

SUSTAINABLE DEVELOPMENT GOAL 6

WHAT'S HAPPENING IN THE HUNTER

HUNTER WATER

Hunter Water are using recycled water as one approach in the long-term management of our water supply and the reliable delivery of water and wastewater services to the Lower Hunter region. Visit the Hunter Water website to learn more about this project and other Hunter Water sustainability initiatives.

AMPCONTROL – GILGI

Gilghi is an off-grid containerised water treatment plant. Water supply in remote Australia is getting harder due to prolonged drought and aging infrastructure. At the same time Australia aspires to higher standards and better outcomes through commitments to United Nations Sustainable Development Guidelines on water and Closing the Gap for Indigenous equality. To this end, Gilghi host a range of community and health benefits beyond simply supplying clean water including better health and wellbeing, less pollution, local employment and reliable support, highly competitive lifetime costs, greater resilience and community infrastructure.
