1. I Can't Have Herpes!

“1 out of 6 people (ages 14-49) have genital Herpes”
-CDC

According to the Centers for Disease Control (CDC), one-sixth of young and middle-age adults have HSV2 which is one of three common types of Herpes:

Herpes Simplex Virus 1 or HSV1 (Cold Sores)
Herpes Simplex Virus 2 or HSV2 (Genital Herpes)
Herpes Zoster Virus (Chickenpox and Shingles)

By adulthood, almost everyone in the U.S. has had Chickenpox. Once you've had Chickenpox, the virus stays in nerve cells where it can later cause painful bands of blisters called Shingles. This is why it is said that most everyone has Herpes.

Most everyone has Herpes because Chickenpox is a Herpes virus that hides in nerves and can erupt again as Shingles.

So, yes, you CAN have Herpes because most everyone does.

What is a virus? No one really knows. How do we get them? No one really knows that either. Where do they come from? You got me there.

Neither my colleagues nor I asked any of those questions in medical school and, like most students, we just accepted that viruses are part of normal life on earth and that cannot be rid of by any prescription drug.

I can tell you what a virus is not. A virus is NOT a living organism. It does not breathe, it does not reproduce on its own and it does not produce wastes. It does not meet any of the qualifications of what it means to be “alive”.
A virus looks and behaves like a tiny bio-computer. It is a simple protein “envelope” that houses a “program” that is systematically injected into a living cell. The genetic machinery of the host cell is then taken hostage to make more viruses. Pretty insidious.

Money and science never mix. In for-profit medicine, drug companies and healthcare providers benefit from never-ending treatments of never-ending symptoms of never-ending illnesses. For this simple reason, I remain a skeptic of any claim that a disease without a known cure can not be stopped or reversed, hence the company statement for DOC WISE LLC: “Natural Solutions for Conditions Touted to Have No Remedy”.

The HSV dragon can be tamed and immobilized (suppressed). Rather than worry about having a dreaded virus that most everyone else has anyway (even though not everyone has it surface on the genitals), let's get to the business of finding the weak spots of that dragon and pierce some serious arrows in the chinks of its armor.

The FIRST line of defense is RED-TOP.
2. Red-Top: First Line of Defense

“The challenge of a teacher lies not in the slaying of dragons, but rather in exposing them as beasts no longer to be feared.”

-Alan Burton

HERP-B-GONE

The Herpes virus is NOT invincible any more than is a dragon with scales, fire and strength in its sheer size.

The first weak spot of the Herpes virus is its protein coat – the envelope that contains its infectious payload. Think of this as the scales of a dragon's skin. A wide range of plant oils have been demonstrated to effectively destroy the protein coat of any type of Herpes virus. No scales or weakened scales = no payload.

The second weak spot of any Herpes virus is its DNA or RNA payload that it uses to control the host cell's genetic machinery (this is akin to a dragon's “fire”).

The third weak spot of the Herpes virus is its ability to make itself appear strong by replicating itself in host cells until the impregnated cells rupture and release innumerable viruses (this is like a dragon's strength due to its size).

To recap, three strategies to neutralize Herpes are:

Strategy 1: Attack the protein coat (Red-Top and Green-Top)
Strategy 2: Attack the payload (Red-Top and Green-Top)
Strategy 3: Block replication (Red-Top and Blue-Top)

Essential plant oils are fragrant chemicals made in different plant parts to protect the plant from a wide variety of diseases. These powerful chemicals are the germ warfare agents of the plant world.
**Herp-B-Gone (HBG) Red-Top** balm is a blend of essential plant oils clinically demonstrated by various scientists to inactivate or directly kill the Herpes virus as follows:

Inactivation of the HSV1 and HSV2 virus coat (Saddi, 2007; Schnitzler, 2001).

Direct killing effect on all types of HSV (Garozzo, 2009; Koch, 2008; Schnitzler, 2008).

Suppression of HSV outbreak (Schnitzler, 2007; Koch, 2008).

Disruption of formation of the Herpes virus coat (Koch, 2008).

Inhibition of viral plaque formation (Schnitzler, 2007).

Block of cell-to-cell spread of HSV1 and HSV2 (Saddi, 2007).

Disruption of the HSV coat (Sokmen, 2004).

Killing effects on drug-resistant strains of HSV1 and HSV2 (Schuhmacher, 2003).

Inhibition of the viral replication of HSV2 (Kita, 2003).

**Red-Top** is therefore a carefully-formulated blend of powerful plant aromatic oils that synergistically work to attack Herpes on multiple fronts. It is not formulated to “dry” an outbreak – and in fact it can make it temporarily more “wet” by the direct-killing effect of Herpes viruses. The immune system's white blood cells will, within 24 hours, begin to remove the dead and dying viruses (and this may cause some temporary discomfort). So if you want something simply to dry an outbreak, **Red-Top** is not for you! If you want to stop Herpes dead in its tracks, it is.

Herpes hides in nerves, and when the virus is activated (by stress which includes hormone cycle changes, menstruation and sun exposure) it replicates and travels down the nerve to surface on
the skin where the nerve terminates – such as around the lips as in HSV1 mouth sores. The activated infection in the nerves causes pain, itching, tingling and burning – which signal that an outbreak is about to blister on the skin (blisters contain infectious newly-replicated viruses).

While HSV1 and HSV2 tend to reside in nerves, both can infect ANY region of the body – especially the mouth and reproductive fluids. Three conclusions are drawn here:

1.) Females are at greater risk of shedding the virus during menstruation.
2.) Menopausal females are a low risk of transmitting the virus.
3.) Males who ejaculate and then have repeat intercourse with their partner are at risk of directly reinfecting themselves.

HSV likes to reside in the nutrient-rich prostate fluid (semen). Over 30 researchers have published studies that demonstrate how the presence of Herpes in semen is associated with increase risk of HSV transmission and male infertility as follows:

Most people think that just because they do not have blisters on the skin they are not infectious. This common misunderstanding is perhaps why HSV is so common today and rapidly spreading.
It is natural for anyone to want to live life on their terms without risking the rejection and social stigma of telling a sexual partner that they have HSV and rationalize that as long as they are outbreak-free there is no risk of transmission.

Because HSV is found in body fluids (mouth and reproductive organs), the risk of transmission in the face of no outbreak should now be obvious. This is why Herp-B-Gone Sensual Lube Green-Top balm was developed – to decrease this risk of transmission between sexual partners.

The SECOND line of defense is GREEN-TOP.

"Life is a sexually transmitted disease with a 100% death rate."
-R.D. Laing

HERP-B-GONE SENSUAL LUBE

While none of us gets out of life alive, we would all benefit from a long healthy life without another Herpes blister!

Both HSV1 (cold sores/fever blisters) and HSV2 (genital Herpes) can be sexually transmitted by mouth-to-genital and genital-to-genital contact, and the rates of cross-infection are rising every year. One of the reasons for the rising rates is that many people with genital Herpes never have an outbreak but only experience itching and tingling and so do not even know that they have HSV.

Green-Top was formulated with more wax than Red-Top. This makes it more waterproof and therefore the choice for cold sores and use as a sensual lubricant.

Red-Top and Green-Top work in synergy. The different oils in Green-Top compliment the oils in Red-Top by attacking HSV in different ways. For example, Green-Top has castor bean oil, which is strongly anti-HSV and is also an excellent lubricant. This makes Green-Top a "second line of defense".

Both Red-Top and Green-Top balms are recommended for daily use during outbreaks and first sign of outbreak symptoms (itching and tingling). Both are safe for long-term use every day for prevention and suppression of an outbreak.

All of the ingredients in Red-Top and Green-Top are natural plant oils except BHT – a synthetic chemical that is listed as GRAS (Generally Regarded As Safe) by the FDA for use in foods and balms as a preservative.
**Red-Top** and **Green-Top** both contain oils that are some of the most powerful natural penetrants, drawing the anti-Herpes ingredients in both balms into the tissue below the skin into the underlying dermis where the virus hides and surfaces in the peripheral nerve endings. Cadaveric studies (on dead bodies) have demonstrated that lemongrass oil, for example, is one of the most powerful plant penetrants delivering the payload of the **Red-Top** balm through the skin to the tissues below the skin. **Green-Top** does not contain lemongrass oil because it is formulated as a lubricant rather than a penetrant. For this reason, in very rare cases of sensitive skin where **Red-Top** is not tolerated due to an uncomfortable “burning” sensation, **Green-Top** is readily tolerated.

Both **Red-Top** and **Green-Top** are suitable for Shingles. Both balms also help heal hard-to-treat cystic acne, boils and infected insect bites.

**Red-Top** and **Green-Top** ingredients are non-toxic and can be applied safely to affected area with or without signs of outbreaks (BUT NOT FOR USE IN EYES!). One or both may be applied as often as needed with early signs of outbreak (itching, tingling and burning sensations) and continued until symptom-free.

Due to activation of the immune system's white blood cells that are mobilized to remove dead and dying viruses, some people may experience increased swelling, redness and pain. This is called a “Herxheimer reaction” or “healing crisis” caused by blood vessels having become “leaky” to allow white blood cells to exit the arteries to clean up the debris. Therefore, symptoms may worsen before they improve. This is actually a good sign although no one wants to hear that when they are hurting. Simply stop treatment until symptoms improve then start treatment again. For best results, continue treatment for at least four weeks after symptoms improve (**Red-Top** and **Green-Top**).

The oils in **Red-Top** and **Green-Top** can stain synthetics; this is avoided by waiting for the balm to be absorbed before putting on
clothes or sleeping on sheets (Red-Top absorbs more quickly). Pre-soak any stains with any liquid detergent and wash as usual.

Because Herpes viruses lie dormant in nerve cells and body fluids, it is difficult to eradicate through the skin. Herpes likes to reside much deeper than just the nerve endings and for this reason Blue-Top was formulated to combat Herpes from the inside.

The THIRD line of defense is BLUE-TOP.
4. Blue-Top: Third Line of Defense

“The best defense is a confusing offense.”

-K. Pauley

HBG3

The third and most effective long-term strategy to confuse and immobilize the dragon is to make its den an uninhabitable place. This again requires color-rich compounds made by certain plants to ward off various infectious diseases.

**Blue-Top**, the third line of defense against Herpes, is an offensive rather than a defensive strategy. **Blue-Top** plant compounds provide a direct assault against the Herpes virus and any chronic intracellular microbe that uses the DNA machinery inside human host cells to replicate itself.

New research reveals that *active* Herpes infections involve *activation* of the JNK gene that is linked with the nucleus of human cells. Herpes viruses infect human cells and stimulates those cells to turn on the DNA replication machinery via the JNK pathway. In this way, HSV uses human host cell DNA to replicate itself.

Any kind of stress activates the JNK gene. When the JNK gene is turned on, the DNA replication mechanism is also activated (the JNK gene is part of the replication machinery). *This is why stress (emotional, environmental or hormonal) can trigger a Herpes outbreak.*

**Blue-Top** is specifically formulated to suppress this activated JNK pathway with a combination of plant flavonoids (pigments) that compliment one another. The result is a blend that is much more effective than each individual plant compound alone.
Published clinical studies have demonstrated the activation of the JNK gene with Herpes infection as follows:

1. Activation of the JNK pathway by HSV-1 immediate early protein ICP0 (Diao L. et al).

2. Expression of HSV-2 US3 affects the Cdc42/Rac pathway and attenuates JNK activation (Murata).

3. Replication of varicella-zoster virus is influenced by the levels of JNK/SAPK and p38/MAPK activation (Rahaus).

4. HSV type 1-induced encephalitis has an apoptotic component associated with activation of JNK (Perkins).

These studies reveal how Herpes viruses use different proteins to activate the JNK gene in the host cell to replicate itself.

An obvious offensive strategy, then, to blocking HSV replication due to activation of the JNK gene pathway is to BLOCK the JNK path without interfering with normal human host cell activity. This, too, has been demonstrated:

1. BX-795 inhibits HSV-1 and HSV-2 replication by blocking the JNK/p38 pathways without interfering with PDK1 activity in host cells (Su et al).

2. Downregulation of cellular JNK and NF-κB activation by berberine may result in inhibition of HSV replication (Song).

So, blocking JNK activity also blocks Herpes replication. But, that is not all! Blocking an over-active JNK gene not only blocks Herpes replication but also improves brain function, provides pain relief, decreases cancer risk, enhances repair of damaged blood vessels, improves nerve function and decreases Herpes-related complications such as Herpes encephalitis. Here are four of many such published reports:
1. Herpes simplex virus type 1-induced encephalitis has an apoptotic component associated with activation of JNK (Perkins et al).

2. JNK: A Putative Link Between Insulin Signaling and Alzheimer's Disease (Rodriguez-Perdigon).

3. SP600125, a selective JNK inhibitor, protects ischemic renal injury via suppressing the extrinsic pathways of apoptosis (Wang).

All of the ingredients in Blue-Top have been demonstrated in published clinical studies to suppress the JNK gene. This proprietary formula includes but is not limited to silibinin, curcumin, crocin, quercitin, licorice and uncaria. Because these flavonoids suppress the JNK gene that Herpes uses to replicate itself, Blue-Top offers many other benefits (such as improved brain function, pain relief, anti-cancer effects, improvement of nerve problems such as sciatica, etc.).

The most effective way to realize the benefits of any natural medicine is to enhance the absorption of the product through the stomach and small intestine. This way, more of the medicine reaches the blood stream and less is lost as waste. For this reason, HBG3 is not encapsulated but instead packaged its powdered form.

HBG3 is not water-soluble, so the best way to enhance its absorption through the gut is to mix it with a protein such as cottage cheese, yogurt, peanut butter or a smoothie. It can be mixed in water, but it will remain clumpy hence this is not recommended; milk is a better alternative as the milk proteins will help dissolve the powder.
At HerpesCure911.com you will find links to all of the studies that show how the ingredients in HBG3 suppress the gene that is activated when the Herpes virus tries to replicate inside human cells. **Blue-Top** is POWERFUL medicine! When used as directed in conjunction with **Red-Top** and/or **Green-Top**, any consumer will enjoy the most effective anti-Herpes natural remedy on the market today. **Red-Top**, **Green-Top** and **Blue-Top** are all based on cutting-edge research that has repeatedly shown that Herpes is not invincible and that a wide variety of plant compounds can inactivate and kill many different types of Herpes viruses via a wide variety of chemical warfare strategies. These biochemicals, when correctly combined, are VERY POTENT – even against drug-resistant strains of Herpes!

**Blue-Top** should be taken for a minimum of 8 weeks (each jar is a 30-day supply) and taken longer if symptoms that signal Herpes activity (itching, tingling and burning) persist. **Red-Top** and **Green-Top** should likewise be started at the first sign of activity and both of these balms should suppress any outbreak when used as directed. Nevertheless, each person is genetically unique so there can be no strict guidelines here. Simply keep taking the supplements in whatever combination works for you until the outbreaks and pre-outbreak symptoms *completely stop!* If it takes one month...GREAT! If it takes one year...GREAT! Just DON'T GIVE UP and NEVER LOSE HOPE because there is way too much science to back you up and give you plenty of hope that outbreaks can be stopped. Since HBG's release in 2015, we have received many consumer reports of remission of outbreaks and outbreak symptoms of even very hard-to-treat cases of HSV1 and HSV2 (these consumers also used **Blue-Top** with one or both balms).

Do NOT expect a complete suppression of symptoms without using **Blue-Top**. **Blue-Top** is KEY to suppressing the Herpes virus because this third line of defense is a *direct offensive assault* to block Herpes from replicating inside human cells.
Herpes likes to hide inside nerves. For this reason, **Red-Top** is formulated with PENETRATING oils that deliver the active anti-Herpes ingredients deeper where the virus hides. **Green-Top** does not contain these penetrating oils because it is formulated as an anti-HSV sensual LUBRICANT to combat Herpes that also likes to reside in the body fluids (mouth and reproductive fluids). **Blue-Top** attacks Herpes from inside because it is an internal immune-boosting anti-Herpes food supplement.

Again, any supplement that can boost the immune system (**Red-Top, Green-Top and Blue-Top**) can temporarily make symptoms worse. If this happens, simply stop until symptoms improve and then start treatment (germ warfare) again!

5. Red-Top Consumer Reviews

“You are not entitled to your opinion. You are entitled to your informed opinion. No one is entitled to be ignorant.”

-Harlan Ellison

Excellent product. I have not used it yet on an existing cold sore and hope I don't have to. I was so fed up after my last outbreak, it was huge and on my bottom lip and very noticeable to others. Very embarrassing. I had researched tons of products and decided to give this a try. This arrived around the time my cold sore was healing, but I started to feel another one coming on on my upper lip. I feared that I was going to have the dreaded back to back outbreaks. I immediately put the HBG on and it stopped it right away. It never blistered and scabbed over like normal and was never visible to anyone which is the most important part in my opinion. By day 3 I could not feel anything there anymore. It felt like magic. I hope this continues to work this well. Love that the product is all natural and it smells great. The jar is a good size and will last a LONG time even with daily use. Well worth the small investment!!

By Very good Product on October 25, 2017

Love this product (Red-Top). Wish I had known about this sooner. I suffered for several months with no meaningful relief....will be purchasing again.

By Suffer no more on October 8, 2017

This product is amazing and does exactly what it says . It even helps with blemishes also that are in your face. I love it !!!!

By Amazon Customer on December 16, 2016

HBG appears to work where so many products like this don't even come close. It's safe to say that you can't go wrong by trying HBG and then see for yourself. I think you'll be pleasantly surprised. Go for it!

By K. Sheldon on April 27, 2016

Great product & great service! I heard about this product by a reputable source that was ranking products to speed the healing process. This was rank #1. And if you compare with Abreva, OraJel, and other products in this line, this is very inexpensive.

By Rex on October 19, 2017

If you google how to get rid of cold sores, you'll come across a few repeated ingredients. Tea tree oil, coconut oil, and lemon balm to name a few. This product makes it convenient in the fact that it has all of these things mixed into it. I personally received it in the middle of my outbreak so I can't comment if it
shortened the duration. For nearly the same amount of money you get 20x the amount you would with Abreva. This balm does have a lemon scent to it. I personally like it and can't even tell after a few minutes. My partner does sometimes comment on the fact that I smell like lemons. Just something to note. Overall, I would recommend this product and do plan on purchasing it again after this runs out.

*By E. Semenyuk on October 4, 2017*

This is truly an excellent product. Stops the itch and burning, heals the blisters very fast. Like – three days from first tingling to almost gone. No idea what it is, but it WORKS.

*By Pam from Florida on October 25, 2017*

I bought my first jar of this amazing product last year because I was sick of having to be on antibiotics one week out of the month on most months. This product really works! I have not taken an antibiotic in over a year and this product lessened the duration and frequency of my outbreaks. I just bought my second jar and will be expanding to include the whole line.

*By R. Marhoefer on October 23, 2017*

Recently I had a outbreak that was more severe than others in the past. I was desperate to find something that work to relieve the pain. I came across this product. Received it today and the minute I put it on I could feel relief. I'm anxious to see what its like in the morning. Amazing.

*By T. V. on September 20, 2017*

About 21 years ago I met a nice lady who had HSV2, but she didn’t know it at the time. After several dates we connected, and began a monogamous relationship. A few weeks into that I had my first HSV2 encounter. We both immediately had blood tests and the doctor determined my episode was my first and she had HSV for a while. Since then I have had 3-4 outbreaks each year. I won’t get into the different treatments doctors recommended over the years, but in the last few years I began a regimen of external 5% and taken by mouth Acyclovir 200MG, as soon as I realize I am having an attack. External was applied 3 times a day and internal was 2 caps three times a day. This lasted for one week. By then it is almost gone, but not entirely. The first few days is painful burning, as the external Acyclovir did little for the pain. A couple of months ago I had two episodes within 2 months and began looking “outside the box” for a better solution. It was then I ran across some reviews on Amazon about Herb-B-Gone. It sounded too good to be true, but I thought, “What have I got to lose?” so I placed an order. The current bout was over by the time I received the product, so I waited until I had symptoms the next time. At that point I was much more sensitive about when another session was starting, with a very slight sensation on the usual area. (This, I had learned empirically, if I wait another few days, will turn into a burning pimple, and the
point I had previously begun treatment.) About 6-weeks later I began feeling a very slight sensation in the previously affected area. It was not painful (yet) but upon examination I could barely see something was forming. (But keep in mind that at this point I was suspicious, and not waiting for a burning pimple.) Immediately I took a Q-tip and liberally applied some HBG to that area. The ointment began soothing the sensation right away. Throughout the day I could feel it soothing the area. Since applying HBG after my nightly shower, first thing in the morning and once about 3 PM each day I discovered in 3 days everything was back to normal. Attack thwarted! Yippee! No more Acyclovir. HBG is a solution I hope will last the rest of my life because HSV2 is never “cured” - only “controlled.” Interestingly, the ingredients list all natural items and a little beeswax to hold it together. The smell is a pleasant citrus. Also, clean your hands thoroughly before AND after application. As I placed my original HBG order I decided to also try their Sensual Lube. I like it and will continue using it. It too has a pleasant citrus smell. BTW, about 20 years ago I married that nice lady.

By WishIKnewThisYearsAgo on December 31, 2016

Lately I have outbreaks every two weeks specially after eating sweet treats. Starts with itches and then bursts. I did some research and I came across HBG. Usually I am very skeptical about trying products but there are so many great reviews about this that I decided to give it a try. I checked the ingredients and I got sold on it. I am using it for about week now and I see big difference. So far all is great and I decided to also try HBG Sensual Lube and HBG3. I am sure these two will do wonders just like HBG did. Can't wait to start using all three products. Thank you Dr. Yoseph.

By G G on October 12, 2017

I had back to back outbreaks within a two week time span. I was at my wits ends and decided to try this product. It works great. The burning and itching was gone rather quickly. So glad I took a chance on this product.

By Tammie on August 12, 2017

I have been using the product for a month and haven't experienced any outbreaks. Although a small bottle, there is enough for at least three months.

By Dez on May 10, 2017

Got this product for a cold sore that was out of control and this product helped! It gave the tingle-burn feel that lets you know it was working but didn't leave my lips dry or worse off. I recommend this for cold sores!

By Page on October 5, 2017

This product works fast and effectively. I highly recommend this product.

By Amazon Customer on October 27, 2016
This stuff works great!!!! I have HSV1 and sometimes it can be genital. I love this stuff it smells great, and makes a great lubricant!

By Simmons on February 19, 2016

The comfort that this product has provided is SO freakin appreciated. The natural ingredients have a cooling/soothing effect and definitely helps to hasten the healing process. I've used the balm not only on sores from herpes but also on pimples, paper cuts, scrapes, cat scratches, razor burn, heat rash etc. Very useful product!

By A. Schroeder on August 23, 2017

I get cold sores all the time. I ordered this the day I felt one coming on. I got it fast and it worked. I’ve used other products that didn’t work this fast. You can tell it’s all natural...the only downfall is I can taste it. But it’s ok lemon flavor is fine. It also makes your lips a little plumped...which is a plus. You can feel it work immediately.

By Krystal on October 3, 2017

I'm on MS medication that has completely killed my body's defense mechanism. Therefore, I am constantly getting cold sores. I've tried everything (over the counter, prescription....you name it). This stuff seems to be doing its job in as little as 3 days I see my sores getting smaller and not nearly as painful. I'm looking to try the Blue-Top to stop the virus from coming out all together. Hope that does the trick!:

By K. Hobelon on September 18, 2017

This is the best product we have found that helps with the pain and healing. It simply works. We tried a lot of other products and remedies but this one does what it says and works better than any other product.

By Paul on September 25, 2017

First, I love the scent a lot. The lemon fragrance makes me feel relieved and calm. And I feel less itchy now, but it would be better if it had creamy texture than oily one. Still, I enjoy putting it on a lot.

By S. Han on November 5, 2016

Well packaged and seems to be working for shingles.

By Hilda B. on September 5, 2015

This product help me a lot with my Shingles. I just apply in the morning and in night, to help to stop most of the pain that I have at night time when it was too painful to get some sleep.

By Oldcard on February 29, 2016

I had excellent results with this...Highly recommended!

By M. Starr on August 13, 2015
This actually seems to help shorten the duration of my outbreaks and helped with pain somewhat as well. I also don't get another outbreak soon after one resolves after using this product. I will definitely repurchase when I run out.

*By B. Carter on April 19, 2016*

Used this product for the first time and was skeptical, not any more. This stuff really worked. I will use again and reorder when needed. Great product.

*By Amazon Customer on January 19, 2016*

This has been the most successful product I have found for my cold sores. I try to use as often as possible on lips and when (which is rarely) I get one I glob this stuff on it and usually heals completely in 1 week. Way better than Abreva. Thanks.

*By Milo on August 16, 2017*

This product not only speeds healing time, it greatly reduces pain associated with the affected area. It has a pleasant scent, not strong or mediciny. Highly recommended!

*By TLC on April 17, 2016*

I ordered this product because I was desperate to find some relief. It has worked great! It is soothing and seems to keep out breaks from happening. I would recommend this product.

*By LuLu on September 27, 2017*

This product is absolutely amazing. I am currently taking Valcyclovir with little relief; however, after the first night of application the swelling and itching are almost completely gone.

*By Texas Ag on September 30, 2017*

Really assisted with a bikini wax burn or irritation. It soothed the area and healed quicker than I expected. My BF used the product before for a cold sore and he swore by it. Has a fresh lemon scent. Great product.

*By SL on December 15, 2016*

Product works wonders. I was diagnosed with HSV1 on my genital area due to a previous relationship. I've used this twice already and it cuts down on the time it takes for my outbreaks to heal (3-4 days vs 1 week and a half). Very happy with this product.

*By Amazon Customer on October 19, 2017*

It worked for me. I applied as per directions. The pain stopped immediately then the boils started to clear up every time I washed the area and reapply more Herp-B-Gone. Now it is gone.

*By Amazon Customer on August 17, 2017*
