# Letter to our customers

Dear Friends,

Growers Tools was started based on the belief that growers and landscapers need the best tools available to produce an economical and fruitful harvest or landscape design. Over our years of being involved with the growing community, we have encountered numerous individuals who have been frustrated by the low quality and poor design of the tools commonly available on the market. Broken heads, cracked steel, dull blades, and poor design are only some of the concerns that make doing work by hand seem so challenging.

We took it upon ourselves to find high quality tools that would not break, crack, or make the job seem so difficult it was not worth the effort. We found that in Europe, hand tool farming is still a vibrant and important part of their agricultural economies. As a result, several companies still produce very high quality tools based on knowledge, tradition, and craftsmanship that have been developed over hundreds of years. These tools are made to be passed down from generation to generation, just like grandpa's hand tools once were.

Our goal is to provide you with the best hand tools for all your growing needs. While the sticker price on these tools is larger than the tools you will find at a large department or home improvement store, you will find that the quality, design, and construction of our tools will save you time and energy that will be well worth your investment. You will be able to pass these tools down from generation to generation.

Currently we source our tools from a company called Falci. Hand forged in the hills of Italy, Falci tools are known for being the finest professional quality garden tools on the market. Falci tools are characterized by the use of first-class raw materials, a 400 year old tradition of artisanal craftsmanship, and diverse agricultural niches based on a broad and deep knowledge of consumer needs. These tools are also easily re-sharpened and re-handled. Should the need arise we will sharpen and re-handle any tool for the lifetime of the tool, but it might take a while!

Happy Growing!

Sincerely,

Larry Stosman and Varun Paranjpe
