#### Safety Officer Tip: Trailer Tune Up

---

Now is a good time to do a safety check on the trailer you use to haul your tractor. Our busy hauling season is upon us.

- A. Check the trailer hitch. Make sure it latches securely and works freely.
- B. Check safety chains.
- C. Plug in the electrical connections. Check for debris and a good connection.
- D. Try the trailer brakes by making quick/short starts and stops.
- E. Check all the lights on the trailer running, stop and turn signals. Have someone work the lights and brakes while you check the lamps to see if all light up.
- F. Check the tires for correct inflation and tread. Check spare for air pressure.
- G. Pull one tire and check for bearing lubrication. Some trailers do have auto grease zerks on the wheels. Give each a squirt of grease.
- H. While the wheel is off - check the brake pads.
- I. While you are at it, take a quick look at your chains and boomers.
- J. Check trailer ball size. Make sure the truck ball matches trailer ball size.

**Load tip: After you have your load chained down, drive a short distance, and check the chain tension. Almost all loads seem to settle a small amount in just a short distance.**

---

**Happy Trailering!**

---
