<< Improving Airports in 2020 >>

Starting with Gap/Risk Analysis and Business Process Modeling

By David Tamir

With 24 years of experience improving dozens of airports, David Tamir has developed an efficient gap/risk analysis methodology for identifying and prioritizing airport improvement projects. David leverages straight forward Excel (see below), using a practical methodology, which quickly achieves results and is easy to understand. David sits with airport stakeholders to: identify and grade airport functions, systems, assets, etc.; define respective criticalities; calculate consequent risks; identify dependencies; and layout a 5-year phased funding plan, based on priorities derived from above.

To achieve success with airport improvement projects

involving business process changes, it's essential to diagram the old "as-is" airport business processes, and then design the new "to-be" improved processes. The required business processes need to drive and shape the implementation. David leverages ISO standardized Business Process Modeling (BPM); as shown in example below. David has developed hundreds of airport business processes spanning Finance & Procurement, Planning, Engineering & Construction, Facilities Maintenance, Operations, Properties & Leasing, IT, HR, Legal, etc.
