REHABILITATION	<p>CS provided a briefing of activities occurring on site:</p> <ul style="list-style-type: none"> Planting in the native vegetation corridor (NVC). There was trouble earlier on with the bigger trees due to them being root bound. Continuing to undertake weed removal. The <i>Melaleuca deanei</i> and <i>Darwinia fascicularis</i> ssp <i>oligantha</i> that have been propagated and planted in the NVC are doing well. Cuttings of the Melaleuca and Darwinia for nursery propagation will be taken this week. Original offset area for Haerses Road are performing well and almost entirely closed in. Castor Oil, which is a problematic species on disturbed and filled sites, is evident near the high wall. Fortunately it is susceptible to selective herbicide so grasses can be retained for structure, but it is important to treat early as it seeds prolifically, creating a large and mobile seed bank Bush-it will be under taking further work to ensure the rehabilitation of sites and the maintenance of on-site biodiversity offset areas. Kenthurst offset will be monitored twice a year as a self-sustaining offset.
