

TELESAIR

Who We Are

Telesair, Inc. is a Southern California based start-up, building innovative solutions to improve the quality of life for people with respiratory insufficiency. We intend to elevate the existing standard of care by improving patients' safety, increasing treatment efficacy, and enhancing the ease of use.

Founded in 2020, the team behind Telesair, Inc is a group of deeply passionate individuals experienced in respiratory devices and medical start-ups. Since its establishment, the team has dedicated to creating smarter respiratory care solutions through real clinical data, engineering design, software, and IOT technology.

Our Vision

A world where everyone has the freedom to breathe.

We will resolve issues of oxygen generation, conditioning, and delivery that have been left unsolved for far too long. Everyone born on to this planet has the right to breathe and we seek to empower that.

We believe oxygen is anything but trivial. As humans, we are able to survive without food for about 3 weeks, and can survive without water for about 3 days. But what happens to a person in 3 minutes without oxygen? They become braindead. Oxygen is the most valuable sustaining force in our lives. That is why we believe no one should be left without access to oxygen and proper respiratory care.

For the patients and caregivers, the loved ones and doctors - Telesair innovates for you ♥

Our Mission

Respiratory insufficiency is becoming an increasingly prevalent issue worldwide. It is a terrible reality to face, with more and more populations left suffering from respiratory problems. Included in those affected are the roughly hundreds of millions people suffering from COPD globally. Factors such as urbanization of areas, a growing aging population, air pollution, and the spread of viral disease has contributed to the heightened pervasiveness of these issues worldwide.

Through our next generation of respiratory care solutions, the team at Telesair is looking to eradicate the shortcomings of the current available solutions. We want to aid in breaching the growing gap between supply and demand for these products, as it is our mission to increase accessibility for all people who need oxygen assistance to the extent of our ability. While medical respirators are not the cure for these diseases, they are paramount to treatment and allow affected individuals to experience a better life..
