Radio Loan Program

You just passed your technicians license test! Congratulations! But now what?

Well, you are probably going to want to purchase a new radio and antenna along with all the other accessories you will need to get on the air. But what do you purchase? Determining what equipment you need or want takes a bit of investigation. And is not something that should be taken lightly.

The West Valley Amateur Radio Club has a limited amount of equipment available to loan out for a short time to new members of our club that have been newly licensed. We want to get you on the air as soon as possible while you decide what equipment of your own to purchase.

The equipment is a mobile 2 meter radio, power supply, and mobile mag mount antenna programmed with the club repeater frequency and a few other local frequencies.

If you would like to take advantage of this program contact one of the club members listed below:
