Leash Finishing

General Information

Width

We recommend that the finished width of your leash should be no more than 1" to be comfortable in your hand. Your stitched design width should be no more than 1" plus two rows top and bottom for a fold finish. If you are using a binding stitch, the total width of your stitching should be no more than 1" including the binding stitch. You may certainly stitch less than 1" if you prefer a narrower leash.

Length

The leather handle and snap will add approximately 15" to the total length of the leash. The finished measurement of your leash will be the length of your stitched canvas plus 15". Maximum leash length is 53" including the handle and snap. Once you decide how long you want your leash to be, deduct 15" from the total length and that will be the amount of stitched canvas required. Please keep in mind that approximately 2" on each end of your stitching will be covered where the leather is attached to the canvas.

Please do not hesitate to contact to contact us if you have any questions. You may reach Glynn at 502.542.9471 Monday through Saturday between 8 am and 6 pm.
