## Key Benefits

### JobSorb can clean-up almost any spill!

Whether your spill is oil or water based, JobSorb™ is up to the task. JobSorb should be the major weapon in your cleanup arsenal.

### Superior performance at an economical price

JobSorb has the highest absorption rate compared to conventional products. JobSorb is typically 10 times more absorbent than conventional clay-based products, resulting in using far less product for cleaning up any type of spill. That typically translates to 50% savings while delivering superior performance.

### Polymer & oil solidifier and encapsulator

If you need to clean up polymers, JobSorb is just what you've been waiting for! The amazing encapsulation properties of this product turn spilled polymers and coagulants into a dry fluffy substance.

### Improved safety and compliance

The dollars spent on absorbent products are insignificant compared to the cost and liability of a mishap that occurs from improper or incomplete cleanup and disposal. Improper cleanups lead to slips and falls, which in turn lead to worker injuries, lost productivity, workmens compensation claims, health care bills, lawsuits, and more which could have been prevented.

### Waste minimization

JobSorb significantly minimizes waste because it weighs less and absorbs more than most competitive absorbents.

### Landfill-friendly

Can be safely disposed of in landfills.

## Other Key Benefits

- ✓ Absorbs liquids immediately on contact
- ✓ Easy to handle
- ✓ Helps eliminate oil odors
- ✓ Non-toxic
- ✓ Non-abrasive
- ✓ Non-leaching
- ✓ Non-carcinogenic
