

RECIPROCATING AIR COMPRESSORS

HDI Series 5-30 HP

The air-cooled, pressure-lubricated, reciprocating **Heavy Duty Industrial Series** is engineered to provide an air compressor built to withstand the most demanding industrial environments. Available in both simplex & duplex configurations, the HDI series 5Hp to 30Hp is equipped with 2-stage, 2-cylinder (247) or 4-cylinder (447) cast-iron compressor pumps powered by premium-efficiency North American made motors. The heavily weighted cast iron pumps and low rpm enhance heat dissipation and enable up to an 80% duty cycle and our proprietary pressure lubrication process ensures oil is delivered to journal bearings and all necessary components, minimizing oil carry-over and friction. The moving components of these pumps are machined, honed, balanced and assembled in Canada. Rugged construction and long life allows DV Systems to confidently offer an unprecedented **7 Year Warranty**.

REFRIGERATED COMPRESSED AIR DRYERS

Standard ASD 10 to 1000 cfm
High Temperature HTD 18 to 52 cfm

AIR AUDITS WITH DV DATA LOGGERS

Streamlining data collection and improving analysis, DV data loggers incorporate high quality sensors to collect and store data at high frequency from around the compressed air system. This data is then wirelessly transferred from DV data loggers to a single DV Base station, which in turn transfers it via the internet to our secure servers. Using a regular internet browser, users can access and analyze data using intuitive 'Wizards' to chart and graph data, as well as simulate 'before' and 'after' equipment energy and cost payback scenarios before using the publishing tools to report both results and future recommendations.

ROTARY SCREW AIR COMPRESSORS

BUILT BETTER

DV Systems has been engineering & manufacturing performance-driven industrial air compressors in our facility in Barrie, Ontario since 1954.

We are proud to provide reliable, innovative products and compressed air system solutions with exceptional customer service.

Our Heavy-Duty, High-Performance and High Efficiency Rotary Screw Air Compressors are covered by a 5 Year Limited Warranty.

Variable Speed Drive Compressors are ideal for continuous-use applications with fluctuating compressed air demand.

Our revolutionary 10 HP Single-Phase Huron B10 rotary screw air compressor features a maximum 55 A draw, allowing installation in locations where the use of traditional 10 HP air compressors was simply not possible, or uneconomical.
