*Thanks for booking the Anderson Cabin*

---

## User Manual

---

### LED LIGHTS

This cabin is powered by a solar panel and battery system. Please try and use lights only as needed.

Whenever leaving the cabin, make sure all lights are off and turn the main power switch off. It is located on the backside of the island behind the access panel. Leave in off position when not in use. Be sure when collecting wood and using the outhouse that you turn the lights off when not in use.

Please no candles in the cabin.

---

### PROPANE SYSTEM

The cabin is equipped with a 5 burner propane stove. The propane tanks are located underneath the cabin. There are 2 shutoff valves. One upstairs on the backside of the island behind the access panel and one at the propane tanks underneath the cabin. Shutoff valves are for emergency use or for changing tanks only. To completely shut off the propane at the end of your trip, use the dial on top of the connected propane tank, turn all the way clockwise to shut off the propane.

If the propane tank is empty; first turn off downstairs gas valve and tank dial, then disconnect tank using the crescent wrench that lives in the upper left most drawer in the kitchen. Attach new bottle and turn dial counter clockwise to open tank and turn gas valve on. Please return the wrench to the drawer when you are done.

---

## COMPOSTING OUTHOUSE

The outhouse is a modern composting design. Any foreign materials other than poop and toilet paper will adversely affect the composting efficiency of the outhouse. The specially designed separate seat is key to the composting process. Urine is separated from the poo thus creating a more efficient process. After each deposit place a small handful of sawdust down the hole, being careful not to get any in the pee separator. Please clean any mess up on the separator.

Put absolutely none of the following down the outhouse hole:

- **Feminine hygiene products**
- **Garbage**
- **Food**
- **Liquids**
- **Cleaning products**

At the end of your stay please clean the seat and separator with toilet paper as best as you can for the next group.

---

## WATER AND WOOD

There is a water source a short walk beyond the outhouse. The water hole may require digging in the winter to find it. Two water jugs are supplied in the cabin, good luck....

There is wood supplied downstairs. Do the majority of your splitting downstairs and only split kindling on the deck. At the end of your trip fill the wood box.

---

*Enjoy your stay !!!*
