At Risk

We've tested Sterling Elfin's DNA against a comprehensive panel of cat genetic health checks so you can rest easier.

Some things to keep in mind:

Our ability to report on risks affecting your cat is only as advanced as the science — which is ever progressing. Make sure to check back again every now and then to find out if new discoveries could help inform you about your cat's health.

Also, genetics is only one factor in a cat's health, so be sure to give your cat a healthy diet and plenty of activity.

Medical Complications

Sterling Elfin is all clear for 5 genetic conditions that could impact his early vet visits.

Here are some conditions common in cats with Sterling Elfin's breed makeup:

Clear

Factor XII Deficiency (Variant 2)

Factor XII Deficiency, also known as Hageman trait, is an asymptomatic blood factor deficiency. While it does not cause an abnormal tendency to bleed, it can be observed as prolonged blood clotting times during certain laboratory screening tests.

Found in breeds including:

Maine Coon

Clear

MDR1 Medication Sensitivity

MDR1 Medication Sensitivity is a disorder caused by a defect to a drug pumping protein that plays an important role in limiting drug absorption and distribution (particularly to the brain). Cats with the MDR1 variant may have severe adverse reactions to some commonly used medications.

Health Risks

We performed an additional 44 tests for genetic health risks — Sterling Elfin is all clear here too!

We've spent over a decade researching genetic conditions in pets, and partnered with other leaders in the field, to develop a comprehensive panel of cat genetic health tests.

Here are some health risks common in cats with Sterling Elfin's breed makeup:

Clear

Polycystic Kidney Disease (PKD)

Polycystic Kidney Disease (PKD) is the most common inherited disease in cats. The disease causes the formation of fluid-filled cysts in the kidneys that can lead to kidney failure.

Maine Coon

Carrier Status

If you're considering breeding Sterling Elfin, good news: we did not detect any concerning genetic variants.

Please note, although Sterling Elfin is clear for the genetic variants we tested, it is possible that he is a carrier/at risk for genetic variants not included in this test, which could be passed on to his offspring.

In addition to genetic disorders, individual blood types should be taken into consideration between cat breeding pairs. Please refer to [Feline Blood Type](#) within Sterling Elfin's report for more information.

There are many responsibilities to consider when breeding cats. Regardless of test results it is important that your cat is in good general health and that you are in a position to care for the kittens if new responsible owners are not found. For first time or novice breeders, advice can be found at most cat registry websites.
