

Riggs Shield™ - for reduced use of force and improved officer safety. Designed and patented by law enforcement for law enforcement.

You're about to be hit with a club for no apparent reason. If you're law enforcement, you have seconds to make a decision. One that could change your life forever. Will you go home to your family at the end of your shift, or end up in the hospital, the morgue or on the evening news sparking protests and law suits? Officers are in a very challenging position today.

The country is asking for change. The Riggs Shield™ can make a difference.

Give your officers a non-lethal tool to defend themselves that provides more time to react and de-escalate a situation quickly with minimal use-of-force.

BENEFITS

- A low-cost, non-lethal tool.
- Deploys in seconds.
- Increases reaction time.
- Reduces use of force.
- Improves officer and suspect safety.
- De-escalates incidents quickly.
- Instinctive use of shield.
- Includes contact-free written training program for optimal benefits.
- Identifies officer as POLICE, SHERIFF, CORRECTIONS or SECURITY.

Officers know that the longer it takes to de-escalate an incident, the greater the chance of injury. The Riggs Shield™ is a defensive tool that allows an officer to subdue a suspect quickly, reducing the need for offensive tools, which can result in potential injury to a suspect or officer.

The Riggs Shield™ is the fastest deploying ballistic shield that can mount to the inside of a patrol car door - not buried in the trunk. This NIJ Level IIIa shield is rated to stop up to .44 Magnum, 240 grain pistol rounds without penetration. The shield protects the officer's vulnerable head and neck that are not protected by body armor. It exceeded NIJ Level III stab tests and in most cases broke off the knife tip. See the videos where we put the shield to the test at www.PoliceBallisticShield.com/ballistics

The Riggs Shield™ protects officers on bikes, in jails and on patrol from stabs, clubs, punches, gunshots, and projectiles, yet leaves their hands free.

The Riggs Shield™ doesn't conduct electricity, so it also defends against stun guns and tasers. Unlike larger shields, it is light enough to carry for long periods.

Officers who attended the on-site Riggs Shield Training Program were surprised to feel how the force of a hit was diminished and didn't transfer into their bodies due to the shield's patented design, material and padding. They found the 5-pound shield to be well-balanced and instinctive, so they were able to run and use their equipment without restriction - and with little or no training. But to get the most out of the shield, we offer an extensive online training program, formerly \$600 for FREE at <https://policeballisticshield.com/training>

FEATURES

- Size: 8.5" x 16.5" x 4"
- Weight: 5 pounds
- Ballistics: NIJ Shot Level IIIa and Stab Level III
- Clear Identification: Plain, or free imprint with POLICE, SHERIFF, or SECURITY.
- Colors:
 - Shield: Black, OD Green, Coyote Tan
