

Bentley's Liquid Glycerine Saddle & Leather Conditioner will produce outstanding results on leather products. Use Bentley's to soften new leather, to fix worn, dry or brittle leather or for weather protection.

Formulated in 1949 by legendary Master Western Saddlemaker Don Bentley. Nobody knows how to take care of leather better than a saddle maker. Don originally mixed it in his own bathtub! While it is no longer mixed in a bathtub, it is still the same formula that is used today, more than 70 years later. Don's saddles from the 1940's, 50's, 60's and 70's can still be found at auction and in use today. Part of their beauty and longevity can be attributed to the care he took in cleaning and conditioning the leathers used in their creation.

Made in U.S.A. with environmentally friendly ingredients.

Non Toxic - Water Repellent - Controls Mildew - No Oily Residue
