## An Introduction to Your Energy Pros

*We are electrical and mechanical engineers with over 80 years of combined experience in product and technology development. We have the practical experience and technical knowledge to guide you through the process of making your home greener, smarter and more energy efficient through a simple, commonsense approach. We continually study the energy market in order to keep up with new cutting-edge developments in products, technologies and services. To help you personalize your energy system, we recommend the best products, technologies and services from our established network of highly rated local companies. We show you how you can create a home that is a more comfortable and inviting place to live in. We inform you about all available incentives and financing methods that will help minimize your expenses as you work towards achieving a greener, smarter, and more energy efficient home.*

# Your Energy Pros, LLC

## Our Philosophy

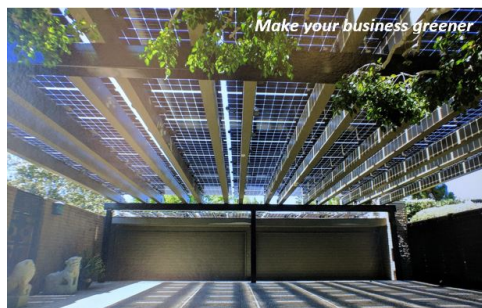

Making your home a greener place is a commitment to yourself, your family, your community, and the planet. It is also a learning process. As exciting new technologies, products, and scientific breakthroughs emerge, staying educated on the “how’s and why’s” of maintaining or upgrading your green home is the best way for you to ensure your efforts are as effective, economical, and beneficial as possible. As Your Energy Pros, our focus is your home’s distinct energy footprint. As experienced engineers in the energy industry, we stay current on all new technology developments, evaluate the ones we believe save energy and deliver value, and present those products and services to our clients. Most importantly, we consider whether these technologies will work together in your home as an integrated system. At the heart of any green home is energy efficiency. When it comes to your home’s comfort, smart possibilities start with one simple ingredient; the right information. As a homeowner, you want to be sure the upgrades you make are right for you, your home, your family, and your lifestyle.

## The Result

Once your installations and upgrades are complete, you can look forward to a greener, smarter, more energy efficient home or business property. You can also feel confident that you took the right steps toward reducing or eliminating your energy bill. As your energy partner, our relationship does not end there. Should you have future problems or concerns, we are a phone call away. And of course, as new technologies become available, further savings in your energy use may be possible. We will keep you updated because you will automatically become a member of our Partnership Program.

## About Us

With over 80 years of combined formal engineering experience in many wide-ranging technology developments, including solar energy harvesting, energy storage, smart sensors, wireless technologies, computer systems, robotics, and mechanical systems, we have the experience to help you navigate the complex, and often confusing, array of products and solutions that are currently being offered in the energy field. We continue to work hard to identify the best of the new emerging technologies, products, and services in order to take the guesswork out of your decision-making process.

## What People Are Saying About Your Energy Pros

**John M. in San Diego, CA** - I am very pleased we hired Your Energy Pros to complete the analysis of our solar energy requirements, select the best company to install our system, supervise daily the work as it was completed and finally to solve a problem we were having with San Diego Gas and Electric in obtaining our license to operate our solar system. I am not an engineer and cannot determine whether or not a roof or solar system is being installed properly. Consequently, I looked for a company that could provide the supervisory skills to make certain all the repairs and installations were being properly completed. In addition, if any problems occurred with regard to the warranties, I wanted a company to call that would take responsibility to make certain the warranties were honored. Your Energy Pros had all the skills needed to fulfill my goals. I recommend highly contacting Your Energy Pros to evaluate your solar needs, hire the contractors and supervise all work.

**Stacy W. in La Mesa, CA** - Steve and Jonathan did an amazing job vetting and finding us the best companies to replace our HVAC and our solar based on our usage and needs. There a lot of information you need prior to choosing the right company. They explained everything we needed and didn't. They saved us a ton of money! We started the process August of 2018 and by mid-September it was completed. The process was so easy, they took care of everything! All we did was kick back and in no time we had new heating/AC and solar panels on our roof. Both companies did a fantastic job; In and out, professional, friendly and tidy. I would highly recommend Your Energy Pros for any needs on your home or your business.

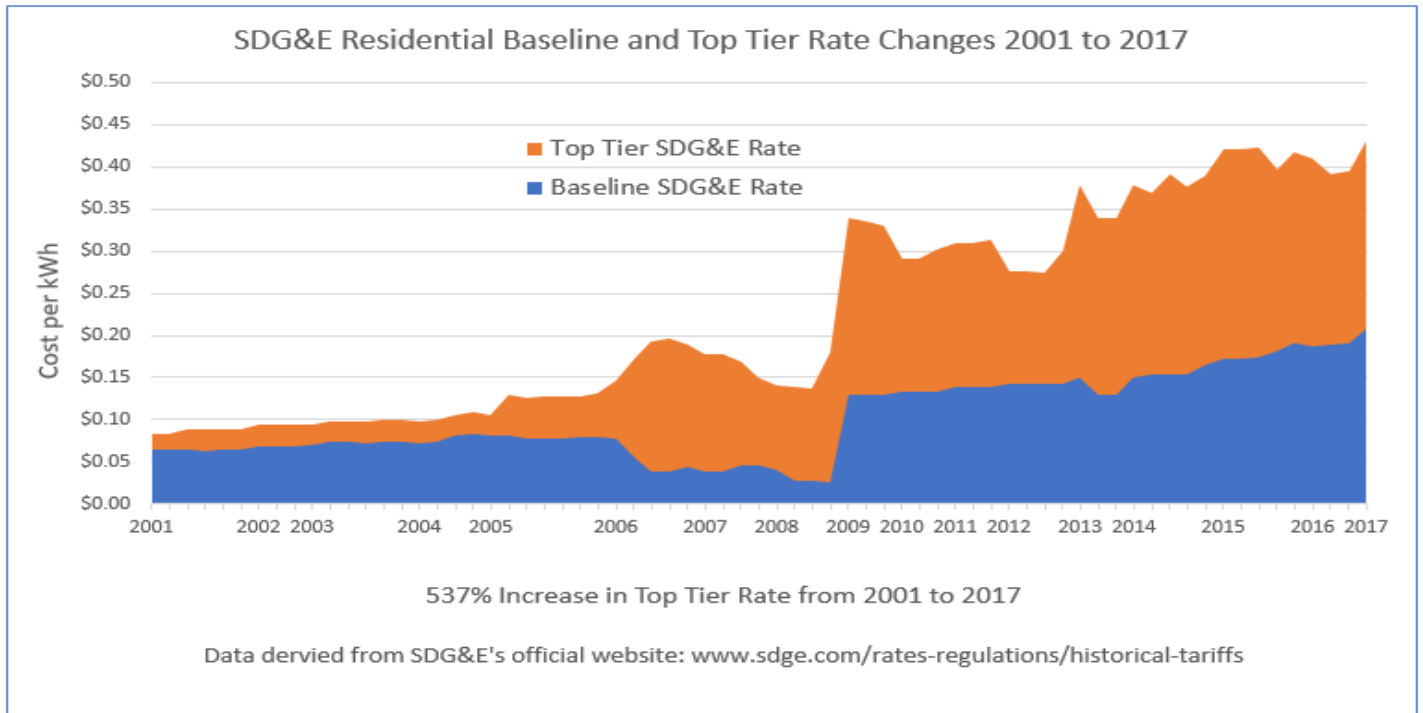

**Sherri F. in Escondido, CA** - Your Energy Pros are absolutely amazing! They are extremely knowledgeable and truly find the best ways to help make efficient energy choices. Solar was the best thing we did and having respectful and caring people like "Your Energy Pros" to work with made all the difference. Steve Luck actually calls to check in and make sure all is going well. This is hands down the BEST customer service we have ever received. I HIGHLY recommend Your Energy Pros!

## Incentives

**Residential Renewable Energy Tax Credit** - Homeowners that install solar photovoltaic (PV) systems are eligible to receive a federal investment tax credit (ITC) in the amount of 26% of the total PV system cost. Unlike tax deductions, this federal tax credit can be used to directly offset your federal tax liability dollar for dollar. If your federal tax credit exceeds your federal tax liability the excess credit may be carried forward for a period of up to 20 years.

## Choosing to not go solar has its consequences

**Congratulations** - The team you are considering believes in excellence where 100% client satisfaction is the norm.

**Everything is included** - We act as your project manager in order to take care of every step of the process, so there's only one company to call if you have any questions. We are your advocates for energy independence, both now and in the future!
