Objective

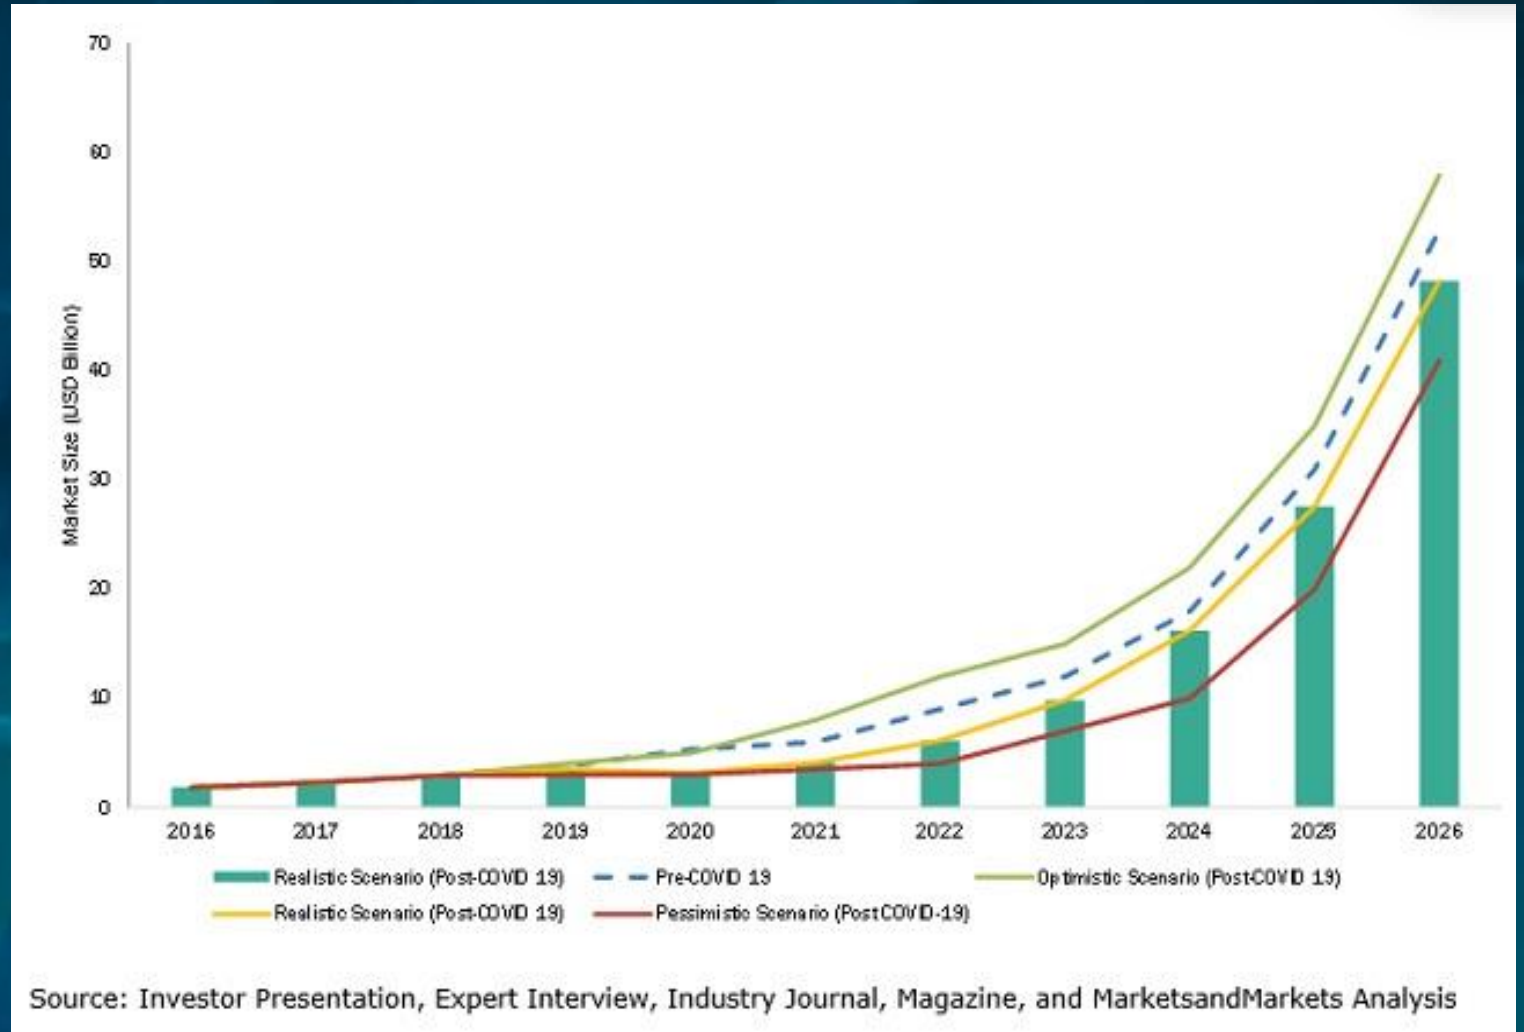

**Manage
Expectations
of Airport Owners
to Successfully
Achieve & Sustain
Airport Digital Twin
(DT) Capabilities**

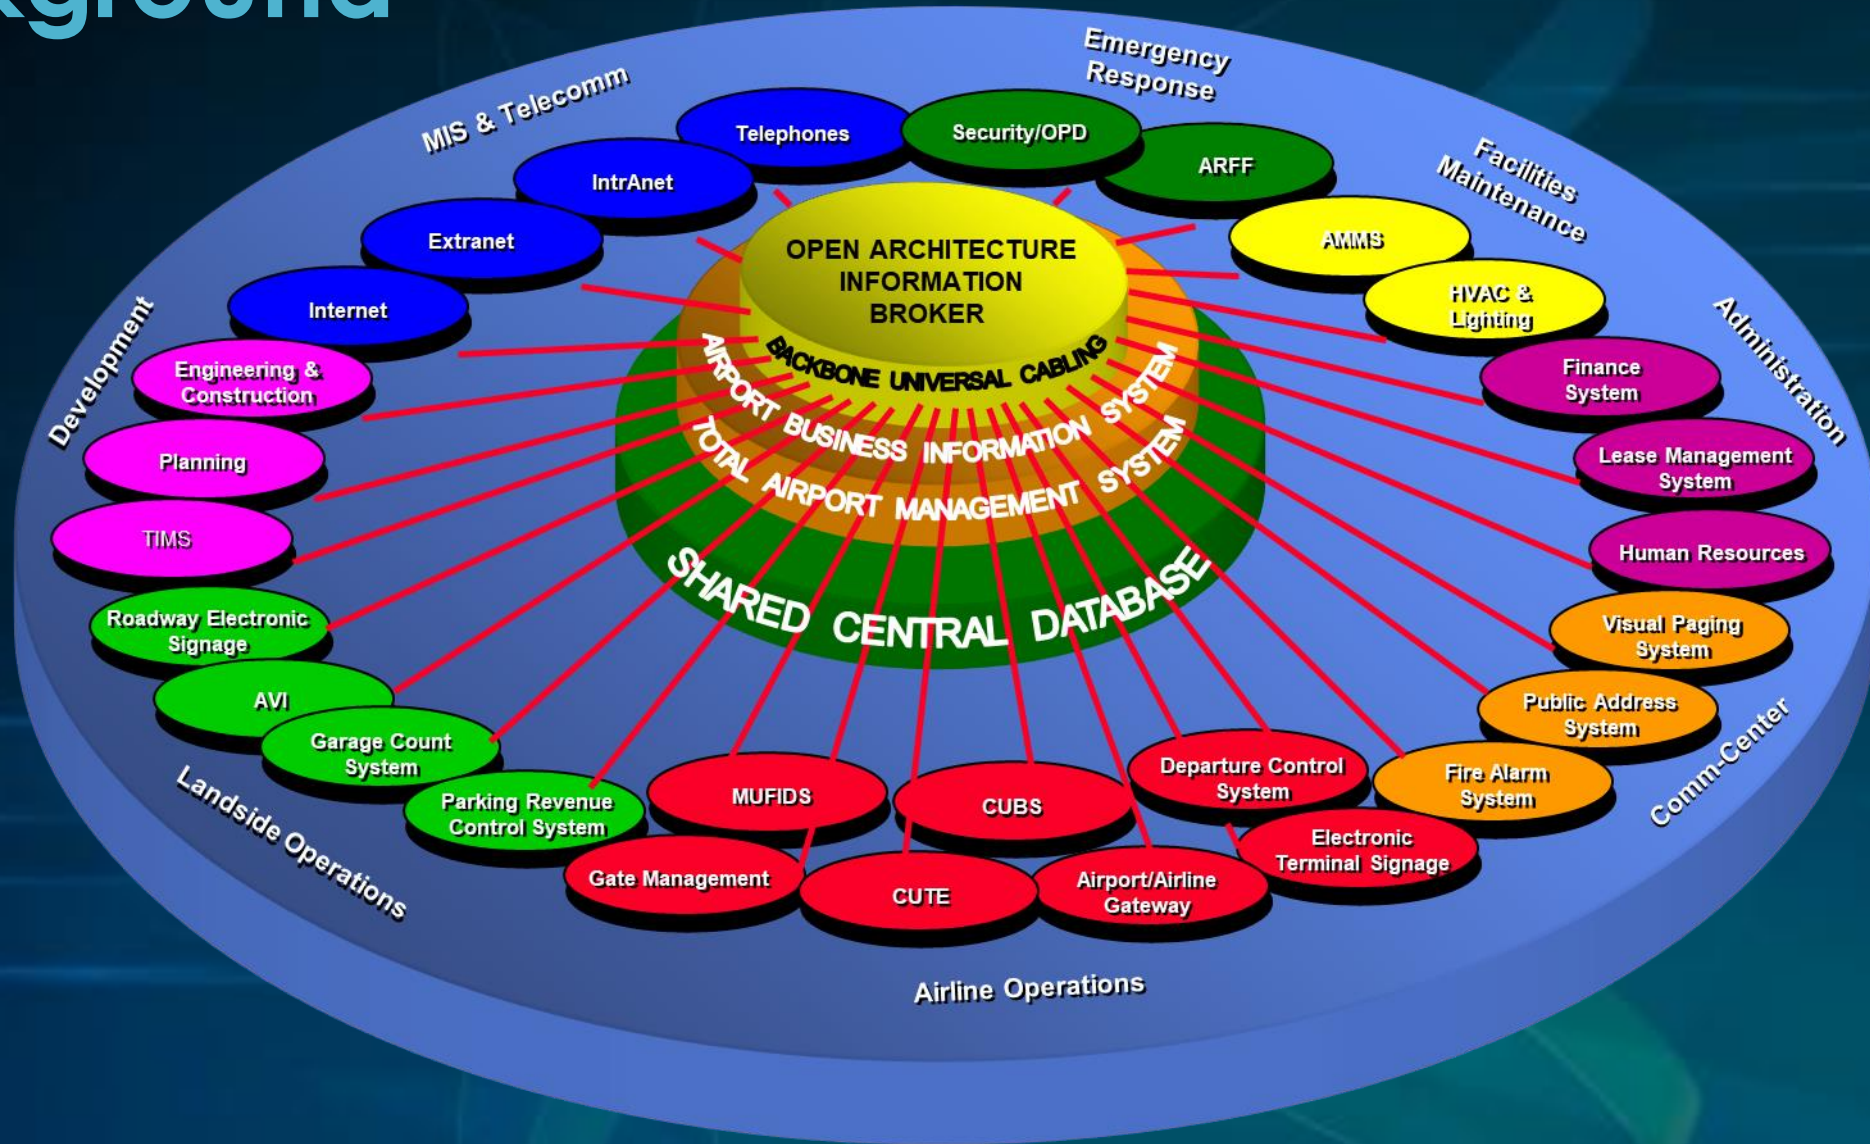

Background

In 2019, researchers at Markets & Markets reported that Digital Twin industry generated **\$3.8 billion USD** in revenue around the world, and is projected to grow to **\$35.8 billion USD** by 2025

Background

Nearly 30-Year-Old Concept ...

Background

- Digital Twin terminology along with IoT interoperability and analytics are **renovating previous concepts**
- Digital Twin **software solutions being marketed** to airports
- Airport **executives hearing and asking** about Digital Twin
- Airport Digital Twin **implementations beginning**
- Airport Cooperative Research Program (**ACRP**) begun to **study** Digital Twins for Airports (ACRP 03-66)

Surveyed Impressions

- Integration
- Real-time data
- 3D visualization
(2D and schematics are ok too)
- Data analytics
- Dashboards
- 2-way flow of data
- Simulated & Predicted
- IoT sensors

AAAE Digital Twin Working Group

- Formed **Digital Twin Working Group (DT-WG)**
December 2021 (under Facilities & Technical Services Committee)
- Primary Objective: **Develop Roadmap for Airport Owners**
- Regular Zoom Meetings
 - **Monthly**: All Working Group Members Invited for Inputs & Reviews of Airport Examples
 - **Weekly**: Smaller Sub-Working Group Developing Roadmap Content Details
- DT-WG Membership
 - 20 Airport Owners
 - 40 Solution & Service Providers
- AAAE Conference Panels
 - 2022 Ops & Tech in San Antonio
 - 2022 NAC in Orlando
 - + AAAE Airport Magazine Article (Oct/Nov)

AAAE Digital Twin Working Group

Roadmap for Airport Owners

AMERICAN ASSOCIATION OF AIRPORT EXECUTIVES [AAAE] DIGITAL TWIN WORKING GROUP

Explanation of Airport Owner's Digital Twin

Final Draft 3/17/22

The purpose of the following explanation is to help airport owners better understand what is a **Digital Twin**, in the context of their airport enterprise management. An airport owner's Digital Twin may be developed incrementally over time, increasing in capabilities gradually on an as needed basis per each airport's individual priorities.

An airport owner's Digital Twin is transportation (e.g., aircraft, vehicle ecosystem, including but not limited to:

- Air Transportation
- Ground Transportation
- Terminal Buildings

An airport owner's digital twin is used for operational decision-making, and effects and simulate predicted futures. It is data, guided by domain knowledge.

An integration of airport information that may include:

- Data (including spatial', not limited to)
- Software (including configuration, not limited to)
- Hardware (including servers, not limited to)
- Network devices (including switches, not limited to)
- Cloud services (including SaaS, not limited to)
- Staff supporting non-airport operations, not limited to
- Governance (including policies, not limited to)

That may provide:

- Visual multi-dimensional representation of airport infrastructure, facilities, assets, resources, workflows, etc.
- Integrated display of correlated data

AAAE Airport Digital Twin Maturity Model						
	Lowest	>	>	>	>	Highest
	Entry Level					Utopia
Level	1	2	3	4	5	6
Staffing	Self motivated individual division staff conducting analysis	Division designated dedicated analyst	Proactive centralized Business Intelligence (BI) organizational function			
			Understaffed	Adequately staffed	Some machine learning automation reducing needed staff levels	Full machine learning automation
Business Processes	Not documented	Few documented	Few mapped with some automation	Mostly mapped with some workflow automation	Completely mapped with full workflow automation	Completely mapped with full workflow automation
Data Housing	Siloed	Combination of siloed and centralized	Mostly centralized data hub/warehouse	Centralized & integrated data warehouse	Mostly aligned data	Full accessibility & alignment
			Defining DT Vision & Path Forward			
Metrics & Analytics	Measuring available data	Developing division metrics for key priorities	Developing centralized universal metrics	Build alignment of organizational measures into employee work tasks	Calibrate alignment of metrics to improve performance	Fully aligned enterprise with on-demand metrics
Data Flow	No automated data sharing flow (i.e., manual batch loading, not real-time via APIs)	Manual and automated data sharing flow	Manual and automated data sharing flow	Priority external and all internal data flows automated	All data feeds automated with self reported validated	All data feeds automated (no self reporting)
	Some IoT device data flow within proprietary disparate systems	Some internal airport systems with automated data sharing	External partners data is partially manual (e.g., airlines, concessions, etc.)	Automated PAX demographics, POS, concessions data, airline activity overlay		
			Common basemap automated web services			
	Aerial/ALP raster floor plan maps some georegistered	Georegistered	Georeferenced with metadata / some surveyed	Some georeferenced LiDAR survey verified	Most georeferenced LiDAR survey verified	All georeferenced LiDAR survey verified
	Real-time sensor/analytic feeds		Interactive analytics	Real-time sensor/analytic feeds		
						Augmented/virtual reality with all integrated data overlay
						Real-time CCTV overlay on 3D GIS/BIM
						AI enabled analytics
						Weekly updated indoor/outdoor maps with LiDAR & draped 360 imagery stored in 2D/3D GIS
						Daily updated indoor/outdoor basemaps with LiDAR & draped 360 imagery integrated in 2D/3D GIS
						Real data updates fully automated in BIM; asset ID AI tagging; reduced 3D/BIM staff
						Spatial data updates fully automated in BIM/GIS with AI asset ID, minimal monitoring and staff
						Updated BIM models stored in BIM and integrated with GIS
						All systems integrated via common hub; direct sensor edge integration
						Automated feedback bi-directional including critical systems
						Automated feedback bi-directional including critical systems
						Full airport campus predictive simulation

AIRPORT OWNER'S DIGITAL TWIN ROADMAP

May 16, 2023

Prepared by David Tamir

AAAE Digital Twin Working Group Lead

under the direction of AAAE Facilities and Technical Services Committee

What's an Airport Digital Twin (DT)

Digital representation of airport campus

- **integrating data** from disparate systems / sources
- to enable **safe, secure,** and **efficient** airport functions
- with **past, present,** and **predicted** views

What's an Airport Digital Twin

An airport owner's Digital Twin is a virtual digital representation of the airport's real-world assets, intermodal transportation (e.g., aircraft, vehicles, passengers, cargo), and processes which may span the entire aerodrome ecosystem, including but not limited to:

- Air Transportation
- Ground Transportation
- Terminal Buildings
- Other Buildings
- Infrastructure
- Properties & Environment

An airport owner's digital twin transforms the airport business enterprise by accelerating holistic understanding, optimal decision-making, and effective action. It uses real-time and historical data to represent the past and present and simulate predicted futures. It is motivated by outcomes, tailored to use cases, powered by integration, built on data, guided by domain knowledge, and implemented in IT/OT systems.ⁱ

Source:

AAAE Airport Owner's Digital Twin Working Group Roadmap
(based on Digital Twin Consortium's Definition)

What's an Airport Digital Twin cont'

An integration of airport information systems (including processes, data, and technologies)

- **Data** (including spatialⁱⁱ, non-spatial, real-time, historic, forecast, and simulated)
- **Software** (including configurable COTS solutions, data maintenance, and business intelligence & analytics)
- **Hardware** (including servers, desktops, laptops, tablets, smartphones, and sensors)
- **Network** devices (including switches, routers, and hotspots)
- **Cloud** services (including software, data, databases, and infrastructure “as a service”)
- **Staff** supporting non-automated data updates (such as airport configuration changes)
- **Governance** (including policies, standards, compliance, processes, and procedures)

That may provide

- **Visual multi-dimensional representation** of the airport's ecosystem including its airspace, surroundings, infrastructure, facilities, assets, systems, flux (e.g., aircraft, vehicles, passengers, meeter greeters), staff resources, workflows, etc.
- **Integrated display of correlated information** from multiple systems/sources (aka business intelligence) in the form of analytic graphs, tables, and maps
- **Temporal analysis** of past, current, real-time, forecast, and/or simulated data

What's an Airport Digital Twin cont'

To enable

- **Efficient collection, access, correlation, and understanding of qualityⁱⁱⁱ data** from multiple airport systems/sources to support faster and more confident decisions to improve airport:
 - Level of Service
 - Safety & Security
 - Operations & Maintenance
 - Planning & Development
 - Costs & Revenue
 - Compliance & Risk Management
- **Autonomous** operations and decision making

What's an Airport Digital Twin cont'

In support of all airport management disciplines

- Planning & Environmental
- Engineering & Construction
- Facilities & Asset Maintenance
- Operations (Landside, Terminal, Airside, Security, Fire, Police)
- Property Leasing & Concessions
- Business Development
- Public & Governmental Affairs
- Information Technology & Communications
- Finance & Procurement
- Legal & Administration

Addressing informational needs of various airport stakeholders

- Board members
- Management
- Staff
- Vendors / Consultants / Contractors / Service providers
- Tenants
- Passengers
- Meeters & Greeters
- Governing agencies (e.g., local, state, federal)
- Surrounding Community

What's an Airport Digital Twin cont'

An airport owner's digital twin is

- NOT a single system, but rather an integration of systems/data, which are assembled into a Digital Twin head-end system
- NOT replacing existing airport systems, but rather expanding their utility; some existing systems may become obsolete or consolidated as a result of a Digital Twin
- NOT the Architectural-Engineering-Construction (AEC) Digital Twin used to design-build-activate new facilities; however, the AEC's Digital Twin data may be leveraged by the airport owner's Digital Twin
- NOT a Building Information Modeling (BIM) nor a Geospatial Information System (GIS), although BIM and GIS are parts of a digital twin

Source: AA AE Airport Owner's Digital Twin Working Group Roadmap

Challenges Facilitated by Digital Twin

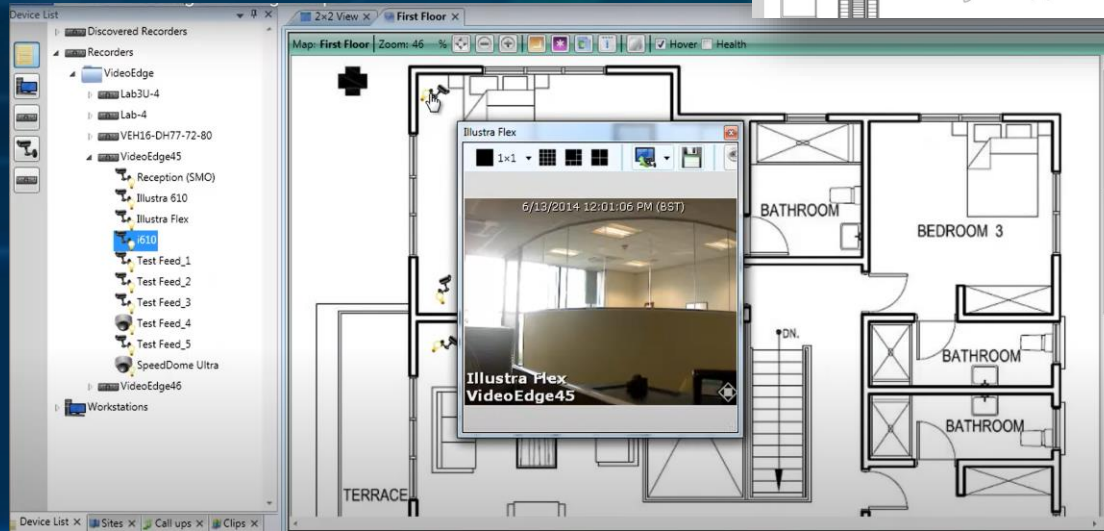

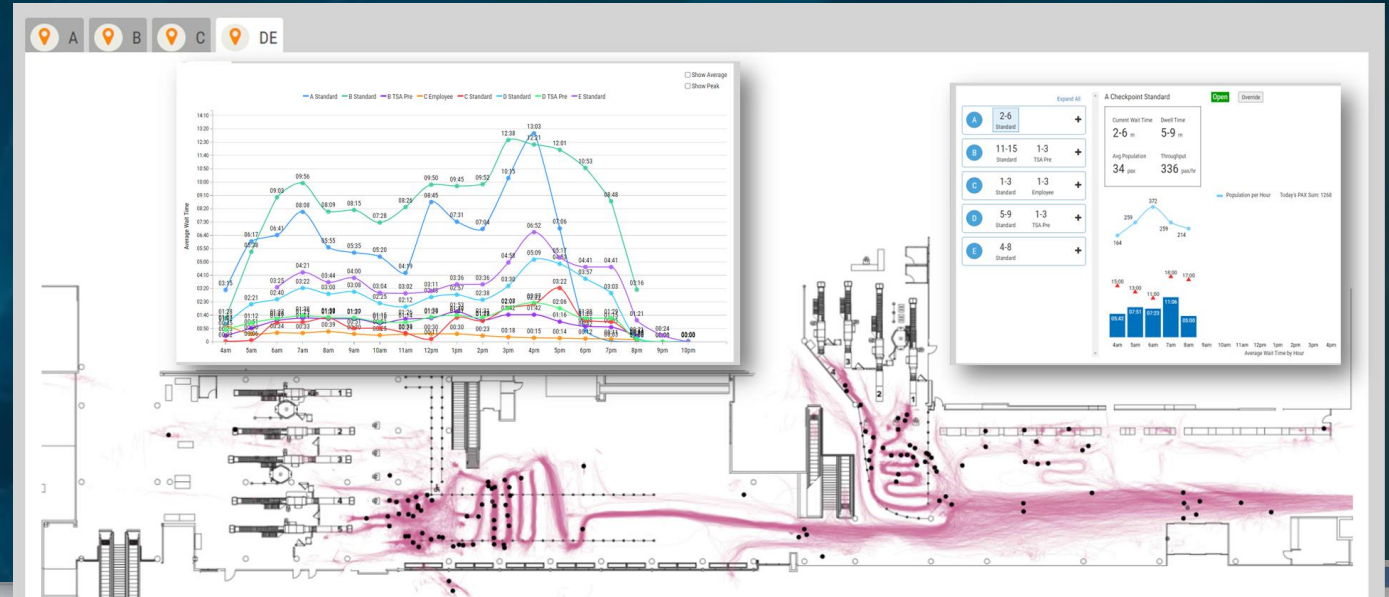

- Internet of Things (IoT) with analytics have become common place (e.g., **CCTV cameras, sensors, alarms, elevators, escalators, etc.**)
- Different IoT types overlayed on disparate system maps/floorplans **need to be updated more efficiently with constant airport changes**
- **Need to correlate interdependencies** of various IoT types across large and complex airport facilities that are constantly evolving
- **Need** various IoTs with analytics **on same “page”** via shared up-to-date airport maps/floorplans

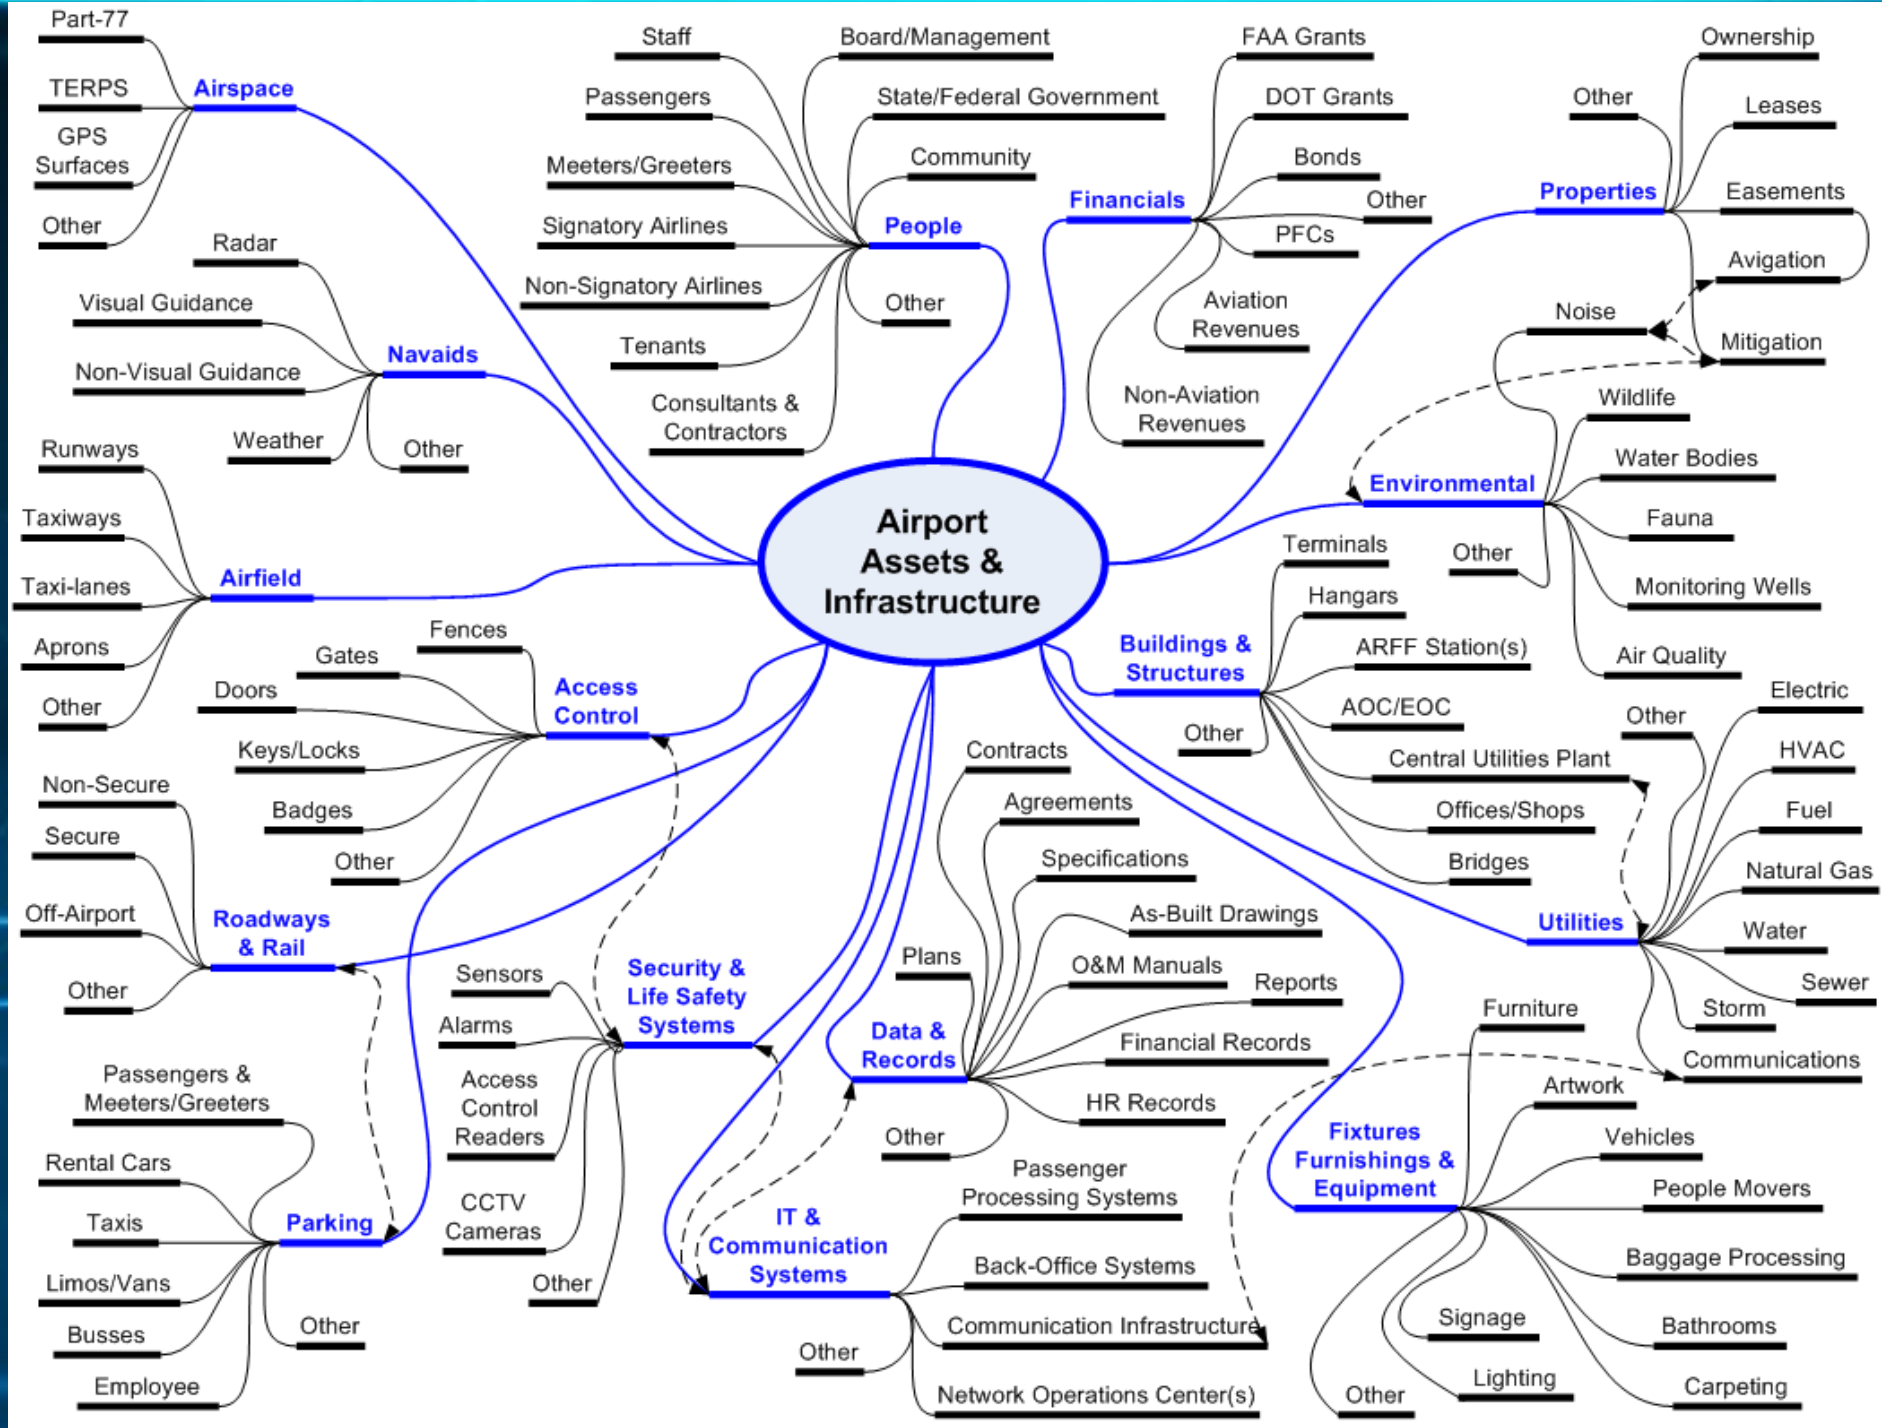

Examples requiring Correlation via a Digital Twin

- PAX Movements Analytics
- Building Sensors Analytics
- CCTV Imagery Analytics

DT Fusion

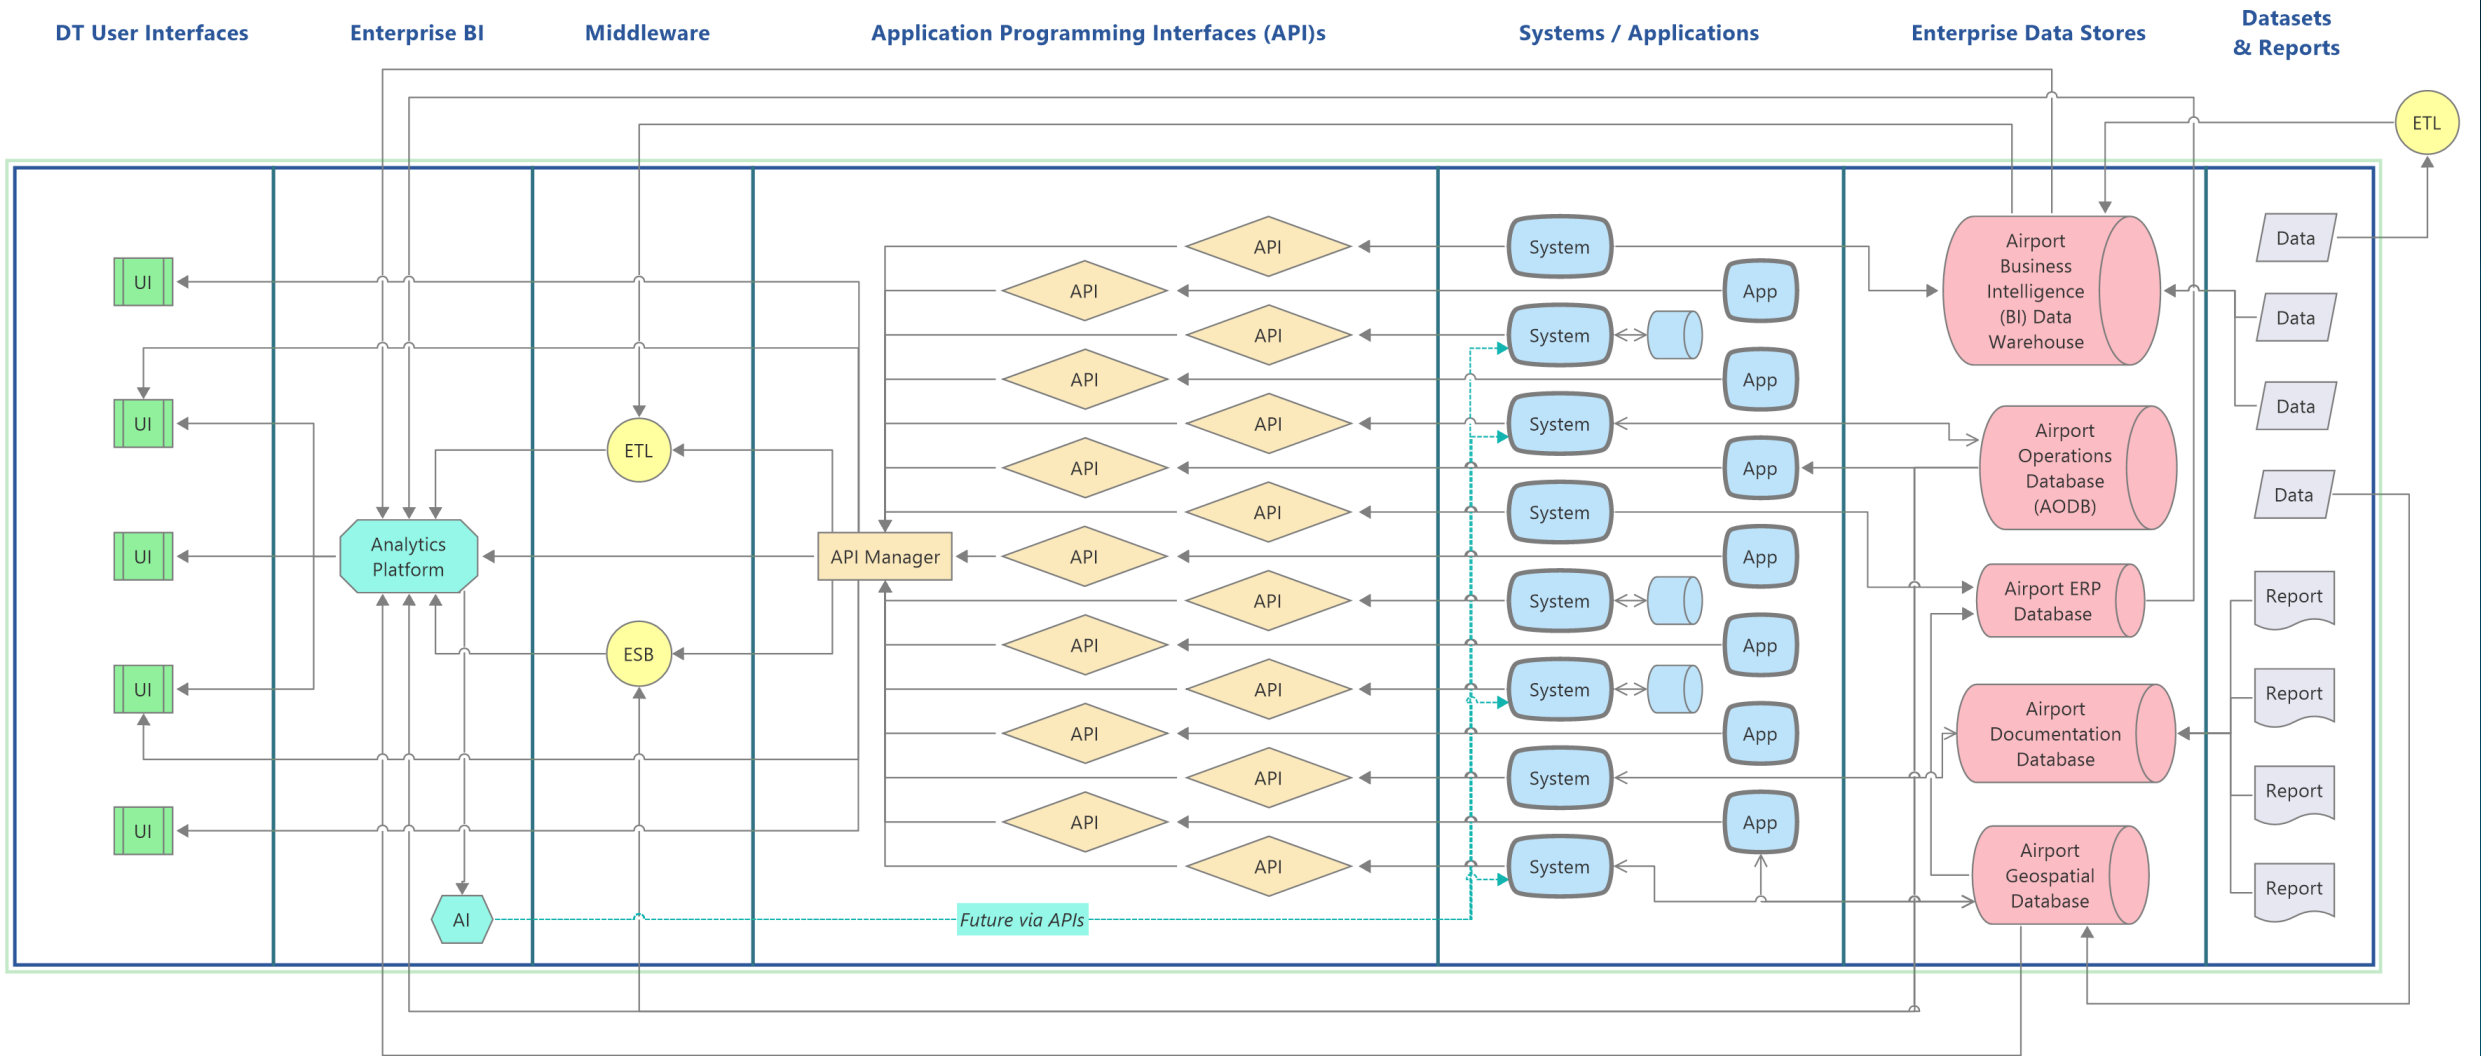

Examples of DT Data Fusion Needs

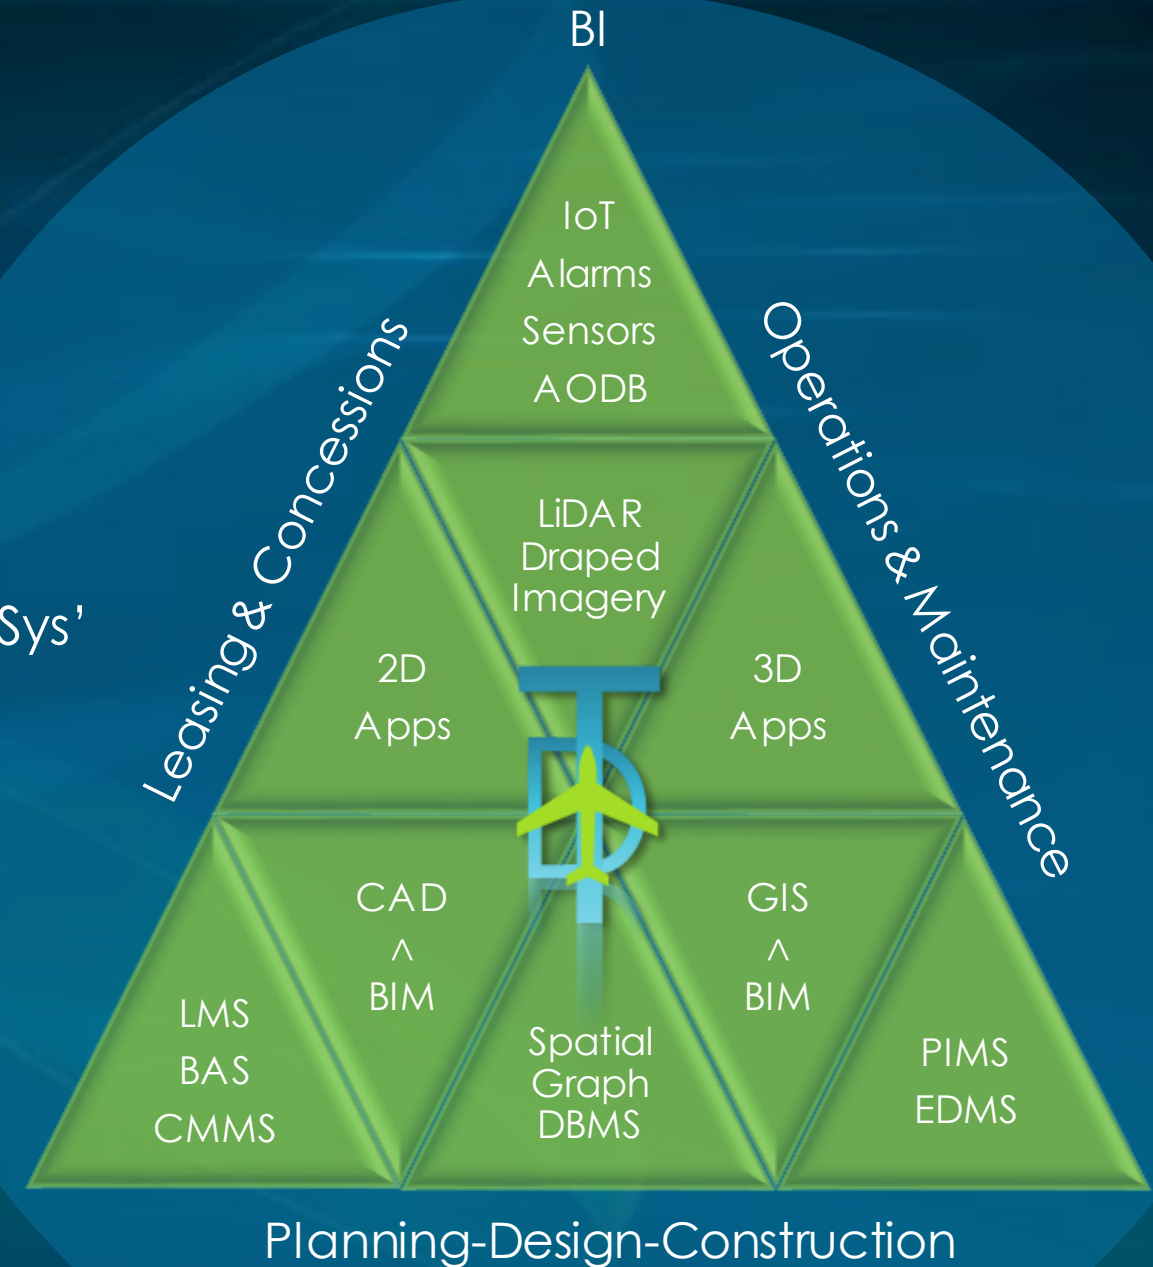

- ALP & Floor Plans
- 3D LiDAR with Draped Imagery
Outdoors & Indoors
- Airspace / AOA Traffic & NOTAMS
- Aircraft Gate Turn-Around Status
- On-Airport Roadways / Curbs
- Parking Garages / Lots Status
- People Movers Status
- Elevators / Escalators Status
- Ticket Counters Status
- Security Checkpoints Status
- PAX Congestion / Queues
- Bathrooms Status
- Alarms / Sensors / CCTV
- Incidents / Complaints
- Inspections / Issues / Weather
- Projects, Work Orders, Outages...

Open System Architecture Approach

Airport DT Components

- **AODB** – Airport Operations Database
- **BAS** – Building Automation System
- **BI** – Business Intelligence
- **BIM** – Building Information Modeling
- **CAD** – Computer Aided Design
- **CMMS** – Computerized Maintenance Mgm't Sys'
- **DBMS** – Database Mgm't Systems
- **EDMS** – Electronic Doc's Mgm't System
- **GIS** – Geospatial Information System
- **IoT** – Internet of Things
- **LiDAR** – Light Detection and Ranging
- **LMS** – Lease Management System
- **PIMS** – Project Info' Mgm't System

Maatregelen level 2

- Escaleer direct vanuit SACC naar TMR-P/FMP en vanuit OCM naar SSM t.a.v. benaderen safetynorm.
- Stop wachtgebied af.
- Stem af met OCM of extra beheersmaatregelen genomen kunnen worden en hoe we terugkeren naar level 0.
- Informeer vanuit SACC de TMR-P / ketenpartners en vanuit OCM de SSM wat de status is van de situatie op de filters en de verwachte voortgang. Aan de hand van deze informatie kan TMR-P, FMP en SSM bepalen of inzet CVO benodigd is.

Top Use Cases

- Landside Arrivals
- Shuttle Bus Frequency
- Security Checkpoints
- Digital Content
- APM Frequency
- Concessions
- Connecting Flights/PAX Loads

Needed @ Airports

- Terminal Resources
- Terminal Energy Management
- Terminal Cleaning
- PAX Health
- Safety Management System (SMS)
- Security/Emergency Situational Awareness
- Predictive Maintenance
- Work Scheduling (e.g., O&M, CIP)

Path to Achieving Airport Digital Twin

Maturity Model

- Staffing
- Business Processes
- Data Housing
- Metrics & Analytics
- Data Flow
- Spatial Correlation
- Systems Integration
- Predictive Simulation

AAAE Airport Digital Twin Maturity Model						
	Lowest	>	>	>	>	Highest
	Entry Level					Utopia
Level	1	2	3	4	5	6
Staffing	Self motivated individual division staff conducting analysis	Division designated dedicated analyst	Proactive centralized Business Intelligence (BI) organizational function			
			Understaffed	Adequately staffed	Some machine learning automation reducing needed staff levels	Full machine learning automation
Business Processes	Not documented	Few documented	Few mapped with some workflow automation	Mostly mapped with some workflow automation	Completely mapped with some workflow automation	Completely mapped with full workflow automation
Data Housing	Siloed	Combination of siloed and centralized	Mostly centralized data hub/warehouse	Centralized & integrated data warehouse	Mostly aligned data	Full accessibility & alignment
Metrics & Analytics	Defining DT Vision & Path Forward					
	Measuring available data	Developing division metrics for key priorities	Developing centralized universal metrics	Build alignment of organizational measures into employee work tasks	Calibrate alignment of metrics to improve performance	Fully aligned enterprise with on-demand metrics
Data Flow	No automated data sharing flow (i.e., manual batch loading, not real time via API)	Manual and automated data sharing flow	Manual and automated data sharing flow	Priority external and all internal data flows automated	All data feeds automated with self reported validated	All data feeds automated (no self reporting)
	Some IoT device data flow within proprietary disparate systems	Some internal airport systems with automated data sharing	External partners data is partially manual (e.g., airlines, concessions, etc.)	Automated PAX demographics, POS, concessions data, airline activity overlay		
		Manual shared CAD/GIS maps	Common basemap automated web services			

Takeaways

- Airport Owner's Digital Twin (DT) is not a single software solution; it's an **integration of data, processes, and technology**
- DT is **NOT replacing existing airport systems**, but rather expands their utility via integration
- DT **requires sustainable geospatial framework**
- Airport **CIP builds and renovates** assets physically and should **also virtually via DT**

Biggest Challenges

- **Funding** resources to build & sustain it
- **Organizational** placement of steward
- **Data update** process lag time

First Steps Towards Achieving DT

Setup Airport Business Intelligence (BI) Group

Equipped with:

- **Enterprise analytics platform** such as Tableau, Microsoft Power BI, and/or ArcGIS Insights
(**Overlaid on GIS** across terminal complex and campus-wide)
- **Data warehouse and middleware** for processing and integrating data from multiple sources

Keys to Success

- Business **use-case** driven
- Enterprise **analytics correlated over GIS** spatial maps
- **Updated** floor plans and campus basemap
(including sensor locations)
- Stewardship by Airport's Business Intelligence **(BI) Group**

Keys to Sustaining Airport Digital Twin

- Keep it Simple & Sustainable **(KISS) Principle**
- Leverage **IoT sensors with APIs to automate overlay** of real-time (and historical) data
- **Update spatial “skeleton”** with IoT sensors, assets, etc...; **leverage simple GIS symbolized point features in 2D/3D**
- Leverage **LiDAR draped imagery** with **semi-automated/robotic scanning platforms indoors and outdoors**

Roadmap to **Sustainable** Airport Digital Twins
