Multi-Tenant Configuration

VoxIP

Customers Can Support Multi-Tenant Environments

Multiple Teleco Support

Your office environment can support multiple service connections for each tenants needs. Configure the VoxIP system to support any number of telco connections, From old POTS lines, digital trunks, SIP trunks or cellular connectivity. The VoxIP system is more than capable of the task for the complexity of multi-tenant environments.

Multiple Time Of Day Scheduling

Most closed systems today only allow for one time of day configuration. In a multi-tenant environment each client has different open and close operations. The VoxIP system ties their open and close settings to each individual inbound number for precise customization for your clients operations.

Outbound Caller ID

Each tenant needs their specific outbound caller ID. The VoxIP system can easily be configured to present the specific caller ID for each tenant. The system also allows for prefix dialing to have multiple outbound callers IDs for a client as well.
