Environmental Monitoring Integration

Video Surveillance With Environmental Monitoring

Your VueIP Video Surveillance system can be configured to display environmental status in real time. Designate which view in the management interface to display temperature, humidity, door status, etc for your data center personnel and stored recordings per IP camera.

Motion Detection can trigger a PoE network strobe for immediate notification to other personnel who don't have access to the VueIP management interface.

Management interface can also set focus and maximize a camera when a panic button is pressed. Instantly taking the default montage view to a single camera from where the incident has taken place.

Extend your VueIP Video Surveillance system by adding environmental integration services.
