Are you maximizing the use of your water?

Get more out of your water. Permeate contains all natural and synthetic blends of surfactants to break the surface tension on your water allowing it to flow more freely.

Permeate improves water penetration and aids in product dispersion when used in foliar sprays.

**General Information**
- Improves water efficiency
- Improves water penetration
- Reduces stress in plants between water cycles
- Aids in nutrient availability
- Aids in soil structure development

**Application Rates**
- Application rates dependent upon soil/tissue sampling
- Typical application rate of 1 Pt. – 1 Qt. per acre
- Typically applied no less than 3 times throughout the growing season

**Application Tips**
- Apply via chemigation, fertigation, or foliar broadcast spray.
- Apply in pre-watering
- Apply during stress cycles in crop
- Apply as soil drench

**5 Gallons, Liquid • Net Wt. 41.5lbs**

**8.3 Lbs. Per Gal. @ 68°F.**
