

# Welcome to Hydraulic Systems

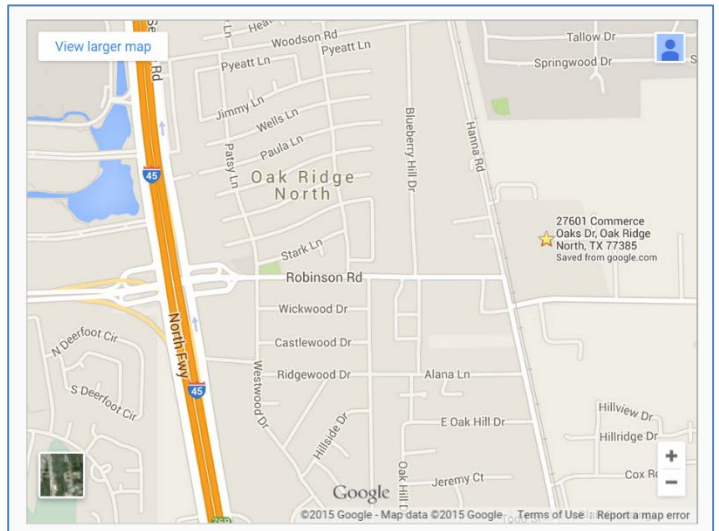

## History

Hydraulic Systems, Inc. was incorporated in 2004 in Casper, Wyoming. Drilling rig walking systems (RigRunner™) and rig hydraulic power units (Star HPU) are the core of the business as well as hydraulic field services. In 2008 Hydraulic Systems relocated to Conroe, Texas and in 2014 moved into its newly built facility near the town center of The Woodlands, TX.

Our systems are at work drilling for oil and gas on 4 continents and every major oilfield in the United States. Our product line has expanded to include our PipeRunner™ Iron Roughneck, Triton Environmental Vacuums, North Rig Catwalk systems, and Foremost Top Drives. In our new facility we have added welding, fabrication, and assembly services.

We consider it Open House any time a customer wants to visit. For our international customers and domestic customers using Houston Bush Intercontinental Airport we are located just a short 20 minute drive north.

Our location just east of The Woodlands provides our customers with hotel accommodations and restaurants of all levels. We are also located about 10 minutes north of the new ExxonMobil campus just off of Interstate 45.
