"The Board of Directors has contracted with Colby Management to introduce a new data management and communication program, and the board and the owners will learn more as it is installed" Glenn Austad, President's Report, Jan 17, 2025

The "program" Glenn mentions above is an interactive computer application* that allows Greenview HOA to distribute information for owners by email and app, and allows owners to respond directly to the Association and Colby Management. This will likely be launched in late 2025. Colby Management uses an application called Townsquare, their customized version of www.townsq.io. This winter and spring the Board will be determining priorities and planning implementation. You can expect a gradual introduction to the application, with opportunities for individual instruction, if you desire. There are many features, but they will be added gradually. Ultimately Townsquare will allow members to have one source of information and eventually grow into a location to share information between owners. Stay tuned!
