Natural

Beeswax, Carnauba wax and Candelilla wax are the most important **natural** waxes from a technical and commercial point of view. Within our line of natural waxes we offer solutions from **sustainable** sources and with **certifications** that guarantee their origin and effectiveness:

Carnauba

- Vegan
- Good **compatibility** with natural oils and waxes
- In creams or lotions it acts as an agent that **prevents moisture loss** in the skin.
- In lipsticks it provides **shine** and increases heat resistance due to its high melting point.
- Structuring agent

Candelilla REAL®

- **Rheological** agent that modifies the viscosity of emulsions.
- Provides excellent **structure** and **shine** to lipsticks and eyeliners.
- In hair creams, allows hair styling to last longer
- **Prevents the migration** of oils and facilitates the release in lipsticks
- Excellent performance for **gelling vegetable oils**
- **Exfoliating property** in granules presentation.

Royal BWX®

- **Rheological** agent
- High **malleability** and **adhesive capacity** that allows for a better structure in lipsticks, mascaras, etc.
- **Provides moisturizing** properties to lips and skin.
- Provides **water resistance** in sunscreens
- **Emollient agent** providing softness to the skin
- **Increases the stability** of cosmetic emulsions.

Code	Product	Shape	Melting Point °C USP 741 CLASS II	Penetration dmm ASTM D-1321	Acid Number (mg KOH / g) USP 401	Attribute	Certifications	Applications

Candelilla Wax eLife® certified
100% Organic by Ecocert
Greenlife according to the
COSMOS standard.

Range of solutions extracted
with **Citric Acid** in favor of
producers and the
environment.

Mineral

Waxes of **mineral** origin are **stable** and due to their **versatility**, they can be used in skin systems producing emulsions with excellent **texture** and **stability**.

In skin care products, the formation of liquid crystals within the emulsion promotes "time-release" **hydration** and also functions as a slow-release delivery mechanism for actives.

Paraffins

- Provides **moisture barrier**
- **Rheology** modifier
- **Provides structure** to the final product
- It is an **emollient agent** that provides softness to the skin.
- **Low oil** content

Microcrystalline Waxes

- High oil and fragrance **retention capacity**
- Pigment wetting aid
- Wide melting temperature range
- Provides **moisture barrier**
- Gives **structure** to the final product
- Rheology modifier
- Provides **consistency** and **emolliency** to the final product

Petrolatum

- It is an **emollient agent** that provides softness to the skin.
- Film former
- Rheology modifier
- Improves **smooth consistency**

*ASTM D-156

- Our waxes are designed to meet customer needs and follow the natural trends of the cosmetic market. They are in accordance with cosmetic regulations and can generate a cost reduction in our customers' formulations.
- We have developed specialties that comply with strict control methods for skin, eye and hair care applications.

Sustainability

We have made sustainability a main axis of business transformation in order to contribute to the solution of global challenges and the well-being of our employees.

Our goal is to create shared value for all our stakeholders through the sustainable use of biodiversity and the sustainable development of communities, resulting in quality products that meet the challenges and objectives of our customers.
