Artificial
Intelligence

Use Cases of NaaS:

- ✓ Regular Network refresh Cycles with budget constraints.
- ✓ Expo or Event Coverage.
- ✓ Temp locations and buildings.
- ✓ Distributed Environment with zero centralized management resources.

Why Choose Us

Forget the traditional budget challenges and upgrade delays! With AIC2's Network as a Service (NaaS), you can now enjoy a cutting-edge network infrastructure—just like paying your electricity or internet bill. Say goodbye to large capital expenditures (CAPEX) and shift to a flexible operational expense (OPEX) model that saves costs and helps you reinvest in other IT projects.

With AIC2's NaaS, network upgrades have never been simpler or more affordable.
Contact us today to find the right solution for your business!

TURNING COMPLEXITY INTO SIMPLICITY

Years over years, customers used to include networks in their regular refresh and upgrade cycles, they used to worry about the allocation of budgets to keep their network up to date with the recent market trends and technologies. This led to delayed projects and missed cycles of network upgrades due to the IT cost saving and budget challenges, which kept the network under threat and exposed to various types of attacks.

Network as-a-service, aka NaaS, brought a new concept and market shift, with NaaS introduced, Networks became a service like electricity bills, Water, and Internet. Customers will need to pay for their network as a monthly or quarterly bills which will convert the network investments from CAPEX to OPEX that will save the cost and reuse the CAPEX in other IT projects.

NaaS enables customers to refresh their IT network infrastructure cost-effectively while deploying the latest technologies, with flexible options such as leasing models for temporary sites. Whether managed via the cloud or on-premise, NaaS provides the flexibility to scale networks easily, leveraging AI for automated issue detection and resolution without human intervention.

Why Choose AIC2 NaaS?

Choose AIC2's NaaS for flexible, cost-saving network solutions that leverage cloud management, AI-powered automation, and scalable options to keep your infrastructure cutting-edge and hassle-free.

Cost Savings

Turn network investments into manageable monthly or quarterly payments, moving from CAPEX to OPEX.

Flexible Solutions

Whether you want to own your network or lease it, our NaaS offering lets you choose the model that fits your business needs—even for temporary locations or buildings.

Cloud Management

Turn network investments into manageable monthly or quarterly payments, moving from CAPEX to OPEX.

AI-Powered Automation

Take advantage of artificial intelligence to automatically detect and resolve network issues, eliminating the need for manual intervention.
