Leverage your network

802.11 Wireless For Voice Connectivity

VoxIP

Customers Can Expand Voice Services Over Wireless Networks

Locations With No Ethernet Connectivity

Devices that have no network connectivity can utilize the existing wireless networks. VoXIP works with your 802.11 networks to connect phones.

Multiple Options For Wireless Devices

Customers can deploy a wide range of devices that are certified to interoperate with the VoXIP VOIP system. You will be able to choose from a wide range of hardware telephones and software clients for smartphones and tablets.

Investing In Your Network

When you upgrade your network you not only upgrade your data but your voice network as well. Converging your data, voice and video is how each customer leverages their network.
