 Glasgow, UK

PERSONAL STATEMENT

During my career I have actively participated and led extensively in process and pipeline commissioning operations, in many demanding environments, over the course of more than 20 projects. With nearly 9 years in the industry I have amassed a wealth of experience in the field of pipeline pre-commissioning. Undertaking roles including project engineer, field engineer, supervisory and operational duties; both onshore and offshore. I have often worked above my role, taking on duties such as logistics, utilising SAP to manage equipment mobilisation and adhere to international customs requirements and project Document Control.

I am an organised, highly motivated and a diligent individual, possessing a strong technical aptitude with analytical and problem-solving skills. I have worked in both company and client office environments, remote areas (on ships, onshore and offshore facilities) under challenging time constraints, work conditions and dealing with unexpected challenges and changes to scopes/procedures.

I have always embraced change and challenging myself to new opportunities and recently found myself with a unique opportunity, disguised as redundancy, to make a bold change for my career and challenge myself to learn new skills. I chose to channel my love of puzzles, games and desire to create to expand my skillsets in Software Development.

I believe my experiences and drive would be valuable within the process, pipelines and umbilical services sector and look forward to challenging myself and expanding my skills and knowledge.

WORK HISTORY

August 2014 – March 2020

Field Specialist II, Baker Hughes Process & Pipeline Services

October 2012 – August 2014

Field Engineer, EnerMech Ltd

September 2008 – July 2011

4th Engineer OOW, Engineering Cadet, Zodiac Maritime Agency

March 2006 – July 2008

Banking Advisor, Cashier, Halifax Bank of Scotland

QUALIFICATIONS

CodeClan, Glasgow, UK
Professional Software Development Award, SQA Level 8

City of Glasgow College - Nautical Training, Glasgow, UK
Professional Diploma in Marine Engineering.

KEY SKILLS

- Operations
- Supervision
- Client Liaison
- Proactive
- Decisive Under Pressure
- Safety Oriented
- Permit to Work
- Risk Assessments
- Competent in Various IT Programs
- Interpret & Modify Technical Drawings

BIO

At home I enjoy drawing, cooking, hiking, cycling and swimming with my family. I have a passion for video games and currently learning sign language to assist my daughter.

EMPLOYMENT HISTORY

August 2014 – March 2020

Field Specialist II, Baker Hughes Process & Pipeline Services

During my employment for the 3rd largest Oil & Gas Service company – Baker Hughes, I served on over 15 projects including NordStream 2 – Russia & Germany, WREP - Georgia, TurkStream - Russia & Bulgaria and Mafumaria 2 - Angola.

I undertook the roles of equipment operator (building spreads and operating a variety of diesel and air driven pumps), team supervisor, field engineer (conducting field paperwork, management of change, risk assessments, timesheets etc.), logistics operator and document controller. I have worked in a wealth of challenging environments, embracing different cultures and mindsets and working to tight deadlines. These roles have enabled me to conduct risk assessments, detailed operational reports, write sequential procedures, handle management of change processes and deliver Agile style toolbox talks before all tasks.

October 2011 – August 2014

Field Engineer, EnerMech Ltd

My first foray into the Oil and Gas Industry allowed me as a Junior Project Engineer to work on a variety of large projects including the COGA project between Congo & Gabon, Jubilee in Ghana and working with the client developing leak testing procedures for over a year with ConocoPhillips for the Jasmine Project. I developed skills in operating many diesel driven fluid, air and nitrogen pumps and use of calibrated testing equipment.

September 2008 – July 2011

4th Engineer OOW, Engineering Cadet, Zodiac Maritime Agency

This 3-year course provided me with the technical knowledge, practical experience, ability to work as a part of a multicultural team and adapt to challenging and demanding environments. It allowed me to travel the globe on containerships, learning about the industry as a whole, along with the technical skills to repair and maintain pumps, water generators, electrical generators and 2 stroke 100000hp engines.

March 2006 – July 2008

Banking Advisor, Cashier, Halifax Bank of Scotland

During my employment at HBOS I progressed my career from customer facing cashier role, handling sums of money, engaging with the public ensuring all transactions were correct and compliant. I moved to the role of Banking Advisor, where I would meet with customers and talk with them regarding their accounts and aspirations in order to provide suitable product recommendations and to seek potential for further sales or saving opportunities.

Previous roles are available on request.

OTHER EXPERIENCE

August 2020

Glasgow's Spirit of Christmas

Upon completion of my course with CodeClan I have volunteered to help this local charity. Creating an application which connects the charities database and allows the users to update the database with toys donated, confirming receipt of donations, logging the age category of each donation and logging its location. This was to give the charity organisers leverage over the database to produce useful data to allow them to designate gifts correctly to children and to ask the public to donate in other specific demographics.

EnerMech internal Project Management Training April 2013

CERTIFICATION

Offshore Medical Certificate, valid until June 2021.
Vaccination Record Card & Yellow Fever Certificate.
Vantage No: 1161795 UK, 2084653 AZ
Further Offshore Emergency Training with Compressed Air EBS (including HEUT) 5850 & 5858
Cert No: 469858501709203985 Expiry 17th September 2024
Cert No: 469858581709202112 Expiry 17th September 2024
Basic Elements of Safety VCA 613046.05238212 Expiry 12th November 2028

EDUCATION AND COURSES

CodeClan, Glasgow, UK
Professional Software Development Award, SQA Level 8
City of Glasgow College - Nautical Training, Glasgow, UK
Professional Diploma in Marine Engineering
Douglas Academy, Milngavie, Glasgow, UK
Higher Grade – Technological Studies, Physics & English
Standard Grade – Art, Mathematics, Chemistry, Geography and French

Compression Fittings, Methanol Awareness, Working at Heights, Nitrogen Pumping,
Fire Fighting, Abrasive Wheel Course, Medical First Aid, Contract Management Training,
Project Management Training, Pigging and P&ID Training, Scotia DHDA Pump Course, Helium Leak Testing,
BP Permit to Work and Right of Way certification, Baker Hughes Pigging Operator 1 training course

PROJECTS

Baker Hughes Process & Pipeline Services

January – March '20 NordStream2 Project, Netherlands
(Logistics), Russia and Germany WBC scopes in Son base. Overseeing packing, generation of load out lists and providing customs paperwork via SAP for delivery. Interfacing between Engineering team and workshop.

October – November '19 APO, Hasbrudal Gas Processing Plant, Tunisia
(Operator) Process Leak testing operations of LP Compressor. Utilising N2 Triplex Pump, OPP, Bas Booster and Mass Spec. Operation of N2 membrane spread for purging and leak testing, hydrotesting of plant systems upon reinstatement. Assisting HSE with data entry for observation cards.

September – October '19 NCOOC, Scott Platform, UK
(Operator) 2019 Shutdown Scope: Process - Leak testing operations of Test Separator. Utilising N2 Triplex Pump, OPP, Gas Booster and Mass Spec. Pipelines – Flushing operations & function testing BHGE equipment for start-up operations. Utilising HP Pump & DHDA.

September '19 BP, ETAP Platform, UK
(Operator) Process Leak testing operations of LP Compressor. Utilising N2 Triplex Pump, OPP, Bas Booster and Mass Spectrometer.

July – August '19 Repsol Sinopec, Claymore Platform, UK
(Operator) 2019 Shutdown Scope: Abandonment of existing Gas Import Line, MEG filling, pressure testing and gel pigging of new Gas Import Line.

April – June '19 BP, WREP SRP Project, Netherlands & Georgia June – October '18
(Project engineer in BH Son en Breugel Base, BH Site PTW Issuing Authority and BP Right of Way Performing Authority onsite in Georgia)
Overseeing and assisting packing and mobilisation of containers and equipment from Son Yard to Georgia. Creating itinerates and identifying outstanding items for procurement.
Onsite generation and issuing of BH Permit to Work (PTW), Assuming the role of BP PA for Right of Way scope of works, compiling daily reports and timesheets.
Supervising work scopes and liaising with clients in generation, completion and finalising project ask paperwork. Managing document control and assisting with as-build report generation.

November – December '18 ExxonMobil, Netherlands
(Operator) Nitrogen leak testing of new refractor and plant. Utilising Triplex N2 Pumping units and Mass Spectrometers.

January – November '17 South Stream, TurkStream Project, Netherlands & Russia , May '18 & January – April '19
(Project Engineer, Logistical Support & Document Controlling in BH Base, Netherlands and onsite Field Engineer Anapa, Russia) Overseen site function testing, packing, customs paperwork generation and mobilisation for both flooding and dewatering spreads. (Fence to Fence operation.)
Wet buckle contingency for dual TurkStream 940km 32" pipelines at depths up to 2200m. Utilising Flooding pump spread to treat H2S contaminated water and dewatering pipeline with air spread with post pipeline recovery.
Pre-commissioning of TurkStream Line 1 and Line 4 pull-in stubs, including engineering documents and on site overseeing and coordinating Flood Clean Gauge, Hydrotest, Dewatering, Drying and Nitrogen inerting operations. Vacuum drying of microtunnel pipelines P1 and P4.

November '17 – April '18 Shah Deniz 2, SDB-PR Platform, Azerbaijan
(Supervisor) Overseeing and co-ordinating onshore to offshore pipeline re-flooding, leak test, hydrotesting, calliper survey, ILI tool run, dewatering, drying and nitrogen purging of gas export, condensate and fortified zone lines. Liaison with clients and other work parties to ensure operations run sequentially. Permit creation and management using BP's eCoW system.

December '16 Repsol Sinopec, Fulmar Export Pigging Operations, Auk Alpha, UK
(Supervisor) Conducting chemical injection and pigging operations of the Fulmar Export Line.

August – October '16 Nexen, Telford Pigging Operations, Scott Platform, UK
(Operator) conducting Gauge Pig, ILI Pigging, Door Seal Testing, N2 leak testing and purging operations for the Telford pipeline and various leak tests on the Scott Platform.

February – July '16 Ersai, Kashagan Project, Netherlands
(Engineering, Document Reviewing and Document Control 6 months)
Flooding, cleaning, gauging, hydrotest, dewatering, drying and calliper survey of 2 x 28" 96km pipelines from Island D to Karabatan in Kazakhstan & 18" 6km line from Island A to D

July '15 – February '16 Saipem, Mafumeria Project, Angola
(Field Engineer and Supervisor) Topside flooding, cleaning, gauging, hydrotesting, dewatering and drying operation from various facilities for Mafumaria Sul project. BH to Client interfacing.

February – June '15 Saipem, South Stream Project, Bulgaria & Dubai
(Project Engineer in Dubai and Field Engineer in Bulgaria) Wet buckle contingency for Southstream 930km 32" pipelines at depths up to 2200m. Utilising Flooding pump spread to gauge and clean lines treating H2S and dewatering spread with post recovery.

January '15 Allseas, Wet Buckle Contingency Plan, Norway
Involved in the generation and review of work procedures for the Baker Hughes Wet Buckle contingency plan. Generated Mobilisation plan, Project Execution plan, reviewed Deep water and Shallow water operation plans.

October – November '14 Bibby Offshore, Campaign on the Bibby Topaz, UK
Deployed as an operator to complete barrier testing on various scopes. Involved the use of diaphragm pumps, DHDAs, ensuring correct PRVs installed for work scopes. Deployment and recovery of down lines. Managing dye levels for pumping operations and maintaining subsea manifolds. (SPAMMS)

EnerMech Ltd

March – August '14 ConocoPhillips, Jasmine Project & March – December '13
Project Engineer for Leak Test, purge and hydro test pack generation. (Including Smart Plug nitrogen leak test pack generation)
Including co-ordinating shutdown on Judy platform (Pipe Freezing, Leak Testing)

January – March '14 BG Group, 2014 Shutdown
Project Engineer for Generation of “P-Systems” to aid the generation of leak test packs and identify systems to be captured.
Created leak trend analysis reports and training material to improve quality of offshore reporting.

February – March '13 Technip, COGA Project & July – August '12
Technician during Pigging, Flushing, Hydrostatic Strength Testing and Leak Testing on Vessel and Platform

December '12 – January '13 Aker, Foinaven Project
Technician during Hydrostatic Strength Testing

October – December '12 Technip, Jubilee Project
Technician on umbilical line pressure testing using ROV operated Subsea Test Pump, filtration and particle counting.

September – October '12 Apache, Forties Bravo 2012 Shutdown
Supervisor on Shutdown (Leak Testing, pipe freeze and purging operations)

June – July '12 ConocoPhillips, Judy Shutdown
Technician on Shutdown (Leak Testing, pipe freeze and purging operations)

April – June '12 Technip, GirRi Project
Technician on umbilical line electrical and pressure testing using ROV operated Subsea Test Pump, filtration and particle counting.

March - April '12 Apache, Forties Alpha 2012 Shutdown
Technician during pipe freezing campaign

January '12 BHP Billiton, Point of Ayr Shutdown
Technician during shutdown leak testing operations
