic value of a historic building), and WAC S 51-20-3112(a)(2) (allowing a 20% cost limit on provision of access in the path of travel to altered primary function areas). This limitation of the certification determination should be noted in any publication of the WSR if certification is issued.

4) The WSR relies on building classifications that differ from those used by the ADA. This will not prevent certification of the WSR because the effects of these differences on accessibility have been substantially eliminated by the Council's interpretations. It should be made clear to building code enforcement officials that the WSR's general classifications should be applied flexibly in the context of accessibility to ensure full ADA compliance.

5) The Appendix to the WSR contains the "U.S. Architectural and Barriers Compliance Board Americans with Disabilities Act Guidelines for Automated Teller Machines," WAC S 51-20-93120. These provisions contain the former ADA Standards for ATMS. On January 18, 1994, however, the Department amended the ADA Standards regarding ATMs. The amended version is enclosed. The WSR Appendix, therefore, should be amended to reflect the current ADA Standards.

6) The WSR does not address transportation facilities. The ADA provides special accessibility requirements for such facilities (by amendment dated January 18, 1994, enclosed). This difference between the WSR and ADA will not prevent certification. However, the certification determination will not apply to any elements in transportation facilities that are

subject to section 10 of the ADA Standards and, therefore, will not constitute evidence of ADA compliance with respect to such elements. This limitation on the certification determination should be noted in any publication of the WSR if certification is issued. If the Council were to adopt accessibility requirements for transportation facilities, those requirements could be submitted to the Department for certification at a later date.
01-03194

The following issues need to be corrected before a certification determination can be issued (page references are to the side-by-side comparison):

1) Maneuvering clearances at doors (Standard 4.13.6, p. 77). The WSR fails to address the different requirements for different approaches to doors (i.e., hinge-side and latch-side). Instead, the code addresses only front approaches, assuming that providing the maneuvering clearance required for front approach will be sufficient, even if a side approach is required. This assumption is not valid. The size, shape, and placement of maneuvering clearances must change when the approach changes. Nor is it always possible to provide a front approach. In addition, the WSR assumes that the size of the maneuvering space is the only important factor. To the contrary, the shape and placement of the maneuvering space are also essential. In order to meet the ADA Standard, the WSR will need to be amended to provide the different space configurations needed for different approaches.

2) Grab bars (Standard 4.16.4, p. 86). The WSR does not correctly address all aspects of the required placement of grab bars at water closets. The WSR fails to require side grab bars to begin no more than 12 inches from the back wall and to extend at least 54 inches from the back wall (WSR would require only extension to 48 inches from the back wall). This extension is necessary for people who need to reach far forward to pull to a standing position. The WSR also fails to require back grab bars to extend at least 12 inches beyond the center of the water closet and at least 24 inches toward the open side of the water closet. This placement is necessary to allow a diagonal transfer to the toilet when needed. An amendment will be necessary to meet the ADA Standard.

3) Food service shelves (Standard 5.5, p. 108). The WSR generally requires at least one shelf to be accessible. However, for food service lines, the ADA requires 50% of shelves to be accessible. The Council has issued an interpretation purporting to require 50% to be accessible. However, because this

interpretation contradicts the code provision, the "interpretation" approach fails to provide appropriate guidance of the requirement. An amendment to the WSR is needed here.

4) Tableware and condiment areas (Standard 5.6, p. 109). The WSR provision references another code provision. However, the reference is erroneous. The Council has issued an interpretation directing readers to the correct provision. However, simply issuing an interpretation does not provide effective notice of the change and does not effectively correct the error in the code.
01-03195

5) Elements in showers and bathtubs:

a) Shower seats (Standard 4.21.3, p. 92). The WSR fails to require that shower seats be L-shaped. The L shape permits people to sit in the corner of the shower and use both walls for support.

b) Shower controls (Standard 4.21.5, p. 93). The WSR addresses placement of shower controls only in an interpretation. That interpretation fails to specify that such controls must be located at specific points on the wall, but, instead, simply requires them to be offset. Offsetting controls is not sufficient to ensure that they are always reachable. If a shower were built to the minimum accessibility requirements, offsetting may be acceptable, but if a shower were built larger than the minimum, offset controls may not be reachable.

c) Bathtub controls (Standard 4.20.5, p. 90). The WSR requires bathtub controls to be placed no more than 24 inches from the clear side of the tub. The ADA requires them to be offset between the midpoint of the tub and the outer edge. Although in very wide tubs (over 48 inches), the Washington requirement may exceed the ADA requirement, in standard tubs the ADA provision is better, because the midpoint of the tub will likely be 15-16 inches from the edge.

d) Clear floor space (Standard 4.21.2, p. 91). The WSR does not require the clear floor space at a transfer shower to extend 12 inches beyond the seat wall, as ADA Figure 35 does. This space is necessary to allow a wheelchair to be placed to permit transfer without obstructing the seat.

6) Parking at medical care facilities (Standard 4.1.2(5), p. 26). The ADA requires accessible parking in increased percentages at medical care facilities - 10% at outpatient facilities and 20% at (inpatient and outpatient) facilities that specialize in mobility impairments. The WSR requires 10% at all outpatient facilities and doctors' offices and 20% only at inpatient mobility-specialty facilities. Thus, outpatient mobility specialists are required to provide 20% accessible parking under the ADA, but only 10% under the WSR.

The WSR requires provision of 10% accessible spaces at physicians' offices; the ADA does not. However, outpatient mobility specialists create the greatest need for accessible parking, while physicians' offices create a lesser such need. Although the WSR approach may result in a larger total number of accessible spaces in the State of Washington, the spaces will be

not be placed where they are most needed.

7) Elevator exception (Standard 4.1.3(5), p. 28; see also pp. 21 and 24). The ADA provides that, generally, no elevator is

required in multi-story buildings (1) that are less than three stories or (2) that have less than 3000 square feet per story. The comparable WSR provision provides an exception to the general requirement to install an elevator for "floors above and below accessible levels that have areas of less than 3000 square feet per floor." S 51-20-3103(b)(2). This language is ambiguous because it is not clear that all floors must be less than 3000 square feet (not just the accessible floor). This language raises the possibility that if one floor is accessible and has less than 3000 square feet, the Washington code would allow all other floors to have no elevator access, regardless of the size of the floors.

Although the WSR exceeds the ADA in that it does not extend the elevator exception to most two-story buildings, this is not sufficient to make up for the nonequivalency of the exception for small floors.

8) Alterations. Because the WSR requires all routes in new construction to be accessible, a number of the ADA Standards' requirements that items be placed on an accessible route are superfluous in the context of new construction under WSR. However, such requirements are necessary under WSR for alterations, where not all routes may be accessible:

a) Protruding objects (Standard 4.1.2(3), p. 25; Standard 4.4, p. 58). The WSR provision regarding protruding objects limits protrusions into an "accessible route of travel, corridor, pathway, or aisle." S 51-20-3106(e). This appears to apply only to routes that are accessible to people who use wheelchairs. However, the ADA protrusion limits serve primarily people with vision impairments. Therefore, protrusions cannot be allowed in any route.

b) Self-service shelves (Standard 5.5, p. 108). The WSR was amended to remove the requirement that self-service shelves be on an accessible route.

9) Unisex toilet rooms (Standard 4.1.6(3)(e), p. 48). The WSR fails to require that, when a unisex toilet room is installed in alterations, it must be placed in the same area as the existing toilet facilities.

10) Companion seating (Standard 4.33.3, p. 104). The WSR fails to require companion seats to be adjacent to accessible seats. The Council states that the code's requirement that accessible seating be "an integral part of any fixed seating

plan" is sufficient. However, it is not clear that "integral" means that every accessible seat must be next to a companion seat. That meaning needs to be made more clear.
1-03197

11) Location of lavatories:

a) Water closets (Standard 4.16.2, p. 85). The WSR allows a lavatory to be installed in the clear floor space at a water closet. The ADA does not permit such a lavatory if the water closet is in a stall. The Council responded to this issue by stating that a lavatory could not be put in a stall because such a lavatory would reduce the required width of the stall. The reasoning behind this statement is unclear and needs to be explained.

b) Bathtubs (Standard 4.20.2, p. 88). The WSR fails to specify that, if a lavatory is placed in the clear floor space of a bathtub, it can never be placed at the end of the tub where the seat is located, but may only be placed at the control end of the tub.

12) Diagonal curb ramps (Standard 4.7.10, p. 63). The ADA provides special standards for diagonal curb ramps; the WSR does not. The Council argues that it is not necessary to address diagonal curb ramps because they are rarely used in private development. The WSR would require such ramps to be accessible if they were in an accessible route. However, the standards for accessibility would be the same as that for curb ramps generally. Therefore, the bottom of the ramp would not be required to have 48 inches of clear space. This clear space limitation is necessary at diagonal ramps to allow people to maneuver out of the intersection. In addition, 24 inches of straight curb on either side would not be required if the ramp had flared sides. This straight space is needed to lessen foot traffic on diagonal ramps.

13) Tactile signage (Standard 4.30.4, p. 101). The WSR technical requirements for raised characters have been amended. The amendment has removed the requirement that such characters be in simple typeface. Therefore, the amended code is not equivalent to the ADA.

14) Knee clearance at tables (Standard 4.32.3, p. 103). The WSR fails to require that knee clearance be at least 19 inches deep at tables and counters.

15) Transient lodging (Standard 9.2.2(6), p. 116). The WSR does not specifically require carports that serve accessible hotel rooms to be accessible. It only addresses such facilities if they serve type A (residential) dwelling units.

We understand from your letter of March 23, 1994, that the Council is currently in the process of updating the WSR and we hope that our analysis will be helpful in that effort. Our staff

would also be happy to meet with Council representatives to answer any questions that you may have about our analysis.

01-03198

Our offices have worked diligently together over a long period of time and we stand on the threshhold of achieving the nation's first ADA-certified State code. Almost all of our work is done. I hope that we can reach agreement on the few remaining issues. We look forward to recommending certification of the WSR as soon as the remaining issues can be resolved. If you have any questions concerning this letter, please call Eve Hill at (202) 307-0663.

Sincerely,

John L. Wodatch
Chief
Public Access Section

ADA Requirements

1. Purpose. This document sets guidelines for accessibility to places of public accommodation and commercial facilities by individuals with disabilities. These guidelines are to be applied during the design, construction, and alteration of such buildings and facilities to the extent required by regulations issued by Federal agencies, including the Department of Justice, under the Americans with Disabilities Act of 1990.

The technical specifications 4.2 through 4.35 of these guidelines are the same as those of the American National Standard Institute's document A117.1-1980, except as noted in this text by italics. However, sections 4.1.1 through 4.1.7 and sections 5 through 10 are different from ANSI A117.1 in their entirety and are printed in standard type.

The illustrations and text of ANSI A117.1 are reproduced with permission from the American National Standards Institute. Copies of the standard may be purchased from the American National Standards Institute at 1430 Broadway, New York, New York 10018.

Washington State Regulations

51-20-002 Purpose. The purpose of these rules is to implement the provisions of chapter 19.27 RCW, which provides that the state building code council shall maintain the State Building Code in a status which is consistent with the purpose as set forth in RCW 19.27.020. In maintaining the codes the council shall regularly review updated versions of the codes adopted under the act, and other pertinent information, and shall amend the codes as deemed appropriate by the Council.
RCW 19-27-020 (5). To provide for standards and specifications for making buildings and facilities accessible to and usable by physically disabled persons.
51-20-003 Uniform Building Code. The 1991 edition of the Uniform Building Code as published by the International Conference of Building Officials and available from the International Conference of Building Officials, 5360 South Workman Mill Road, Whittier, California 90601 is hereby adopted by reference with the following additions, deletions, and exceptions.
41-20-005 Uniform Building Code Requirements for Barrier-Free Accessibility. Chapter 31 and other Uniform Build Code requirements for barrier-free access are adopted pursuant to chapters 70.92 and 19.27 RCW.

Commentary
E - Equivalent
NE - Not equivalent to ADA provisions
PNE - Possibly/potentially not equivalent to ADA provisions

Strike through = material deleted since prior DOJ review

ADA/Washington State July 12, 1994

01-03200

1. Purpose, continued.

Pursuant to RCW 19.27.040, Chapter 31 and requirements affecting barrier-free access in Sections 3304 (b), 3304 (h), 3306 (g) and 3306 (i) shall not be amended by local governments.

In case of conflict with other provisions of this code, chapter 31 and requirements affecting barrier-free access in Sections 3304 (b), 3304 (h), 3306 (g), and 3306 (i) shall govern.

51-20-3101 Scope. (a) General. Buildings or portions of buildings shall be accessible to persons with disabilities as required by this chapter. Chapter 31 has been amended to comply with the Federal Fair Housing Act (FFHA) Guidelines as published by the U.S. Department of Housing and Urban Development (March 1991) and the Americans with Disabilities Act (ADA) Guidelines as published by the Architectural and Transportation Barriers Compliance Board and the Department of Justice (July 1991).

Reference is made to appendix Chapter 31 for FFHA and ADA requirements not regulated by this chapter.

(b) Design. The design and construction of accessible building elements shall be in accordance with this chapter. For a building, structure, or building element to be considered to be accessible, it shall be designed and constructed to the minimum provisions of this chapter.

51-20-3102 Person with Disability is an individual who has

an impairment, including a mobility, sensory, or cognitive impairment, which results in a functional limitation in access to and use of a building or facility.

01-03201

Comment: Issue 1. It is acknowledged that the purpose of the ADA is a civil rights law designed to prohibit discrimination against persons with disabilities as defined in the Act and its regulations. It is further recognized that the ADA regulations attempt to provide for compliance with the act through regulations affecting policies and procedures as well as construction.

The Washington Barrier-free facilities regulations are only construction regulations. The State Building Code Council is granted authority to promulgate accessibility construction standards under Chapter 70-92 of the Revised Code of Washington (RCW). The WAC process is similar to the federal regulatory process. Through the WAC process legislation is clarified and rules for enforcement are established. The Council can expand coverage in the adoption of the WAC as long as it isn't conflicting with the RCW. The provision of concern in the analysis is a provision of the RCW as adopted in 1973. The WAC is broader in application. Review of the scope and purpose statements found in Sec. 3101 will not reveal similar language limiting application to the "physically handicapped." Also to be taken into consideration is the adopted definition of "person with disability" found in Sec. 3102 which reads: "person with disability is an individual who has an impairment, including a mobility, sensory, or cognitive impairment, which results in a functional limitation in access to and use of a building or facility."

The Washington regulations were written to incorporate the standards for new construction and alteration contained in the Title III regulations of ADA. As such, the intent of the Washington regulations is to "protect" persons with disabilities as well as they are "protected" by the ADAAG, regardless of there [sic] specific type of disability. While the "stated" purpose may not be identical, the net result is the same, construction and alteration of buildings to be accessible.

[E. Section 3102 does seem to include all disabilities that are affected by building construction. Therefore, the substantive coverage is equivalent.]

Assembly Area. A room or space accommodating a group of individuals for recreational, educational, political, social, or amusement purposes, or for the consumption of food and drink.

Chapter 4 Definitions and Abbreviations Section 402. Assembly Building is a building or portion of a building used for the gathering together of 50 or more persons for such purposes as deliberation, education, instruction, worship, entertainment, amusement, drinking or dining or awaiting transportation.

Comment: Issue 2. The Uniform Building Code treats small assembly spaces as part of the major occupancy of the building. Most of these are Business (B) or Education (E) occupancies. For example, a small restaurant, is a B-2 occupancy. A small conference room in an office building is a B-2 occupancy. A classroom at a university or private or technical college is a B-2. A classroom at a grade school or high school will either be a E-1 or E-2. Anticipating this difference, the requirement for assistive listening systems is specifically referenced in the requirements for B and E occupancies (Sec. 3103(a)3 and 4, respectively). In addition the regulation on fixed seats and tables which you might find in a small restaurant is a general requirement contained in Sec. 3105(d)5. Since the exception to allow a portion of seats in a restaurant to be located in an inaccessible mezzanine applies only to A occupancies in the Washington regulations, it could not be used in smaller assembly spaces. In this regard the WSR code provides greater accessibility than ADA.

Not clearly referenced for small assembly spaces are the requirements for wheelchair spaces. The code does require each space, including such small assembly spaces to be accessible. We believe that assembly spaces where the total occupant load is less than 50 which also have fixed seats are

fairly rare. The most likely location would be in some classrooms. In order to clarify the application of the code to these circumstances, the Council has issued Interpretation No. 93-32. It should be noted that the Washington Code requires distribution of wheelchair locations in all assembly occupancies, even those with fewer than 300 fixed seats. On balance we believe that the total set of regulations of assembly areas is equivalent.

01-03203

Dwelling Unit. A single unit which provides a kitchen or food preparation area, in addition to rooms and spaces for living, bathing, sleeping, and the like. Dwelling units include a single family home or a townhouse used as a transient group home; an apartment building used as a shelter; guestrooms in a hotel that provide sleeping accommodations and food preparation areas; and other similar facilities used on a transient basis. For purposes of these guidelines, use of the term "Dwelling Unit" does not imply the unit is used as a residence.

Interpretation 93-32.
Question: Are wheelchair spaces required in assembly areas which are not assembly occupancies, specifically assembly spaces with fixed seats and an occupant load of less than 50?

Answer: Yes. The intent of the code, as provided in Sec. 3101(a), is to provide standards equivalent to the ADA Accessibility Guidelines. Regardless of occupancy classification, for assembly areas of 4 to 25 seats, one wheelchair location is required, for areas of 26 to 50 seats, two wheelchair locations are required. (See Table 31-A).

Sec. 405 D. Dwelling Unit is any building or portion thereof which contains living facilities, including provisions for sleeping, eating, cooking and sanitation, as required by this code, for not more than one family, or a congregate residence for 10 or less persons.

Dwelling Unit, Type A is an accessible dwelling unit that is designed and constructed [in accordance with this chapter] to provide greater accessibility than a Type B dwelling unit.

(Type A dwelling units constructed in accordance with this Chapter also meet the design standards for Type B dwelling units.)

Dwelling Unit, Type B is an accessible dwelling unit that is designed and constructed [in accordance with this chapter.] [(Type B Dwelling Unit Standards are based on] the U.S. Department of Housing and Urban Development [(HUD)] Federal Fair Housing Act Accessibility Guidelines.[)]

Single-Story Dwelling Unit is a dwelling unit with all finished living spaces located on one floor.

Multistory Dwelling Unit is a dwelling unit with finished living space located on one floor, and the floor or floors immediately above or below it.

[E. when read together with Table 31-A and S 3105.]
5 ADA/Washington State July 12, 1994
01-03204
Mezzanine or Mezzanine Floor. That portion of a story which is an intermediate floor level placed within the story and having occupiable space above and below its floor.

Primary Entry[ance] is a principal entrance through which most people enter the building. A building may have more than one primary entry.

Primary Entry[ance] Level is the floor or level of the building on which the primary entry is located.

Comment: Issue 4. The 1992/93 amendments changed the term entry to entrance in all locations to eliminate this possible difference between ADA and Washington. [See page 599b of the Published Code.] The intent is the same and training being provided around the State includes the ADA concept of entrances.

Chapter 4 Definitions and Abbreviations Section 414
Mezzanine or Mezzanine Floor is an intermediate floor placed within a room.

Comment: Issue 5. ADA and Washington definitions are very similar. The ADA differentiation between mezzanine and raised or lowered floor area does not occur in the ADA definition, but must be discovered by combining the various provisions in Section 5.

Similarly, the limitations on mezzanine design are found in Section 1717 of the UBC and Washington Code (attached). The key regulation is that the "clear height above and below the mezzanine floor construction shall not be less than 7 feet." It is clear from UBC that more than a simple raised or lowered area must be provided to be considered a mezzanine. This is clearer than the ADA which does not succinctly distinguish when a raised area becomes an intermediate floor level.
Chapter 4, Section 408 Grade (Adjacent Ground Elevation) is the lowest point of elevation of the finished surface of the ground, paving or sidewalk within the area between the building and the property line or, when the property line is more than 5 feet from the building, between the building and a line 5 feet from the building.

[E.]

[E.]

8 ADA/Washington State July 12, 1994

01-03205

Comment: Issue 3. The analysis has confused the application of the phrase of "for 10 or less persons" contained in the UBC definition as applying to the whole definition. In[sic] only applies to congregate residences of 10 or less persons as being included in the definition of a "dwelling unit." Congregate residences of larger than 10 persons are treated differently in the UBC. The ADA definitions of dwelling unit is at odds with the definition of dwelling unit used in almost all building and zoning codes by indicating a dwelling unit is used as transient lodging. This definitional difference has no effect on the accessibility requirements as applied in the Washington Code. In order to give assistance to local building officials in applying the Washington Code in these cases, the Council has issued Interpretation No. 93-39.

6 ADA/Washington State July 12, 1994

01-03206

Entrance. Any access point to a building or portion of a building or facility used for the purpose of entering. An entrance includes the approach walk, the vertical access leading to the entrance platform, the entrance platform itself, vestibules if provided, the entry door(s) or gate(s), and the hardware of the entry door(s) or gate(s).

Interpretation 93-39:
Question: For purposes of accessibility requirements of Chapter 31, how should buildings such as homeless shelters, halfway houses, transient group homes, and similar social service establishments where people may sleep or temporarily reside be classified? Similarly, how should apartments or condominium complexes be classified where some or all of the units are rented to short term quests.
Answer: The intent of the code, as provided in Sec. 3101(a), is to provide standards equivalent with the ADA Accessibility Guidelines.

For the purpose of determining accessibility requirements per

Chapter 31, uses such as homeless shelters, halfway houses, transient group homes, and similar facilities should be reviewed on a case by case basis. While these uses are "residential" in nature, if the residents are considered transient, classification as R-1 hotel, or R-3 lodging house is more appropriate. Some may need to be classified either in an I (Institutional) or B (Business) category. If services are provided at the site such as job or health counseling, classification should be in a category which requires accessibility. These uses should not be categorized as congregate residence when the residents are essentially transient.

Apartments or condominiums which are rented on a short term basis to transient guests should be categorized as either a Group R-1, hotel, or Group R-3 lodging house with appropriate accessibility provided.

[E.]

Ground Floor. Any occupiable floor less than one story above or below grade with direct access to grade. A building or facility always has at least one ground floor and may have more than one ground floor as where a split level entrance has been provided for where a building is built into a hillside.

Story. That portion of a building included between the upper surface of a floor and upper surface of the floor or roof next above. If such portion of a building does not include occupiable space, it is not considered a story for purposes of these guidelines. There may be more than one floor level within a story as in the case of a mezzanine or mezzanines.

51-20-0407 Section 407 Floor Area is the area included within the surrounding exterior walls of a building or portion thereof, exclusive of vent shafts and courts. The floor area

of a building, or portion thereof, not provided with surrounding exterior walls shall be the usable area under the horizontal projection of the roof or floor above.

Ground Floor is any occupiable floor less than one story above or below grade with direct access to grade. A building may have more than one ground floor.

51-20-0420 Section 420 Story is that portion of a building included between the upper surface of any floor and the upper surface of the floor next above, except that the topmost story shall be that portion of a building included between the upper surface of the topmost floor and the ceiling or roof above. If the finished floor level directly above a usable or unused under-floor space is more than 6 feet above grade as defined herein for more than 50 percent of the total perimeter or is more than 12 feet above grade as defined herein at any point, such usable or unused under-floor space shall be considered as a story.

51-20-0320 Section 420 Story. First is the lowest story in a building which qualifies as a story, as defined herein, except that a floor level in a building having only one floor level shall be classified as a first story, provided such floor level is not more than 4 feet below grade, as defined herein, for more than 50 percent of the total perimeter, or not more than 8 feet below grade, as defined herein, at any point.

01-03208

Comment: Issue 6. The term "story" in the UBC serves more specific purposes than the term does in ADA and therefore the definition is more specific. The UBC limits types of construction (wood vs concrete vs steel) based on the number of stories. The UBC also limits certain occupancies (uses) are limited to 1st stories. These examples show the importance of knowing exactly what a story is. There is no effect on accessibility as regulated in Washington since all stories and basements must be accessible (with the limited exception of not providing elevator access to some small stories).

[E. The potential problem here is that a building might be built with one or more floors below ground (for parking) and only one floor above ground. Under this definition, the below-ground floors would not be considered a "story". Thus, this would be considered a one-story building and no elevator would be required. However, the Washington accessibility provisions do not exempt a basement from accessibility requirements, even if it is not a "story", so a builder would be required to provide an accessible entrance and an accessible route to all parts of the building.]

Transient Lodging. A building, facility, or portion thereof, excluding inpatient medical care facilities, that contains one or more dwelling units or sleeping accommodations. Transient lodging may include, but is not limited to, resorts, group homes, hotels, motels, and dormitories.

DOJ 36.104(1). An inn, hotel, motel, or other place of lodging, except for an establishment located within a building that contains

not more than five rooms for rent or hire and that is actually occupied by the proprietor of the establishment as the residence of the proprietor.

51-20-0404 Section 404 Congregate Residence is any building or portion thereof which contains facilities for living, sleeping and sanitation, as required by this code, and may include facilities for eating and cooking, for occupancy by other than a family. A congregate residence may be a shelter, convent, monastery, dormitory, fraternity or sorority house but does not include jails, hospitals, nursing homes, hotels or lodging houses.

Chapter 4, Section 413 Lodging House is any building or portion thereof containing not more than five guest rooms where rent is paid in money, goods, labor or otherwise.

51-20-0409 Section 409 Hotel is any building containing six or more guest rooms intended or designed to be used, or which are used, rented or hired out to be occupied, or which are occupied for sleeping purposes by guests.

51-20-0409 Section 409 Motel is any building containing six or more guest rooms intended or designed to be used, or which are used, rented or hired out to be occupied, or which are occupied for sleeping purposes by guests.

(See definition of Hotel) 51-20-1201 Group R. Occupancies Defined. Group R Occupancies shall be:

Division 1. Hotels and apartment houses. Congregate residence (each accommodating more than 10 persons)
Division 2. Not used.
Division 3. Dwellings, family child day care homes and lodging houses. Congregate residences (each accommodating 10 persons or less).

01-03210

Comment: Issue 7. (See also Issue No. 19) ADA defines terms to clarify which activities are regulated for accessibility. UBC defines terms to distinguish how buildings must be constructed, safely occupied and exited. The UBC does not

use the term transient directly but it is a factor in all the regulations which distinguish a hotel from and[sic] an apartment building. A careful review and understanding of Chapters 12 and 33 of the UBC clarifies this approach. Every activity someone wishes to conduct in a building must fall in one of the UBC occupancy categories. If it is not specifically listed, the building official must categorize it as being similar to one of those listed and regulate it accordingly. See Section 501 of the UBC (attached). Thus any facility providing residential services on a transient basis will be categorized either as a hotel or lodging house by the building official and accessibility will be required at that change [sic] of occupancy. In order to assist local building officials address this potential concern, the Council has issued Interpretation No. 93-39.

Interpretation 93-39.
Question: For purposes of accessibility requirements of Chapter 31, how should buildings such as homeless shelters, halfway houses, transient group homes, and similar social service establishments where people may sleep or temporarily reside be classified? Similarly, how should apartments or condominium complexes be classified where some or all of the units are rented to short term quests.
Answer: The intent of the code, as provided in Sec. 3101(a), is to provide standards equivalent with the ADA Accessibility Guidelines.

For the purpose of determining accessibility requirements per Chapter 31, uses such as homeless shelters, halfway houses, transient group homes, and similar facilities should be reviewed on a case by case basis. While these uses are "residential" in nature, if the residents are considered transient, classification as R-1 hotel, or R-3 lodging house is more appropriate. Some may need to be classified either in an I (Institutional) or B (Business) category. If services are provided at the site such as job or health counseling. classification should be in a category which requires accessibility. These uses should not be categorized as congregate residence when the residents are essentially transient.

Apartments or condominiums which are rented on a short term basis to transient guests should be categorized as either a Group R-1, hotel, or Group R-3 lodging house with appropriate accessibility provided.

[E.]

ACCESSIBLE ELEMENTS AND SPACES: SCOPE AND TECHNICAL REQUIREMENTS.

4.1 Minimum Requirements

4.1.1* Application.

(1) General. All areas of newly designed or newly constructed buildings and facilities required to be accessible by 4.1.2 and 4.1.3 and altered portions of existing buildings and facilities required to be accessible by 4.1.6 shall comply with these guidelines, 4.1 through 4.35, unless otherwise provided in this section or as modified in a special application section.

51-20-3101 Scope (a) General. Buildings or portions of buildings shall be accessible to persons with disabilities as required by this chapter.

Chapter 31 has been amended to comply with the Federal Fair Housing Act (FFHA) Guidelines as published by the U.S. Department of Housing and Urban Development (March 1991) and the Americans with Disabilities Act (ADA) Guidelines as published by the U.S. Architectural and Transportation Barriers Compliance Board and Department of Justice (July, 1991).

Reference is made to Appendix Chapter 31 for FFHA and ADA requirements not regulated by this chapter.

51-20-3101 (b) Design. The design and construction of accessible building elements shall be in accordance with this chapter. For a building, structure or building element to be considered to be accessible, it shall be designed and constructed to the minimum provisions of this chapter.

51-20-3103 Building Accessibility (a) Where required. 1. General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.

51-20-0104 Application to Existing Buildings and Structures. (a) General. Buildings and structures to which additions, alterations or repairs are made shall comply with all the

requirements of this code for new facilities except as specifically provided in this section. See Section 1210 for provisions requiring installation of smoke detectors in existing Group R, Division 3 Occupancies.

14 ADA/Washington State July 12, 1994

01-03213

4.1.1 (2) Application Based on Building Use. Special application sections 5 through 10 provide additional requirements for restaurants and cafeterias, medical care facilities, business and mercantile, libraries, accessible transient lodging, and transportation facilities. When a building or facility contains more than one use covered by a special application section, each portion shall comply with the requirements for that use.

51-20-3106 Accessible Design and Construction Standards. (a) General. Where accessibility is required by this chapter, it shall be designed and constructed in accordance with this section, unless otherwise specified in this chapter.

51-20-3103 Building Accessibility (a) Where required. 1. General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.

UBC Section 503. (a) ... When a building houses more than one occupancy, each portion of the building shall conform to the requirements of the occupancy housed therein.

15 ADA/Washington State July 12, 1994

01-03214

4.1.1*(2) Continued.

51-20-3103 Building Accessibility. (a) Where required. 1. General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.
(a) 2. Group A. Occupancies. A. General. All Group A Occupancies shall be accessible as provided in this chapter.
(a) 3. Group B. Occupancies. All Group B Occupancies shall be accessible as provided in this chapter. Assembly spaces in Group B Occupancies shall comply with Section 3103 (a) 2. B.
4. Group E. Occupancies. All Group E. Occupancies shall be accessible as provided in this chapter. Assembly spaces in Group E Occupancies shall comply with Section 3103 (a) 2. B.
5. Group H Occupancies. All Group H Occupancies shall be accessible as provided in this chapter.
6. Group I Occupancies. All Group I Occupancies shall be accessible in all public use, common use and employee use areas, and shall have accessible patient rooms, cells and treatment or examination rooms as follows:
6.A. In Group I, Division 1.1 hospitals which specialize in treating conditions that affect mobility, all patient each nursing unit, including associated toilet rooms and bathrooms.
6.B. In Group I, Division 1.1 hospitals which do not specialize in treating conditions that affect mobility, all patient rooms in each nursing unit, including associated toilet rooms and bathrooms.
6.C. In Group I, Division 1.1 and Division 2 nursing homes and long-term care facilities, at least 1 in every 2 patient rooms, including associated toilet rooms and bathrooms.
6.D. In Group I, Division 3, mental health Occupancies, at least 1 in every 10 patient rooms, including associated toilet

rooms and bathrooms.

4.1.1 (2) Continued.

4.1.1 (2) Continued.

6.E. In Group I, Division 3 jail, prison and similar Occupancies, at least 1 in every 100 rooms or cells, including associated toilet rooms and bathrooms.

[6.F. In Group I Occupancies, all treatment and examination rooms shall be accessible.]
In Group I, Division 1.1 and 2 Occupancies, at least one accessible entrance that complies with Section 3103 (b) shall be under shelter. Every such entrance shall include a passenger loading zone which complies with Section 3108 (b) 3.

51-20-3103 (a) 7. Group M. Occupancies. Group M, Division 1 Occupancies shall be accessible. [as follows:]
[A.] Private garages, [and] carports
[which contain accessible parking serving Type A dwelling units.]
[B]. In Group M., Division 1 agricultural buildings, access need only be provided to paved work areas and areas open to the general public.

51-20-3103 (a) 8. Group R. Occupancies. A. General. All Group R Occupancies shall be accessible as provided in this chapter. Public and common-use areas and facilities such as recreational facilities, laundry facilities, garbage and recycling collection areas, mailbox locations, lobbies, foyers and

management offices, shall be accessible.
[EXCEPTION: Common- or public-use facilities accessory to buildings not required to contain either Type A or Type B dwelling units in accordance with Section 3103(a)8B.]

B. Number of Dwelling Units. In all Group R, Division 1 apartment buildings the total number of Type A dwelling units shall be as required by Table No. 31-B. All other dwelling units shall be designed and constructed to the requirements for Type B units as defined in this chapter.

EXCEPTIONS: 1. Group R Occupancies containing **[no more than] three dwelling units [need not be accessible]*
* *

01-03216
4.1.1 (2) Continued.

4.1.1 (3)* Areas Used Only by Employees as Work Areas. Areas that are used only as work areas shall be designed and constructed so that individuals with disabilities can approach, enter, and exit the areas. These guidelines do not require that any areas used only as work areas be constructed to permit maneuvering within the work area or be constructed or equipped (i.e., with racks or shelves) to be accessible.

51-20-3152

TABLE NO. 31-B
REQUIRED TYPE A DWELLING UNITS

Total Number of Dwelling Units on Site	Required Number of Type A Dwelling Units
0-10	None
11-20	1
21-40	2
41-60	3
61-80	4
81-100	5
For every 20 units or fractional part thereof, over 100	1 additional

See Occupancy Groups above

01-03217

Comment: Issue 8. Except in Group M occupancies, the Washington code does not distinguish areas in a building which are employee versus public areas. It requires all areas of a building to provide equal accessibility. In this regard the Washington Code provides greater accessibility than the ADA. For example if a plan shows a room with a series of built in work stations, ADA would simply ask if the room can be approached, entered and exited. Under the Washington code, accessible aisles would be required between work stations and 5% of the stations would be accessible.

Over time use of specific rooms change without need for a building permit or review by a building official. It is better in the long term of accessibility to require full accessibility at the time of construction.

Group M occupancies are small, miscellaneous buildings that are limited in size to less than 1000 square feet and don't fit in other categories. Typically they are accessory buildings at other buildings. A typical garage at a house in [sic] an M-1. So is the storage shed at the house. Another broad category is agricultural buildings, also limited to 1000 square feet or less. Most things that small are at family farms, but not always. Thus for these small buildings which might be places

of employment or places of public accommodation, accessibility is required by the Washington code.

[E.]

4.1.1 (4) Temporary Structures. These guidelines cover temporary buildings or facilities as well as permanent facilities. Temporary buildings and facilities are not of permanent construction but are extensively used or are essential for public use for a period of time. Examples of temporary buildings or facilities covered by these guidelines include, but are not limited to: reviewing stands, temporary classrooms, bleacher areas, exhibit areas, temporary banking facilities, temporary health screening services, or temporary safe pedestrian passageways around a construction site. Structures, sites and equipment directly associated with the actual processes of construction, such as scaffolding, bridging, materials hoists, or construction trailers are not included.
51-20-3103 Building Accessibility (a) Where required. 1. General. Accessibility to temporary or permanent buildings or portions thereof shall be provided for all occupancy classifications except as modified by this chapter. See also Appendix Chapter 31.
51-20-3103 (a) 1. EXCEPTION 2. Temporary structures, sites and equipment directly associated with the construction process such as construction site trailers, scaffolding,

bridging, or material hoists are not required to be accessible. [This exception does not include walkways or pedestrian protection required by Chapter 44.]
51-20-0104 (e) Moved Buildings and Temporary Buildings. Buildings or structures moved into or within the jurisdiction shall comply with the provisions of this code for new buildings or structures.
Temporary structures such as reviewing stands and other miscellaneous structures, sheds, canopies or fences used for the protection of the public around and in conjunction with construction work may be erected by special permit from the building official for a limited period of time. Such buildings or structures need not comply with the type of construction or fire-resistive time periods required by this code. Temporary buildings or structures shall be completely removed upon the expiration of the time limit stated in the permit.

Comment: Issue 9. Section 3103(a)1, Exception 3 has been amended to include the following sentence. "This exception does not include walkways or pedestrian protection required by Chapter 44." (See Page 599c of the Published Code.) By adding this limitation to the exception, these walkways must still be accessible.

Section 104(e) is primarily a permit process section. It allows a special permit for such temporary structures and allows waiver of construction type and fire-resistive standards. It does not waive requirements of Chapter 31 regarding accessibility.
[E.]
20 ADA/Washington State July 12, 1994
01-03219
4.1.1 (5) General Exceptions.
(a) In new construction, a person or entity is not required to meet fully the requirements of these guidelines where that person or entity can demonstrate that it is structurally impracticable to do so. Full compliance will be considered structurally impracticable only in those rare circumstances when the unique characteristics of terrain prevent the incorporation of accessibility features. If full compliance with the requirements of these guidelines is structurally impracticable, a person or entity shall comply with the requirements to the extent it is not structurally impracticable. Any portion of the building or facility which can be made accessible shall comply to the extent that it is not structurally impracticable.

51-20-3103(a) 1. EXCEPTIONS:

51-20-3103(b) 2. EXCEPTION[S]: [1. A single accessible route shall be permitted to pass through a kitchen or storage room in an accessible dwelling unit. 2. Floors above and below accessible levels that have areas of less than 3,000 square feet per floor, need not be served by an accessible route of travel from an accessible level. This exception shall not apply to: A. The offices of health care providers: or, B. Transportation facilities and airports: or, C. Buildings owned or leased by government agencies: or D. Multi-tenant Group B, Division 2, retail and wholesale occupancies of five tenant spaces or more.] [3] For sites where natural terrain or other unusual property characteristics do not allow the provision of an accessible route of travel from the public way to the building, the point of vehicular debarkation may be substituted for the accessible entrance to the site.
51-20-3105(a) General . . . [For Group R, Division 1 apartment buildings.] Where specific floors of a building are required to be accessible, the requirements shall apply only to the facilities located on accessible floors.

01-03220

4.1.1(5) Continued.

4.1.1(5)(b) Accessibility is not required to (i) observation galleries used primarily for security purposes; or (ii) in non-occupiable spaces accessed only by ladders, catwalks, crawl spaces, very narrow passageways, or freight (non-passenger) elevators, and frequented only by service personnel for repair purposes; such spaces include, but are not limited to, elevator pits, elevator penthouses, piping or equipment catwalks.

Comment: Issue 10. The elevator exception has been revised and is now generally equivalent and, for two story

buildings, requires substantially greater accessibility than the ADA. See also Issue No. 16, below.

51-20-3101(e) Modifications. Where full compliance with this chapter is impractical due to unique characteristics of the terrain, the building official may grant modifications in accordance with Section 106, provided that any portion of the building or structure that can be made accessible shall be made accessible to the greatest extent practical.

Comment: Issue 11. In preparing the Washington's regulations it was noted that this provision of the ADA was very limited in potential application, therefore an equivalent provision was not adopted. Under Section 105 and 3101(d), building officials can approve alternative designs which provide substantially equivalent or greater accessibility. In addition, a specific exception based on terrain which allows an alternative approach than providing an accessible route from the street is provided by Sec. 3103(b)2. Through these provisions, the Washington Code is more restrictive than the appearance of the ADA provisions and provides greater accessibility.

51-20-3103(a) 1. EXCEPTIONS: 1. Floors or portions of floors not customarily occupied, including, but not limited to, elevator pits, observation galleries used primarily for security purposes, elevator penthouses, nonoccupiable spaces accessed only by ladders, catwalks, crawl spaces, very narrow passageways or freight elevators, piping and equipment catwalks and machinery, mechanical and electrical equipment rooms.

[Amendment: P.N.E. The language raises the possibility that the phrase "that have areas of less than 3000 square feet per floor" refers to "accessible levels" without limiting "floors above and below" or vice versa. Thus, if the ground floor were less than 3000 square feet, WAC would not require an elevator, even though any number of floors above or below it were greater than 3000 square feet. It needs to be clear that no floor can exceed 3000 square feet. Although WAC does exceed the ADA in that WAC does not allow an elevator exemption for two-story buildings, that does not make up for the possible problem caused by the ambiguity regarding square footage per floor.]

[WAC applies a lower standard than "structurally impracticable". However, because this is a waiver provision, it is not part of the certification determination. Rather, any

waiver will be non-certified.]

22 ADA/Washington State July 12, 1994

01-03221

Comment: Issue 12. It was the intent of the WSR to have the same effect as the ADA. The language of the exception may be poorly crafted but was intended as a long list of ways in which areas not customarily occupied would be accessed.

To clarify application of this exception the Council has issued Interpretation No. 93-29.

Interpretation 93-29:
Question: 1. Do spaces such as machinery, mechanical, electrical, and telephone equipment rooms need to be accessible? Since these spaces typically work areas only open to employees, is it sufficient to have these rooms designed that persons with disabilities can approach, enter, and exit from these areas?
2. Are rooms used for storage considered to "not customarily occupied" and able to be nonaccessible?
Answer: 1. The intent of the code, as provided in Sec. 3101(a), is to provide standards equivalent to the ADA Accessibility Guideline. Machinery, mechanical, electrical, and telephone equipment rooms must be accessible, as must rooms identified as or other service spaces such as custodial, janitors', and supply rooms must be accessible when the primary occupancy must be accessible. Such rooms must be designed so they can be approached, entered, and exited by a person with disabilities. The intent of the exception is to only apply to spaces of the building which are very rarely accessed even by building service personnel such as a mechanical or plumbing chase, crawl space, plenum, or space above a suspended ceiling. The listing of the equipment rooms in this exception is intended only to be examples of locations where the small, non-occupiable spaces might be accessed.
2. Storage rooms are not spaces which are "not customarily occupied," and must meet accessibility standards of Chapter 31.

[P.E. The interpretation has so many typographical errors that it is very confusing.]

4.1.2 Accessible Sites and Exterior Facilities: New Construction.
An accessible site shall meet the following minimum requirements:
(1) At least one accessible route complying with 4.3 shall be provided within the boundary of the site from public transportation stops, accessible parking spaces, passenger loading zones if provided, and public streets or sidewalks, to an accessible building entrance.
4.1.2 (2) At least one accessible route complying with 4.3 shall connect accessible buildings, accessible facilities, accessible elements, and accessible spaces that are on the same site.
51-20-3105 Facility Accessibility (a) General. Where buildings are required to be accessible, building facilities shall be accessible to persons with disabilities as provided in this section. **[For Group R, Division 1 apartment buildings.] Where specific floors of a building are required to be accessible, the requirements shall apply only to the facilities located on accessible floors.
51-20-3103(b)2. Accessible Route of Travel. When a building or portion of a building, is required to be accessible, an accessible route of travel shall be provided to all portions of the building, to accessible building entrances and connecting the building and the public way.
The accessible route of travel to areas of primary function may serve but shall not pass through kitchens, storage rooms, toilet rooms, bathrooms, closets or other similar spaces.

EXCEPTION[S]: [1. A single accessible route shall be permitted to pass through a kitchen or storage room in an accessible dwelling unit. 2. Floors above and below accessible levels that have areas of less than 3,000 square feet per floor, need not be served by an accessible route of travel from an accessible level. This exception shall not apply to: A. The offices of health care providers; or, B. Transportation facilities and airports; or, C. Buildings owned or leased by government agencies; or, D. Multi-tenant Group B, Division 2, retail and wholesale occupanices of five tenant spaces or more.] **[moved up #3] For sites where natural terrain or other unusual property characteristics do not allow the provision of an accessible route of travel from the public way to the building, the point of vehicular debarkation may be substituted for the accessible entrance to the site.

[Amendment: P.N.E. It appears that the phrase "that have areas of less than 3000 square feet per floor" refers to "accessible levels" without limiting "floors above and below"or vice versa. It needs to be clear that no floor can exceed 3000 square feet (see discussion above at Standard

01-03223
Continued.

4.1.2 (3) All objects that protrude from surfaces or posts into circulation paths shall comply with 4.4.

4.1.2(5)(b) One in every eight accessible spaces, but not less than one, shall be served by an access aisle 96 in (2440 mm) wide minimum and shall be designated "van accessible" as required by 4.6.4. The vertical clearance at such spaces shall comply with 4.6.5. All such spaces may be grouped on one level of a parking structure.

EXCEPTION: Provision of all required parking spaces in conformance with "Universal Parking Design" (see appendix A4.6.3) is permitted.

4.1.2(5)(c) If passenger loading zones are provided, then at least one passenger loading zone shall comply with 4.6.6.

Accessible routes of travel serving any accessible space or element shall also serve as a means of egress for emergencies or connect to an area of evacuation assistance.

When more than one building or facility is located on a site, accessible routes of travel shall [connect]
accessible buildings and accessible site facilities.
The accessible route of travel shall be the most practical direct route connecting accessible building entrances, accessible site facilities and the accessible site entrances.

51-20-3106(e) Protruding Objects. Protruding objects shall not reduce the clear width of an accessible route of travel or maneuvering space. Any wall- or post-mounted object with its leading edge between 27 inches and 79 inches above the floor may project not more than 4 inches into [an accessible route of travel.] corridor,
passageway, or aisle]. Any wall-or post-mounted projection greater than 4 inches shall extend to the floor.

51-20-3107(a)[5] . . . [For other than Group R, Division 1 apartment buildings, where accessible parking is required,] one [of] every eight accessible parking spaces,
[or fraction thereof], shall
[be designed to be accessible to vans].

51-20-3107(b)2. . . . Van accessible parking spaces shall have an adjacent access aisle not less than 96 inches in width.

[(c) Signs. . . . Van accessible parking spaces shall have an additional sign mounted below the International Symbol of Access identifying the spaces as "Van Accessible." EXCEPTION: Where all of the accessible parking spaces comply with the standards for van accessible parking spaces.]
51-20-3108 Passenger Loading Zones. (a) Location. Where provided, passenger loading zones shall be located on an accessible route of travel
[Amendment: E.]
[Amendment: N.E. The amendment creates an ambiguity because of the placement of "accessible" at the beginning of the list of covered pathways. We need to be clear that objects must not protrude into any corridor or passageway or aisle, regardless of whether it is otherwise accessible. Because, in new construction, WAC requires all routes to be accessible, this distinction is a problem only for alterations.]

[Amendment: E.]

[Amendment: E.]

01-03224

4.1.2(5)(d) At facilities providing medical care and other services for persons with mobility impairments, parking spaces complying with 4.6 shall be provided in accordance with 4.1.2(5)(a) except as follows:

(i) Outpatient units and facilities: 10 percent of the total number of parking spaces provided serving each such outpatient unit or facility;

(ii) Units and facilities that specialize in treatment or services for persons with mobility impairments: 20 percent of the total number of parking spaces provided serving each such unit or facility.

4.1.2 (6) If toilet facilities are provided on a site, then each such public or common use toilet facility shall comply with 4.22. If bathing facilities are provided on a site, then each such public or common use bathing facility shall comply with 4.23.

For single user portable toilet or bathing units clustered at a single location, at least 5% but no less than one toilet unit or bathing unit complying with 4.22 or 4.23 shall be installed at each cluster whenever typical inaccessible units are provided. Accessible units shall be identified by the International Symbol of Accessibility. EXCEPTION: Portable toilet units at construction sites used exclusively by construction personnel are not required to comply with 4.1.2(6).

51-20-3107 (a) Accessible Parking Required. . . . [2] Inpatient Medical Care Facilities] For Group I, Division 1.1, 1.2 and 2 medical care Occupancies specializing in the treatment of persons with mobility impairments, 20 percent of parking spaces provided accessory to such occupancies shall be accessible.
[3. Outpatient Medical Care Facilities. For Group I, Division 1.1 and 1.2 and Group B, Division 2 Occupancies providing

outpatient medical care facilities, 10 percent of the parking spaces provided accessory to such occupancies shall be accessible.]

Comment: Issue 13. Section 3107 has been amended to include a 10 percent requirement for outpatient medical care facilities at either hospitals (Group 1.1), Outpatient surgery centers (Group 1.2) or doctors and dentists offices (Group B-2). (See page 604s of the Published Code.) Ironically this WSR provision will require more accessible parking than the ADA based on the interpretation of this provision contained in the January 1993 supplement to the Title III technical assistance manual.

51-20-3106 (k) 1. General. Bathrooms, toilet rooms, bathing facilities and shower rooms shall be designed in accordance with this section. (3106)

[Amendment: N.E. WAC requires 20% at inpatient mobility-specialists and 10% at outpatient facilities. Under S 3107 outpatient mobility-specialty facilities would only need 10%. The ADA would require 20% for all (inpatient and outpatient) mobility-specialty facilities. Although WAC does exceed the ADA in that it requires the additional (10%) accessible spaces at doctors' offices, the increased accessible parking is most needed in the places WAC does not provide it (outpatient mobility specialists) and least needed in the places WAC does provide it (doctors' and dentists' offices).]

4.1.3 (4) Interior and exterior stairs connecting levels that are not connected by an elevator, ramp, or other accessible means of vertical access shall comply with 4.9.

Comment: Issue 14. Section 3103(a) 1 only exempts temporary structures which are directly related to the construction process. The standards for accessible toilets are provided and are applicable to permanent and temporary facilities. If someone gets a local building permit for portable toilets, there is nothing in Chapter 31 which exempts them from complying with 3105(b) or 3106(k). The code specifically regulates temporary as well as permanent structures in Section 3103(a)1. Not all jurisdictions require building permits for these temporary installations, thus it is not uniformly covered by local application of the code. This in no way exempts them from ADA compliance.

51-20-3306 Stairways. (a) General. Every stairway having two or more risers serving any building or portion thereof shall conform to the requirements of this section. When aisles in assembly rooms have steps, they shall conform with the provisions in Section 3315.

51-20-3106 (i) Stairways. 1. General. Stairways required to be accessible shall comply with section 3306 and provisions of this section.
51-20-5105 (c)3. Stairways. Stairways shall comply with Section 3106(i).

Comment: Issue 15. Section 3105(c) has been amended to provide scoping for elevators, platform lifts and stairways. (See pages 603a and 603b of the Published Code.) The net result is the Washington regulations provide greater accessibility than the ADA in that all stairways in covered buildings must comply with 3106(i). This is significantly more than the ADA which only applies to stairways where floors are not accessible by elevator or ramp.

[E.]

[E.]

27 ADA/Washington State July 12, 1994

01-03226

4.1.3 (5)* One passenger elevator complying with 4.10 shall serve each level, including mezzanines, in all multi-story buildings and facilities unless exempted below. If more than one elevator is provided, each full passenger elevator shall comply with 4.10.

EXCEPTION 1: Elevators are not required in facilities that are less than three stories or that have less than 3000 square feet per story unless the building is a shopping center, a shopping mall, or the professional office of a health care provider, or another type of facility as determined by the Attorney General. The elevator exemption set forth in this paragraph does not obviate or limit in any way the obligation to comply with the other accessibility requirements established in section 4.1.3. For example, floors above or below the accessible ground floor must meet the requirements of this section except for elevator service. If toilet or bathing facilities are provided on a level not served by an elevator, then toilet or bathing facilities must be provided on the accessible ground floor. In new construction if a building or facility is eligible for this exemption but a full passenger elevator is nonetheless planned, that elevator shall meet the requirements of 4.10 and shall serve each level in the building. A full passenger elevator that provides service from a garage to only one level of a building or facility is not required to serve other levels.

EXCEPTION 2: Elevator pits, elevator penthouses, mechanical rooms, piping or equipment catwalks are exempted from this requirement.

EXCEPTION 3: Accessible ramps complying with 4.8 may be used in lieu of an elevator.

51-20-3105 (c) Elevators[, Platform Lifts and Stairways].
1. [Elevators. A.] Where Required. In multi-story buildings or portions thereof required to be accessible by Section 3103, at least one elevator shall serve each level, including mezzanines. Other than within an individual dwelling unit, when an elevator is provided but not required, it shall be accessible.

EXCEPTIONS: 1. In Group R. Division 1 apartment occupancies, an elevator is not required where accessible dwelling units and guest rooms are accessible by ramp or by grade level route of travel. 2. In a building of fewer than three stories an elevator is not required where ramps, grade-level entrances or accessible horizontal exits from an adjacent building, are provided to each floor. 3. In multistory parking garages, an elevator is not required where an accessible route of travel is provided from accessible parking spaces on levels with accessible horizontal connections to the primary building served. 4. In Group R, Division 1 hotels and lodging houses less than 3 stories in height, an elevator is not required provided that accessible guest rooms are provided on the ground floor.

[B. Design. All elevators shall be accessible.]
EXCEPTIONS: 1. Private elevators serving only one dwelling unit. 2. Where more than one elevator is provided in the building, elevators used exclusively for movement of freight.

4.1.3 (5)* Continued.

4.1.3 (5)* Continued.

51-20-3103 EXCEPTION 2:
floors above
and below accessible levels that have areas of less than
3000 square feet per floor, need not be
[served by an accessible route of travel
from an accessible level. This exception shall not apply to:
A. The offices of health care providers; or, B. Transportation
facilities and airports; or, C. Buildings owned or leased by
government agencies; or D. Multi-tenant Group B, Division 2,
retail and wholesale occupancies of five tenant spaces or
more.]

51-20-3105 (c) [1. Elevators.B.] Design. All elevators shall be accessible.

EXCEPTIONS: 1. Private elevators serving only one dwelling unit.

2. Where more than one elevator is provided in the building, elevators used exclusively for movement of freight.

Elevators required to be accessible shall be designed and constructed to comply with Chapter 296-81 of the Washington Administrative Code.

[Amendment. P.N.E. The language raises the possibility that the phrase "that have areas of less than 3000 square feet per floor" refers to "accessible levels" without limiting "floors above and below" or vice versa. Thus, if the ground floor were less than 3000 square feet, WAC would not require an elevator, even though any number of floors above or below it were greater than 3000 square feet. It needs to be clear that no floor can exceed 3000 square feet. Although WAC does exceed the ADA in that WAC does not allow an elevator exemption for two-story buildings, that does not make up for the possible problem caused by the ambiguity regarding square footage per floor.]

29 ADA/Washington State July 12, 1994

01-03228

EXCEPTION 4: Platform lifts (wheelchair lifts) complying with 4.11 of this guideline and applicable state or local codes may be used in lieu of an elevator only under the following conditions:

(a) To provide an accessible route to a performing area in an assembly occupancy.

(b) To comply with the wheelchair viewing position line-of-sight and dispersion requirements of 4.33.3.

(c) To provide access to incidental occupiable spaces and rooms which are not open to the general public and which house

no more than five persons, including but not limited to equipment control rooms and projection booths.

(d) To provide access where existing site constraints or other constraints make use of a ramp or an elevator infeasible.

Comment: Issue 16. Item 1: Section 3103(a) 1 and 3103(b)2 have been revised to clarify that the exception for elevators is truly only an accessible route exception. It no longer exempts whole spaces from all accessibility standards. See also amendments to 3105(a). The Washington code now clearly provides greater accessibility than the ADAAG. See pages 599c, 601a and 603 of the Published Code.
Item 2: The Washington State elevator standards were revised through an amendment to WAC Chapter 296-81 which was effective on July 1, 1992 to be consistent with the ADAAG. Section 296-81-007(5) specifically adopts the ANSI A117.1-1990 elevator standard which includes standards for wheelchair and platform lifts. In addition sections .300 through .360 and .370 adopts additional standards for elevator design and installation which are consistent with the ADA requirements. See Issue No. 46 for a comparison of the ADA and Washington regulations. (A copy of WAC 296-81 is attached.)

51-20-3105 (c) [2] Platform Lifts. Platform lifts may be used in lieu of an elevator under one of the following conditions subject to approval by the building official:
[A.] To provide an accessible route of travel to a performing area in a Group A. Occupancy; or,
[B.] To provide unobstructed sight lines and distribution for wheelchair viewing positions in Group A Occupancies; or,
[C.] To provide access to spaces with an occupant load of less than 5 [that are not open to the public]; or
[D.] To provide access where existing site constraints or other constraints make use of a ramp or elevator infeasible.

All platform lifts used in lieu of an elevator shall be capable of independent operation and shall comply with Chapter 296-81 of the Washington Administrative Code.

[E. Equivalency of technical standards is addressed separately below.]

4.1.3 (8) In new construction, at a minimum, the requirements in (a) and (b) below shall be satisfied independently:

(a) (i) At least 50% of all public entrances (excluding

those in (b) below) must be accessible. At least one must be a ground floor entrance. Public entrances are any entrances that are not loading or service entrances.

(ii) Accessible entrances must be provided in a number at least equivalent to the number of exits required by the applicable building/fire codes. (This paragraph does not require an increase in the total number of entrances planned for a facility.)

(iii) An accessible entrance must be provided to each tenancy in a facility (for example, individual stores in a strip shopping center).

One entrance may be considered as meeting more than one of the requirements in (a). Where feasible, accessible entrances shall be the entrances used by the majority of people visiting or working in the building.

[296-81-007. National Elevator Code adopted. ...(5) The American National Standard Safety Code for Elevators, Dumbwaiters, Escalators, and Moving Walks, ANSI A17.1, 1990 Edition, is adopted as the standard for elevators, dumbwaiters, escalators, and moving walks installed on or after July 1, 1992, with the exceptions of ANSI A17.1, Part XIX, and ANSI A17.1, Part V, Section 513, which is replaced by chapter 296-94 WAC.]

Comment: Issue 17. Section 3105(c) 2C has been revised to read "To provide access to spaces with an occupant load of less than 5, that are not open to the public." (See paged (sic) 603a and 603b of the Published Code.) The provisions are now equivalent.
Comment: Issue 18. See comment on Issue No. 16, above.

51-20-3103 (b) 3. Primary Entry[ance] Access. At least 50% of all public entries, or a number equal to the number of exits required by Section 3303 (a), whichever is greater, shall be accessible. One of the accessible public entries shall be the primary entry to a building. At least one accessible entry must be a ground floor entrance. Public entries do not include loading or service entries.

EXCEPTION: In Group R. Division 1 apartment buildings only the primary entry need be accessible, provided that the primary entry provides an accessible route of travel to all dwelling units required to be accessible.

Where a building is designed not to have common or primary entries, the primary entry to each individual dwelling unit required to be accessible, and each individual tenant space, shall be accessible.

[E. Technical requirements addressed separately below.]

Comment: Issue 19. (See also comment on Issue No. 7, above.) Except where an apartment building is used as a hotel, the ADA does not regulate apartment buildings. Under the UBC a permit issued for an apartment building is for residential apartment use and does not include transient use as covered by the ADA. A transient use of an apartment building would require a new building permit and occupancy certificate. If this is the intended use at the first permit, the applicant needs to so state so that the building is reviewed according to the proper standards. If that information is withheld there is a violation of the building code. Where the permit process is properly followed, this exception does not result in less accessibility than the ADA. To assist local building officials in understanding this difference, the Council has issued Interpretation No. 93-39.

Interpretation 93-39:
Question: For purposes of accessibility requirements ofChapter 31, how should buildings such as homeless shelters,
halfway houses, (transient group homes, and similar social service establishments where people may sleep or temporarily reside be classified? Similarly, how should apartments or condominium complexes be classified where some or all of the units are rented to short term guests.
Answer: The intent of the code, as provided in Sec. 3101(a), is to provide standards equivalent with the ADA Accessibility Guidelines.

For the purpose of determining accessibility requirements per Chapter 31, uses such as homeless shelters, halfway houses, transient group homes, and similar facilities should be reviewed on a case by case basis. While these uses are "residential" in nature, if the residents are considered transient, classification as R-1 hotel, or R-3 lodging house is more appropriate. Some may need to be classified either in an I (Institutional) or B (Business) category. If services are provided at the site such as job or health counseling, classification should be in a category which requires accessibility. These uses should not be categorized as congregate residence when the residents are essentially transient.

Apartments or condominiums which are rented on a short term basis to transient guests should be categorized as either a Group R-1, hotel, or Group R-3 lodging house with appropriate accessibility provided.

[E.]

4.1.3 (8)(b)(i) In addition, if direct access is provided for pedestrians from an enclosed parking garage to the building, at least one direct entrance from the garage to the building must be accessible.

(ii) If access is provided for pedestrians from a pedestrian tunnel or elevated walkway, one entrance to the building from each tunnel or walkway must be accessible.

One entrance may be considered as meeting more than one of the requirements in (b).

Because entrances also serve as emergency exits whose proximity to all parts of buildings and facilities is essential, it is preferable that all entrances be accessible.

51-30-3103 (b)2. ...The accessible route of travel shall be the most practical direct route connecting accessible building entrances, accessible site facilities and the accessible site entrances.

Comment: Issue 20. Per the definition contained in Section 3102, these are primary entrances to a building and would need to be accessible, including the provision of accessible routes. Further, the side by side comparison appears to only compare this ADA requirement with one small part of the Washington provisions. Other provisions are critical to this comparison. The rest of 3103(b)2 is important, see attached. It clearly states that where there is more than one facility on the site, accessible routes be provided connected each facility. No exemption of any kind is provided for tunnels or elevated walkways. Section 3107 requires parking to be on an accessible route which is the shortest possible to accessible building entrance(s). In case there is any question as to the intent of the provision, the Council has issued Interpretation No. 93-30.

Intrepretation 93-30
Question: Must tunnels, elevated walkways, (pedestrian walkways) and doorways providing direct access from parking garages to a building provide an accessible entrance.
Answer: Yes. The intent of the code, as provided in Sec. 3101(a), is to provide standards equivalent to the ADA Accessibility Guideline. These types of entrances and connections between buildings are considered to be primary entrances and must be accessible.

[E.]

01-03233
4.1.3 (11) Toilet Facilities: If toilet rooms are provided, then each public and common use toilet room shall comply with 4.22. Other toilet rooms provided for the use of occupants of specific spaces (i.e., a private toilet room for the occupant of a private office) shall be adaptable. If bathing rooms are provided, then each public and common use bathroom shall comply with 4.23. Accessible toilet rooms and bathing facilities shall be on an accessible route.

51-20-3105 (b) Bathing and Toilet Facilities. 1. Bathing Facilities. When bathing facilities are provided, at least 2 percent but not less than 1, bathtub or shower shall be accessible. In dwelling units where both a bathtub and shower are provided in the same room, only one need be accessible.

51-20-3105 (b) 2. Toilet Facilities. Toilet facilities located within accessible dwelling units, guest rooms and congregate residences shall comply with Sections 3106(k) and 3106 (aa).
In each toilet facility in other occupancies, at least one wheelchair accessible toilet stall with an accessible water closest shall be provided. In addition, when there are 6 or more water closets within a toilet facility, at least one other accessible toilet stall complying with Section 3106(k) 4, also shall be installed.

Where urinals are provided, at least one urinal shall be accessible.

51-20-3105 (b) 3. Lavatories, Mirrors and Towel Fixtures. At least one accessible lavatory shall be provided within any

toilet facility. Where mirrors, towel fixtures and other toilet and bathroom accessories are provided, at least one of each shall be accessible.

51-20-3106(k) 1. General. Bathrooms, toilet rooms, bathing facilities and shower rooms shall be designed in accordance with this section. For dwelling units see also Section 3106(aa).

35 ADA/Washington State July 12, 1994

01-03234

Comment: Issue 21. Item 1: 2% of Bathing Facilities. The intent of Interpretation No. 93-31 is to require accessible bathing facilities as required by ADA. It states that if only one bathing facility is provided in a building, it must be unisex and have 2% of its bathing features accessible; if multiple facilities are provided, they also must be accessible at the rate of 2% of the bathing fixtures.
Item 2: Toilet Facilities without Stalls. The application of this section has been that each toilet facility is accessible, regardless of the number of facilities in a building or the number of water closets in the room or the presence of an actual "stall." In each "toilet facility" at least one fixture of each type provided must be accessible. The intent is to provide accessibility whether or not there is a stall. Read literally the WSR actually require a stall in all instances. No official interpretation of this has been issued and the questions received to date have been to nuances of meeting these provisions such as overlapping clear spaces in a single user facility, not whether it even has to be accessible because there is not a stall.

Interpretation 93-31:
Question: What is the application of the requirements for 2 percent of bathing facilities to be accessible when there is only one bathing facility in a building, or when there are multiple bathing facilities? Must separate facilities for each sex be provided?
Answer: The intent of the code, as provided in Sec. 3101(a),

is to provide standards equivalent to the ADA Accessibility Guidelines.

Where only one bathing facility is provided in a building, 2 percent of the shower or bathtub fixtures within that facility must be accessible and the facility must be accessible to all persons (unisex). Where there are multiple bathing facilities in a building, each bathing facility must provide 2 percent of the shower or bathtub fixtures as accessible. Chapter 31 does not restrict how those bathing facilities are designated (men, women or unisex).

[E.]

01-03235

4.1.3 (12) Storage, Shelving and Display Units:
(a) If fixed or built-in storage facilities such as cabinets, shelves, closets, and drawers are provided in accessible spaces, at least one of each type provided shall contain storage space complying with 4.25. Additional storage may be provided outside of the dimensions required by 4.25.
(b) Shelves or display units allowing self-service by customers in mercantile occupancies shall be located on an accessible route complying with 4.3. Requirements for accessible reach range do not apply.

4.1.3 (14) If emergency warning systems are provided, then they shall include both audible alarms and visual alarms complying with 4.28. Sleeping accommodations required to comply with 9.3 shall have an alarm system complying with 4.28. Emergency warning systems in medical care facilities may be modified to suit standard health care alarm design practice.

4.1.3 (15) Detectable warnings shall be provided at locations as specified in 4.29.

51-20-3105 (d) 6. Storage
[Facilities]. In other than Group R, Division 1 apartment buildings, where fixed or built-in storage facilities such as

cabinets, shelves, closets and drawers are provided in accessible spaces, at least one of each type provided shall contain storage space complying with Section 3106(r).

Comment: Issue 22. See comment to Issue No. 19, above.

51-20-3105 (d) 9. Alarms. where provided, [alarm systems] shall include both audible and visible alarms. [Visible] alarm devices shall be located in all [assembly areas;] common-use areas including toilet rooms and bathing facilities,[;] hallways and lobbies[; and hotel guest rooms as required by Section 3103(a)8C].

EXCEPTIONS: 1. Alarm systems in Group I, Division 1.1 and 1.2 Occupancies may be modified to suit standard health care design practice.

2. Visible alarms are not required in Group R, Division 1 apartment buildings.

Comment: Issue 23. See comment to Issue No. 19, above.

51-20-3106 (d) 5. B. Detectable Warnings. Curb ramps shall have detectable warnings complying with Section 3106 (g). Detectable warnings shall extend the full width and depth of the curb ramp.

51-20-3106 (d) [8]. Vehicular Areas. Where an accessible route of travel crosses or adjoins a vehicular way, and where there are no curbs, railings or other elements [which separate the pedestrian and vehicular areas and which are] detectable by a person who has a severe vision impairment, the boundary between the areas shall be defined by a continuous detectable warning not less than 36 inches wide, complying with Section 3106 (q).

[E.]

[E.]

4.1.3 (17) Public Telephones:

(a) If public pay telephones, public closed circuit telephones, or other public telephones are provided, then they shall comply with 4.31.2 through 4.31.8 to the extent required by the following table:

Number of each type of telephone provided on each floor	Number of telephones required to comply with 4.31.2 through 4.31.81
1 or more single unit	1 per floor
1 bank2	1 per floor
2 or more banks2	1 per bank. Accessible unit may be installed as a single unit in proximity (either visible or with signage) to the bank. At least one

public telephone per floor shall meet the requirements for a forward reach telephone3.

1 Additional public telephones may be installed at any height. Unless otherwise specified, accessible telephones may be either forward or side reach telephones.

2 A bank consists of two or more adjacent public telephones, often installed as a unit.

3 EXCEPTION: For exterior installations only, if dial tone first service is available, then a side reach telephone may be installed instead of the required forward reach telephone (i.e., one telephone in proximity to each bank shall comply with 4.31).

Comment: Issue 24. The references have been corrected to 3106(q) in the November 1992 amendments, see attached.

51-20-3105 (d) 2. Telephones. On any floor where public telephones are provided at least one telephone shall be accessible. On any floor where 2 or more banks of multiple telephones are provided, at least one telephone in each bank shall be accessible and at least one telephone per floor shall be designed to allow forward reach complying with Section 3106...

Comment: Issue 25. To simplify the code provisions, the Washington regulations lumped all telephones available to the public as public telephones. Section 401(a) of the UBC requires the use of Webster's Third New International Dictionary of the English Language, Unabridged, copyright 1986, to provide ordinary meanings for words not defined in the code. Webster's dictionary defines public as "a place accessible or visible to all members of the community."

[E.]

[E.]

01-03237

4.1.3 (19) (b) This paragraph applies to assembly areas where audible communications are integral to the use of the space (e.g., concert and lecture halls, playhouses and movie theaters, meeting rooms, etc.). Such assembly areas, if (1) they accommodate at least 50 persons, or if they have audio-amplification systems, and (2) they have fixed seating, shall have a permanently installed assistive listening system complying with 4.33. For other assembly areas, a permanently installed assistive listening system, or an adequate number of electrical outlets or other supplementary wiring necessary to support a portable assistive listening system shall be provided. The minimum number of receivers to be provided shall be equal to 4 percent of the total number of seats,

but in no case less than two. Signage complying with applicable provisions of 4.30 shall be installed to notify patrons of the availability of a listening system.

4.1.3 (20) Where automated teller machines are provided, each machine shall comply with the requirements of 4.34 except where two or more machines are provided at a location, then only one must comply.

EXCEPTION: Drive-up-only automated teller machines are not required to comply with 4.34.2 and 4.34.3.

51-20-3103 (a) 2. B. Assistive Listening Devices. Assistive listening systems complying with Section 3106 (u) 3 shall be installed in assembly areas where audible communications are integral to the use of the space including stadiums, theaters, auditoriums, lecture halls, and similar areas; where fixed seats are provided; as follows:

1. Areas with an occupant load of 50 or more.
2. Areas where an audio-amplification system is installed.
Receivers for assistive-listening devices shall be provided at a rate of 4 percent of the total number of seats, but in no case fewer than two devices. In other assembly areas, where permanently installed assistive-listening systems are not provided, [electrical outlets shall be provided at a rate of not less than 4 percent of the total occupant load].
Signage complying with Section 3106 (p) shall be installed to notify patrons of the availability of the listening system.

Comment: Issue 26. See comment on Issue No. 2, above. Also, for assembly spaces without fixed seats, the ADA language requiring "an adequate number of electrical outlets. ... to support a portable assistive listening system" is not readily enforceable. To provide more specific standards for building designers and regulators, the Washington code provides an exact number of electrical outlets. If the intent of the ADA is only an outlet for the system transmitter, then a number of outlets which is 4% of the occupant load is going to be more than "adequate" and will provide greater accessibility than the ADA.

[Appendix 51-20-93120(a) Purpose. The purpose of this division is to provide the United States Architectural and Transportation Barriers Compliance Board Americans with Disabilities Act Guidelines for automated teller machines.]

[E.]

39 ADA/Washington State July 12, 1994

01-03238

Comment: Issue 27. The ADA standards for ATM's are now located in the Appendix to Chapter 31. See page 970j of the Published Code.) As a total document, standards equivalent to the ADA are present and available for use.

51-20-3105 (d) 4. [Recreation Facilities.
Where common or public use [recreation facilities,] swimming pools, hot tubs, spas and similar facilities are provided, they shall be accessible. Swimming pools shall be accessible by transfer tier, hydraulic chair, ramp or other means. Hot tubs and spas [need] be accessible only to the edge of the facility.

[EXCEPTION: Common- or public-use facilities accessory to buildings not required to contain either Type A or Type B dwelling units in accordance with Section 3103(a)8B.]

[This still does not provide scoping requirements. However, 28 C.F.R. S 36.607 provides that "if certain equipment is not covered by the [submitted] code, the determination of equivalency cannot be used as evidence with respect to the question of whether equipment in a building built according to the code satisfies the Act's requirements with respect to such equipment."]

[Amendment: E.]

4.1.5 Accessible Buildings: Additions. Each addition to an existing building or facility shall be regarded as an alteration. Each space or element added to the existing building or facility shall comply with the applicable provisions of 4.1.1 to 4.1.3, Minimum Requirements (for New Construction) and the applicable technical specifications of 4.2 through 4.35 and sections 5 through 10. Each addition that affects or could affect the usability of an area containing a primary function shall comply with 4.1.6(2).

51-20-3111 Additions. New additions may be made to existing buildings without making the entire building comply, provided the new additions conform to the provisions of Part II of this chapter except as follows:

1. Entries. Where a new addition to a building or facility does not have an accessible entry, at least one entry in the existing building or facility shall be accessible.

2. Accessible Route. Where the only accessible entry to the addition is located in the existing building or facility, at least one accessible route of travel shall be provided through the existing building or facility to all rooms, elements and spaces in the new addition which are required to be accessible.
3. Toilet and Bathing Facilities. Where there are no toilet rooms and bathing facilities in an addition and these facilities are provided in the existing building, then at least one toilet and bathing facility in the existing facility shall comply with Section 3106 or with Section 3112 (c) 5.
4. Group I Occupancies. Where patient rooms are added to an existing Group I Occupancy, a percentage of the additional rooms equal to the requirement of Section 3103 (a) 6., but in no case more than the total number of rooms required by Section 3103 (a) 6. shall comply with Section 3106 (w). Where toilet or bath facilities are part of the accessible rooms, they shall comply with Section 3106 (k).
5. Group R, Division 1 Apartment Buildings. Additions of 3 or fewer dwelling units in Group R, Division 1 apartment buildings need not comply with Part 1 of this chapter. Where an addition affects the access to or use of an area of primary function, to the maximum extent feasible, the path of travel to the area of primary function shall be made accessible.

Comment: Issue 28. See comment on to Issue No. 19, above.

[E.]

01-03240

4.1.6 Accessible Buildings: Alterations.

(1) General. Alterations to existing buildings and facilities shall comply with the following:

(1) (a) No alteration shall be undertaken which decreases or has the effect of decreasing accessibility or usability of a building or facility below the requirements for new construction at the time of alteration.

(1)(b) If existing elements, spaces, or common areas are altered, then each such altered element, space, feature, or area shall comply with the applicable provisions of 4.1.1 to 4.1.3 Minimum Requirements (for New Construction). If the applicable provision for new construction requires that an element, space, or common area be on an accessible route, the altered element, space, or common area is not required to be on an accessible route except as provided in 4.1.6(2) (Alterations to an Area Containing a Primary Function).

51-20-3110 Alteration is any change, addition or modification in construction or occupancy.

51-20-3112 Alterations. (a) General. 1. Compliance Alterations to existing buildings or facilities shall comply with this section. No alteration shall reduce or have the effect of reducing accessibility or usability of a building, portion of a building or facility. If compliance with this section is technically infeasible, the alteration shall provide accessibility to the maximum extent feasible. 51-20-3112 (a) 1. EXCEPTION: Except when substantial as defined by Section 3110, alterations to Group R, Division 1 apartment buildings need not comply with this section.

51-20-0104 Application to Existing Buildings and Structures. (a) General. Buildings and structures to which additions, alterations or repairs are made shall comply with all the requirements of this code for new facilities except as specifically provided in this section. See Section 1210 for provisions requiring installation of smoke detectors in existing Group R, Division 3 Occupancies.

(b) Addition, Alterations or Repairs. Additions, alterations or repairs may be made to any building or structure without

requiring the existing building or structure to comply with all the requirements of this code, provided the addition, alteration or repair conforms to that required for a new building or structure. Additions or alterations shall not be made to an existing building or structure which will cause the existing building or structure to be in violation of any of the provisions of this code nor shall such additions or alterations cause the existing building or structure to become unsafe. . .

(c) Any change in the use or occupancy of any existing building or structure shall comply with the provisions of Sections 308 and 502 of this code.
For existing buildings, see Appendix Chapter 1.

4.1.6, Continued.

(1) (c) If alterations of single elements, when considered together, amount to an alteration of a room or space in a building or facility, the entire space shall be made accessible.

4.1.6(k) EXCEPTION:
(i) These guidelines do not require the installation of an elevator in an altered facility that is less than three stories or has less than 3,000 square feet per story unless the building is a shopping center, a shopping mall, the professional office of a health care provider, or another type of facility as determined by the Attorney General.

4.1.6(k) EXCEPTION: (ii) The exemption provided in paragraph (i) does not obviate or limit in any way the obligation to comply with the other accessibility requirements established in these guidelines. For example, alterations to floors above or below the ground floor must be accessible regardless of whether the altered facility has an elevator. If a facility subject to the elevator exemption set forth in paragraph (i) nonetheless has a full passenger elevator, that elevator shall meet, to the maximum extent feasible, the accessibility requirements of these guidelines.

51-20-3112 (a) 2. Existing Elements. If existing elements, spaces, essential features or common areas are altered, each such altered element, space feature or area shall comply with the applicable provisions of Part II of this Chapter. Where an alteration is to an area of primary function, to the maximum extent feasible, the path of travel to the altered area shall be made accessible. See also Appendix Chapter 31 Division II. EXCEPTION 1: Accessible route of travel need not be provided to altered elements, spaces or common areas which are not areas of primary functions.

51-20-3112 (a) 4. Other Requirements. A. Where

alterations of single elements, when considered together, amount to an alteration of a room or space in a building or facility, the entire area or space shall be accessible.
51-20-3112 (b) Substantial Alterations. Where substantial alteration as defined in Section 3110 occurs to a building or facility, the entire building or facility shall comply with Part II of this code.

[EXCEPTION: Areas of evacuation assistance need not be added to a substantially altered building.]

Comment: Issue 29. See comment on Issue No. 19, above.

51-20-3112(a)4.B. No alteration of an existing element, space or area of a building shall impose a requirement for greater accessibility than that which would be required for new construction.

[E.]

NE No equivalent provision. Section 51-30-3103 (a) 1 allows floors of more than 3000 square feet above and below accessible floors to be constructed without access features.

01-03242

4.1.6 (2) Alterations to an Area Containing a Primary Function: In addition to the requirements of 4.1.6(1), an alteration that affects or could affect the usability of or access to an area containing a primary function shall be made so as to ensure that, to the maximum extent feasible, the path of travel to the altered area and the restrooms, telephones, and drinking fountains serving the altered area, are readily accessible to and usable by individuals with disabilities, unless such alterations are disproportionate to the overall alterations in terms of cost and scope (as determined under criteria established by the Attorney General). (See Section 36.403)

Comment: Issue 30. See comment on Issue No. 16, above.

51-20-3112 (a) 2. Existing Elements. If existing elements, spaces, essential features or common areas are altered, each such altered element, space feature or area shall comply with the applicable provisions of Part II of this chapter. Where an alteration is to an area of primary function, to the maximum extent feasible, the path of travel to the altered area shall be made accessible. See Also Appendix Chapter 31, Division II. EXCEPTIONS: 1. Accessible route of travel need not be provided to altered elements, spaces or common areas which are not areas of primary function.

2. Areas of evacuation assistance need not be added to an altered building.

[3. Subject to the approval of the building code official, the path of travel need not be made accessible if the cost of compliance with this part would exceed 20 percent of the total cost of construction, inclusive of the cost of eliminating barriers, within an 36-month period.]
51-20-3114 (a)

44 ADA/Washington State July 12, 1994

01-03243

Comment: Issue 31. With respect to this requirement, the Washington regulations will result in substantially more accessibility than the ADA. The Washington provision, now located in Sections 51-20-3111 and 3112(a)2 read as follows: ... [see above]
The Washington provisions will result in more, rather than less improvements to the path of travel because of three differences between ADA and WSR:

1. Use of the exception is subject to review of the building official. The building official has the option of turning down the exception request, even if it exceeds 20%.

2. The Washington regulations do not require barrier removal. When a place of public accommodation does remove barriers, that action is treated as an alteration under the Washington regulations. If that action is occurring in an area of primary function, Washington law requires improvement to the path of travel, the ADA does not.

3. The Washington regulations require that 20% of the "total cost of construction" of the addition or alteration be applied to improving the path of travel. ADA requirements stated in Section 36.403(a) apply only to alterations which affect usability of, or access to an area of primary function. As such building modifications which don't affect access are not alterations under the ADA. These actions would not

trigger the path of travel requirements nor their costs included in the determination of disproportional costs. In the Washington regulations, all the costs of the remodeling are included.

[The 36-month provision will create a snowball effect, because you take 20% of the past 3 years, regardless of whether the path of travel requirement was satisfied in the previous alterations. The ADA looks back only if the path of travel requirement was not met on the prior alterations. However, this does not result in less accessibility.
In addition, because the disproportionality provision in WAC is a waiver, it is not covered by the certification determination.]

45 ADA/Washington State July 12, 1994

01-03244

Example: A owner proposes remodels of a building which include alterations to areas of primary function, removal of barriers and other changes. The total cost of the construction is $200,000. Under Washington regulations, $40,000 must also be applied to improvements to the path of travel. Under the ADA, much less will be spent. $50,000 is being spent to remove barriers. Another $40,000 is being spent on elements which do not affect accessibility or usability. Leaving only $110,000 being applied to "alterations," as defined in ADA. Under ADA, only $22,000 need be applied to improving the path of travel, before a claim of disproportionality can be made.
For further clarification of the application of the Washington regulations see Council Interpretation No. 93-14.

Interpretation 93-14:
Question: 1. A 500 square foot addition is being proposed to the basement of an existing Group B, Division 2 Occupancy. The existing basement area is 3,200 square feet. Currently the building has two stairway exits from the

basement, but it is not served by an elevator. The addition is primary function area. When applying the path of travel requirements, where the applicant intends to pursue an appeal because of costs over 20%, is it required that up to 20% be spent, or can it be waived.
2. Are items 1, 2, and 3 of Section 51-20-3111 redundant with the requirement for improvements to the path of travel?

Answer: 1. Each project should be considered on a case by case basis. If alterations to the path of travel exceed 20%, the intent of the code is that improvements to the path of travel be made to at least the 20% level.
If however the only item needed to improve the path of travel costs more than the 20%, e.g. an elevator, then the expenditure on the path of travel can be "waived" at this time, but the amount should be added to future alterations or additions made in the subsequent 36 months.
The code only requires improvements to the path of travel serving the addition or altered area.
2. Yes, items 1, 2, and 3 are part of the path of travel when additions are made to the area of primary function.

46 ADA/Washington State July 12, 1994

01-03245

4.1.6 (3) (c) Elevators:

(i) If safety door edges are provided in existing automatic elevators, automatic door reopening devices may be omitted (see 4.10.6).

(ii) Where existing shaft configuration or technical infeasibility prohibits strict compliance with 4.10.9, the minimum car plan dimensions may be reduced by the minimum amount necessary, but in no case shall the inside car area be smaller than 48 in by 48 in.

(iii) Equivalent facilitation may be provided with an elevator car of different dimensions when usability can be demonstrated and when all other elements required to be accessible comply with the applicable provisions of 4.10. For example, an elevator of 47 in

by 69 in (1195 mm by 1755 mm) with a door opening on the narrow dimension, could accommodate the standard wheelchair clearances shown in Figure 4.

Fig. 4 Minimum Clear Floor Space for Wheelchairs.

Fig. 4(d) Clear Floor Space in Alcoves. For a front approach, where the depth of the alcove is equal to or less than, 24 inches (610 mm), the required clear floor space is 30 inches by 48 inches (760 mm by 1220 mm).
