## Site Preparation.

You would require a level compact site in order to erect.  
Strip of top soil & replace with 3 - 4" of hard core.  
Before shed is erected install a 140mm concrete floor on a dampproof membrane. The base frame provided will make this task easier as you can screed of the edges.

## Customise

We can also customise to your detail usually at no extra ask for quote.

## larger Sheds

For larger workshops & garages view web site for more information and prices or ask for quotation.
