

“Instant” Loading Dock and Loading Platform at Manufacturing Facility

Case Study	
Date	Spring 2021
Location	Manufacturing Facility, Salem, MA
Facility	Tight Site without loading docks
Project Scope	Installation of a five-slot loading dock, an expanded storage deck and a forklift accessible ramp
Time Frame	3 weeks, start to finish, on time, on budget

GDC Properties Management was asked to build new loading dock and platform to accommodate 5 dock height trucks at the same time. The project also included a large pad for storage of pallets of product prior to loading onto the trucks as well as a ramp that would allow a forklift carrying a one ton pallet of cargo to drive up onto the dock area. Cost effective, 100% recycled, glass aggregates and steel mattress cages were part of the design! The project was completed in just three weeks.
