

# Convention Workshops

*We have an exciting lineup of workshops for this year's convention!*

## Virtual Fencing: Advancing Grazing & Conservation

Learn how virtual fencing is helping Missouri livestock producers unlock new regenerative grazing strategies, expand livestock and cover crop integration, and enhance natural resource conservation.

**Presenter: Kaitlyn Dozler, University of Missouri Center for Regenerative Agriculture**

Kaitlyn will introduce the Center's Virtual Fencing Program, explain the fundamentals producers should know about this technology, and share how it's being utilized in both cover crops and perennial pasture grazing systems across Missouri. She'll also highlight real producer experiences, cost-share opportunities, and farmer-to-farmer education networks that connect producers using virtual fencing on their operations.

## Farm Succession: Planning for the Next Generation

How you pass your farm down to the next generation is one of the most important decisions you'll make. While sometimes it's as simple as including provisions in a will, it often becomes much more complex—especially when multiple generations and families are involved.

**Presenter: Jason Weydert, AgriLegacy**

Jason has years of experience helping family farms navigate the succession process. This session will include an open discussion on strategies to make transitions fair for everyone involved while addressing tax implications and other common challenges.

## Lubrication Fundamentals

Lubrication is one of the most important aspects of equipment maintenance—but with so many weights, grades, and specifications, it can be hard to keep up.

**Presenter: Doyle Justus, Schaeffer Oil**

Doyle will discuss the properties of different greases and oils and answer your questions about choosing and using the right products for your equipment.

## Sensible Soil Health

Learn how to maximize nutrient use efficiency through fertility balance and a systems approach. Soil health involves more than nutrients—it's influenced by application timing, seed rates, microbial life, and more.

**Presenter: Greg Vincent, Ag Spectrum**

Greg will discuss the company's "Maximum Farming System" and share insights to help you better understand the factors that drive strong soil health and improved yields.

## First Aid and Safety for Agriculture

In agriculture, you can never be too prepared for emergencies.

**Presenters: Members of the Boone County Fire Department**

This session covers basic first aid, common injuries and hazards in the agricultural community, and strategies for injury prevention and mitigation.
