

Load Bank Testing Services - Critical for Your Generator's Performance

Emergency standby generators are a significant company investment and play a very crucial role, to provide backup in moments of power outages to ensure safety and operational continuity.

United Power Production performs regular load bank tests to verify the components in the system will perform effectively and optimally when needed to support your critical load.

Regular load banking of your generator ensures you will have backup power and prevent financial consequences.

Problems ahead, if a generator continually runs below 30% load, it never reaches operating temperature and this causes carbon deposits to build up on injectors, pistons, rings, turbos and in the exhaust system.

Load Bank Testing verifies 100% Performance

Ensures compliance with NFPA	Ensures Generator Performance
<p>Level 1: Failure of EPSS to perform could result in loss of human life.</p> <p>Level 2: Failure of EPSS to perform is less critical to human life and safety.</p>	<ul style="list-style-type: none">• Cooling system readiness• Corrects wet stacking• Allows for proactive maintenance• Disaster preparedness

During the Load Bank Testing the EPSS will be fully inspected by qualified technicians, and a full performance report will be recorded. The report will include a full analysis of the emergency generators condition and load test performance. Unsatisfactory results will be reported to the customer along with a corrective action plan.

To learn more about our power generator load bank testing, call us today at [313-652-4401](tel:313-652-4401) to speak to a team member or [complete our online contact](#) form to schedule services or request more information.
