

Dental Design Studios

Dental Design Studios is a full service laboratory that specializes in cosmetic dentistry, and accepts all STL files. All restorations are FDA approved and are accompanied with an IdentAlloy® sticker of assurance. As a full-service laboratory offering crown and bridge, cosmetic, implant, laser welding and orthodontic products, we can accommodate virtually any case a dental office may have. **All restorations are made in the USA!**

JUNE/JULY 2023 SPECIAL

BruxZir® Bridge \$25 off First Case*

**Offer valid through 7/31/2023*

Initially, BruxZir was nicknamed the restoration with “More Brawn than Beauty.” Now, due to advanced CAD/CAM technologies, we can produce a restoration with improved translucency and color similar to the patient’s natural dentition. Complete color penetration all the way through the restoration now allows you the option of using it in the anterior region as well as the posterior region. Additionally, this new advancement allows for greater shade consistency and prevents any shade changes after occlusal adjustments.

Indications:

This restoration is ideal for crowns, bridges, implants and onlays. The chip proof durability is ideal for patients who have broken natural teeth or previous PFM restorations. Lastly, it is also ideal when the patient lacks the prep space for a PFM.

Preparation/cementation requirements:

- Shoulder preparation not needed, feather edge is okay. It is a conservative prep similar to full-cast gold, so any prep with at least 0.5mm of occlusal space is adequate.
- Minimum occlusal reduction of 0.5mm; 1mm is ideal.
- Resin-reinforced glass ionomer cement.
