RE: Virgin Excavated Natural Material (VENM)

To Whom It May Concern,

Dixon Sand operates sand quarries in the Maroota suburb of New South Wales. The quarries process Hawkesbury friable sandstone and Maroota tertiary sand.

This process is carried out through excavation of the raw materials with the use of bulldozers and excavators. The excavated material is then processed through a crushing, screening and washing plant.

All of our products which we produce for sale to the marketplace consist of Virgin Excavated Natural Material (VENM) which are not contaminated with manufactured chemicals, or with process residues from industrial, chemical or agricultural activities, and do not contain any sulfidic ores or soils or any other wastes.

Our products comply with the definition of VENM provided in the *Protection of the Environment Operations Act 1997*.

Yours Sincerely

David Dixon
Director / Quarry Manager
