

How to review your Basic Med

You'll need to **retake the BasicMed course, at least once every two years to the end of the month of your last completion, and pass the quiz.** That's it! Make sure you have a current driver's license, valid flight review and you are ready to fly.

24-MONTH RENEWAL STEPS

48-MONTH RENEWAL STEPS

Step 1: Get the BasicMed FAA CMEC Form

Review if you're eligible for BasicMed and download the [BasicMed FAA Comprehensive Medical Examination Checklist \(CMEC\)](#). Complete the self-assessment portion of the form.

Step 2: See Your Doctor

Take your Comprehensive Medical Examination Checklist (from Step 1) and get a BasicMed specific exam by a state-licensed doctor. Have your doctor fill out the rest of the exam checklist. You will need this to complete step 3 and will need it again for your 24-month renewal.

Step 3: Take Online Course

Once you have completed your FAA CMEC from a state licensed physician, take this online course and pass the quiz. You **must complete the post-course form** to submit your exam information (from Step 2) to the FAA to earn your BasicMed completion certificate.

Step 4: File Documents in Your Logbook

Download your course completion certificate and keep it with your completed CMEC in your logbook or electronically. You need to have it available upon request from FAA. Make sure you have a valid flight review, and you are ready to fly!

Spoiler Alert:

You need to take the

- "Online Course" every 2 years (to the month), and
- get a MD Visit/approval every 4 years(to the DAY).

And keep your Dr's Report so you have the answers at your fingertips. (Date of last actual exam, their MD License #, etc)

How to review your Basic Med

You know it: The FAA is explicit about not flying while taking any drug that produces drowsiness or other central nervous system effects. That means **muscle relaxants**, tranquilizers, stimulants, **sedatives**, and **most cold medicines will ground you**. The FAA allows most inhalers to treat asthma, hypertension and cardiac conditions. Narcotics and illicit drugs are never ok to take—period.
