

## Dental Design Studios

### July 2024 Special

A smile changes everything; we want to be a part of enhancing your patients' smiles.

#### Implant Special\*

**\$50**

- Shoulder preparation not needed, feathered edge is OK. It is a conservative prep similar to full-cast gold, so any prep with at least 0.5 mm of occlusal space is adequate.
- Minimum occlusal reduction of 0.5 mm; 1.0 mm is ideal.
- Resin-reinforced glass ionomer cement.

\*Offer valid through 7/31/2024

\*Offer valid for new customers only

#### Porcelain Fused to Zirconia Single Unit Crown\*

**\$95**

- Unlike metal PFM's, PFZ allow more light to pass through, and this makes them more suitable for anterior teeth.
- Zirconia does not produce any chemical reaction in the mouth, ZrO<sub>2</sub> is biocompatible. This is important as metal can cause allergic reactions once placed in the mouth.
- Zirconia when fused with porcelain is stronger than any other material, including gold.
- PFZ is less likely to fracture as compared to porcelain fused to metal.

\*Offer valid through 7/31/2024

\*Offer valid for new customers only
