VIEWING -All bulls are available for viewing at the Barwick Ranch until the morning of Friday, February 13th when the cattle will be hauled to Alma Sale Barn.

CAN'T BE THERE ON SALE DAY?- If you are unable to attend and would like to submit a bid, please feel free to contact Rodney at number listed above.

ABSENTEE BIDDING- absentee bidders who wish to utilize the internet may bid online at www.dvauction.com. Please register online 24 hours prior to sale. We guarantee your satisfaction of all bulls purchased sight unseen. All bids will be handled with integrity and confidentiality.

TERMS AND CONDITIONS- Terms are cash or check, all settlements must be made day of sale before bulls leave the grounds. All bulls sell under the terms of the AGA (American Gelbvieh Association).

HERD HEALTH- All bulls will sell with health and brand papers.

SEMEN INTEREST- we will be retaining a 1/2 semen interest in all bulls sold, unless otherwise noted

ANNOUNCEMENTS- A supplement sheet will be available on sale day with updated information **including homozygous black and carcass traits**. This sheet and any announcements made form auction block take precedence over catalog. All responsibility goes to the buyer after the auctioneer says SOLD. Every effort will be made to ensure safe handling of cattle throughout the sale and load out process.

GUARANTEE- All bulls are guaranteed against injury or death through the first breeding season. (90 days after turn out). If a replacement bull is not available, a credit will be given toward the purchase of a bull at the sale the following year. If a problem should arise, please contact Barwick Gelbvieh immediately to resolve this issue.

DELIVERY- All cattle can be delivered free of charge in Nebraska and northern Kansas. Arrangements can be made for delivery anywhere in the US.

**** If you haul your bull(s) day of sale, you will be given a \$100 discount per bull****

FREE CARE- All bulls not taken home on sale day will feed and cared for until April 1st free of charge. Bulls needing fed after April 1st are subject to a cost of \$3.5 per head/per day.

RESPONSIBILITY- All persons attending the sale do so at their own risk. Neither the sales management nor the consignors assume any liability, legal or otherwise, for any accidents which may occur.

Dear Beef Producers:

Welcome to the 12th Annual Barwick Gelbvieh Production Sale. Most importantly we want to say THANK YOU, 1st to the mighty God we serve for seeing this through and 2nd for your interest and support of our breeding program. It's always a pleasure doing business with each of you and appreciate your evaluation of our offering.

We are excited to have Steinkruger Farms as friends and guest cosigners at our sale.

Our numbers are not large, but the quality runs deep with bulls that will flat add pounds to the scales and \$\$\$\$ in your pocket. We take great pride in calving ease and their gentle disposition. The bulls are fed a high roughage ration for longevity and we have strived to put together an outstanding set of functional bulls that will be evidenced by performance, carcass quality, and maternal traits in their offspring allowing for pounds on sale day and quality replacement females.

We are sincerely honored to have you evaluate our genetics and invite you to visit our ranch to view the cattle prior to sale day. See you on Friday, February 13th at Alma Livestock, Alma Nebraska !!

Sincerely,

The Barwicks and Steinkrugers

AMERICAN GELBVIEH ASSOCIATION EPDS AND ECONOMIC INDEXES

Calving Ease Direct (CED): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

Milk (Milk): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Calving Ease Maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease. This EPD is important to a rancher's bottom line because it predicts which animals produce daughters with a genetic pre-disposition to calve unassisted as heifers.

Heifer Pregnancy (HP): Predicts the probability that a bull's daughters will become pregnant as first-calf heifers in a regular breeding season, expressed as a percent. A higher value of this EPD is favorable, meaning that a higher percentage of a sire's daughters get pregnant as first calf heifers compared to other sires in his contemporary group.

30-month Pregnancy (Pg30): Predicts the probability that a bull's daughters will become pregnant and calve at three years of age, given that they calved as first-calf heifers. This EPD is expressed as a percent, again, with a higher number being more favorable meaning a higher percentage of a sire's daughters will calve at three years of age, given they calved as first-calf heifers.

Stayability (STAY): Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six year of age. The stayability EPD is one of the best measures currently available to compare a bull's ability to produce females with reproductive longevity.

Docility (DOC): Is reported as a percentage, with higher numbers indicating a higher percent of offspring receiving a disposition score of 1 (docile).

Scrotal Circumference (SC): Predicts the difference, in centimeters, of scrotal circumference of an animal's male offspring at yearling compared to the SC of other animals' male offspring.

Birth Weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning Weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

Mature Weight (MWT): Body weight of cows adjusted to six years of age at body condition score 5. MWT is reported in pounds and is computed from a genetic model that leverages information from weaning weight, post-weaning gain, and mature weights of cows. Reported weights are adjusted for both age at observation and for body condition. Body weights of cows 2 to 12 years of age are utilized in the evaluation.

Cow Energy Requirement-Yearly (CERY): Mature body weight, lactation potential and birth weight are primary predictors of energy requirements. Mature Weight, Milk and Birth Weight EPD are utilized to inform prediction equations from beef cow nutrition research to estimate differences in energy requirement over a production year. The CERY EPD is reported in pounds of Total Digestible Nutrients (TDN) required for an age 6 cow.

Yield Grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass Weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye area (CREA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MARB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (CFAT): Differences for fat thickness, in inches, for a carcass over the 12th rib, smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

Dry Matter Intake (DMI): The genetic difference in pounds of expected average daily dry matter intake of progeny.

\$GAIN: Reports the difference in expected marginal value of gain less the cost of feed to achieve that gain. Reported in dollars of marginal profit with more positive values representing increased efficiency and profit.

Maternal Profit Index (MPI): In this production scenario, Gelbvieh bulls are mated to Angus-based cows with surplus calves marketed at weaning, with replacement heifers retained from the calf crop. EPDs weighted in this index are Calving Ease Direct (CED) and Maternal (CEM), Weaning Weight (WW), Milk (MILK), Mature Weight (MWT), Dry Matter Intake (DMI), Stayability (STAY), and Heifer Pregnancy (HP). Mature weight is the primary driver and represents the significant cost of maintenance energy requirement in the cow-calf sector. Weaning Weight and Milk (expressed in pounds of calf weaning weight) represent the principal revenue stream. Stayability helps account for differences in replacement costs in the system and the effect of heifer retention on revenue streams. This index should be used by commercial cattlemen whose production scenario includes the traditional marketing of calves at weaning and replacement retention from the herd.

Feeder Profit Index™ (FPI™): Envisioned as a completely terminal index, FPI assumes all calves are marketed as finished beef carcasses priced on a value-based grid. Thus, it shouldn't be used in production scenarios where replacements are kept from these matings. The new FPI formulation more precisely weights Economically Relevant Traits (ERTs) available for selection, including the key carcass traits of Carcass Weight (CW), Ribeye Area (REA), and Dry Matter Intake (DMI) that were not included in the original formulation. The new FPI also weights Fat Thickness (CFAT), post-weaning Average Daily Gain (ADG), and Calving Ease Direct (CED). Carcass value determined by carcass weight, quality, and yield grade influencing traits accounts for approximately 75% of the index as principal revenue drivers. Dry Matter Intake (DMI) captures differences in expected costs to the terminal carcass endpoint.

Total Profit Index (TPI): Combining replacement female retention from the herd with carcass endpoint for marketed surplus heifers and all steers, TPI balances both maternal and terminal selection criteria. Because of the challenges faced by commercial cattlemen by the antagonisms in selection for this production scenario, TPI includes the largest and most diverse set of EPDs in the model, including carcass traits as the primary revenue drivers with cow Mature Weight (MWT), Stayability (STAY) and Dry Matter Intake (DMI) as cost drivers.

Take a look here! Super stout, easy doing son out of our long time herd sire, Stunner. If you are in the business of selling or retaining replacement females these Stunner sons need to be on your short list!

Two-Year-Olds

This bull is a twin brother to lot 5. If you want to make a consistent calf crop, these two are a spitting image of each other. Well balanced EPDs, impeccable phenotype, and backed by generations of influential genetics. Check out this bulls depth of body, balanced look, and width he possesses from every angle.

Quite possibly the best Stunner sons we have ever raised! Take a good hard look at the quality this bull represents and the prominent genetics within his pedigree featuring Basin Payweight, Stunner 316, GRU Early Encounter and our long time Donor Jewel 602R. We used 030M to clean up our cows this summer as we adore him for his massive center body, attractive 1/3, soundness, and his expansive width throughout design. We truly believe no matter if the bull ends up in the hands of a fellow seedstock producer or a commercial cattleman, he will be profitable producing powerful bulls, high performing steers, and the keeping kind of females. Genomic Enhanced EPDs will be updated by sale day

Another Just N Time son with an incredible phenotype boasting his huge center mass, attractive front 1/3 and powerful hip. Backed by a great High Stakes female who was featured in our Reserve National Champion Pen of 3 heifers in 2023.

Yearlings

Lot 23

Here is a big time higher percentage Gunner son that does everything exceptionally well. He features big and stout phenotype starting from the ground up with a big foot and wide stance and expresses that width up through his stifle and over his top line. He is bold ribbed and comes out attractive through his front 1/3. 257N is out of a great young Independence daughter that is quite impressive and one that has been an eye catcher since she was a calf. But his positive attributes don't stop there he has an EPD profile ranking in the top 3% for REA, top 10% YG and FPI, top 15% CW and Fat, top 25% YW and \$GAIN, and top 30% WW

A higher percentage Gelbvieh bull that puts together an intriguing design combining an attractive front 1/3 with his powerful build. Goes back to the beautiful Marley female who was successfully campaigned across the country and was high regarded for her functionality and brood cow potential

Yearlings

If you are in the market for purebred Gelbvieh bull that can make a substantial difference in even the most progressive seedstock or commercial operation look no further. This bull puts a new definition to the term barrel middled! But that's not all, he is also wide in his stance and bold shaped while being functional and easy on the move. Not only does this bulls phenotype make him unique but so do his exceptional EDPs for all aspects of production including, calving ease, Growth, Maternal, and even carcass merit. This bulls story doesn't stop there, he backed by one of the most exciting young females in our herd, a beautiful and perfect uttered daughter PLA Cash Out. Genomic Enhanced EPDs will be updated time of sale.

These flush brothers come to you from the 1046Y donor that has proved to produce top bulls and replacement females with every mating thrown her way. This set of bulls has been extremely fun to watch develop. Our favorite pick of these bulls has changed almost every time we walk in the pen if not couple times each trip through the pen. If you want the most consistent calf crop these 4 brothers are 4 peas in a pod! Each one carries a bold center body, stout build, a balanced and eye appealing look, and travel freely. Each one with slightly different genomic EPDs that focus strongly on carcass merit.

Lot 57 is our Balancer Futurity Entry who was awarded top 5 honors at OKC. Before BARG Royalty Bred 1457N was even 3 months of age we knew he special! This bull puts together the most unique and attractive muscular pattern than we have ever seen. Every single person who has studied this bull has fallen in love with the presence he possesses. He is astonishingly bold ribbed, as wide as you can possibly make one, combined with a flawless foot shape, leg set, and substantial bone size. Royalty Bred comes by his name as he backed by generations of bulls and females that have made their mark on the Gelbvieh breed. He is sired by the 2023 Balancer Futurity Champion, Post Rock Clock Work and combines the likes of DLW Ms Edison 321A and EGL Pearl 265F, two highly regarded females in the breed. Combine the phenotype this bull features and the power in his blood with his unmatched performance and growth, we believe this bull has exactly what this breed needs to advance any seedstock operation or the most progressive commercial herd.

The Stunner sons featured in this years sale will be the final bulls sired by the GRU Stunner 927J Bull that you all have come to admire. This bull is molded like many other Stunners with a big hip, bold center body, and a balanced look. Backed by the highly productive 05D female that consecutively produces top bulls.
