

Unlocking Solar Potential with Smart Solar Coat

Discover Smart Solar Coat, the after-care solution that maximises your solar panel investment. Increase energy yield and ensure long-term performance. Let us help you achieve peak efficiency and long term savings. We can apply from the first day that you install your panels or we can revive your panels that have been sitting in place for years.

The Hidden Threat: Energy & Profit Loss

Environmental Build-up

Dust, pollen, and grime and a huge increase in moss and algae in the last couple of years due to the climate change accumulate continuously. This blocks sunlight and reduces energy conversion efficiency.

Reduced Output

Panels underperform, costing you money when it should not. Output declines over time, diminishing your return on investment and shortens the life span of your panels.

Smart Solar Coat: The Science of Shine

1

Advanced Formula

Smart Solar Coats unique formula bonds to panel surfaces. This is nano tech at its best.

2

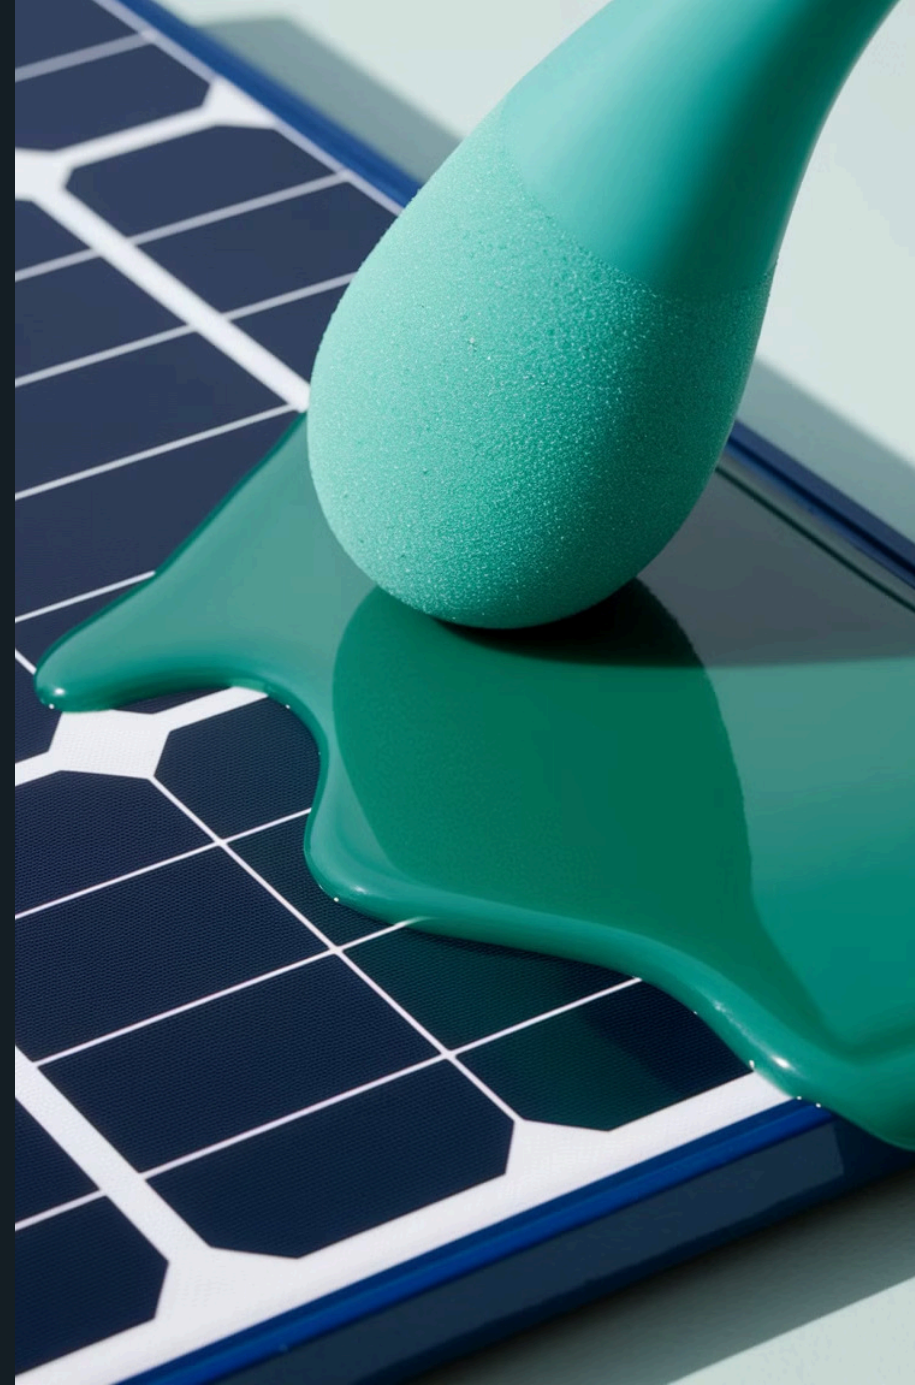

Protective Layer

It creates a shield against environmental pollutants, that have been unavoidable until now.

3

Increased Gain

More sunlight reaches cells, boosting energy gain, increasing profits!

Witness the Transformation

1

Increased Energy Yield

Panels generate more power after Smart Solar Coat application up to 30% has been recorded on data. We have case studies going back as far as 2014!

2

Reduced Cleaning

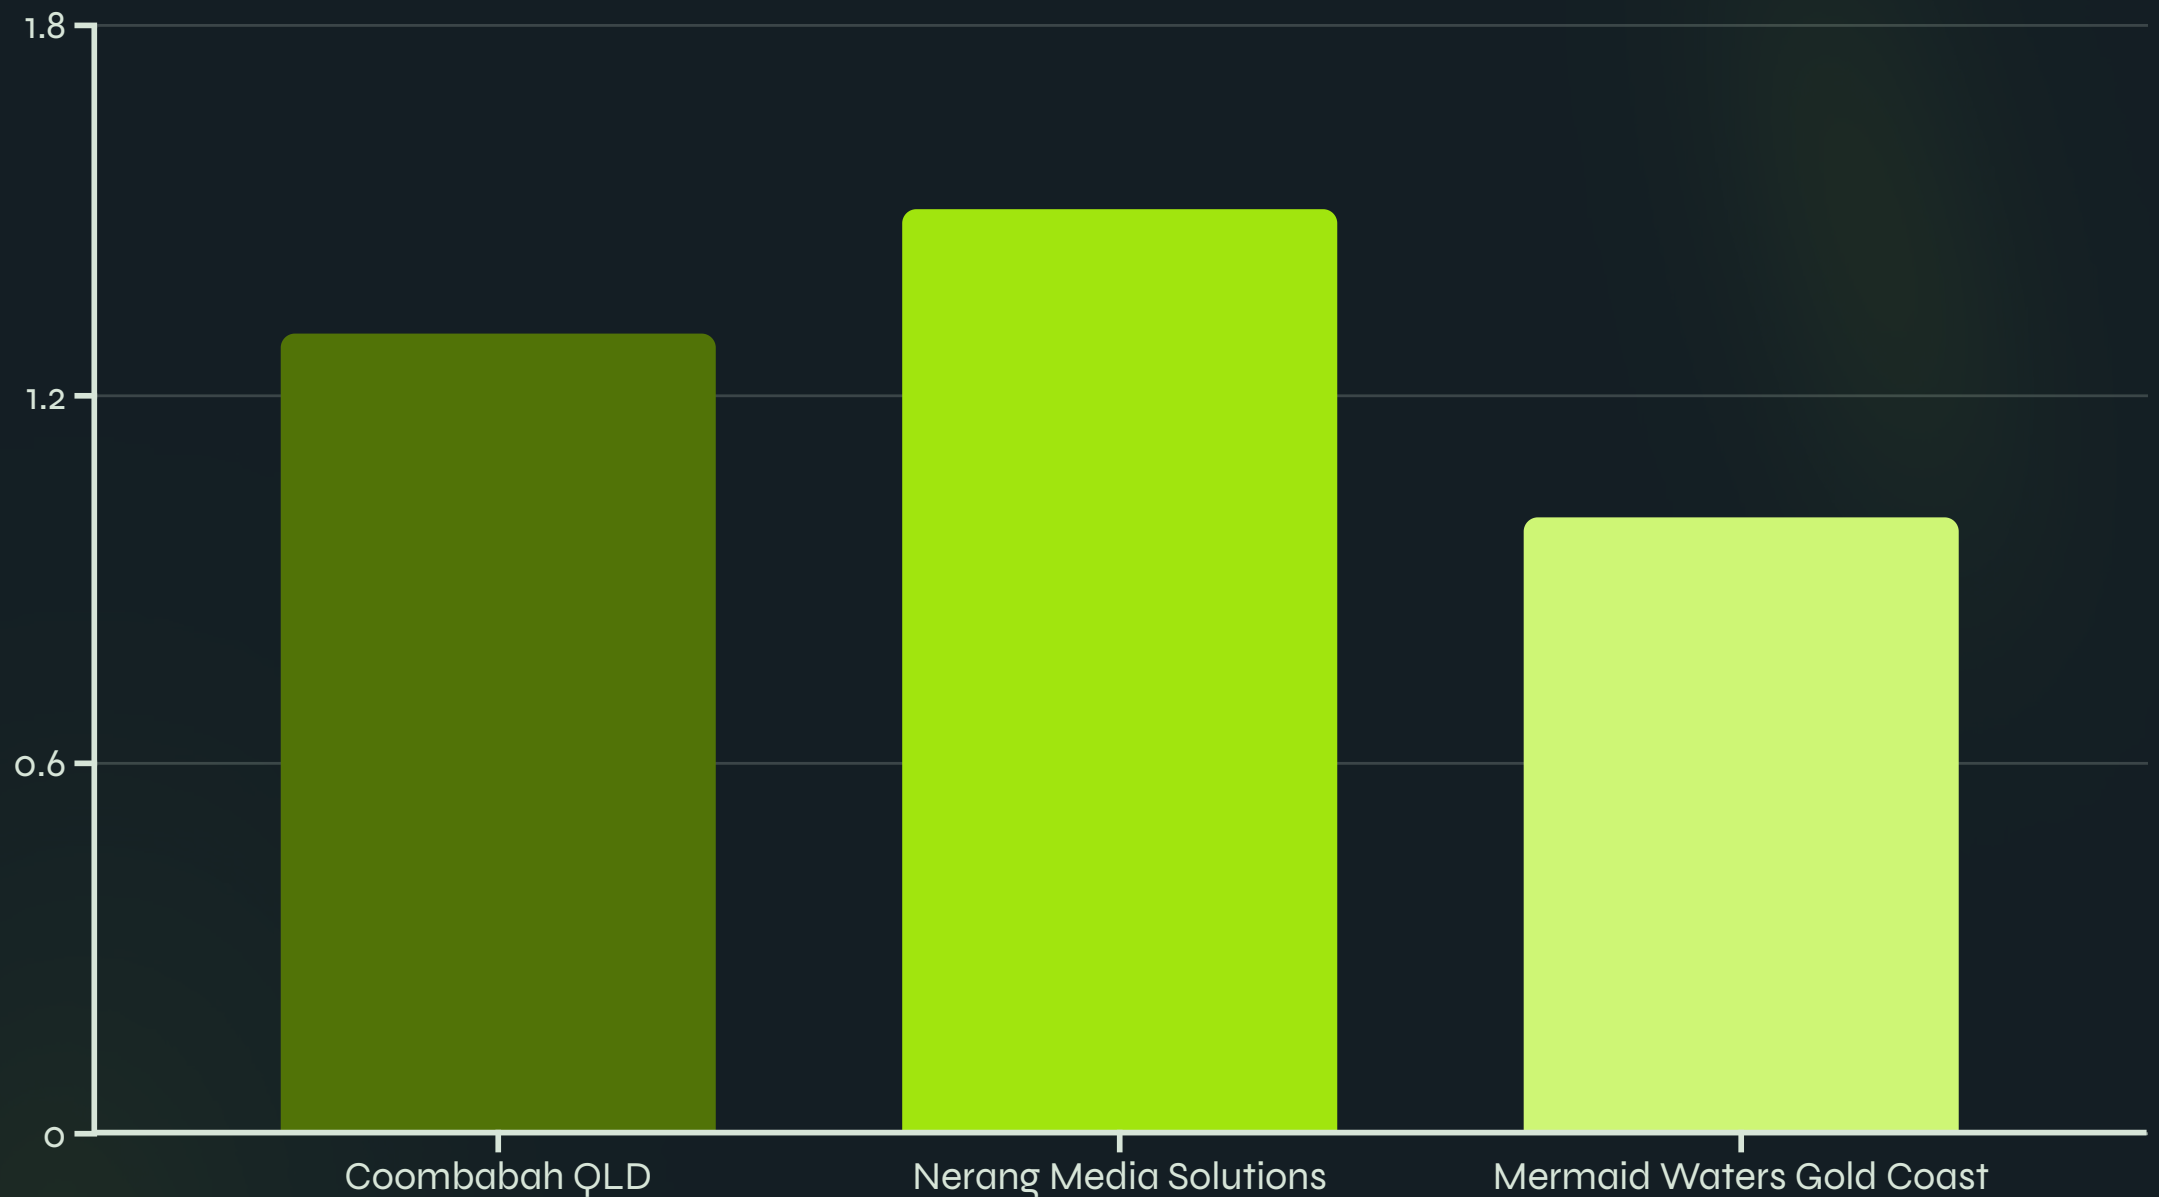

Panels stay cleaner for longer, minimising cleaning needs and abrasion on the panels, prior to application and so reducing the wear and tear on the panel.

3

Enhanced Performance

Optimized energy output translates to increased savings and increased income on solar farms and home owners. Is this not the main reason you invested into solar in the first place?

Validated by customers, KWH Increase Per Day!

Independent studies prove Smart Solar Coat effectiveness. Data confirms a significant average energy gain per day!

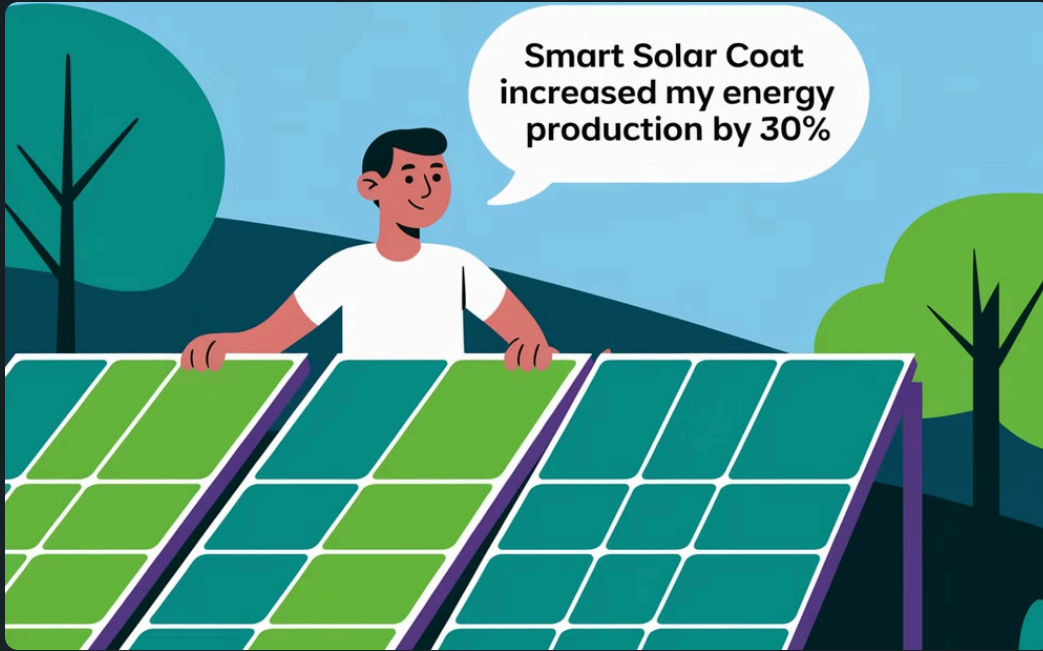

Maximise your solar investment today.

Smart Investment, Rapid Returns

Smart Solar Coat pays for itself through increased energy savings. Increased output to your grid increasing profits for you and your clients. Reduce long-term maintenance costs. Experience a rapid return on investment.

Success Stories: Real Results

Hear from satisfied customers who have boosted their energy output with Smart Solar Coat. Join the ranks of smart solar coat investors today. We focus on the long term gains for your savings and increased income so that we can grow our network of satisfied customers.

Call us today for more information or even just a quick Q and A? 01634 620622

Take the Next Step, harvest more solar!

Direct Call Q & A

Discuss your specific needs over the phone or email straight away.

Send us your solar panel count, location & age. We can then offer a bespoke price.

Energy Gain Calcs

Evaluate your solar increase potential with our team, this is a straight forward calculation that we can offer your increased profits.

Smart Solar Coat Demo

Experience the difference first-hand, we can visit you or you can come to us at our office. Its outstanding to see the difference.

Partner with DC Revive. Start maximising your solar investment today with a Smart Solar Coat installation. Contact us for a free consultation and demo.

Why We Invested in Smart Solar Coat

We saw the incredible results from case studies in Australia and knew we had to bring this innovation to Europe. But we didn't stop there. We invested time, research, and resources to **enhance the formula**, ensuring it works efficiently in the European climate with improved application methods.

With the UK being one of the lowest solar power producers per person in Europe, we recognized a need—**businesses and homeowners want to maximize savings while helping the environment**. That's why we developed **Smart Solar Coat** further, a cutting-edge nano coating that boosts efficiency for both new and old solar panels. The UK could generate a further 15-30% increase of power generated without installing another panel.

- ✓ Increase solar output by up to 30%
- ✓ Extend panel lifespan & reduce cleaning time
- ✓ Lower maintenance costs & minimise environmental impact

This isn't just about better solar panels—it's about **reviving** lost profits, **protecting** your investment, and **supporting** a greener future. **Call us today** to see how Smart Solar Coat can work for you!
