Off-Site Routing & Notification Services

VoxIP

Never Miss a Call or Voicemail Again.

Off-Site Call Routing

Allow for important calls to be routed live offsite to a cell phone or other backup destination. The VoxIP system allows for you to configure the system to route calls from an auto attendant, extension, etc. This way you never miss a new sales or support opportunity.

Time of Day Specific

Allows for the process to be time and day specific. During normal business hours this may not be the procedure for handling calls. This would be configured for after hours situations to support your clients in the case of an after hour issue.

Voicemail Notification

Provides the ability to send an email or page when a voicemail is left. The system also allows the voicemail to be created into a wav attachment and send to any individual or group email boxes.
