## Creation and Time

( Made as a witness for science and the Bible to come together for creation. )

The greater the creation, the greater the creator. Wouldn't you agree? Take for instance the reclining chair. Whoever created that chair was an excellent creator. The Bible says that God created the earth and everything in it. Not only did God create the earth, but He created the universe and our solar system as well. What did God use for this creation? He used **time**, **space** and **matter** to create the universe which I will cover later.

About 60% of the human body is made of water. With that in mind when God created man ( Adam ), He took water and sand and molded them together to form man ( like a sand castle that you see at the beach ). He breathed life into man with His breath and this is written in Genesis ( the first book of the Bible ). Moses was the author of Genesis. When Moses was writing Genesis, he was inspired and told by God what to write. God said let us make man in our image. When God said "us" and "our", He was referring to the Trinity ( God, Jesus, Holy Spirit ). We were created in the image of God ( think about that ). The Trinity is hard for us to understand. When people think of the Trinity, they think of a triangle with each one at the point of the triangle, thus separating each one. Think of the Trinity as a circle with each one on the edge of the circle. The Trinity is all in one, not separated.

The Bible is a training manual for life according to 2 Timothy 3: 16 and 17 which says "**ALL** Scripture is God-breathed ( inspired by God to all the authors of the Bible ) and is useful for teaching, rebuking, correcting and training in righteousness, so that the servant ( you and me as Christians ) of God may be thoroughly equipped for every good work".

God literally created the universe and everything in it in 6 days. There is something about the time that He took for the creation that we do not know. According to science we know that time in space is different from time on earth. God used matter in space to create the universe and in science that was known as the big bang theory and that is not far from the truth. He set up the matter as a domino effect and we know that for the dominoes to fall, someone ( The Creator ) had to push the first domino. According to science, it took many years for the creation to happen. God told Moses that it took 6 days for the creation because it was easy to literally understand. The words “universe”, “galaxy”, and “solar system” were not known in the days of Moses.

God used **space** to put the universe ( **matter** ) and **time** to put it there. In Genesis, God told Moses what was happening each day of the six days. According to the Bible in 2 Peter 3: 8-13 it says that, “With the Lord a day is like a thousand years, and a thousand years **on earth** is like a day **in heaven**” ( highlight added by me ). The Bible tells us that. So, with that in mind, it took six thousand years to create the universe and that coincides with science.

Who told Peter about time in relation to earth and heaven? It must have come from Jesus when Peter was with him as a disciple. If this is written in the Bible, then it is true. It is very difficult for us to conceive this “time” relationship, but if we take the truth of the Bible literally, then there is no argument.

How big is our God? He is indescribable as Louie Giglio tells us. The following examples are from Louie Giglio. After the invention of the Hubble telescope, we discovered a lot about the universe. How big is the universe? We do not know, but it is big. Take for instance the size of a golf ball and let us call it the earth. If you were to put that golf ball on the sun, you would have to look hard to find it.

Let us say the diameter of the sun is fifteen feet across and you were to put that golf ball somewhere on the surface of that fifteen feet, that would be the relevant size of the earth to the sun in our solar system.

**With the Hubble telescope, we have discovered the three largest stars in our galaxy and there are three billion stars just in our galaxy. There are thousands of galaxies in the universe. That is big.**

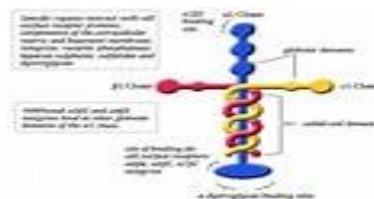

**The first largest star is named Betelgeuse and let us just say that it is the size of the Empire State building. You can lay that golf ball at the bottom of the Empire State building and that would be the relevant size of earth to Betelgeuse. Amazingly big is this star that God created.**

**The next star is bigger than Betelgeuse and it is named Mucehpei. Let us say the size of Mucehpei is three ( 3 ) Empire State buildings stacked on top of each other and with the golf ball at the bottom would be the relevant size of earth to Mucehpei.**

**The biggest star discovered so far in our galaxy is named Canis Majoris. Let us say the size of Canis Majoris is six ( 6 ) Empire State buildings stacked on top of each other with the golf ball at the bottom.**

**Can you look at that golf ball and find yourself? God can!! I have always said that God can take the earth in His hand and see what is happening on both sides of earth at the same time. How big is our God? Indescribable.**

**God operates big in the universe and operates small on earth as in the size of molecules. You can take 16 molecules and put them on the point of a safety pin. Everything that is matter is made up of molecules and those molecules are constantly changing and moving according to the Second Law of Thermodynamics. Since we are made up of molecules, what keeps the molecules together in our skeletal bodies? There is one of the protein molecules that act as a glue to keep us together and it is called Laminin. What does Laminin look like under a microscope? Jesus holds us together with a cross. Amazing.**

**When God created the earth, He created time. Time is measured by the revolving of the earth around the sun and the revolving of the earth on its axis. If a person were to leave our solar system and travel in space, the farther that person travels away from the sun, the more time diminishes. Our life on earth is synonymous with time as mentioned in an earlier commentary called “Logical Reasoning”.**

**The earth was created as a perfect design for us to exist and live. It is the perfect distance from the sun for us live. It rotates on its axis at the perfect speed for us to live. It is a perfect design by God. Do you think that was by chance? When something is designed, it is created by someone ( the Creator ) and not by chance.**

**In Revelation Chapter 21, it talks about God creating a new heaven and a new earth.**

**Creation is mentioned and described twice in the Bible in Genesis and Revelation. It is mentioned at the beginning of Genesis and again at the end of Revelation. Isn't it ironic that this is the first and last books of the Bible? Something to think about.**

**When the universe was created, God had a plan to create the earth for us and a heaven for us if we believe in Him. When we die, we are given a new body for us to travel to another place in the universe called heaven. In an interview with Billy Graham, he stated “that heaven is on another planet somewhere in the universe and with this new heavenly body we will be able to travel from one planet to another”. This is not science fiction, it is true. The new heaven is described in Revelation.**

**In summary, Jesus created the universe and this was a design, not by chance. The earth was created by design until the new earth is created.**

**So in conclusion, ( made as a Christian witness based on circumstantial evidence God made the universe and everything in it ).**

**A commentary by a Christian Brother: Larry Hord.**
