

Introducing ParaPurge and Liver GB+ TUDCA

Did you know that up to 80% of all Americans have parasites? And around 25% of us have NAFLD or non-alcoholic fatty liver disease? Introducing brand new products to combat both issues! ParaPurge uses Nobel Prize winning, pharmaceutical-grade fenbendazole and ivermectin to destroy the parasites. Then TUDCA, which stands for Tauroursodeoxycholic acid, supports your liver during the cleanse.

How do parasitic infestations happen? According to the Cleveland Clinic:

Common food sources of parasites include:

- Raw or undercooked meat, including fish
- Raw or unwashed fruits and vegetables
- Raw aquatic plants, such as watercress
- Unpasteurized milk and juices

Common causes of parasitic infections include:

- Spending time in areas with known parasites
- Contaminated water, foods, soil, blood or feces
- Not washing your hands before eating
- Having a weak immune system
- Contaminated bug bites
- Sexual contact with an infected person

Common parasite symptoms may include:

- Diarrhea / Abdominal pain
 - Nausea and vomiting
 - Unexplained weight loss
 - Inability to lose weight / Increased appetite
 - Muscle aches / Fever / Chills
 - Problems sleeping
 - Weakness / Fatigue
 - Skin rashes / Pimples
 - Burning feet (*Cheryl*)
 - Seasonal allergies (*Michael*)
 - Sinus blockage and inability to smell (*LB*)
- my.clevelandclinic.org/health/diseases/24911-parasites

But here's what makes modern parasites particularly dangerous:

-  They've evolved to hide from standard medical tests.
-  They release toxins that mimic common conditions, leading to misdiagnosis.
-  They create biofilms - protective shields that make them nearly invisible to your immune system.
-  They multiply rapidly, creating colonies before you even know they're there.

ParaPurge's revolutionary formula combines Nobel Prize-winning ivermectin with pharmaceutical-grade fenbendazole to:

- ✓ Target parasites at their source
- ✓ Break down their protective biofilms
- ✓ Support your body's natural defenses
- ✓ Help restore your vibrant health

And then there is **Fatty Liver Disease**. Is it really a problem? Yes. If left untreated, it can cause irreversible scarring of the liver, leaving it unable to function properly. Your liver is critical for detoxification, a healthy immune system, and so much more.

Why ParaPurge?

Did you know that up to 80% of Americans are unknowingly hosting parasites? These silent invaders could be secretly draining your energy, clouding your thinking, and compromising your health right now. ParaPurge combines Nobel Prize-winning ivermectin with pharmaceutical grade fenbendazole to help eliminate these unwanted guests. While the initial 25-day protocol helps clear these organisms, many customers choose to continue with maintenance doses to maintain their renewed energy, mental clarity, and digestive comfort. Some experts believe that there is a causal effect between parasites and cancer.

Why TUDCA?

Your liver is your body's master detoxifier - but in today's toxic world, it's constantly overwhelmed. When your liver struggles, you might experience fatigue, brain fog, digestive issues, and difficulty losing weight. TUDCA is short for tauroursodeoxycholic acid, a powerful bile salt that helps unclog and rejuvenate your liver's natural detox pathways. This formula also adds N-Acetyl Cysteine (NAC), Saw Palmetto, Hawthorn Berry, Celery Seed and Grape Seed Extract for full liver functional support. Some clients start TUDCA as a stand-alone product for liver healing. This product is especially powerful when used in conjunction with a ParaPurge cleanse. As ParaPurge eliminates unwanted organisms, TUDCA helps your liver efficiently process and remove these toxins, reducing die-off symptoms and supporting a smoother cleanse. Many customers continue TUDCA beyond the initial 30 days because they love how clear, energized, and healthy they feel with optimal liver function.

ParaPurge

- Dosage: 3 capsules per day in a cycle, as described below.
- Timing: Spread the doses out throughout the day (e.g., one capsule per meal). For best effectiveness, take 1 capsule every 8 hours.
- How to Take: Take with a meal containing healthy fat for best absorption.
- Cycle: Take for 10 days, then take 5 days off, then finish the second 10 days. This cycle allows your body to properly process and eliminate parasites – both the mature adults and the babies that follow. Several cycles may be needed. It would be prudent to do a ParaPurge once or twice a year.

Liver GB + TUDCA

- Dosage: 2 capsules per day for intervention; 1 per day for maintenance.
- Timing: Both capsules can be taken at the same time, or taken with ParaPurge.
- How to Take: Take with a meal containing healthy fat for best absorption.
- Duration: Can be taken daily for ongoing liver and digestive support.
