

SIC Biometrics is launching an unparalleled Live-Scan Wi-Fi device at the Connect ID 2019.

Newark, DE. (April 18, 2019) – SIC Biometrics, a world leading mobile biometric and identification device developer and manufacturer, is pleased to announce that they will be launching the IdentiFI-50 at the Connect ID Conference and Exhibition 2019 in Washington, DC, on April 30th.

The IdentiFI-50's predecessor, the IdentFi-45 G2 device, was deployed to help banks and law enforcement organizations. The IdentiFI-50 is the world's first mobile Live-scan FAP-50 that uses secure and fast Wi-Fi communication; it is compatible with iOS, Android and Windows operating systems. This high-speed Wi-Fi device fits in a trouser pocket, features multiple security layers, and allows users to see fingerprints captured, in real time, at 5 frames per second on mobile devices or computers. The IdentiFI-50 functions between 14°F and 131°F, meets the MIL-STD-810 specifications, and is rated IP 65.

Using top-of-the-line FIVE-0 FBI-certified sensor from Integrated Biometrics, the IdentiFI-50 does life-scan 4-4-2 captures in record time. The combined technologies of SIC Biometrics and Integrated Biometrics places this product in a class of its own.

The unparalleled SIC smart power management allows the IdentiFI-50 to capture fingerprints continuously for 8 hours. When left on the new sleep/wake-up mode, the battery lasts more than 2 weeks and will be ready to capture prints in only 5 seconds.

The IdentiFI products are driven by custom applications and run on APIs available under the SIC Biometrics SDK suite. This will allow customers to develop a proof-of-concept in a matter of hours and plan for full integration in just a few days.

"The IdentiFI-50 is the result of 20 years of innovations by SIC Biometric and the collaboration of key US and European organizations. I thank our great partner ecosystem, suppliers and the SIC Biometrics team for their contribution, determination and continued support for bringing to market this high-performance and unique product" stated Eric Talbot, CEO of SIC Biometrics.

The IdentiFI-50 and other SIC products will be in action in different booths of the Connect ID 2019. Come and meet SIC team members at the Integrated Biometrics Booth (# 111) on April 30th and May 1st.

About SIC Biometrics

SIC Biometrics Inc. (www.sicbiometrics.com) was established in Virginia in 2012. It is the American branch of SIC Biometrics Global Inc., which was established in Quebec, Canada in 1999. All SIC products, design,

firmware, and software are developed and manufactured in North America by SIC team members. SIC technologies have been deployed and used by over 50 million people. Our clients and members seek the accurate verification of identities in financial services, justice systems, as well as food and social services in the Americas, Western Europe, Africa, and the Middle East. Since its formation in 1999, SIC has been driving innovation in the biometrics industry.

SIC has 20 years of experience in pioneering advanced biometrics and ID solutions. Additionally, we have been one of the top global biometric/ID mobile product manufacturers since 2009 with the Touch Prox, IFMID iOS devices, All-in-One and IdentiFI products.
