

Financial Reporting and Technical Accounting Support

Practical, cost-effective remote technical support for AIM-listed finance teams

My Accountancy People Limited helps AIM-listed companies prepare high-quality financial statements and address technical accounting matters through a flexible remote delivery model. The objective is simple: give growing listed businesses access to experienced qualified support without the fixed cost of a larger in-house technical accounting team.

What we do	Why it matters
Annual financial statements, technical accounting papers, disclosure support, year-end reporting assistance and audit liaison.	AIM-listed companies often face listed-company reporting expectations with lean internal teams, tight deadlines and close cost control.

“The right support model should not just reduce cost. It should improve reporting quality, strengthen delivery and give management confidence over technically complex areas.”

My Accountancy People Limited

We have been providing cost-effective financial reporting support for UK AIM-listed businesses since 2021.

The challenge for AIM-listed companies

AIM-listed businesses are expected to deliver clear external reporting, robust technical accounting and sound financial governance. In practice, many are doing so with lean internal finance functions, limited in-house technical resource and sustained pressure on cost.

- Complex annual reporting timetables and year-end pressures
- IFRS and UK GAAP issues requiring specialist judgement
- Increased scrutiny over disclosures, assumptions and accounting policies
- Pressure to support a smooth external audit process
- The need to preserve reporting quality while maintaining cost discipline

Our solution

We provide remote financial reporting and technical accounting support tailored to the needs of AIM-listed companies. The model is flexible, proportionate and designed around the reporting cycle rather than a fixed advisory overhead.

Financial statement preparation	Technical accounting support	Year-end and audit support
Support with annual financial statements, note disclosures, accounting policies, consistency review and draft outputs ready for audit review.	Clear input on complex accounting matters, structured technical memoranda and documented reporting judgements.	Additional reporting capacity, audit query support and practical assistance during peak reporting periods.

Why a remote regulated accounting firm can make sense

Access to expertise	Experienced qualified accounting support when it is needed most.
Variable cost model	Support can be scaled around year-end, transactions and reporting peaks.
Focused technical input	Advice is targeted to the company's actual reporting requirements rather than a generic advisory approach.
Commercial practicality	Support is built around deadlines, deliverables and the reality of running a lean finance team.

Typical areas of support

Our support can be applied to recurring reporting requirements, one-off technical matters or additional cover during pressured periods in the reporting cycle.

- Annual report and financial statement drafting for the PLC and subsidiaries
- Interim reporting support
- Revenue recognition issues
- Share-based payment accounting
- Financial instruments
- Business combinations
- Impairment and judgement papers
- Complex funding arrangements
- Disclosure reviews
- Audit query support
- Reporting timetable pressure relief
- IFRS and UK GAAP interpretation

Who we work with

Lean finance teams

AIM-listed companies needing listed-company reporting quality without a large technical accounting headcount.

CFOs and Head of Reporting

Leaders requiring additional bandwidth, technical depth or support during year-end and audit.

Complex or unusual transactions

Businesses facing one-off accounting questions, judgement-heavy disclosures or evolving reporting requirements.

Cost-conscious listed businesses

Companies seeking high-quality support at a more proportionate cost than traditional models.

Why My Accountancy People Limited

We combine technical accounting capability with a practical understanding of what finance teams need during real reporting cycles. The emphasis is on delivery: technically robust support, responsive communication and outputs that help management produce clear, compliant and investor-ready reporting.

Technically robust

Responsive

Commercially sensible

Focused on delivery
